1.3 Design of the Survey.—For a study of border economy a purposive selection of ten villages in the border area, which were known to be important from the point of view of production and distributive trade in pre-partition days was made. Similarly for project areas a total of eight villages two from each of the four blocks in the district—where intensive development programmes were taken up, were selected. These villages were selected by the Project Officers themselves. Apart from these, a random sample of ten villages from all over the district were taken. Thus a total of 28 villages all over district—10 from border areas, 8 from project areas and 10 from general areas were selected for

LAMDOH CEREMONY.

This ceremony is identical with that of *Pynhiar synjat*, except that the bride and bridegroom do not interchange rings, and that there is no sacrifice of the pig. The parties merely buy some pig's flesh and perform a puja with a small portion of the flesh of the legs of the animal. Amongst the poor, fish sometimes takes the place of pork at the *Iadih-kiad* ceremony. The latter consists of a drinking bout mingled with muttered sentences by a *nongkinia* (sacrificer), the invocations and prayers being the same as at the *Pynhiar synjat*. The *Lamdoh* and *Iadih-kiad* ceremonies take the place of the more elaborate *Pynhiar synjat* in most places now-a-days.

585 782 273

LYNNGAM MARRIAGES.

The ritual observed at these marriages is described as under: —First of all a proposal is made in the following manner. A *ksiang*, or go-between, is sent, with the brother of the girl for whom a husband is required, to the house of the father of the young man (not to the house of the mother as is the case with the Khasis). If the proposal is accepted, the father of the young man kills a pig, and gives a feast to the people of the village of his father-in-law elect; also to the go-between and the *borang* (brother of the bride). The father of the bride then gives a similar feast. A sum of Rs. 1 each is given as a present to the go-between by the fathers of the bride and bridegroom, and the father of the bride pays from Rs. 5 to Rs. 15 to the father of the bridegroom. Further feasting ensues at the house of the father of the bride. The go-betweens then sacrifice a pig and two fowls at the house of the bridegroom, and afterwards perform the same sacrifice at the house of the bride. At the house of the bride, after the fowls and the pig have been sacrificed, the go-between, after drinking liquor himself, pours out some on the floor of the house and then gives some to the bride and bridegroom to drink. The killing of the fowls, the sacrifice of the pig, and the libation of liquor are essentials at a Lynngam marriage. The sacrifice of the fowls is also an essential feature

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

After the plants have attained the height of about 6 in., they are earthed up. When the leaves turn yellow, it is a sign that the potatoes are ripe. The different kinds of sweet potatoes grown and the yam and another kind of esculent root—*u sohphlang* (*flemingia vestita Benth.*) will be noticed under the head of "Crops." 244

The Khasis possess very few agricultural sayings and proverbs, but the following may be quoted as examples:— 241 538

(1) *Wat ju ai thung jingthung ne bet symbai ha uba sniew kti.*

Do not allow plants to be planted or seeds to be sown by one who has a bad hand. [777]

As elsewhere, there is a belief amongst the Khasis that some people's touch as regards agriculture is unlucky. [826]

(2) *Thung dieng ne bet symbai haba ngen bnai, ym haba shai u bnai.*

Plant trees or sow seeds not when the moon is waxing, but when it is on the wane.

(3) *Wei la saw bha ka bneng sepngi jan miet phin sa ioh jingrang lashai.*

A red sky in the west in the evening is the sign of fine weather to-morrow.

Cf. our English proverb "a red sky in the morning is a shepherd's warning, a red sky at night is a shepherd's delight."

CROPS.

The varieties of rice found in the Khasi Hills are divided into two main classes, one grown as a dry crop on high lands, and the other raised in valleys and hollows which are artificially irrigated from hill streams. The lowland rice is more productive than that grown on high lands, the average per acre of the former, according to the agricultural bulletin, as ascertained from the results of 817 experimental crop cuttings carried out during the fifteen years preceding the year 1898, being 11.7 maunds of paddy per acre, as against an average of 9.4 maunds per acre (resulting from 667 cuttings made during the 243 433

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

243 same period) for the latter.* The average out-turn of both
433 kinds is extremely poor, as compared with that of any description of rice grown in the plains. The rice grown in the hills is said by the Agricultural Department to be of inferior quality, the grain when cleaned being of a red colour, and extremely
244 coarse. The cultivation of potatoes is practically confined to the Khasi Hills, there being little or none in the Jaintia Hills. The normal out-turn of the summer crop sown in February and harvested in June is reported by the Agricultural Department to be five times the quantity of seed used, and that of the winter crop, sown in August and September on the land from which the summer crop has been taken, and harvested in December, twice the quantity of seed. The winter crop is raised chiefly for the purpose of obtaining seed for the spring sowings, as it is found difficult to keep potatoes from the summer crop in good condition till the following spring. The usual quantity of seed used to the acre at each sowing is about 9 maunds, so that the gross out-turn of an acre of land cultivated with potatoes during the year may be taken at 63 maunds, and the net out-turn, after deducting the quantity of seed used, at 45 maunds. The above estimate of the Agricultural Department rests chiefly on the statements of the cultivators, and has not been adequately tested by experiment.

244 Since the appearance of the potato disease in 1885-86 there
439 has been a great decrease in the area under potato cultivation. In 1881-82 the exports of potatoes from the district were as high as 126,981 maunds. From 1886-87 the exports began annually to decrease until in 1895-96 the very low figure of 8,296 maunds was reached. The figures of export for the last nine years are as follows :—

1896-97	16,726	maunds.
1897-98	7,805	"
1898-99	9,272	"
1899-00	5,422	"
1900-01	29,142	"
1901-02	38,251	"
1902-03	36,047	"
1903-04	50,990	"

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

vation is impossible because of the cold climate. In the past, Khasi economy must have remained at a very primitive stage. 178 244

Potato cultivation has been much encouraged along with the development of Shillong and the opening of the motor road to Gauhati from Shillong after the Independence of India when Shillong became the seat of the Assam Government, as well as the capital of the Khasi-Jaintia Hills. Shillong has become an important trading centre, where big merchants collect the harvests of potatoes in exchange for rice, clothes and various other goods from the Assam valley. These changes have introduced the Khasis into an active commercial economy which again has brought about various changes in their social life. Recently coal excavations have started in the upland Khasi Hills, and many Khasi become miners. 178 433 369 [244] [633] [491] [439] [316]

Thus the history of the Khasi Hills during the last hundred years has changed a great deal the picture of the Hills. However, dark corners still remain in Bhoi, War and in the area bordering on the Garo Hills. These have been kept in a vacuum between the Hindu civilization of the bordering plain and the modernization of the uplands centred in Shillong. In these areas, the people are still practising primitive jhum cultivation. I have chosen two villages in War located in one of these area as subjects of my major field-work. 178 184

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

Shella

Confederacy forms a more marked endogamous community, through being cut off geographically and economically from the rest of the Khasi, and socially from the neighbouring Hindu people. 621

The Economy and the People.

Shella lies along the upper part of the Shella River and stretches upwards along the steep slope, looking down towards the Bengal plain. The climate of this part of the hills is considered to be one of the worst in tropical India for human habitation. The Bengal plain, though warmer than this area, is considered more healthy. This border land is the zone of malaria, typhoid, black fever, cholera, etc. None of the Bengalee peasants dare to live in such an area. However, it is the most fertile for products such as betel-nuts, pan-leaves, oranges, bananas and pineapples, and it also produces limestone. These people seem to prefer to settle in this zone and to enjoy its prosperity, at the expense of human lives: every year, especially between March and September, the inhabitants suffer from various fevers and dysentry and other diseaes, many of the weaker facing death. 131 132 164 433 164 648

Before the Partition of India and Pakistan, the products of Shella were carried down the Shella River to Sylhet, one of the biggest centres in East Bengal, which brought unimaginable wealth to the Shella people. Their houses were built by carpenters from Sylhet. The style and structure of these houses were exceptionally elaborate for the Khasi. They purchased vast rice fields in the plain, which used to be cultivated by Bengalee and Garo labourers engaged by them. These Khasi do not themselves know how to cultivate rice fields; they have always been managers or landowners. Their boys used to be sent to high schools and colleges in Sylhet. As a result of their trading with the Bengalee, many of them read and speak fluent Bengalee. There is no difference between their style of clothing and that of the Bengalee, though the women maintain their traditional dress in the Shella style. 177 178 434 [439] [342] [166] [464] [871] [191] [291]

They have thus been distinguished from the rest of the Khasi not only geographically, but also economically and culturally. Their personality also differs sharply from the rest of the Khasi. They are very sociable, and quick, a quality lacking among the Khasi of Sohkynduh and Kongton. They are clever enough to deal with strangers. The upland Khasi say Shella people are very cunning. This remark shows one side of these people. They had to be cunning, since they traded with the Sylhet Bengalee who were said to be the most cunning of their race. Their role in the trade and in the history of the modernization of the Hills was considerable. For centuries they represented intellectual Khasi owing to their contact with Hindu civilization, while the Hills remained in darkness. They assumed an important role when the British established an administration in the Hills, and even up to now, many leading Khasi originated from this area: for instance, Lati Hat, the first interpreter of the British Headquarters at Cherrapunjee; Jeebon Roy, who was the first Magistrate among the Khasi; Maham Sing, a lawyer and Member of the Legislative Assembly (the grandson of Jeebon Roy); Nichols Roy, Minister of Health and Prisons of the Assam Government, Member of the Legislative Assembly, and Missionary of the Church of God; R. R. Thomas (brother of Nichols Roy), Principal of the Gauhati University, etc. 157 184 648 177 178 [439]

Through constant cultural contact with Hindu, and encouraged by their economic prosperity, the Shella Khasi, like the Jaintias, have been much influenced by Hindu culture. However, this does not mean that the people of Shella adopted the Hindu beliefs. Though there is a small Hindu shrine, and some ceremonial elements were borrowed from the Hindu, most of the 177 648 771 795

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

[Shella]

wife who lives with him. The Khasi woman lives with her mother. Some say the Khasi woman is his second wife, other say their marriage is not recognized by the public. 563

Actually, owing to the bad climate, very few non-Khasi live in this area. Besides the two non-Khasi just mentioned, there were a Bengalee tax collector and an Assamese Forest Officer, both of whom lived at Shella Bazaar. Bengalee villages are situated about five miles south of Shella. Except in the bazaar, Bengalee and Khasi have no social contact with each other, and intermarriages have been rare.

However, it is obvious that in the past the Khasi must have had many cases of intermarriage with Bengalee. Among the Khasi, there is a clan called 'Dkhar.' The term 'Dkhar' is also used for the peoples of the plains: Bengalee are called 'Dkhar' by the Khasi. They say that the Dkhar clan originated in Bengalee girls who married Khasi men and who went to live in the Hills. It is said that in older days, the Khasi often raided the Sylhet plain and kidnapped Bengalee girls as well as goods. In Bengalee records of Sylhet, Khasi appear as 'bloody Khasi.' Khasi old men say that in order to increase their population they did sometimes kidnap Bengalee girls, but that they treated these girls very nicely and kindly, no differently from their own people. Since they follow the matrilineal system, they decided to name their descendants 'Dkhar.' It is said that all the present Dkhar people are descendants of such marriages. The Dkhar are found more on the southern slopes of the Khasi Hills i.e. among the Wars. 101 563

It seems there were many reasons for the descendants by marriage between the Khasi and the Bengalee to become Khasi. First of all, it is said that in the olden days the Khasi wanted to increase the population by such marriages. At the same time, a Bengalee who married a Khasi became an outcast from his or her own society owing to the caste system, and this inevitably made them Khasi. Secondly, the Khasi were primarily grouped into the *iing*, and they considered the marriage relation as of secondary importance. Hence it was rather difficult to remove by marriage a Khasi man or woman from their native place. Thirdly, Khasi could hardly live in the plain where no betel-nut or pan-leaf gardens were available; they could not engage in rice cultivation in the plain, as the technique is entirely different from the cultivation of betel-nut or pan-leaf. Moreover, they said they could not stand the heat in the plain. Therefore, the orientation of intermarriages was always towards the Khasi community: the Khasi brought outsiders to their own land; they did not themselves leave.

Such a marked tendency on the part of the Khasi to remain attached to their own homeland, is in no way contradictory with the phenomena of their migration to places outside the Khasi Hills, owing to the exploitation of their homeland and to the increase in population. The formation of Jatinga represents such an instance; there are also the cases of modern Khasi women from sophisticated urban areas, who easily leave their homeland, after marriage with a non-Khasi; this also appears in the following data on Jatinga. 161 167 [563]

Jatinga

Jatinga is a Khasi village situated in the North Cachar Hills, three miles west from Haflong, the headquarters of the North Cachar Hills. The number of households was about sixty in February 1956. Their economy depends on the pan-leaf, orange and pineapple gardens, similar to that of the Shella people. 131 621 433

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

workers and they were few in number.[1] They were particularly employed for such work as the clearing of jungle for new pan gardens in summer. 245 464

In the orange season (December to February) the number of workers increased and they were paid more: Rs. 1/8 were paid[2] for one load (one person carrying 80 pounds of oranges, from an orange garden to the railway station—about two miles). Usually a worker made three to five trips a day. Many workers from Jaintia used to come for this particular season. 245 464 465

Semi-permanent workers were engaged for wet rice fields. They were usually Hindu cultivators: since these Khasi and other tribes do not know the technique of wet cultivation, plains people like the Bihàree immigrants were engaged. These workers were provided with servants' quarters where they lived with their wives and children. However, very few Jatinga households possessed rice fields. 243 464

The economic prosperity of Jatinga reached its climax during the period from 1934 to 1940. Since 1942, the orange production has been decreasing. In 1945, a serious disease attacked the orange gardens as well as the pan-leaf gardens. Besides, by depriving Jatinga, as it had Shella, of their most important markets, Dacca and Sylhet, the Partition of India and Pakistan in 1947 caused a serious economic depression in the whole region. On the other hand, because of the past prosperity, the population has rapidly increased during the last ten years. The serious economic condition of Jatinga is illustrated in the petition which was submitted by the Jatinga people when the Governor of Assam visited those areas in January 1956. It runs thus: 245 434 731 161 458

"Since the last ten years or so, with the increase of population in the village and with the loss of fertility of the soil, the people were faced with economic depression. At present they are facing acute shortage of land they have also no scope to adopt other forms of cultivation like jhuming and wet rice cultivation, etc. Moreover, there has been successive attack of Bright's disease which destroyed and wiped out all the orange and pan gardens. And as such, majority of the families have to depend for their livelihood on daily wages. . . ."

It is indeed a serious situation for them, because the Khasi do not produce staple foods, such as rice; their economy is completely dependent on the trade of their products by which they purchase their main provisions, clothes, etc. Other peoples round Jatinga, being jhum cultivators, can at least get rice and cotton: the minimum requirements, staple foods and clothing are available even in the worst conditions, so that they can at least maintain themselves though the standard of living is low. As I stated before, a few households in Jatinga possessed rice fields, but the majority had none. Recently they rented some plots of jhum field for rice cultivation from Zemi-Naga of neighbouring villages.[3] However, its yield was but a small percentage of their consumption. A few 182 434 [433] [243]

1. If they had worked in the gardens of Jatinga, they might have got more profit than from their own jhum fields. For one day's labour, they got Ans. 8/. For one month, they could earn Rs. 15 with which they could buy about 4-5 maunds of rice (one maunds paddy cost Rs. 3-4). For one year it became 50 maunds, which was impossible to produce in a jhum field by a single person's labour. [435

2. These rates, including the figures of note 1, apply to 1956.

3. Jatinga villagers told me that Zemi-Naga were kind enough to lend them their field for a negligible rent, though they had not enough for themselves. Zemi-Naga said that they owed much to Jatinga in the past, so that now they sympathised with the condition of Jatinga, and offered some parts of their jhum field. [427] [628]

pendable water supply. Villages are about two to five miles apart, and have no boundary markers. In the past, villages contained semipublic buildings and grounds: the home of the village priest (also the home of a chief if he resided in that village), the village marketplace, and tree groves, cremation grounds, or other awesome spots that were believed to be inhabited by supernatural beings. Villages today may have also one or more Christian churches, government social welfare buildings, and schools. Formerly, villages were entered through a guarded gateway; this is no longer the case, and paths feed into villages from all directions. Often several villages are nucleated into one large unit, named and also described as a "village." These were once defense units, but were so uncohesive otherwise that institutionalized rivalry obtained among the component villages. Now, they have been integrated through the agency of all-village public services, especially schools. **Housing.** The traditional Khasi house is entered through a door at the rounded end of a U-shaped ground plan, and is about 20 feet at widest extent; it is about 30 feet deep, and is elliptical or hogback in profile. Its walls are of stone blocks cemented with mud. The roof of grass thatch, supported by a bamboo frame, overhangs the walls on their outside, down to about three feet above the ground. The house is divided into two parts: the front one-third is on the ground level, floored either with stone blocks or tamped earth, and is used for storage of occupational instruments and as a shelter for poultry. The rear two-thirds is raised four feet on piles of stone blocks to a platform of planks, and is partitioned into six rooms, comprising a kitchen, areas for storage of food and water, and sleeping quarters. Furniture is minimal, and the house is totally undecorated. There are no windows, and no smoke vents. A house generally has a companion shed, walled of wood and grass matting and thatched with grass. This serves as a pigsty, but it may be partitioned also to house cows, and it may have a loft for fuel storage. Compounds often contain garden plots, and are fenced around with stone or bamboo and mud. Nowadays, the traditional house has given way to Western-style bungalows of wood and tin, especially in and around Shillong. [Cf. Mukherjee et al. 1941.]

ECONOMY. The Khasi economy is a market economy based on agriculture, and most Khasis are primary producers, sellers, middlemen, and/or providers of services in connection with markets. Khasis are often multioccupational: they produce goods for partial subsistence, and also play some part in trade. **Agriculture.** On the Shillong plateau, the major field crops are potatoes, maize, millets, and dry rice, still produced mostly through swidden farming, with a two- to three-year period of fallow, but increasingly through continuous use of a single field with the aid of ma-

243 on from October to December. For millets the seed is sown in April-May and reaped about six months later. Maize is usually sown in 244 April-May and ripens in August - September. For potato, generally three crops are raised in the district ; the first is sown in December-January and harvested in April-May, the second is sown in February-March and is gathered in June-July and the third is sown in July-August and is harvested in November-December.

245 For oranges and betelnut the orchards are cleared of weeds twice a year. Harvesting of orange takes place from October to January. Betelnut ripens at the beginning of the year and are collected between February and May.

241 2.6.3 **Agricultural implements.**—The usual agricultural implements are a hoe, a sickle, three or four kinds of doas, a harrow, a crowbar which is used for the construction of irrigation channels, 'sierras' and winnowing baskets. Bullock drawn plough is used in wet paddy cultivation in parts of Jowai subdivision and in Bhoi area and resembles the one in use in the plains of the State.

2. 6. 4. **General cultural practices.**—The cultivators mostly adhere to their indigenous practices of cultivation. Rotation of crops is not widely used. Cultivation of rice is usually done by broadcasting the seeds though transplanting is also in vogue in some areas. Mixed cropping is widely practised. Cultivation by making terraces in the hill slopes is gaining popularity in the district.

433 2.7 **Cottage Industries.**—Cottage Industries, it appears, have not 326 found very great favour among the people of the district. A few [323] families here and there manufacture iron implements, earthenware, [285] pottery, baskets, mats and jewellery. In striking contrast with other [306] districts weaving of cotton clothes is rare among the Khasis. The [286] Mikirs in Bhoi area and in areas adjoining North Cachar and Mikir [171] Hills practice it only for their domestic consumption. At present, the [654] Government is trying to popularise weaving in the district and this [231] has been welcomed by the Khasis. Among other cottage industries production of eri cocoon in the northern part of the district adjoining Kamrup district and bee keeping throughout the district are worth mentioning.

142 2.8 **The People.**—The Khasis and Jaintias are a short sturdy 147 race distinct from the neighbouring hill tribes. By nature they are 441 hardy and laborious and in respect of manual labour, they are free 563 from any inhibition. Side by side with the Khasis live the Mikirs, Garos and Nepalis who form respectively 7.32 percent, 3.38 percent and 3·27 per cent of the total rural population. Besides, there are plains people who are mainly concentrated in the town of Shillong. In the marketing centres of the border area there are large number of Bengali Hindus who dominate the bulk of the trade in the border areas.

241 2.9 **Occupation.**—The greater portion of the population of the [433] district subsists on cultivation. More than 75 percent of the rural [461] households are predominantly agricultural. The industrious Khasi agriculturists males and females have a high regard for hard labour

and even the well to do ones do not feel anything to work as labourers in other's farms. It is almost customary among the agriculturists to work in other's farms on wage basis, when agricultural operation in one's own farm are over. This is probably an outcome of the difficult transport situation. Among the non-agriculturists and those who follow agriculture as subsidiary occupation, a large number are porters and labourers engaged in jobs like transporting of goods from place to place, collection of limestone, sand, fuel, Collieries and forests of the district also offer employment to a good number of people. Since the taking up of road programme under the plan, a large number of people are getting employment in construction of roads, etc. It is heartening to note that for construction of roads, nay for all kinds of works demanding unskilled labourers, the district locally supplies the whole labour force. People in the various local points of the district, particularly those living in higher hills are mainly engaged in trade. The Khasis are indefatigable traders and have been able to keep almost the whole of the small trade in the district in their own hands. A small proportion of the people are engaged in cottage industries such as stone cutting, brick making, bee keeping, blacksmithy, cane and bamboo works, etc.

The number of persons returned in the 1951 census under each of the eight main livelihood classes for the rural tract of the district was as follows.

TABLE 1

Number of Persons (Source 1951 Census)

Head	Male	Female	Total	P.C.
(1)	(2)	(3)	(4)	(5)
A. Agricultural class:—				
1. Cultivators of land wholly or mainly owned and their dependents.	90,603	92,107	1,82,710	59·89
2. Cultivators of land wholly or mainly unowned and their dependents.	16,014	16,109	32,123	10·53
3. Cultivating labourers and their dependents.	14,053	14,941	28,994	9·50
4. Non-cultivating owners of land, agricultural rent receivers and their dependents.	344	562	906	·30
Sub-total	1,21,014	1,23,719	2,44,733	80·22
B. Non-agricultural class:—				
5. Production other than cultivation.	11,791	10,309	22,103	7·24
6. Commerce	3,237	4,069	7,306	2·39
7. Transport	355	264	619	·20
8. Other services and miscellaneous sources.	17,462	12,864	30,326	9.95
Sub-total	32,848	27,506	60,354	19.788
Total	..	..	3,05,087	100.00

There is another 102·21 acres of land in Subacherra in the Indo Pakistan Border which is under tea plantation since prepartition period After partition this area has fallen into India. But at present though tea plantation is still carried on, the revenue has never been collected at all since the company has gone to Pakistan. 423 651 648

There are also in Jowai subdivision 15 numbers of building land sites, mostly leased out to non-Khasi individuals and institutions. They include building for churches, schools, hospitals and training classes, etc. The total area comes to 397·39 acres with a total revenue of Rs.216·84 per year. The period of the lease varies from one plot to another.

A part from land revenue, all the houses in Jowai subdivision are subjected to taxation. The rate is fixed at Rs.2 to Rs.6 per year according to the economic condition of the village. In Shillong subdivision only 31 Sirdarships which were formerly known as British Sirdarships have to pay house tax.

2.12 **Land Utilisation.**—The following table gives the area under important crops. 241 433

TABLE 2

	1958-59	
Winter rice	37,800	acres.
Maize	8,000	"
Other cereals	1,000	"
Potato	21,600	"
Chillies	350	"
Sweet potato	5,400	"
Linseed	180	"
Cotton	50	"
Tobacco	600	"
Arecanut	13,455	"
Orange	20,000	"
Betel-leaf	10,000	
Total	1,18,435	acres.

3.3 **Measures so far taken.**—Since 1947, there has been constant demand from border people for relief and rehabilitation. Government undertook various measures to alleviate their difficulties. Government's attention to border problem has however, not been adequate. The common feeling of border people was that whenever the border problem deteriorated due to some adverse measures adopted by East Pakistan authorities more attention was attracted, on the other hand, when the situation eased comparatively the Government's vigilance also slackened. 643 659

The various measures so far adopted by Government in border area, have been fully discussed and commented upon by the Border Rehabilitation Committee. These need no repetition here. But a few points emerging from the grievances put forward by the villagers during our investigation are noted below.

On the question of the schemes linked up with the issue of diversification of agriculture in border area, a large section of the border people skilled in the maintenance and operation of orchards are opposed to the idea of a complete switch over from cash crops to food crops in the cultivation of which they have no adequate experience. Moreover, there is the problem of getting adequate land in the vicinity for wet paddy cultivation. Indeed, having lost the market for some of the cash crops, some cultivators are trying to increase cultivation of paddy and other valuable crops on their own initiative wherever suitable land is available. But the problem of getting adequate funds for reclamation and improvement of land has stood as a serious handicap to them. Financial assistance to the needy and willing cultivators for reclamation works and taking up of more minor irrigation projects is very necessary. 178 241 433

As regards Government loans granted to cultivators, people complained that apart from being inadequate they are often untimely. As a result the people, needy as they are, utilise the amount for meeting their day to day consumption expenses. 241 651 659

There have been complaints that various improved seeds supplied by Government are of very inferior quality leading to waste of time and money of the poor people. The Department of Agriculture should not only check the quality of the seeds before issue but should also see that the seed are properly used by inexperienced cultivators who are newly taking up cultivation of these crops.

With the opening up of a few vital P. W. D. Roads transport of border products to Shillong and other places has greatly been facilitated but the problem of transporting them from remote interiors to the various local points on P. W. D. roads still remains unsolved. While during winter season these places may be negotiated by a man on foot up and down the steep gradients, during rainy seasons these tracks become slippery, the streams and rivulets are over-flooded and it becomes impossible for a man to cross them, thus isolating the villages from each other leading to cessation of trade and all other activities between villages. Properly planned test relief schemes for construction of feeder roads and bridges linking up these villages, will, apart from giving some works to the people alleviate much of the difficulties of transportation of agricultural produce. 489 491 659

Name of village (1)	Name of society (2)	Sponsored by (3)
7. Sohrai ...	(1) Credit Society.	Local people
	(2) Co-operative Trading Society.	
8. Durang ...	Marketing Society.	Do
9. Shella ...	Trading Co-operative Society.	Do.

6.10 **Cottage Industries.**—It has already been mentioned that Village and Cottage Industries are not very popular in the district.

The following table shows the industries reported from the sample villages :—

TABLE 5-9

Industry (1)	No. of villages reporting existence of the industries. (2)	No. of villages reporting production for sale. (3)
Cane and bamboo works ...	9	7
Blacksmithy	8	5
Tailoring	2	2
Handloom	—	—
Weaving and Spinning ...	3	1
Rearing of cocoons, etc. ...	1	1
Rearing of lac	1	1
Others	2	1

Blacksmithy and making of baskets, cane products, etc., out of cane and bamboo, are a traditional occupation. Weaving and spinning of cotton, rearing of muga cocoon and weaving of eudi, etc., are in vogue only in the Khasi area and the areas adjoining Kamrup and North Cachar and Mikir Hills districts. Lac rearing is found in the northern portion of the district, *i.e.*, Nongpoh area.

Except cane and bamboo works and blacksmithy other industries are practised in a very limited scale. There is thus a lot of scope for intensively encouraging industries in the district.

General area.—

1. Mawphlang	Paddy and maize	Dao, hoe and plough	Bone-meal, dung and chemical.	241
2. Jowai	Paddy, maize and betel-leaf	Dao, hoe and plough	No.	
3. Byllah	Paddy, maize, etc.	Dao, hoe and plough	No.	
4. Mawkyrwat	Paddy, maize and potato	Dao, hoe and plough	No.	
5. Amlo	Paddy, maize and millet	Dao, hoe and plough	No.	
6. Langrinang	Paddy, maize and millet	Dao, hoe and plough	Dung and bone-meal.	
7. Mawkhrit	Paddy, potato and maize	Dao, hoe and plough	Bone-meal.	
8. Kupmain	Paddy and maize	Dao, hoe and plough	No.	
9. Dawrpa	Paddy, potato and maize	Dao and hoe	No.	
10. Jowai	Tapioca, millet and orange.	Dao and hoe	No.	

This table reveals that in one region there is bias for cash crops and in the other for food crops—more or less depending upon the soil and topography of the regions. Extreme hardship occurs when there is deficiency in food production or a glut in the market of cash crops. The cash crop producers are, of course, trying to adapt their crops to the changing market conditions. With the loss of market for oranges, the people in the border areas are trying to increase their betelnut production and start cultivating paddy, potatoes, etc. Throughout the district, people are trying to increase wet paddy cultivation. Wherever water is available, they spare no pain to convert it into a wet paddy field. Similarly, increasing interest is evident among the people in the cultivation of valuable crops like black-pepper, cashewnut, etc., which have a good prospect in the border areas. It is felt that there is considerable scope for intensification of cultivation of chillies, turmeric, coffee, etc. But any new endeavour demands heavy initial investment which often is not within the reach of cultivators. Government should continue to advance adequate agricultural loans to the needy cultivators in a better planned manner. 178 241 433 458 44

Only 19 out of 28 villages reported use of bullock driven ploughs for wet paddy cultivation. But even in these villages animal power is not universally used. Of course, in the rocky fields people have no alternative to the use of hoes and spades but in some areas particularly in the wet paddy field, bullock driven ploughs may profitably be utilised. It is not that the farmers do not realise the advantage of ploughing but want of funds for purchase of bullocks, etc., is reported to be the cause of continuance of the old practice. Both broadcasting and transplanting methods are in vogue in paddy cultivation the latter being a recent introduction is gaining popularity. Some farmers in the project area villages have tried line sowing but according to them it is very laborious and amounts to 178 241

#162 125 161 621

5.2: The following table shows the classification of population by age and sex in the three areas :—

Age and Sex Composition of Population

Age Group	Border area			Project area			General area		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1. Below 3 yrs.	[illegible]	[illegible]	[illegible] (10·[illegible])	[illegible]	[illegible]	[illegible] (10·[illegible])	[illegible]	[illegible]	[illegible] (10·[illegible])
2. 3 to below 15 yrs.	[illegible]	[illegible]	[illegible] (24·[illegible])	[illegible]	[illegible]	[illegible] (23·[illegible])	[illegible]	[illegible]	[illegible] (28·[illegible])
3. 15 to below 45 yrs.	[illegible]	[illegible]	[illegible] (37·[illegible])	[illegible]	[illegible]	[illegible] (3[illegible]·[illegible])	[illegible]	[illegible]	[illegible] (3[illegible]·[illegible])
4. 45 yrs. & above	[illegible]	[illegible]	[illegible] (1·[illegible])	[illegible]	[illegible]	[illegible] (1·[illegible])	[illegible]	[illegible]	[illegible] (0·[illegible])
Total	[illegible]	[illegible]	[illegible] (100·00)	[illegible]	[illegible]	[illegible] (100·00)	[illegible]	[illegible]	[illegible] (100·00)
No. of females per 1,000 males	—	[illegible]	—	—	—	[illegible]	—	—	[illegible]

It is seen that the population under 15 years of age in the border area, project area and general area were respectively [illegible] per cent, [illegible] per cent and [illegible] per cent of the total population in these areas, while that under age group between 15 to 45 years, constituted respectively [illegible] per cent, [illegible] per cent [illegible] per cent of the population in the three areas.

It is evident that population of females was on a whole greater than that of male in border area and project area and less in general area. The number of females per 1,000 males in border area, project area and general area were respectively [illegible], [illegible] and [illegible] against the 1951 census figure of 985 females per 1,000 males in the rural areas of the district of United K.J. Hills.

5.3: The following table shows the classification of population by religion.

TABLE G-5

#162 779

Classification of Population by Religion

Area	Tribal religion	Christianity	Hinduism	Other religion	Total
(1)	(2)	(3)	(4)	(5)	(6)
1. Border area	[illegible] ([illegible]·[illegible])	[illegible] (28·[illegible])	[illegible] (1[illegible]·[illegible])	[illegible] (0·[illegible])	[illegible] (100·00)
2. Project area	[illegible] (27·[illegible])	[illegible]	[illegible]	[illegible]	[illegible] (100·00)
3. General area	[illegible] (9[illegible]·[illegible])	[illegible] (10·[illegible])	[illegible] (0·[illegible])	[illegible]	[illegible] (100·00)

[4133] [563] Population following Hinduism and other religion in the border area comprises mostly of displaced persons from East Pakistan following trade and business as their means of livelihood, while those in the general and project areas are mainly the Nepalese who are generally engaged in cattle rearing and agriculture.

[illegible] A perusal of the table above will show that proportion of families following non-agricultural labour as principal occupation is higher in [illegible] areas. Majority of these families were formerly engaged in agriculture but due to adverse circumstances arising out of fragmentation, [illegible] were forced to take to other occupations. The adult male and normal F.M.D. units gave employment to a large section of these people. Other avenues of employment are collection and carriage of timber, woodcutting, and carving of sandalwood, etc. Traders in cultivated articles and groceries who formed the bulk of the traders in the border [illegible] were are largely the displaced persons and the Bengali people concentrated in Bhalgaon and Dalai. Others are petty traders dealing in fruits, vegetables, fish, clothes and other handicraft. Under craftsmen manufacturers, etc., comprise the lower families, blacksmiths, carpenters, etc., Commission agents, Educators, Doctors, etc., are shown as others.

[illegible] In the following table the families in the three village groups are classified according to their subsidiary occupation.

As is manifest, agriculture cannot not be the single major industry giving employment to about 3/4th of the employed persons. In Sunder area this accounts for 78 per cent of the total employed persons. Among the other industries giving employment to the rest of the employed persons come in order of importance, construction (3 per cent), trade and commerce (3 per cent), mining and quarrying (3 per cent) and manufacture such as manufacture of footwear, production of garments, other wood and stone products (3 per cent). In Pegam area, apart from agriculture which accounts for 78 per cent other industries in order of importance of employment come construction (11 per cent), service and profession, manufacture, trade and livestock (2 per cent each), and mining (4 per cent). In Central area agriculture give employment to 88 per cent of the population. Then in it come livestock mining, manufacture and forestry which account for 4 per cent and 3 per cent respectively of the total employed persons.

CHAPTER VIII

Farm Output and sale

8.1 As a large majority of the family income is mainly from their farms, an attempt is made below to analyse the data collected on farm output, disposal and sale of produce. The data relate to the agricultural year March, 1957 to February, 1957.

8.2 **Output:** The following table sets forth some interesting data on farm output average cultivated area, etc. of cultivators by value groups.

TABLE F-1

Number of families by Gross output group

Gross output group (Rs)	Sadar area		Project area		Control area	
	No. of families	Average cultivated area (acres)	No. of families	Average cultivated area (acres)	No. of families	Average cultivated area
(1)	(2)	(3)	(4)	(5)	(6)	(7)

TABLE F-2

Number of Families

Gross output group Rs.	Border area				Project area				General area			
	Small farms	Medium farms	Large farms	Total	Small farms	Medium farms	Large farms	Total	Small farms	Medium farms	Large farms	Total
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
0	35	22	3	60	17	3	—	20	1	1	—	2
Less than 100	145	28	1	177	41	6	—	47	9	1	—	10
100 — 200	77	45	2	124	69	16	1	86	31	6	—	37
200 — 300	63	66	32	161	95	37	1	133	32	18	1	51
300 — 1000	18	79	56	149	54	100	4	158	19	38	4	61
1000 — 2000	3	24	50	77	4	42	10	57	—	11	9	20
2000 — 3000	—	9	11	20	—	—	8	8	—	—	1	1
3000 — 4000	1	1	5	7	—	—	3	3	—	—	—	—
4000 and above	—	4	6	10	—	—	2	2	—	—	—	—

As is to be expected, large output groups are associated with higher farm size groups. It will also be seen that proportion of farms with an output of less than Rs. 500.00 per annum in Border area, Project area and General area are respectively 67 per cent, 55 per cent and 60 per cent. A joint consideration of the proportions and the size of cultivated area in the three groups indicates that the large majority of farms in Border area are less profitable than those in the other two areas though the farms in Border area are sown with very rich cash crops. This is further amplified by the fact that in Border area of the total number of farms fetching less than Rs. 500.00 a year, 35 per cent are medium sized farms and 6 per cent are large sized farms, the corresponding percentages for the Project area being 23 per cent and 1 per cent and for General area 27 per cent and 1 per cent respectively.

8.3.—The following table summarises the data on relative importance of crops, harvested area under different crops, average yeild of crops and sale proceeds, etc.

TABLE F-3
Yield rate of some important crops

Crop	Border area			Projet area			General area		
	Gross farm area harvested (in acres)	Average yield per acre	Sale proceed (Rs.0.00)	Gross farm area harvested (in acre)	Average yield per acre	Sale proceed (Rs.0.00)	Gross farm area harvested (in acre)	Average yield per acre	Sale proceed (Rs.0.00)

=[illegible] " " " betelnut.
(b) 1 Kuri=100 leaves.
(c) Potato here relates to potato harvested in winter months.

341
423
435

241 311 433

8·4—Relative importance of crops—Total gross farm area harvested amounted to 3324.48 acres in Border area, 1700.40 acres in Project area and 561 acres in General area.

From above table it will be seen that in Border area, orange accounted for the highest proportion of harvested area, *i.e.*, 31 per cent, followed in order of importance by betel nut, paddy, betel leaf and millet which respectively accounts for 17 per cent, 19 per cent, 9 per cent and 3 per cent of the total harvested area. Other crops which account for 248.68 acres (7 per cent) includes maize, tezpata, banana, turmeric, dal, blackpepper and other fruit crops.

Considering sale proceeds, it is clear that betelnut happens to be the main earner accounting for 60 per cent of the total sale proceeds followed by orange, paddy and betel leaf which respectively account for 22 per cent, 6 per cent and 5 per cent of the total sale proceeds. Thus orange and betel leaf which in pre-partition days were the main earner-crops in the Border area have been passed to second and forth position respectively—the proportions fetched by them, particularly by betel leaf, being negligible. On other hand as there is a good market for betel nut, Border people have taken to betel nut cultivation in a more extensive scale.

241 245 311 433

It is significant that while in Border area total farm area is 3914 acres, total area harvested comes to only 3325 acres including area under mixed cropping which is in wide practice in Border area particularly for orange, betelnut, and for some other minor crops. Thus proportion of unharvested farm area emerges out to be considerable which can be accounted for the following reasons:—

(1) The farm area includes some new gardens particularly of betelnuts which usually take quite a few years to bear fruits.

[44]

(2) Reportedly a large number of orange and betel-leaf gardens were not harvested at all as there was no market for them.

241 433 44

Turning our attention to Project area and General area, it will be found that paddy eclipses all other crops in as much as in the two areas it respectively covers 82 per cent and 61 per cent of the total harvested area in the respective area. In Project area paddy is followed by Betel leaf, orange, potato and betelnut in order of importance while in General area it is followed by potato, millet, orange, betel leaf and betelnut. In both the areas as will be seen from table above, almost all the crops retain their respective position in value. Considering sale proceed, in Project area, paddy occupies the highest position accounting for 77 per cent of the total sale proceeds followed by betel leaf, orange, betelnut and potato accounting respectively for 8 per cent, 5 per cent, 5 per cent and 1 per cent of the total sale proceeds. In General area, in order of importance of sale proceed paddy, potato and betelnut are worth mentioning fetching respectively 45 per cent, 30 per cent and 4 per cent of the total sale proceeds.

8·5—In the following paragraphs we have reproduced the yield rates of different crops, calculated on the basis of area harvested and total produces reported by the cultivators. For assesment of correct yield rates it is necessary to conduct a scientifically designed crops cutting survey which in view of its largeness in magnitude and other complexities associated with the type of experiments, could not be fitted in with the programme of the present survey. It is admitted that the yield estimates worked out by us are proved to be subjected to the usual limitations of this type of data. 128 433

Yield

1. **Paddy.**—It will be seen from table above that average yields of paddy per acre for Border area, General area and Project area are respectively 8.38 maunds, 12.92 maunds and 12.60 maunds and for the district as a whole it comes to 11.65 maunds though there are cases where maximum yield goes to above 18 maunds per acre. Thus it is seen that the average yield is much less than the average yield for the State of Assam (plain district) which is above 18 maunds per acre. Average yield in Border area is evidently much smaller. Apart from low fertility of land, another reason for this low average is that in a number of villages selected from Border area such as Syndai, Amki and Lumshnong, there was widespread havoc to standing crops was caused by wild elephants. 243 433 [136]

2. **Potato.**—The average for the three areas comes to 21·61 maunds per acre which is in contrast to the State average of above 40 maunds per acre. Our estimate has in fact been lowered due to inclusion of a few villages in the foot hills where potatoes don't grow well, otherwise in a number of high altitude villages, yield per acre well exceeded 40 maunds. The average for Border area is rather too low. Apart from unsuitability of Border land of high altitude potatoes another reason for this low average is that during the reference year the crop suffered from widespread incidence of pests and insects. 244 433 [136]

3. **Orange.**—yield of orange in Border area, Project area and General area was found to be 5. 27 luties or 5396 numbers against 16.76 luties or 17162 numbers and 2.80 luties or 2867 numbers respectively Thus the average yield in Border area, even considering the mixed nature of some gardens is much low. The reasons are obvious. 245 433

4. **Betelnut.**—Average yield per acre from Border area, Project area and General area was found to be 2.93 luties (18752 numbers), 4.11 luties (26304 numbers) ann 3.03 luties (19392 numbers) respectively bringing the average for all the three areas to 2.95 luties per acre. 249 433

5. **Betel leaf.**—Average yield per acre works out as 17·15 kuris, 10.64 kuris and 24 kuris in Border area, Project area and General area respectively. Thus in Border area the average is much lower. This is due to the fact that most of the gardens remained unplucked for want of market for leaf.

426 Of the total number of loans 81 per cent in Border area, 18 per cent in Project area and 20 per cent in General area were free of interest while rate of interest for 9 per cent, 30 per cent and 60 per cent respectively of the loans in the three areas were found to be 20 per cent or more per annum which in cases ranged upto 200 per cent.

241 434 592 10.8. Farm output of 67 per cent of the families in Border area, 56 per cent of families in Project area and 60 per cent of families in General area wee less than Rs. 500. a year, while 5 per cent, 30 per cent and 1 per cent of the families in the respective area earned more than Rs. 2,000.00 a year from their farms. Of the total number of farms fetching less than or Rs. 500.00 a year in Border area 35 per cent of them are medium sized farms and 4 per cent large sized farms, the corresponding proportions for Project area and General area being 21 per cent, 1 per cent, 27 per cent and 1 per cent.

24 433 10.9. In Border area the most important crops are oranges, betelnut, paddy, and betel leaf which respectively accounted for 31 per cent, 27 per cent, 19 per cent and 9 per cent of the total harverted area. In Project area paddy and orange are the most important crop which accounted respectively for 82 per cent and 8 per cent of the total harvested area. The most important crops in the General area are paddy and potato which respectively accounted for 61 per cent and 7 per cent of the total harvested area.

On the basis of data collected for all the villages investigated average yield per acre worked out at paddy 11.65 maunds, potato 21.61 maunds, oanges 5.77 lutis (5908 numbers) and betelnut 2.95 lutis (12980 numbers). These yield exhibited wide variation among the three areas.

434 592 10.10. Proportions of families with annual gross income of less than Rs. 750, Rs. 750 to less than Rs. 3,000, and above Rs. 3,000, were respectively found to be 49 per cent, 45 per cent and 6 per cent in Border area, 34 per cent, 60 per cent and 6 per cent in Project area and 45 per cent, 54 per cent and 1 per cent in General area. Average annual gross income per family worked out at Rs. 1,078.50 in Border area, Rs. 1,229.40 nP. in Project area and Rs. 844.34 nP. in General area which for predominantly agricultural and non-agricultural families respectively stood at Rs. 1,025.06 nP. and Rs. 1,161.91 nP. in Border area, Rs. 1,095.33 nP. and 1,644.36 nP. in Project area and Rs. 873.98 nP. and 780.84 nP. in General area. In all the three areas main contributors to family income were agriculture, service-profession-labour and trade accounting respectively for 41 per cent, 35 per cent and 15 per cent of the total average income in Border area, 37 per cent, 40 per cent and 9 per cent in Project area and 53 per cent, 36 per cent and 5 per cent in General area.

The net annual income per family in different income groups varied between R. 60 to 2,949 in Border area, between Rs. 110 to Rs. 3,509 in Project area and between Rs. 98 to Rs. 2,004 in General area. The average over all per family net annual income worked out at Rs. [illegible] in Beder area, Rs. 989 in project area and Rs. 750 in General area and the same per capita at Rs. 231 in Border area, Rs. 216 in Project area and Rs. 053 in General area.

(9) Cotton is grown on high lands and
248 slopes; it is sown in April, and becomes fit for picking by January.

311 Area and Outturn of Crops.—According to the Assam Administration Report for 1875-76, the area of the British portion of
241 the Khásí and Jáintiá Hills District amounts to 2160 square miles,
648 of which only 110 are under cultivation; of the remainder, 1337 square miles are set down as cultivable, and 713 as uncultivable. The total area of the semi-independent Khásí States is given as 3997 square miles, of which 176 are under cultivation, 2561 are cultivable, and 1260 uncultivable. In another portion of the same Report, the area under various crops throughout the entire District is thus approximately estimated:—Rice, 59,880 acres; other food grains, 37,800 acres; cotton, 1076 acres; potatoes, 33,880 acres. The average out-turn of rice per acre is estimated at 8 *maunds*, or nearly 6 cwt.; of other food grains, 3 *maunds*, or over 2 cwt.; of cotton, 1 *maund*, or 1¼ cwt.; of
[435] potatoes, 55 *maunds*, or nearly 40 cwt. The price of rice in 1875-76 was Rs. 4. 8 per *maund*, or 10s. 8d. a cwt., which gives Rs. 36 or £3. 12s. as the value of the rice crop obtained from one acre.

241 Condition of the Peasantry.—The Khásiás can scarcely be
423 considered as agricultural people, as they do not grow sufficient
• 433 grain for their own subsistence, and are dependent to a great extent on imports of rice from the neighbouring Districts. Ten acres is generally considered a comfortable holding for a husbandman in the position of an ordinary Bengal peasant, but scarcely any man in the Hills depends entirely upon the produce of his land for
[231] his support. In the Jáintiá Hills a cultivator's position is con-
[554] sidered to be very low if he possesses no cattle, but performs all the operations of agriculture with his own hands. In that portion of the District, five acres is all that can be cultivated with a single
[465] pair of oxen, the average being four acres. A husbandman with a holding of five acres would not be so well off as a retail shopkeeper, nor would it enable him to live as comfortably as he could on a money wage of Rs. 8 or 10s. a month. The peasantry, however, as a class are not in debt. The land is owned chiefly by small proprietors, who occupy and cultivate their hereditary fields. The relations of landlord and tenant do not exist in the Hills, and no rent is payable to any one; consequently the principle of Act x. of 1859 (the Rent Law of Bengal) has no application.

231 The Animals used in agriculture are oxen; goats and pigs are
435

20: Hunter G-4 (no date) 1897 AR? Khasi AR?

supply. As the District depends so largely for its supply of rice upon Sylhet and Kámrúp, the state of the markets in those places exercises a greater influence on the rates in the Hills than any failure of the local harvest. In the year 1898 the price of common rice is said to have risen as high as 6 *seers* for the rupee, or 180. 8d. per cwt., in consequence of the failure of the crops in the plains.

ROADS AND MEANS OF COMMUNICATION.—The following are the eight principal lines of road in the Khási and Jaintia Hills:—(1) Road from Shillong to Cherrapunji, in Khásiya. This road has recently (1877) been opened for wheeled traffic throughout its entire length. The Deputy-Commissioner's Report for 1876-77 states that the number of passengers passing up and down may be estimated at about 800 or 1000 every month, and the number of carts already used at about 130. The *dawk dák* brings travellers up to Shillong from Cherrapunji in two days by a comfortable and easy carriage service, while for natives a cheaper conveyance by bullock cart is available. At Cherrapunji there is a good *dák* bungalow in charge of a *khánsámá*, where the usual accommodation provided in a hotel is to be found. The stages to Shillong are as follow:—(2) Cherrapunji to Borsúlah, 17 miles. The road is good throughout. There is a *dák* bungalow in charge of a *chaukidár* at Borsúlah, where grain and rice are procurable. (3) Borsúlah to Nongpoh, 14½ miles. The road is hilly throughout, but good. At Nongpoh, which is at an elevation of 1500 feet, there is a *dák* bungalow in charge of a *khánsámá*, from whom tea, liquors, and biscuits, etc. can be obtained. The *dák* bungalow is furnished with bedding, linen, etc. Grain and rice can be purchased in the *bázár*. (4) Nongpoh to Umsning, 18½ miles. At Umsning, elevation 1500 feet, there is a *dák* bungalow in charge of a *chaukidár*. Supplies or coolies are not procurable, but sometimes grain and rice can be purchased. (5) Umsning to Umjam, 15½ miles. At Umjam there is a Public Works Department rest-house in charge of a *chaukidár*. Supplies or coolies are not procurable. (6) Umjam to Shillong, 15½ miles, of which 6½ are a continuous ascent. At Shillong there are *dák* bungalows in the Artillery Lines, containing four separate rooms. A *khánsámá* is in attendance, and the rooms are completely furnished with bedding, linen, etc. This entire road, which has a total length of 63 miles, is as perfect a hill road as could be seen in any country, and a model of engineering skill. (7) Road running from Cherrapunji across the Hills, via Songlúm, Mawfang, Chaná

20: Hunter G-4 (no date) 1897 AR? Khasi AR?

at Rs. 480,000, or £48,000, and the revenue derived by Government from the quarries was Rs. 63,266, or £6,326. In addition, the Khasi Chiefs receive a revenue from this source of more than £1000.

Iron.—The smelting of iron was once the chief industry in the Khasi Hills, and a considerable quantity of the metal used to be exported into Sylhet, both in the crude and the manufactured state. Recently, however, this industry has almost died out, in the face of the competition of the superior article imported from England and sold in the plains at a cheaper rate. The indigenous methods of extracting, washing, and smelting the ore have been minutely described by Professor Oldham. The following description is taken from Mr. Allen's Report, dated 1878, at which date the annual export of smelted iron was estimated at 43,000 *maunds*, valued at Rs. 63,500, or £6,350, at the rate of Rs. 1. 8 per *maund*:—"The ore is said to be most abundant and of the best quality in the State of Khyrim, especially at the villages of Nongkrim and Nongmaki. A few iron articles, such as *dáos* or bill knives, *kukiffs* or cutlasses, spear and arrow heads, are manufactured by the Khasi smiths in the Hills; but the greater bulk of the smelted iron is sent to the plains for sale in circular lumps weighing about 4 or 5 *seers*. These lumps, called *ilrol*, sell at Chhatak for from Rs. 1. 4 to Rs. 1. 6 per *maund*. The best iron, however, which is known into here called *pati*, sells for from Rs. 1. 10 to Rs. 1. 12 per *maund*. Khasi iron is preferred to English, in consequence of its greater malleability. It is much used by the native boat-builders of Sylhet and the neighbouring Districts to make fastenings for the timbers of their boats. When brought into the market, it is more than half drossy, and it is this circumstance which renders the iron trade unprofitable. The cost of carriage from the Hills to the plains is about 6 *annas* per *maund*; and the traders, who are all Khasiás themselves, affirm that they get an average profit of only 2 *annas* per *maund*." The tables of trade for 1876-77 return no smelted iron as exported from the Hills, but Rs. 3000 of iron implements exported, against nails and ironmongery imported to the value of Rs. 18,000.

The Manufactures of the District, besides iron, consist of coarse cotton and woollen cloth, plain silver work, rude implements of husbandry, coarse baskets made of the fibre of the pine-apple, common pottery, and mats and baskets. With the exception of the

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

648 797 871 858

of parents undergoing considerable privations rather than deny their children education; and in many families it has become a matter of ordinary routine to send the children to school. This only refers to the younger children; for after boys have attained their fourteenth or fifteenth year, their parents grow impatient for their pecuniary assistance. It is the custom among the Khásis to inure very young children to work, so that they may earn enough to support themselves as soon as ever they can manage strap and basket. It is common for a boy to realise from ten *pies* to five *annas* a day for his parents; and it is considered sufficient sacrifice for the latter to have kept him at school up to his fourteenth year.'

631 651 433

KHASI STATES.—The following is a list of the nineteen semi-independent Khási States or Democracies, with the particulars of information that are available for each, taken from the Assam Administration Report for 1875-76:—

(1) BIRWAS or WAHRAH.—Name of Siem, U Baman Singh, age in 1876, 16 years; approximate population of State, 369; estimated gross revenue—from market dues, Rs. 10; from *mílikhed* on lime quarry, Rs. 16,000—total, Rs. 16,010, or £1601; products, rice, millet, *tejpát* or bay leaves, black pepper, Piper nigrum; minerals, lime.

(2) CHHAKA or SHOKAN.—Siem, U Hájan Máik, aged 42; population, 8260; revenue—from market dues, Rs. 7000; judicial fines, Rs. 150; *milikhed* on lime quarry, Rs. 200; *zemindári* holding in Sylhet, Rs. 1500—total, Rs. 8850, or £885; products, cotton, millet, betel-nuts, *ádá*, oranges, black pepper, Piper nigrum, chillies, turmeric, ginger, and honey; manufactures, bamboo mats and bamboo baskets; minerals, lime, iron, and coal.

(3) SHELLA.—Wíhadádáru, U Jirdí, aged 29, and U Ráí Singh, aged 35, of whom the former can read and write both Khási and Bengáli a little; population, 5511; revenue—from market dues, Rs. 300; judicial fines, Rs. 400—total, Rs. 700, or £70; products, oranges, betel-nuts, and pine-apples; manufactures, bamboo mats and bamboo baskets; minerals, lime and coal.

(4) KHYREM or NONG-KREM.—Siem, U Kher Singh, aged 32; population, 20,504; revenue—from pension allowed by the British Government, Rs. 1800; market dues, Rs. 9000; judicial fines, Rs. 400; *milikhed* on lime quarry, Rs. 1900; contributions for State purposes, Rs. 1000—total, Rs. 10,100, or £1010; products, rice, cotton, millet, 'Job's tears,' caoutchouc, cinnamon, *mikhlang*

20: Hunter G-4 (no date) 1897 AR? Khasi AR?

(a kind of turnip), betel-nuts, Indian corn, *pân*, oranges, tea, potatoes, black pepper, Piper nigrum, chillies, turmeric, ginger, and honey; manufactures, cotton cloth, *eri* silk cloth, *dâo* or bill knives, *kuddâlis* or mattocks, knives, hammers, crowbars, wedges, mats, and baskets; minerals, lime, coal, and iron. 631 651 633

(5) Myllum or Mylliem.—Siem, U Hain Mâsik, aged 30; population, 12,266; revenue—from market dues, Rs. 250; State contributions, Rs. 1000; judicial fines, Rs. 205; forest rent, Rs. 15—total, Rs. 1690, or £169; products, cinnamon, sugar-cane, rice, 'Job's tears,' Indian corn, *sulphang*, ginger, and millet; manufactures, *dâos* and baskets; minerals, iron.

(6) Langrin or Langkin.—Siem, U Ber, aged 25; population, 1867; revenue—from market dues, Rs. 250; *mâlikhud* on lime quarry, Rs. 300; forest rent, Rs. 60; fisheries, Rs. 30—total, Rs. 640, or £64; products, rice, millet, chillies, turmeric, and ginger; minerals, lime and coal.

(7) Maharam.—Siem, Amthar Singh, aged 38; population, 4[illegible]; revenue—from State contributions, Rs. 400; market dues, Rs. 100; forest revenue, Rs. 55; *mâlikhud* on lime quarry, Rs. 350; judicial fines, Rs. 100—total, Rs. 1045, or £104. 10s.; products, 'Job's tears,' black pepper, Piper nigrum, chillies, bay leaves, honey, Indian corn, *sulphang*, cinnamon, cassia-bark, sugar-cane, and ginger; manufactures, *dâos*, *kuddâlis*, and hammers; minerals, iron and lime.

(8) Maoyang or Maoyong.—Siem, U Jit Singh, aged 35; population, 1238; revenue—from lime quarries, Rs. 250. 8; house tax, Rs. 9; rent of fisheries, Rs. 30; judicial fines, Rs. 100; State contributions, Rs. 50—total, Rs. 350. 8, or £35. 3; products, honey, bees-wax, cotton, rice, millet, 'Job's tears,' *sulphang*; manufactures, mats; minerals, lime.

(9) [illegible] Siem, U [illegible], aged [illegible]; population, 947; revenue—from market dues, Rs. 180; State contributions of an uncertain nature, Rs. 150—total, Rs. 330, or £33; products, potatoes, millet, chillies, turmeric, honey, and ginger; manufactures, mats; minerals, lime, coal, and iron.

(10) Malai-soi-mat or Malaiwamat.—Siem, U Shangram Singh, aged 33; population, 499; revenue from market dues, Rs. 50; *mâlikhud* on lime quarry, Rs. 750; State contributions, Rs. 50; forest revenue, Rs. 50—total, Rs. 900, or £90; products, rice, millet, 'Job's tears,' ginger, chillies, turmeric, bay leaves, betel-nuts, and oranges; manufactures, mats; minerals, lime.

on a historical past, different from that of the Khasi groups, the former having been ruled by the powerful, but somewhat disturbed dynasty of the Jaintia Raja and the Jaintia Wars of the British; the latter by small independent chiefs. Yet Jaintia social organization appears on the whole to preserve the matrilineal social structure clearer and to be less influenced by plains-civilisations, than that of the Khasi, though a few features of Brahmanical religious observances and also some traces of social admixture are found in the immediate vicinity of Jowai, the former summer residence of the Jaintia Raja. Stronger no doubt, than this influence, was that exerted by the British and non-Assamese Indians in the provincial capital Shillong since 1866. Methods of agriculture and other aspects of material civilisation differ but little in the Jaintia and Khasi plateau-areas.

The same cannot be said of both - the War-Khasi and War-Jaintia. Linguistically their affiliations are with the Khasi or Jaintia respectively as in the plateau-areas. Economically, however, both War-groups form a separate pan-lind cultivating unit in the little accessible steep southern slopes of the Khasi and Jaintia Hill massif. Both War-groups live in the environments of bamboo-wooded flora and fauna, sharply differentiated from the wind-barren plateau with its perennial winds and the lovely, if solitary beauty of its highland bowls, which forms the background of both the Khasi and Jaintia plateau-groups.

The age of the War-Khasi and -Jaintias, as two independent economic — and two half-independent historical linguistic entities, is an intricate problem. The two War-groups subsist on pan-lind cultivation as a means only, grown in the thick two-gardens as swiddens, not as bush-cultivation, as in the plateau-groups, because there is insufficient space on the steep slopes, for vegetable gardens or fields. The pan-lind cultivators therefore depend on land, purchased from outside. The slopes seem to have been uninhabited until not long ago. Yet pan-lind chewing is such an integral part of Khasi life, that until quite recently, and occasionally even now, the distance between two places is not measured by the number of hours needed for walking, but by the number of betelnut and pan-lind packages, consumed on the way. Also the common benediction among Khasi expresses the wish that as and as many betel pan in the Garden of God. Yet pan-cultivators and the settlements of the War-people as pan-lind cultivators in the southern slopes seem comparatively young. Pan-cultivation on the plateau is impossible. It is therefore possible that pan was for a long time only a much valued import article from the plains, bartered against Khasi ore and iron [illegible] markets of the plains, by both War-Khasi and War-Jaintia women and men.

According to a tradition, across which I came among the Nongbanda clan of the Nongmaliar village, the ancestors of the present War people were on the plateau at a time when no pan-cultivation was going on in the slopes and none of the present big returns of pan-tree gardens was yet held by their present (War-) owners. It was distant ancestor of a Nongbanda clan-member who about two or three generations ago told the story to U Hang pan of

Shella

Confederacy forms a more marked endogamous community, through being cut off geographically and economically from the rest of the Khasi, and totally from the neighbouring Hindu people.

The Economy and the People

Shella lies along the upper part of the Shella River and stretches upwards along the steep slope, looking down towards the Bengal plain. The climate of this part of the hills is considered to be one of the worst in tropical India for human habitation. The Bengal plain, though warmer than this area, is considered more healthy. This border land is the zone of malaria, typhoid, black fever, cholera, etc. None of the Bengalee peasants dare to live in such an area. However, it is the most fertile for products such as betel-nuts, pineapples, oranges, bananas and pineapples, and it also produces limestone. These people seem to prefer to settle in this area and to enjoy its prosperity, at the expense of human lives every year, especially between March and September, the inhabitants suffer from various fevers and dysentery and other diseases, many of the weaker facing death.

Before the Partition of India and Pakistan, the products of Shella were carried down the Shella River to Sylhet, one of the biggest centres in East Bengal, which brought unimaginable wealth to the Shella people. Their houses were built by carpenters from Sylhet. The style and structure of these houses were exceptionally elaborate for the Khasi. They purchased vast rice fields in the plain, which used to be cultivated by Bengalee and Garo labourers engaged by them. These Khasi do not themselves know how to cultivate rice fields; they have always been managers or landowners. Their boys used to be sent to high schools and colleges in Sylhet. As a result of their trading with the Bengalee, many of them read and speak fluent Bengalee. There is no difference between their style of clothing and that of the Bengalee, though the women maintain their traditional dress in the Shella style.

They have thus been distinguished from the rest of the Khasi not only geographically, but also economically and culturally. Their personality also differs sharply from the rest of the Khasi. They are very sociable, and quick, a quality lacking among the Khasi of Sohkpohtah and Kyngton. They are clever enough to deal with strangers. The upland Khasi say Shella people are very cunning. This remark shows one side of these people. They had to be cunning, since they traded with the Sylhet Bengalee who were said to be the most cunning of their race. Their role in the trade and in the history of the modernization of the Hills was considerable. For centuries they represented modernized Khasi owing to their contact with Hindu civilization, while the Hills remained in darkness. They assumed an important role when the British established an administration in the Hills, and rose up to now, many leading Khasi originated from Shella area. So, namely, Lall Bah, the first interpreter of the British Headquarters at Cherrapunjee; Jadhon Roy, who was the first Magistrate among the Khasi; Mohan Sing, a lawyer and Member of the Legislative Assembly (the grandson of Jadhon Roy); Nicholls Roy, Minister of Health and Prisons of the Assam Government, Member of the Legislative Assembly, and Missionary of the Church of God; R. R. Thomas (brother of Nicholls Roy), Principal of the Cachari University, etc.

Through constant cultural contact with Hindu, and encouraged by their economic prosperity, the Shella Khasi, like the Jaintias, have been much influenced by Hindu culture. However, this does not mean that the people of Shella adopted the Hindu beliefs. Though there is a small Hindu shrine, and some ceremonial elements were borrowed from the Hindu, most of the

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

178 like the Zemi-Naga, the Cachares and the Kuki. But after the period of
561 economic prosperity as I shall describe in the next section, the Jaitinga people
621 reached a rather high level of education, while most of the neighbouring tribes
remained illiterate. Their standard of living likewise improved. Fashionable
[371] girls of Jaitinga who have studied at the Convent school in Shillong, and speak English and Hindi, cannot marry half-naked tribesmen who work in the jungle. They prefer to intermarry with Moslem, Punjabee or Assamese who belong to more sophisticated community, and through whom they can enjoy urban life. Thus the orientation of the intermarriage of the people of Jaitinga has changed, along with the growth of Jaitinga.

It should be noted that intermarriages come mostly through the contacts at Shillong, where people used to go once a week for the bazaar, rather than through direct contacts with neighbouring villages.

Economy of Jaitinga and its Relation to Neighbouring Tribes.

178 It is very interesting to find two different kinds of economy in the same
171 ecological background: Jaitinga Khasi practice pan-leaf and orange cultivation
and depend mainly on a trading economy, while the other neighbouring tribal
245 peoples practice jhum cultivation, almost a subsistence economy. This situation has remained unchanged for the last fifty years since the establishment of Jaitinga village.

The first Jaitinga immigrants occupied one ridge of the mountain where the
101 present Jaitinga is situated. Formerly, this land belonged to the Zemi-Naga,
245 one of the old inhabitants of the Cachar Hills, who possessed a vast jungle area for jhum cultivation. It seems that there was no objection to the Khasi occupying this small spot; it was apparently too small an area for the jhum cultivation—pan-leaf cultivation of the Khasi requires less than one twentieth of the land of the usual jhum cultivation. The Khasi who started pan-leaf cultivation were able to accumulate some capital, and after several years they started orange gardens. They had had experience of orange cultivation in their homeland, but this was the first time they had operated commercially.

245 The success of this orange cultivation was beyond their dreams. Hearing
• 434 of good oranges at Jaitinga, many Bengalee merchants from Dacca, Sylhet,
439 Silchar and Gauhati began to come to buy them. Moreover, the village had
the great advantage of being situated near the railway station. Oranges were
[346] sold by carloads. Unimaginable wealth came to the Jaitinga people. Especi-
[371] ally the founder's family, including his brother's and sister's, became extraordinarily wealthy; their income used to be Rs. 10,000 a year. The children were sent to the school which was established in the village and some were educated at colleges in Dacca, Sylhet and Shillong. The villagers had
[342] beautiful houses built by Manipuri and Bengalee carpenters. Actually the houses of Jaitinga were known as some of the best construction in Assam.

Like the Shella people, they were managers of gardens and employed workers.
245 Wealthy households used to engage several labourers annually, most of them
46 from Jaintia where the Jaitinga people had originated. These workers were provided with shelter in the servant quarters of their employer's house, but they had to provide meals for themselves. They were paid daily according to the work done. They were available to other households, when their employer had no work. Some labourers were also engaged locally among the Zemi-Naga, the Cachares and the Kuki, though not as many as among the Jaintia.
245 These local tribes were fully well occupied by their jhum cultivation, and not
464 used to being employed as workers. Therefore, most of them were not regular

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

workers and they were few in number.[1] They were particularly employed for such work as the clearing of jungle for new pan gardens in summer. 245 464

In the orange season (December to February) the number of workers increased and they were paid more: Rs. 1/8 were paid[2] for one load (one person carrying 80 pounds of oranges, from an orange garden to the railway station—about two miles). Usually a worker made three to five trips a day. Many workers from Jaintia used to come for this particular season. 245 464 465

Semi-permanent workers were engaged for wet rice fields. They were usually Hindu cultivators: since these Khasi and other tribes do not know the technique of wet cultivation, plains people like the Biharee immigrants were engaged. These workers were provided with servants' quarters where they lived with their wives and children. However, very few Jaintiaga households possessed rice fields. 243 464

The economic prosperity of Jaintiaga reached its climax during the period from 1939 to 1945. Since 1945, the orange production has been decreasing. In 1945, a serious disease attacked the orange gardens as well as the pan-leaf gardens. Besides, by depriving Jaintiaga, as it had Shella, of their most important markets, Dacca and Sylhet, the Partition of India and Pakistan in 1947 caused a serious economic depression in the whole region. On the other hand, because of the past prosperity, the population has rapidly increased during the last ten years. The serious economic condition of Jaintiaga is illustrated in the petition which was submitted by the Jaintiaga people when the Governor of Assam visited those areas in January 1956. It runs thus: 245 434 781 161 458

"Since the last ten years or so, with the increase of population in the village and with the loss of fertility of the soil, the people were faced with economic depression. At present they are facing acute shortage of land they have also no scope to adopt other forms of cultivation like jhuming and wet rice cultivation, etc. Moreover, there has been successive attack of Bright's disease which destroyed and wiped out all the orange and pan gardens. And as such, majority of the families have to depend for their livelihood on daily wages. . . ."

It is indeed a serious situation for them, because the Khasi do not produce staple foods, such as rice; their economy is completely dependent on the trade of their products by which they purchase their main provisions, clothes, etc. Other peoples round Jaintiaga, being jhum cultivators, can at least get rice and cotton; the minimum requirements, staple foods and clothing are available even in the worst conditions, so that they can at least maintain themselves through the standard of living is low. As I stated before, a few households in Jaintiaga possessed rice fields, but the majority had none. Recently they rented some plots of jhum field for non-cultivation from Zemi-Naga of neighbouring villages.[3] However, its yield was but a small percentage of their consumption. A few 182 434 [433] [243]

1. If they had worked in the gardens of Jaintiaga, they might have got more profit than from their own jhum fields. For one day's labour, they got Ans. 6/. For one month, they could earn Rs. 15 with which they could buy about 4-5 maunds of rice (one maunds paddy cost Rs. 3-4). For one year it became 50 maunds, which was impossible to produce in a jhum field by a single person's labour. [435]

2. These rates, including the figures of note 1, apply to 1956.

3. Jaintiaga villagers told me that Zemi-Naga were kind enough to lend them their field for a negligible rent, though they had not enough for themselves. Zemi-Naga said that they owed much to Jaintiaga in the past, so that now they sympathised with the condition of Jaintiaga, and offered some parts of their jhum field. [427] [428]

15: Nakane E5 (1955-1956) 1967 AR7 Khasi AR7

182 very wealthy households still maintain their former economic activities, but
• 434 the majority have been impoverished, becoming daily labourers for the wealthy
ones or for rice contractors. Thus considerable internal economic differentiation has begun to appear in the community.

Though the recent economic depression brought poverty to Jaitinga, the
182 standard of living is still strikingly higher than that of neighbouring tribes.
245 Studying non-economic aspects of Jaitinga, I wondered at first why these
648 neighbouring tribes have remained as they were, except for temporary employment at Jaitinga, why, looking at the prosperity of Jaitinga, they did not adopt the way of the Jaitinga people?

Indeed some of them attempted to imitate the Jaitinga economy, but the results were unfortunately not favourable to them. First, both pan-leaf and orange cultivations were entirely new to the tribal peoples, and the technique was quite different from that of dry rice cultivation in the jhum field. Pan cultivation requires very delicate care which is almost impossible to manage for people who have been accustomed to the primitive jhuming cultivation. For instance, when they go into pan gardens, they have to wash themselves and put on special clean clothes in order to prevent the spread of epidemic leaf disease. Tribal people, who seldom wash their clothes, or mostly go naked, could hardly keep pan gardens. In this respect the Khasi are entirely different, having specialized in this economy for a long period, even as they believe, from time immemorial.

On the other hand, the technique of orange cultivation is much easier than that of pan-leaf, but it takes several years to obtain a yield, it requires considerable capital though with. For the jhum cultivators, who usually did not have cash income to fund, it was almost impossible to start it, while the Khasi were able to use funds from the selling of the pan-leaf. Furthermore, the
[423] management of such gardens, either pan-leaf or orange, differs also from that of the jhum for as it entirely depends on individual enterprise based on private land ownership, which is new for those tribes where the community owns the land. Thereby the possibility of starting orange gardens is restricted to special individuals among those belonging to exceptionally rich and powerful households. Few households in neighbouring villages did, in fact, start orange gardens, adopting the technique of the Jaitinga people. This was several years and they were waiting to have the yield around 1950. However, unfortunately, when the oranges began to come into production, orange disease started in Jaitinga and spread all over those areas. Thus dreams therefore were never true.

Besides oranges, some of them also established gardens of bananas, jackfruits, and papaias, but were more successful than the oranges. These plantations started merchant than oranges in this area, though not in great quantity. The proceeds went to the Jaitinga people who sold them again to Bengalee merchants. In question arose why were they not sold directly to Bengalee merchants, when the profit would have been much greater.

This aspect of the market economy touches upon very interesting problems
182 concerning the relations between tribal and Hindu peoples. Such tribal peoples
44 who live on a primitive subsistence level usually do not have direct contact
648 with the peoples of the plains. There is always an intermediary between them. In this case it is the Jaitinga people who have both tribal life and Hindu life. They are also in between culturally. If a tribal cultivator sells his produce to a Hindu merchant, he would most certainly be cheated by the running merchant, as he is quite ignorant of trade. Tribal men do deal with markets directly, but only on a small scale at Hafleng bazaar, and without making a profit: it is just the exchange of their handmade or jhum produce for an iron

19: Assam G-5 (1958) 1963 AR7 Khasi AR7

#162 871 125 In border area and project area the percentage of literates is worked out at 24 and 31 respectively --a comparatively high figure for a rural area. This, however, cannot be regarded as a true index of literacy in the rural area of the district for the fact that villages from border area and project area were purposively selected almost all of which by virtue of their bigness in size and location in vantage points, happened to possess at least one school for quite a long time. The average picture for the district as a whole is brought out by the percentage of literates in the general area which is only 17. A comparison of this figure with that of 1951 census for the rural areas of the district which is only 12 per cent shows that during the last eight years there has been an increase in the percentage of literacy.

As will be seen from table above the proportion of literates among males is higher than that among females throughout the district.

Economic Status

P/162 • 934 5.2: The following table shows the number of persons in the sample villages by sex and economic status.

TABLE C 5

Number of Persons by Sex and Economic Status

Economic Status	Number of persons in Hardcore area			Fringe area			Control area		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
Earners	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Percentage to total population	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Earning dependents	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Percentage to total population	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Non-earning dependents	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Percentage to total population	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Total population	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

From the above table it is seen that the proportion of earners in the Border area, Project area and General area are respectively 33 per cent, 45 per cent and 55 per cent of the corresponding total population. Thus each earner has to support himself and roughly one dependent. Thus the burden of dependency is not very heavy in the district. This is because of the fact that men, women and adolescents all join the labour force. Number of women engaged wholly on domestic works is few. Only in big families having a number of women, one or two of them are engaged in domestic works, otherwise the Khasi women attend to the domestic works in addition to their work in the field.

From table G 5/1 in the appendix it will be seen that respectively 4/7 per cent, 7.8 per cent and 14.2 per cent of the earners in Border area, Project area and General area are below 15 years of age.

3/6—Attempt was made to study the employment position in the selected villages. For this purpose the following definition of employed and unemployed persons was adopted.

Persons working for pay or profit on one day during a period of 30 days preceding the date of enquiry would be classified as employed. Those who did not work on any day during the last 30 days, may be employed or unemployed. The person is unemployed if—

(i) He who was without a job for the whole reference period.

(ii) Who was seeking one, and

(iii) Who was in a position to accept job if offered one.

A person is also unemployed if he did not work because of his prolonged illness, believed that no work was available, or was expecting to return to a job from which he had been indefinitely laid off.

On the other hand a person is employed if he had a job, although temporarily absent from work during the reference period due to illness, vacation, industrial dispute or being laid off temporarily. Also a person would be considered employed if he was waiting to take up a new job which he had been offered or to start a new business.

19: Assam G-5 (1958) 1963 A87 Khasi A87

CHAPTER IX

Income and Expenditure

9.1 The great majority of rural people are members of families of two or more persons sharing a common income earned mostly by joint efforts of family members and also disbursed in supplying the consumption needs of the family as a whole. An image is made below, therefore, to analyse the aspects of income and expenditure of the rural families family-wise.

9.2 It has already been mentioned that the majority (i.e., above 78 per cent) of the families of all the three areas pursued agriculture as a principal occupation. Some of these families follow cottage industries, trade, transport, labour, etc as subsidiary occupations. The rest of the families had either agriculture as subsidiary occupation or were independent of agriculture. The larger section of these families were non-agricultural labourers. The following table gives the distribution of families in different income groups

TABLE C-1

Frequency distribution of families in different income groups

Income Group No.	No. of families: Border area: Monthly agricultural labor	Border area: Non-agricultural	Border area: Total	Border area: Average annual gross income per family (Rs.)	Deccan area: Monthly agricultural labor	Deccan area: Non-agricultural	Deccan area: Total	Deccan area: Average annual gross income per family (Rs.) 10. [illegible] vs [illegible]	[illegible] (1.12)	[illegible] (.74)	[illegible] (.46)	[illegible]	[illegible] (.53)	[illegible] (2.45)	[illegible] (7.62)	[illegible] --	-- --	-- --	-- --	-- --
11. [illegible] vs [illegible]	[illegible] (.86)	[illegible] (1.62)	[illegible] (1.05)	[illegible] --	[illegible] (.53)	[illegible] (.45)	[illegible] (.41)	[illegible] --	-- --	-- --	-- --	-- --
12. [illegible] vs [illegible]	[illegible] (2.21)	[illegible] (0.41)	[illegible] (1.45)	[illegible] --	[illegible] (0.14)	[illegible] (10.12)	[illegible] (1.78)	[illegible] --	-- --	-- --	-- --	-- --
Total —	[illegible] (100.00)	[illegible] (100.00)	[illegible] (100.00)	[illegible] --	[illegible] (100.00)	[illegible] (100.00)	[illegible] (100.00)	[illegible] --	[illegible] (100.00)	[illegible] (100.00)	[illegible] (100.00)	--

From table above, it is difficult to judge the relative prosperity of agricultural and non-agricultural families. The annual gross income of 48 per cent of the agricultural families is less than Rs.750·00 a year while that of 87 per cent of them is below Rs.1,500 a year. Thus the remaining 13 per cent of the families only have a gross annual income of above Rs.1,500 a year. Among non-agricultural families the corresponding proportions are 32 per cent, 79 per cent and 21 per cent. Thus proportion of non-agricultural families with annual gross income less than Rs.750, is greater than the corresponding proportion of agricultural families. The petty traders, porters and other non-agricultural labourers who are economically very poor constitute this non-agricultural class. On the other hand proportion of non-agricultural families with annual gross income of more than Rs.750 exceeds the corresponding proportion for agricultural families. These non-agricultural families comprise of a good number of business men, contractors, etc., who are comparatively a bit well off than the agriculturists. 162* 434 463 592

In Project area proportion of agricultural families and non-agricultural families with annual gross income of less than Rs.750 is 36 per cent and 29 per cent respectively as against 49 per cent and 32 per cent of their respective counterpart in Border area. Proportions of families with gross income below Rs.1,500 a year is 84 per cent and 66 per cent indicating that proportions of agricultural as well as non-agricultural families with income above Rs.1,500 a year are greater than their corresponding counterparts in Border area.

In general area villages it is significant to note that proportion of agricultural families with gross annual income of over Rs.2,000 is negligible (·61 per cent) while those under Rs.750 and Rs.1,500 are 43 per cent and 93 per cent respectively.

Table below further reveals that 58 per cent of the gross income in the Border area, 54 per cent in the Project area and 86 per cent in the General area is earned by families in the income group less Rs.1,500 constituting as much as 85 per cent of the total number of families in the respective areas.

TABLE G-2

Percentage distribution of income and families in different income groups 162* 434

Annual income (Rs.)	Border area		Project area		General area	
	Families	Income earned	Families	Income earned	Families	Income earned
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. Less than 750	84.5	58.4	80.3	53.8	93.00	85.5
2. 750 to less than 1500	18.2	19.2	14.1	22.6	7.0	14.5
3. 1500 to less than 2000	2.1	6.7	1.9	5.0	..	..
4. 2000 and above	3.2	13.7	3.7	18.6	..	..
Total	100.0	100.0	100.0	100.0	100.0	100.0

19: Assam C-5 (1956) 330.5 K67 Khasi K67

Considering all the families together if we classify the families with gross annual income below Rs.750 as low income group, those between Rs.750 to less than 2,000 as medium income group and those above Rs. 2,000 as high income group, we get the following proportion of families in different areas :—

	Low income group	Medium income group	High income group	Total
(1)	(2)	(3)	(4)	(5)
Border area	[illegible]	[illegible]	[illegible]	[illegible]
Project area	[illegible]	[illegible]	[illegible]	[illegible]
General area	[illegible]	[illegible]	[illegible]	[illegible]

Thus we see that majority of the families are concentrated towards the medium income group in Project area and General area while proportion of medium income group families is least in Border area. Proportion of low-income group families is least in Project area and highest in Border area closely followed by General area. Thus it appears that Project area villages enjoy a comparatively better economy than Border area and General area villages.

9.3 The greater bulk of the agricultural families income is derived from sale of agricultural produce. Most of them supplement their income through non-agricultural labour while others do it through Cottage Industries, trade, etc. The Non-agricultural families derived their major income from non-agricultural enterprises. The following table shows the contribution of different components to the average annual gross income of families.

TABLE [illegible]

Components of average annual gross income per family

Source of income	Agricultural families				Non-agricultural families				All families			
	Value of produce				Value of produce				Value of produce			
	Consumed at home	Marketed	Total	%	Consumed at home	Marketed	Total	%	Consumed at home	Marketed	Total	%

Total	—	—	—	[illegible]	[illegible]	—	—	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

From the above table it is seen that average annual gross income of predominantly agricultural families in Border area, Project area and General area are respectively Rs 1,[illegible], Rs 1,[illegible] and Rs [illegible]. Apparently it appears that people in the General area are poorer than those in Border area. This however cannot be said to be true. For, from a consideration of the distribution of families in table G-5 it will be seen that average income figure for Border area and Project area are in fact inflated due to existence of a number of families in higher income group.

To the income of families in Border area agriculture and Animal husbandry contribute [illegible] per cent followed by Labour-service-profession which contribute [illegible] per cent. Labour includes agricultural labour etc). Miscellaneous sources such as charity, maintenance, loan realised, etc., contribute 1 per cent. Others in order of importance are liquidation of assets, non-agricultural occupation such as trade, Cottage Industries, etc., which respectively accounts for [illegible] per cent only.

In project area main contributors are agriculture and Animal husbandry and Labour-service, profession etc., accounting for [illegible] per cent and [illegible] per cent respectively, followed by liquidation of assets and non-agricultural pursuits such as trade and cottage industries which respectively contribute [illegible] per cent and [illegible] per cent of the families total gross income.

Main contributors to family income in General area are in order of importance agriculture, Labour-service, profession, etc., non-agricultural occupation, and liquidation of assets, which respectively accounts for [illegible] per cent, [illegible] per cent, [illegible] per cent, and [illegible] per cent of the families total gross income.

It is also seen that of the total average income of families, value of items produced or kept at or home and consumed at home accounts for [illegible] per cent of the families total annual gross income in Border area, [illegible] per cent in Project area and [illegible] per cent in General area. Thus average annual cash income of an agricultural family in the three area comes to [illegible] per cent, [illegible] per cent and [illegible] per cent respectively, of the families average gross annual income, i.e., Rs [illegible], Rs [illegible] and Rs [illegible] respectively.

[illegible] Considering non-agricultural families it is seen that average gross annual income per family in Border area, Project area and General area are respectively Rs. [illegible], Rs. [illegible] and Rs. [illegible] respectively. The main contributor to this income in Border area is Trade followed by Service, Technician, Labour and Agriculture and Animal husbandry. Same in Project area are Labour-Service-Technician followed by Trade, small scale manufacture and agriculture and animal husbandry. The comparatively higher average income from small scale manufacture and handicraft is due to existence of quite a good number of liquor distillers with quite a large amount of annual income. Main contributors to gross annual income of non-agricultural families in General area in order of importance are agriculture and animal husbandry, service-profession and labour. It is significant that among the non-agricultural families also agriculture and animal husbandry emerge to be the biggest contributor. This is due to the fact that in General area villages there are a large number of Nepali families whose principal occupation is cattle rearing and earned enough by selling milk, ghee, and livestock. These families were classed as non-agricultural families.

[illegible] Of the gross income, agriculturists spend a portion in their farms on items such as purchase of seed, manure, etc., cost of maintenance of livestock, wages and salaries for labourers, and transport of produce while other a and a portion on running their household expenditure such as purchase of merchandise for reselling, purchase of plants and machinery and raw materials for household enterprises, wages and salaries for employees, etc. The net annual income per family, as will be evident from table C-6, comes to Rs. [illegible] in Border area, Rs. [illegible] in Project area and Rs. [illegible] in General area. The corresponding figures for agricultural families being Rs. [illegible], Rs. [illegible], Rs. [illegible] and for non-agricultural families Rs. [illegible], Rs. [illegible] and Rs. [illegible] respectively.

The following table shows the annual expenditure of families in running their enterprises.

varied between 1.08 per cent to 2.00 per cent in the three areas. It is very likely that this figure will be an under-estimate due to the fact that people addicted to it do not like to admit so. The existence of a large number of licensed liquor distilleries - numbering upto 5 in a single village, and the brisk trade in these distilleries bear testimony to the fact that a large share of family income is drained out through liquor.

Among miscellaneous items clothing and footwear accounted for nearly 8 per cent in Barbil area, 6 per cent in Pagnet area and 5 per cent in Gerangi area. Next to it in importance is medicine and durbar which accounted for about 5 per cent of the total annual expenditure in all the three areas.

Generally speaking, the comparatively high percentage of expenditure on food and low percentages on other items like clothing, houses and in repairs, education, etc., indicates a low standard of living of the rural families in general.

9.8. It may be of some interest to know how the families belonging to different economic groups divide their income between their current living expenses and other outlays on goods and services. The picture of the family expenditure pattern is summarised in the following table.

TABLE 69

Analysis of family expenditure in different income groups

Number Items	Income group

19: Assam G-5 (1958) 1963 AR7 Khasi AR7

It is noticed that food is the largest single item of expenditure at every income level demanding about two-thirds or more of the average total all expenditure. It is significant to note that money outlays on food increase markedly at successive income level. This wide range of expenditure is the result of very low standard of food consumption in the low income groups and also possibly of increasing number of members per family in the higher income groups. 434 592 511

One striking feature revealed by the summary table of family income and expenditure given above is the average net deficit shown by the families of almost each income-group, except perhaps marginal surplus in respect of a few income-groups in the higher level. Thus for majority of the families the entire family income was not adequate on the average to meet current outlays on food and other necessities and comforts of daily living. Even the advantage of comparatively large average income was more than balanced by the larger differential increase in the family expenditure due either to their larger family size or comparatively higher standard of living or both.

436 Of the total number of loans 61 per cent in Border area, 10 per cent in Project area and 29 per cent in General area were free of interest while rate of interest for 9 per cent, 30 per cent and 60 per cent respectively of the loans in the three areas were found to be 12 per cent or more per annum which in some cases went upto 200 per cent.

241 434 592 10.8. Farm output of 97 per cent of the families in Border area, 56 per cent of families in Project area and 68 per cent of families in General area were less than Rs. 500 a year, while 6 per cent, 23 per cent and 1 per cent of the families in the respective area earned more than Rs. 2,000.00 a year from their farms. Of the total number of farms fetching less than or Rs. 500.00 a year in Border area 35 per cent of them are medium sized farms and 4 per cent large sized farms, the corresponding proportions for Project area and General area being 21 per cent, 1 per cent, 27 per cent and 1 per cent.

24 433 10.9. In Border area the most important crops are oranges, kwai nut, paddy, and betel leaf which respectively accounted for 34 per cent, 27 per cent, 19 per cent and 9 per cent of the total harvested area. In Project area paddy and oranges are the most important crop which accounted respectively for 52 per cent and 8 per cent of the total harvested area. The most important crops in the General area are paddy and potato which respectively accounted for 61 per cent and 7 per cent of the total harvested area.

On the basis of data collected for all the villages investigated average yield per here worked out at paddy 11.65 maunds, potato 21.61 maunds, oranges 5.77 lotis (2000 numbers) and betelnut 2.95 lotis (12000 numbers). These yield exhibited wide variation among the three areas.

434 592 10.10. Proportions of families with annual gross income of less than Rs. 750, Rs. 750 to less than Rs. 2,000, and above Rs. 2,000, were respectively found to be 49 per cent, 45 per cent and 6 per cent in Border area, 34 per cent, 60 per cent and 6 per cent in Project area and 45 per cent, 54 per cent and 1 per cent in General area. Average annual gross income per family worked out to Rs. 1,070.30 in Border area, Rs. 1,220.40 nP. in Project area and Rs. 904.30 nP. in General area which for predominantly agricultural and non-agricultural families respectively stood at Rs. 1,025.06 nP. and Rs. 1,161.91 nP. in Border area, Rs. 1,095.23 nP. and 1,644.36 nP. in Project area and Rs. 873.98 nP. and 780.04 nP. in General area. In all the three area main contributors to family income were agriculture, service-profession-labour and trade accounting respectively for 41 per cent, 35 per cent and 15 per cent of the total average income in Border area, 27 per cent, 40 per cent and 9 per cent in Project area and 53 per cent, 36 per cent and 5 per cent in General area.

The net annual income per family in different income groups varied between Rs. 60 to 2,049 in Border area, between Rs. 110 to Rs. 3,508 in Project area and between Rs. 93 to Rs. 2,004 in General area. The average over all per family net annual income worked out at Rs. 853 in Border area, Rs. 989 in project area and Rs. 760 in General area and the same per capita at Rs. 231 in Border area, Rs. 216 in Project area and Rs. 153 in General area.

N. C. actual population		[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

428 to the nearest of kin of the wife, or to her nearest relatives if there are no relatives. The rank and value of a deceased male descend to his brother; when no brother exists, then to the male children of his mother's sister (maternal aunt); should the maternal aunt have no male children living or between, then to the children of the female children of the maternal aunt. When no relatives are to be found, the property of the deceased goes to the ruler of the country; or if a man dies leaving no relatives other than wife and children, or no relatives on the mother's side, the property in this case also goes to the ruler, who, as the wife and children cannot preserve the value of the deceased, takes charge of them, and so in doing takes all the property also. With regard to the inhabitants of the Lower Hills or Shelli, the custom as to succession is as follows:—Property belonging to a subject of Shelli is divided into two classes:—(i) Property inherited from ancestors, which descends to the nearest of kin or to the relative of a deceased person who has perished by sharpness. (ii) Property acquired during the lifetime of the holder, which is inherited by the children, whose duty it is to provide for the maintenance of their mother until she is married or dies.'

* 426 448 342 152 342 180 242 434 276

WEALTH, CONDITION OF THE PEOPLE.—The Khasis and the Syntengs are as a people prosperous. Common labourers, if adult males, can earn wages as high as one shilling per diem, and adult females as high as eightpence. The dwellings of the well-to-do classes are generally constructed of masonry, with thatched roof and plank floor, and divided into two or three rooms. The furniture consists of a bedstead (*phyrphi*), a box or two (*sawdi*), some cooking utensils, and a few knives. The ordinary peasants and poorer classes construct their huts of cane, mud, or plank walls, with a thatch or cane roof. These are fitted with wooden platforms or bamboo planks placed on the ground to serve as beds. The food of the well-to-do classes consists of rice, fish when obtainable, fowl or meat, curry, vegetables, oil, hog's lard, fermented and spirituous liquor. It may be estimated that the living expenses of an average household of this class would be about Rs. 25 or £2, say, a month, valuing the articles of consumption at *bazar* prices. An ordinary husbandman or labourer lives on rice, dry fish, occasionally a little meat, oil, or hog's lard. *Betel* leaf, betel-nut, and lime are essential to the comfort of all the hill people, who are inveterate chewers of *betel*. They commence at an early age, and are rarely seen without a *betel* leaf in their mouths; the females are quite

dotted from the province. Ponies will cost as many as four or five hundred a day, with the usual accompaniment of six horses. The estimated cost of maintaining an average family of the labouring class is about Rs. 8 or 10s. a month.

Towns: Stations.—There are no towns in the usual acceptance of the word; but the chief places in the Hills, looked upon by the inhabitants as cities, are Shillong, Jowai, Cherra Pinji, and Gauhati. According to the Census of 1872, Shillong had only 1,363 inhabitants, Cherra Pinji 2,23, and Jowai 4,900. Jowai, however, is a collection of rural hamlets, and the population of Shillong has entirely altered since the date of the Census. The latter place has become the Civil Station in 1874, in substitution for Cherra Pinji; and when Assam was erected into an independent Province in 1874, it was selected as the permanent seat of the Local Government. The Chief-Commissioner resides there, and also the heads of all departments in the Administration. The area of the Station is 7 miles in length by 1½ or 2 miles in breadth. A considerable native population is already settled, and is increasing from day to day. One of the largest weekly markets in Sylhet is held in the Sahar; and with a view to facilitate access to the Station, which is the sanitarium for the Province of Assam, a cart road has recently been completed to Gauhati on the Brahmaputra, which will tend to make the place more and more important. An excellent water supply is conducted into Shillong through an aqueduct which has to assume in the neighbouring hill streams, and sanitary measures are carefully enforced. Large sums of money have annually been expended on the erection of the public buildings necessary for the offices of the administration. A printing-press has been established, from which issue all the official documents and reports of the Province. The climate is excellent, the temperature being more equable than that of any other hill station in India, and therefore admirably suited to the constitution of Europeans. There is a church at Shillong, and a chaplain on the Bengal establishment officiates both there and at Gauhati. The cantonments were occupied in 1873 by the 43d Regiment of Assam Light Infantry, with three outposts. The strength was 9 European officers, 18 native commissioned officers, 80 non-commissioned officers, 770 fighting men, and 58 paid camp followers and non-combatants; grand total, 935. The total cost, including contingencies, was Rs. 1,83,190, or £18,319.

ACCOUNT OF KHASI AND JAINTIA HILLS.

326 manufacture of iron, in which the native blacksmith often employs hired labourers, the other industries are generally followed by families in their own houses. No class of labourers are hereditarily attached to any manufacture in a manner that affects their personal freedom. The system of advancing money for manufacturing purposes does not obtain in the Khasi and Jaintia Hills. The total value of the manufactures of the District is stated to be between £[illegible] and £[illegible] per annum. No local manufactures are carried on by means of imported capital.

339 Commerce and Trade.—The external commerce of the Khasi and Jaintia Hills is chiefly conducted on the southern boundary, through the District of Sylhet. The total value is more considerable than might be expected, owing to the fact that these Hills practically possess the monopoly of supplying Bengal with lime, potatoes, and oranges. Other important articles of export are raw cotton, stick-lac, betel-nut and pan leaves, and bay leaves or tejpat. The exportation of iron, which was once large, has now almost ceased. The chief imports consist of rice, dried fish, cotton cloth, salt, and tobacco. On the whole, it would appear that the course of trade is almost equally balanced. Trade statistics of more or less value are in existence. The earliest of such statistics are to be found in the Report of Mr. W. J. Allen, dated 1858. The information there given was based for the most part upon oral statements furnished by numerous native traders to Mr. Hudson, who then filled the office of Principal Assistant-Commissioner. It may be accepted as 'a fair representation of the state of trade in the Hills' at that time. The imports and exports on the Assam side were each estimated at about Rs. 15,000, or £1,500. The trade with the markets in the Surma valley was much larger. The total of the exports was valued at Rs. 700,000, or £70,000, giving a profit to the traders of Rs. 170,705, or £17,070. The chief items were:—Limestone, 1,700,000 *maunds*, valued at Rs. 306,000; potatoes, 30,000 *maunds*, value Rs. 125,000; oranges, 45,000,000 in number, value Rs. 56,250; smelted iron, 45,000 *maunds*, value Rs. 67,500; cotton, 12,000 *maunds*, value Rs. 42,000; betel-nuts, value Rs. 37,500; coal, 25,000 *maunds*, value Rs. 12,500. The total value of the imports was estimated at Rs. 350,000, or £35,000, being just one-half the value of the exports; the estimated profits were given as Rs. 44,325, or £4432. The chief items were:—Rice, 150,000 *maunds*, value Rs. 225,000; cloth of sorts, Rs. 25,000;

lac, lead and zinc), Rs. [illegible] lac, iron manufactures, other Rs. [illegible]. For the last three years, from 1874-75 to 1876-77, detailed tables of the external commerce have been drawn up by the successive Deputy Commissioners in charge of the District. There is however, no organised system of trade registration, and the Chief Commissioner of Assam has expressed the opinion that the figures "cannot be at all valued again." The items vary greatly year by year, which is partly due to the different principles of valuation adopted. For the year 1874-75 the total exports were valued at Rs. 1,371,831, or £137,183, being just double the estimated value twenty years ago; the imports were valued at Rs. 1,559,500, or £155,950, being an increase in the same period of nearly forty-fold. The excess value of exports was Rs. 11,331, or £1,133. In 1875-76 the exports were valued at Rs. 1,501,761, or £150,176; the imports at Rs. 1,613,455, or £161,345, showing an excess on the export side of Rs. 104,306, or £10,430. The values for 1876-77, given in full on the following pages (pp. 278, 279), are quoted from the Administration Report for that year. They are based partly upon returns of trade at the ports of Hailakandi and Jiriniganj, and partly upon such approximations as could be supplied by local traders. The total value of the exports amounts to Rs. 1,603,336, or £160,333; that of the imports to Rs. 1,576,483, or £157,648, showing a balance of Rs. 27,043, or £2704, in favour of the District.

The export of limestone in 1876-77 was 1,600,000 maunds, valued at Rs. 480,000, at the rate of Rs. 300 for 1000 maunds. These figures show no increase in quantity, but a large increase in value, over the estimate of twenty years ago. The registration system of river traffic in Bengal shows a total export during 1876-77 from the two Districts of Sylhet and Cachár of 1,056,139 maunds of lime and limestone, valued at Rs. 792,108 at the rate of 12 annas per maund. The difference between these two sets of figures for the same year is very considerable. It may be partly explained by the consideration that the Bengal estimate of value includes the stone after it has been calcined and reduced to lime. The trade in limestone is chiefly in the hands of Messrs. Inglis & Co., whose depot is at Chhatáli, on the Barak river. The connection of this firm with the trade of the Khási Hills is of very long standing. The founder, Mr. Henry Inglis, was the son-in-law of

439 Colonel Lister, who filled the office of Political Agent from 1833 to
648 1834. In 1835, when Mr. Allan drew up his Report on the Distrct, the trade built in lime and oranges was a monopoly of this Mr. Inglis. The stone is exported to Chittagong and other marts on the Surma river, where some portion is burned and made into lime, and the remainder sold in the rough. The trade name in Bengal is "Sylhet lime."

439 The export of potatoes in 1876-77 was 100,500 maunds, valued
434 at Rs. 301,650, or £30,165, at the rate of Rs. 3. 8 per maund.

Text continued from page 156.]

The price is about the same as it was twenty years ago, but the quantity has increased fourfold. The potato was first introduced into the Hills in 1832 by Mr. David Scott, who was then the Governor-General's Agent. "No greater boon could have been conferred upon the people." The local trade is entirely in the hands of the Khásiás themselves, and the larger portion of the produce is despatched direct to Calcutta. According to the registration returns of river traffic in Bengal, the export of provisions (including vegetables) from Sylhet in 1876-77 was 113,016 maunds, valued at Rs. 362,324, or £36,232, at the rate of Rs. 3 per maund. [177] [244]

The export of oranges in 1876-77 was 9,400,000 in number, valued at Rs. 37,600, at the rate of Rs. 12 per 1000. These figures apparently show a great decrease since 1858. At that time Mr. Inglis possessed the entire monopoly of the trade, by means of the leases which he held from the Khásiá Chiefs of all the valuable groves. The annual produce of his groves was estimated at forty-five millions of oranges, having increased from eleven millions within the

439
434
245
648

previous twenty years. The oranges, like the limes, were brought down to Mr. Ingles' depôt at Chittagong, where they were sold to the dealers at the rate of about Rs. 1. 12 per cent., or less than half their present estimated price. It is stated in Mr. Allen's Report, that the Calcutta market was then chiefly supplied from the gardens of Malda Fingi and Bar Fingi; the produce of the other villages was more perishable, and required to be sold in the neighbouring Districts. The fruit is known in Calcutta as "Sylhet oranges." The Bengal registration returns for 1876-77 show a total export from Sylhet of 84,915 maunds of "fruit," valued at Rs. 125,915, or £12,591.

The export of raw cotton appears to have greatly increased. In 1876-77 the total quantity exported was 36,000 maunds, valued at Rs. 216,000, or £21,600, at the rate of Rs. 6 per maund. Twenty years before the export had been only 14,000 maunds, valued at Rs. 42,000, at the rate of only Rs. 3. 8 per maund. The cotton is of inferior quality, with a short and woolly staple. It is chiefly consumed by the Sylhet women. The total registered export from this District in 1876-77 was only 4,500 maunds, valued at Rs. 64,500, at the high rate of Rs. 14 per maund.

The chief article of import now, as twenty years ago, is rice; the hill-men have never grown sufficient for their own consumption, and the recent establishment of the Civil Station of Shillong has increased the demand. In 1876-77 the total imports of rice were estimated at 203,800 maunds, valued at Rs. 510,500, or £51,050, at the rate of Rs. 3. 8 per maund. Twenty years ago the imports were nearly as great, viz. 172,000 maunds; but the value was only Rs. 215,000, at the rate of Rs. 1. 8 per maund, or less than one half the present value. The chief source of supply to Sylhet District, which sends its surplus to the tea-gardens of Cachar, as well as to these Hills, and also exported, in the year 1876-77, 214,000 maunds of rice and 235,000 maunds of paddy into Bengal.

The importation of fish (fresh and dried) has enormously increased. In 1876-77 the total amount was 33,500 maunds, valued at Rs. 215,000, or £21,500, at the rate of Rs. 6 per maund. Twenty years ago the value was only Rs. 20,000, but the quantity is not given. The preparation of dried fish is a flourishing industry in the adjoining District of Sylhet.

The importation of cotton cloth has increased in an almost equal proportion. The value in 1876-77 was Rs. 158,000, or £15,800, as

against Rs. 25,000, or £1,500, twenty years earlier. The supply of piece-goods is derived directly from Dacca. 439

A curious feature in the trade of the Khási and Jaintia Hills is the total absence of Marwárí or Jain merchants—an enterprising class, who are found everywhere else in Assam, even in the furthest corners of the Brahmaputra valley. There are a few Bengáli traders from Dacca, who do not take up a permanent residence in the Hills; but the great bulk of the business remains in the hands of the natives, who themselves ply the profession and are said to be keen at a bargain.

The principal markets in the foot of the Hills, on the Sylhet side, are Bholágunj, Chhatak, Lakhai, Jaintiápur, Jaflong, Phulbári, Maulong, Pomrai, Sládpur, Nongkhlai, and Langpáh. Many of these are situated within the Sylhet boundary; but they are all frequented by Khási and Synteng traders, who spend their whole time in passing from one market village to another. The markets so late are held at regular intervals of eight days (for the Khási week consists of five months), with the object of persuading the same people to visit the different places in rotation.

Credit.—Such little capital as the people possess is either employed in trade or lent out upon interest. In a few cases it is hoarded and allowed to remain idle. In small loan transactions, whether articles are pledged as security or not, the interest usually charged is one *dood* in the rupee per month, or 75 per cent. per annum. In larger transactions the rate of interest per month varies from 1 to 3 per cent. Nothing is charged in the name of interest where lands are mortgaged as security for a loan, as the land is always made over to the mortgagee in lieu thereof, and he is only bound to restore it on payment of the amount lent. In petty advances for agricultural purposes, part of the produce is given by the cultivator as something less than market rates in repayment of the amount borrowed. Limestone quarrying is the only industry in the District carried on by European agency.

Revenue and Expenditure.—The revenue realised from the Khási and Jaintia Hills has increased considerably in recent years. As the Khási States are treated as semi-independent, the receipts from that portion of the District are altogether insignificant, with the exception of the dues levied from the lime quarries. The larger part of the revenue in Jaintia is derived from the house tax. For 1875, when British authority was first established in the Khási Hills,

Gordon E-4, 5 (no date) 1927 ART Khasi ART

Syntengs in the interior and by the Bhois and Lyngngams. The men in the Khasi Hills wear a cap with ear-flaps. The elderly men, or other men when sportsmen is desired, wear a white turban, which is fairly large and is well tied on the head. Males in the Sumatriy of Nongpoiu and in the North-Western corner of the district wear knitted worsted caps which are often of a red colour. These are sold at Nongpoiu market at about 8 or 9 annas each. They are brought to Nongpoiu by traders from the Syntengs country, and from Shillong, where they are knitted generally by Syntengs women. A small cloth is worn round the waist and between the legs, one end of which hangs down in front like a small apron. The Syntengs wear a somewhat differently shaped cap, having no ear-flaps and with a high-peaked crown. Both Khasi and Syntengs caps are generally of black cloth, having, as often as not, a thick coating of grease. The old-fashioned Khasi female's dress, which is that worn by people of the cultivator class of the present day, is the following:—Next to the skin is worn a garment called *ka jymphu*, which is a piece of cloth wound round the body and fastened at the loins with a kind of cloth belt, and which hangs down from the waist to the knee or a little above it. Over this is worn a long piece of cloth, sometimes of muga silk, called *ka jaiaseu*. This is not worn like the *Assamese mekhela* or Bengali *sari*, for it hangs loosely from the shoulders down to a little above the ankles, and is not caught in at the waist: in fact, Khasi women have no waist. It is kept in position by knotting it over both the shoulders. Over the *jaiaseu* another garment called *ka jain lap* is worn. This is thrown over the shoulders like a cloak, the two ends being knotted in front, it hangs loosely down the back and sides to the ankles. It is frequently of some gay colour, the fashion in Mawkhar and Cherrapunji being some pretty shade of French gray or maroon. Over the head and shoulders is worn a wrapper called *ka tap-mak-khlieh*. This, again, is frequently of some bright colour, but is often white. There is a fold in the *jaiaseu* which serves as a pocket for keeping odds and ends. Khasi women in cold weather wear gaiters which are often long stockings without feet, or, in the case of the poor, pieces of cloth wound round the legs like puttiers, or cloth gaiters. I have seen

InGurdon E-4, 5 (no date) 1997 ART Khasi ART

277 nurseries are regularly watered, and are covered up with layers of leaves to ensure, as far as possible, the retention of the necessary moisture. When the plants are 3 or 4 in. high, they are transplanted to another and larger nursery, the soil of which has been previously well prepared for the reception of the young plants.

278 An orangery is prepared in the following manner :—

The shrubs, weeds and small trees are cut down, leaving only the big trees for the purpose of shade. The plants from the nurseries are planted from 4 ft. to 9 ft. apart. When they have become young trees, many of the branches of the sheltering trees mentioned above are lopped off, so as to admit the necessary amount of sunlight to the young orange trees. As the orange trees increase in size, the sheltering trees are gradually felled. The orchard requires clearing of jungle once in spring and once in autumn. The Khasis do not manure their orange trees, nor do they dig about and expose the roots. The price of orange plants is from 75 to 100 plants per rupee for plants from 1 to 2 ft. in height, and from fifty to seventy-five plants per rupee for plants from 2 to 5 ft. in height. Orange trees bear fruit when from five to eight years old in ordinary soils. In very fertile soils they sometimes bear after four years. A full-grown tree yields annually as many as 1,000 oranges, but a larger number is not unknown. The larger portion of the produce is exported from the district to the plains, and to fruit markets at the foot of the hills such as Theria, Mawdon, and Phali-Bazar, on the Shella river, whence it finds its way to the Calcutta and Eastern Bengal markets.

279 Potatoes are raised on all classes of land, except *kali*, or wet paddy land. When the land has been properly levelled and hoed, drains are dug about the field. A cultivator (generally a female), with a basket of seed potatoes on her back and with a small hoe in her right hand, digs holes and with the left hand drops two seed-potatoes into each hole. The holes are about 6 in. in diameter, 6 in. deep, and from 6 to 9 in. apart from one another. Another woman, with a load of manure in a basket on her back, throws a little manure over the seed in the hole, and then covers both up with earth.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

The most important crop on the southern side of the hills is the orange, which has already been referred to in the paragraph dealing with agriculture.

The oranges are sold by the *epah* or 100, which is not a 100 literally, but somewhat over 3,000 oranges. Different places have different *epahs*. At Phali Hat, on the Bogapani River, the *epah* is computed as follows:—

1 Hali = 4 oranges.
8 Halis = 1 Bhar.
100 Bhars = shi epah (one hundred).
= 3,200 oranges.

At Shella the computation is slightly different, being as follows:—

1 Gai = 6 oranges.
5 Gais + 2 oranges = 32 oranges.
4 Bhars = 1 bola = 128 oranges.
27 bolas + 2 bhars = shi epah (100)
= 3,520 oranges.

By another method of calculation the *epah* consists of 3,240 oranges.

The price per *epah* varies from about 10 rupees in good years to Rs. 40, when the orange harvest has been a poor one.

The lime is also cultivated, not separately, but along with the orange. The lime can be grown with success at a higher altitude than the orange. There is extensive betel-nut and *pân* cultivation on the southern slopes of the hills. The betel-nut tree is cultivated in the same manner as in the plains, except that the trees are planted nearer to one another. The trees bear when eight to ten years old. A portion of the crop is sold just after it has been plucked; this is called *u 'wâi khiar*, and is for winter consumption. The remainder of the crop is kept in large baskets, which are placed in tanks containing water, the baskets being completely immersed. This kind of betel-nut is called *u 'wâi sun*. The Khasis, like the Assamese, prefer the fresh betel-nut. They do not relish the dry *supârî* so much.

The principal *pân* gardens are on the south side of the hills, *pân* not being grown on the northern slopes, except in the neighbourhood of Jirang. The *pân* creepers are raised from cuttings, the latter being planted close to the trees up which they are to be trained. The creeper is manured with leaf

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

mould. The plant[1] is watered by means of small bamboo aqueducts which are constructed along the hill-sides, the water being conducted along them often considerable distances. As in the plains, the leaves of the *pán* creeper are collected throughout the year. 245 [312]

The bay leaf (*'la tyrpid*, or *tezpit*) is classified in the *Agricultural Bulletin* as *Cinnamomum tenala*, and there is a note in the column of remarks that "this tree, as well as one or two others of the same genus, yields two distinct products, *tezpit* (bay leaf) and cinnamon bark." The bay leaf is gathered for export from the extensive gardens in Maharam, Malaisohmat, Mawsynram, and other Khasi States. The plants are raised from seed, although there are no regular nurseries, the young seedlings being transplanted from the jungle, where they have germinated, to regular gardens. Bay leaf gardens are cleared of jungle and weeds periodically; otherwise no care is taken of them. The leaf-gathering season is from November to March. The leaves are allowed to dry for a day or two in the sun, and then packed in large baskets for export. The gathering of bay leaf begins when the trees are about four years old. [739]

The following are the other minor crops which are grown in the Khasi and Jaintia Hills:—

Pineapples, turmeric, ginger, pumpkins and gourds, the egg plant, chillies, sesamum, and a little sugar-cane. The arum* (*la shirin*) is also extensively grown in the hills, and forms one of the principal articles of food amongst the poorer classes; it is generally raised in rotation with potatoes, or is planted along with Job's tears. The stem of the arum is sometimes used as a vegetable, also for feeding pigs. 249 [262] [231]

In the Jowai Sub-Division, notably at Nartiang, there are fairly gold mangoes, which are more free from worms than those grown in the plains of Assam.

The Bhois and Lynngams cultivate lac. They plant *erhar dal*, *u landoo*, in their fields, and rear the lac insect on this plant. Last year the price of lac at Gauhati and Palasbari markets rose as high as Rs. 50 per maund of 82 lbs., it is said, but the price at the outlying markets of Singra and Boko was 231 435

* Colocasia esculenta, Beng. Kachu. 137

1 [i.e., the pán .... Analysis]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

about Rs. 30. The price of lac has risen a good deal of late years. Formerly the price was about Rs. 15 to Rs. 20 a maund. The lac trade in the Jaintia Hills and in the southern portion of the Khyrim State is a valuable one. The profits, however, go largely to middle-men, who in the Jaintia Hills are Syntengs from Jowai, who give out advances to the Bhoi cultivators on the condition that they will be repaid in lac. The Marwari merchants from the plains attend all the plains markets which are frequented by the hill-men, and buy up the lac and export it to Calcutta. The whole of the lac is of the kind known as stick lac.

HUNTING.

The weapons used by the Khasis for hunting are bows and arrows, the latter with barbed iron heads, and spears which are used both for casting and thrusting. Before proceeding on a hunting expedition the hunters break eggs, in order to ascertain whether they will be successful or not, and to which jungle they should proceed. Offerings are also made to certain village deities, e.g. *U. Rynglew*, *u Basa*, and *u Basa ki mráď*. A lucky day having been selected and the deities propitiated, the hunters start with a number of dogs trained to the chase, the latter being held on leashes by a party of men called *ki nongai-ksew*. When the dogs have picked up the scent some hunters are placed as "stops" (*ki ktem*), at points of vantage in the jungle, and the drive commences with loud shouts from the hunters, the same being continued until the object of the chase breaks into the open. The man who draws the first blood is called *u nongsiat*, and the second man who scores a hit *u nongban*. These two men get larger shares of the flesh than the others. The *nongsiat* obtains the lower half of the body of the animal, thighs and feet excepted, called *ka tdong*, and the *nongban* one of the forequarters called *ka tabla*. The other hunters obtain a string of flesh each, and each hound gets a string of flesh to itself. These hunting parties pursue deer sometimes for many miles, and are indefatigable in the chase, the latter lasting occasionally more than one day. In the Jaintia Hills, at the end of the chase, the quarry is carried to

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

274 Nongwar, thirty-one stills; and Rangthang, thirty-seven
436 stills.

From what has been stated above some idea may be gathered
274 how very large the number of stills in the Khasi and Jaintia Hills is. I am not in a position to state with any degree of accuracy what is the amount of spirit manufactured or consumed in the year, but it is very considerable. The out-turn of a Khasi still has been reckoned at from four to eight bottles per day. From this estimate, and the fact that there are 1,530 stills in the district, it may be roughly calculated what is the consumption annually. Practically the whole of the spirit is consumed within the district. The liquor which is manufactured is far stronger than the spirit distilled in the ordinary out-stills in the plains.
273 It has been stated by an expert analyst that the Khasi spirit
435 contains 60 to 80 per cent. of proof spirit, and that it possesses "an exceptionally nice flavour and taste." The usual price at which it is sold is 4 to 6 annas a quart bottle, a second quality being sometimes sold for 3 annas. It will be seen that the
[465] liquor is exceedingly cheap. A Khasi in the villages of the interior can get drunk for 2 annas,* or a quarter of an ordinary coolie's daily wage. Drunkenness prevails on every market day at Cherrapunji, Jowai, and other large hats, and on occasions when there are gatherings of the people for various purposes. This cheap but strong spirit is demoralizing the people, and some restriction of its use would be welcomed by
273 many. In the Khasi Welsh Methodist Church abstention from
997 liquor is made a condition of Church membership, but the vast number of stills and the facilities with which liquor can be obtained are a constant source of temptation to the Christian community, and cause many defections.

GAMES.

526 The Khasis have many games, but their principal game is archery, this may be said to be the national game, and is a very popular form of recreation amongst them, the sport being indulged in from about the beginning of January to the end of

* About threepence.

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

been denuded completely of timber, charcoal being necessary 327
for smelting, has affected the production almost as much as the presence of cheap iron in the market.

MANUFACTURE OF ERI SILK CLOTHS AND COTTON CLOTHS IN THE JAINTIA HILLS.

The number of weavers in the district at the last Census 288
was 533. This number in the Census Report is ascribed to [162]
the cotton industry, no mention being made of weavers of silk. The spinning of Eri silk thread, and weaving it into cloths is, however, a fairly considerable industry amongst the Khyrwang and Nongtung villages of the Jaintia Hills. The Nongtungs and Khyrwangs rear their own Eri worms, and spin the silk from the cocoons. The late Mr. Stack, in his admirable note on silk in Assam, says, "Throughout the whole range of the southern hills, from the Mikir country, Eri thread is in great request for weaving those striped cloths, in which the mountaineers delight," but this observation should have been confined to the Jaintia Hills portion of this district, the Khasis not weaving themselves either in silk or cotton. The Khasis obtain their silk cloths from the Assam Valley, and from the Nongtung or Khyrwang villages in Jaintia. The latter villages have given the name to the striped cloth, *ka jáin Khyrwang*, which is almost invariably worn by the Syntengs. Mr. Stack has given in detail a description of the silk industry in Assam; and it is not therefore necessary to go over the same ground here. The Khyrwang cloth is red and white, mauve and white, or chocolate and white, the cloth being worn by both men and women. The Khyrwang cloths vary in price from Rs. 5 to [435]
Rs. 25, according to size and texture. These cloths are the [462]
handiwork of women alone, and a woman working every day regularly will take six months to manufacture a cloth valued at Rs. 25; but, as a rule, in the leisurely manner in which they work, it takes a year to complete it.

l: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

323 Larnai. The Larnai potters make many of the earthen pots to be found in the Khasi houses called *khiew ranei*, or sometimes *khiew Larnai*. Mr. Gait says, "These potters use two kinds of clay mixed; one is of a dark blue colour, *'dew-iong*, and the other of a greyish colour, *'dew khluid*. These clays seem to correspond closely with the *kumár máti* and *hira máti* of the Brahmaputra Valley."

323 The clay at Larnai is well beaten out upon a hide, or upon a
415 flat disc of wood; the women fashion the pots by hand, they do
435 not use the potter's wheel. The pots are sun-dried and then fired. They are painted black with an infusion of a bark called *sohliya*. The Larnai potters also make flower-pots which are sold in Shillong at from 2 annas to 4 annas each, the price of the ordinary pot or *khiew ranei* varying from 2 pice to 4 annas each. A water-pot (*khiew um*) is also fashioned, which is sometimes used in the manufacture of liquor, price 4 annas to 6 annas each.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

585 that they may prosper, that they may obtain rice and fish, that
788 they may possess hundreds and thousands; thus, oh god." The priest then pours liquor on the ground three times from the gourd, counting "one, two, three." He then continues the invocation thus, "*Hei*, thou, oh mother; oh grandmother; oh maternal uncle; oh father: oh *Suid-nia;* oh younger grandmother; oh elder grandmother; oh younger grandfather; oh elder grandfather. As the flesh has fallen (on the floor, i.e. the feast has been prepared), the ring has been put on, the three strips of flesh are ready (alluding to the three dried fish already mentioned), you will all of you (ancestors) give ear, you will continue giving strength and spirit (i.e. to the married pair) that they may be well" (and so on, as written in the first invocation). He then pours out the liquor three times as before. He then adjures the Siem, the elders, and all the people who do not belong to either of the two clans, and pours out liquor three times as before. The three pieces of dried fish are first placed on the *tympan*, the high rack above the fire-place, then removed and tied to the ridge-pole of the house, amidst shouts of
585 *Ho, hoi, hoi, hoi.* The poor then sacrifice a fowl, and the
769 rich a pig without blemish (*uba tlem*), to *u Suid nia* and *ka Iaw-bei* (the spirits of deceased ancestors of the family), and present them with *dykhot*, or pieces of flesh. Two or three days afterwards, the bride, accompanied by her female relatives, pays a visit to the bridegroom at his house, and after this they go and come as they like to one another's houses.
591 After two or three children have been born, they take down the
782 pieces of dried fish from the roof and sacrifice two pigs, one on behalf of the husband and another on behalf of the wife. Then they say there can be no possible *sang*, and husband and wife use each other's things and pool their earnings, and if the husband has a house of his own, the wife can go and live with him; this, however, is not the custom amongst many of the Syntengs, who more strictly observe the principles of the
585 matriarchate. The cost of the marriage ceremonies amongst
435 Khasis, Syntengs and Wárs, may be put down at between Rs. 50 and Rs. 200 according to the position of the parties.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

of a Garo marriage. The Lynngams, unlike the Garos, do not observe which way the beaks of the fowls turn when they are thrown on the ground after being sacrificed. The Lynngams, like the Khasis, take auguries from the entrails of the fowls and the pig. After these ceremonies are over, the Lynngam pair are allowed to cohabit. The cost of an ordinary Lynngam marriage is from Rs. 30 to Rs. 40. The marriage system in vogue among the Lynngams may be described as a mixture of the Khasi and Garo customs. As has already been stated, the Lynngams are a mongrel breed of Khasis and Garos.

CEREMONIES ATTENDING DEATH.

The death customs of the Khasis are not only very elaborate, but possess a significance of their own, it is, therefore, necessary to describe them in detail; they are as follows:—

A member of the family bends down towards the ear of the apparently deceased person and calls him or her by name three times, to make sure that death has occurred. If no answer comes, the family laments, for it is then concluded that the person is really dead. The body is then bathed in warm water from three earthen pots and is reverently laid on a mat (*japung*), where it is dressed in white cloth, a peculiar feature of the dressing being that the waist-cloth and turban are folded from left to right, and not from right to left, as in the case of the living. An egg called *u'leng kpoh* is placed on the stomach of the deceased, and nine fried grains, of *riw hadem*, or Indian corn, are tied round the head with a string. The rich place ear-rings in the ears and other jewellery on the body of the deceased, it being necessary that this jewellery should be specially made for the occasion, and they deck the corpse with valuable cloths. A cock, *u'iar krad lyati* (literally the cock that scratches the way), is sacrificed, the idea being that a cock will scratch a path for the spirit to the next world. A sacrifice of a bull, or of a cow in case the deceased is a woman, (*u* or *ka masi pynsum*,) follows. Portions of the left leg of the fowl and the lower part of the jaw of the bull or cow are kept, to be placed afterwards in the *mawshieng*, or bone,

The cost of an archery contest varies [435] considerably. In general it can be said that 526 a shooter pays one anna (about 10 pfennigs, 525 peace evaluation) for each shot. All the various competitions together produce a tidy little sum, especially when the attendance is good. I have come across figures as high as 50 to 70 rupees which were got together in this way during the course of a year and were then spent at the end of the year together at a great feast after the main competition.

It is frequently the custom among the Synteng, not to collect this contribution, anna by anna; rather, a large sum, which is raised by collecting signatures, is bet with the opponent at the main shooting (the final game). This also occurs occasionally among the Khasi. (31)

31. Gurdon, The Khasis, reports on page 56 that a sum of 500 rupees was bet in the Nongkrem state in Khadar Blang at a shooting competition.

3. The Feast after the Archery Contest 527

A general feast is arranged with the money bet or saved. Everything is just as wild during this feast as during the archery competition. Several strong men go forth to fetch the pigs bought for this occasion. The living animals are tied to bamboo poles by their feet. Four men, two and two alternately, carry each a burden on their shoulders to the place of the festival. There is lively activity at that place. The men stand around huge fires and chat. Others busily arrange dishes and pots of brass --everything polished

/110/ The sale of oranges is an exception. 804
These appear on the market by the thousands. This fruit is sold by the spah, i.e., the hundred, but this is not to be taken literally. For the spah have various meanings according to the region. Thus the people on the Bogapani River (in Phali) sell according to the following system:

1 hali	equals	4 oranges
8 hali	"	1 bhar
100 bhar	"	1 spah, i.e., 3200 oranges

They are reckoned as follows in Shella:

1 gai	equal	6 oranges
5 gai and 2 oranges	"	1 bhar
4 bhar	"	1 hola
27 hola and 2 bhar	"	1 spah or 3520 oranges

The price for a spah varies from 10 to 40 rupees (tyngka), according to the amount of fruit that appears at the market. [435]

Quai leaves (tympeu) are sold according to the following scale:

2 sla	equal	1 jur
10 jur	"	1 khongshi
3 khongshi	"	1 blah
4 biah	"	1 tap
20 tap	"	1 kuri
4 kuri	"	1 shalia

But among the War the quai leaves are sold 435

435 in bundles. Each bundle is four bunches and each bunch has 48 leaves. The price for 10 to 20 bundles costs a rupee (tyngka) on the average. But when the rain stops and the dry season begins, the price climbs to 2.3 rupees and more. Four thousand to five thousand bundles of tympeu are sold daily at a well-attended market.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

workers and they were few in number.[1] They were particularly employed for such work as the clearing of jungle for new pan gardens in summer. 245 464

In the orange season (December to February) the number of workers increased and they were paid more: Rs. 1/8 were paid[2] for one load (one person carrying 80 pounds of oranges, from an orange garden to the railway station—about two miles). Usually a worker made three to five trips a day. Many workers from Jaintia used to come for this particular season. 245 464 465

Semi-permanent workers were engaged for wet rice fields. They were usually Hindu cultivators: since these Khasi and other tribes do not know the technique of wet cultivation, plains people like the Biharee immigrants were engaged. These workers were provided with servants' quarters where they lived with their wives and children. However, very few Jatinga households possessed rice fields. 243 464

The economic prosperity of Jatinga reached its climax during the period from 1934 to 1940. Since 1942, the orange production has been decreasing. In 1945, a serious disease attacked the orange gardens as well as the pan-leaf gardens. Besides, by depriving Jatinga, as it had Shella, of their most important markets, Dacca and Sylhet, the Partition of India and Pakistan in 1947 caused a serious economic depression in the whole region. On the other hand, because of the past prosperity, the population has rapidly increased during the last ten years. The serious economic condition of Jatinga is illustrated in the petition which was submitted by the Jatinga people when the Governor of Assam visited those areas in January 1956. It runs thus: 245 434 731 161 458

"Since the last ten years or so, with the increase of population in the village and with the loss of fertility of the soil, the people were faced with economic depression. At present they are facing acute shortage of land they have also no scope to adopt other forms of cultivation like jhuming and wet rice cultivation, etc. Moreover, there has been successive attack of Bright's disease which destroyed and wiped out all the orange and pan gardens. And as such, majority of the families have to depend for their livelihood on daily wages. . . ."

It is indeed a serious situation for them, because the Khasi do not produce staple foods, such as rice; their economy is completely dependent on the trade of their products by which they purchase their main provisions, clothes, etc. Other peoples round Jatinga, being jhum cultivators, can at least get rice and cotton: the minimum requirements, staple foods and clothing are available even in the worst conditions, so that they can at least maintain themselves though the standard of living is low. As I stated before, a few households in Jatinga possessed rice fields, but the majority had none. Recently they rented some plots of jhum field for rice cultivation from Zemi-Naga of neighbouring villages.[3] However, its yield was but a small percentage of their consumption. A few 182 434 [433] [243]

1. If they had worked in the gardens of Jatinga, they might have got more profit than from their own jhum fields. For one day's labour, they got Ans. 8/. For one month, they could earn Rs. 15 with which they could buy about 4-5 maunds of rice (one maunds paddy cost Rs. 3-4). For one year it became 50 maunds, which was impossible to produce in a jhum field by a single person's labour. [435]

2. These rates, including the figures of note 1, apply to 1956.

3. Jatinga villagers told me that Zemi-Naga were kind enough to lend them their field for a negligible rent, though they had not enough for themselves. Zemi-Naga said that they owed much to Jatinga in the past, so that now they sympathised with the condition of Jatinga, and offered some parts of their jhum field. [427] [628]

transported to other parts of Indian Union. The prices of some of the cash crops recorded a disproportionate fall unprecedented before. The price of orange which ruled at Rs. 20·00 to Rs. 25·00 per luti (1,024 nos.) tumbled down to Rs. 8·00 to Rs. 16·00 per luti, that of betel leaf which used to sell at Rs. 20·00 to Rs.25·00 per kuri (2,880 leaves) came down to Rs.2·00 to Rs.3·00 per kuri. Tezpata and other fruits also suffered equally. The worst of all was that even at this rock bottom price the produce was not lifted. The following figures quoted from the memorandum submitted to the Prime Minister by the Border People's Association which are claimed to have been collected from individual growers are indicative of the extent to which the border trade suffered after partition. 435 439 458

TABLE A-1

Annual export from United Khasi & Jaintia Hills to East Bengal before and after partition

The difficulty of getting adequate supply of foodgrains and other necessities of daily life posed a serious problem. Due to communication difficulties arrangement for adequate supply of these commodities from other parts of Indian Union could not be made. The supply from 439 458

435 659 Regarding supply of foodgrains through fair price shops, the position appeared to be unsatisfactory. Complaints were heard from some villagers coming from the interior villages that they very rarely get rice from fair price shops, which are usually allotted to bigger villages, sometimes too far from the villages tagged to it. Even the people of the villages where there were fair price shops, complained that the supply of rice to these shops was inadequate and the price also was very high which in some areas was even as high as Rs. 31·00 per maund.

164 312 In a majority of the villages investigated, water supply and medical facilities were not satisfactory. Malaria, dysentery and other bowel diseases are common in this area.

8.3.—The following table summaries the data on relative importance of crops, harvested area under different crops, average yeild of crops and sale proceeds, etc.

TABLE F-3
Yield rate of some important crops

Crop	Border area			Project area			General area		
	Gross farm area harvested (in acres)	Average yield per acre	Sale proceed (Rs.0.00)	Gross farm area harvested (in acre)	Average yield per acre	Sale proceed (Rs.0.00)	Gross farm area harvested (in acre)	Average yield per acre	Sale proceed (Rs.0.00)

435

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

243 the District, nor do any superior kinds of cereals appear to have been substituted for inferior ones.

THE DIFFERENT STAGES OF RICE CULTIVATION, in English and Khásí, are as follow:—The blade as it first shows, *spch-u-kyba;* the blade when well above the ground, *la-thylleng-u-kyba;* the ears when first formed, *lam-mat;* the ears beginning to ripen, *byr-tem;* the ripe ears, *la-hih;* unhusked rice, *u-kyba;* husked rice, *u-khaw;* cooked rice, *ka-ja.*

262 THE VARIOUS SOLID AND LIQUID PREPARATIONS made from rice
[435] are the following:—(1) *U-kypu*, cakes of different kinds, sold at six
[782] or twelve for a penny, according to size. (2) *U-shirá* or *gáh-khir*, prepared by the hillmen as an offering to their deity at the conclusion of the harvest. (3) *Kadam*, fermented rice water, sold at the rate
273 of from three-farthings to threepence per quart, according to the
435 strength of the liquor. (4) *Ka kiad-phatika* or *ka kiad-hárak*, a kind of spirits distilled from rice, and sold at from threepence to fourpence-halfpenny per quart.

243 OTHER CEREALS.—Indian corn, or *u-riu-ha-dem*, is grown on homestead lands. The ground is first manured, and the seed is sown about the middle of April. The crop is fit for cutting in September and October. A kind of millet seed called *u-krti* is commonly sown with paddy on high lands. For want of more suitable land, however, this crop is often cultivated by itself on rocky slopes; and when this course is adopted, the jungle is first cut down in February and burnt. The seed is sown in April, and the crop gathered in December.

244 PULSES AND FIBRES.—Only two kinds of pulses are grown in the Hills, *u-rym-bai-ktung* and *u-rym-bai-jú*, both of which are varieties
283 of beans. They are sown on high lands in March and April, and gathered in December. The only fibre is that made from the pine-apple stalk, which is largely used for making netted bags.

245 MISCELLANEOUS CROPS.—(1) Oranges.—There are numerous
[439] orange plantations in the neighbourhood of Cherrá Púnjí, and the fruit is exported to all parts of Bengal. In the year 1876-77 the estimated exports were 9,400,000 in number, valued at Rs. 37,600, or £3760, at the rate of Rs. 12 or £1, 4s. per three thousand. These figures show a decrease in number as compared with the estimated export twenty years ago. The trees flower in March or April, and the fruit ripens in October and the following months. In some cases the oranges are allowed to remain on the trees till March, but

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

(8) Cotton is grown on high lands and
248 slopes; it is sown in April, and becomes fit for picking by January.

311 Area and Out-turn of Crops.—According to the Assam Ad-
241 ministration Report for 1875-76, the area of the British portion of the Khásí and Jáintiá Hills District amounts to 2160 square miles,
648 of which only 110 are under cultivation; of the remainder, 1337 square miles are set down as cultivable, and 713 as uncultivable. The total area of the semi-independent Khásí States is given as 3997 square miles, of which 176 are under cultivation, 2561 are cultivable, and 1260 uncultivable. In another portion of the same Report, the area under various crops throughout the entire District is thus approximately estimated:—Rice, 59,880 acres; other food grains, 57,820 acres; cotton, 1076 acres; potatoes, 33,880 acres. The average out-turn of rice per acre is returned at 8 *maunds*, or nearly 6 cwt.; of other food grains, 3 *maunds*, or over 2 cwt.; of cotton, 2 *maunds*, or 1½ cwt.; of
[435] potatoes, 55 *maunds*, or nearly 40 cwt. The price of rice in 1875-76 was Rs. 4 8 per *maund*, or 12s. 8d. a cwt., which gives Rs. 36 or £3, 12s. as the value of the rice crop obtained from one acre.

241 Condition of the Peasantry.—The Khásiás can scarcely be considered an agricultural people, as they do not grow sufficient
423 grain for their own subsistence, and are dependent to a great
433 extent on imports of rice from the neighbouring Districts. Ten acres is generally considered a comfortable holding for a husbandman in the position of an ordinary Bengal peasant, but scarcely any man in the Hills depends entirely upon the produce of his land for
[231] his support. In the Jáintiá Hills a cultivator's position is con-
[554] sidered to be very low if he possesses no cattle, but performs all the operations of agriculture with his own hands. In that portion of the District, five acres is all that can be cultivated with a single
[465] pair of oxen, the average being four acres. A husbandman with a holding of five acres would not be so well off as a retail shopkeeper, nor would it enable him to live as comfortably as he could on a money wage of Rs. 8 or 16s. a month. The peasantry, however, as a class are not in debt. The land is owned chiefly by small proprietors, who occupy and cultivate their hereditary fields. The relations of landlord and tenant do not exist in the Hills, and no rent is payable to any one; consequently the principle of Act x. of 1859 (the Rent Law of Bengal) has no application.

231 The Animals used in agriculture are oxen; goats and pigs are
435

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

reared either for food or as articles of trade. A pair of ploughing oxen are worth about Rs. 32, or £3, 4s.; an ordinary cow, Rs. 12, or £1, 4s.; a score of kids six months old, Rs. 16, or £1, 12s.; and a score of full-grown pigs, from Rs. 100 to Rs. 160, or from £10 to £16. 231 435

THE AGRICULTURAL IMPLEMENTS in use in the District consist of a plough, called *ka-jingshir* in Khásí, and a hoe or *kodáli*, called *u-mo-khiar*. When the cultivation is carried on by means of oxen, the plough is used, the hoe alone being used when the land is cultivated by manual labour. In the Khásí Hills the use of the plough, except in a few rare cases, is entirely unknown; but in the Jáintiá Hills, oxen and ploughs are used to a greater extent. What is technically termed 'a plough' of land is equivalent to four English acres; a pair of oxen, together with the necessary implements, would represent a capital of about Rs. 40, or £4. 241 407 [435]

WAGES.—The Deputy-Commissioner reports that the price of labour in the District has more than doubled in the last ten years. The rates obtaining at present are from eightpence to one shilling a day for an ordinary labourer, and from one shilling to eighteenpence a day for a porter. An agricultural day-labourer earns sixpence, and a woman at the same work fourpence-halfpenny a day. Bricklayers, carpenters, and blacksmiths earn from a shilling to eighteenpence a day. The new Station of Shillong, the present seat of the Local Government, was established in May 1864, and since that date the demand for labour has markedly increased. The extension of the cultivation of potatoes has also had an appreciable effect on the price of labour. 178 464 465 [244]

PRICES OF FOOD GRAINS.—Of the different descriptions of rice in the markets of the District, the better sorts are imported from the neighbouring Districts of Sylhet and Káchár. The local produce is considered fit only for the use of the Khásís. The price of the better descriptions depends entirely upon the distance from which the supplies come. In a distant market like that of Shillong, rice of the best quality generally sells at from 6 to 7 *seers* for the rupee, or from 16s. to 18s. 8d. per cwt.; and rice of inferior quality, which is only used by the poorer classes, at from 9 to 10 *seers* for the rupee, or from 11s. 2d. to 12s. 5d. per cwt. Little or no trade is carried on in unhusked grain. Paddy produced in the District generally sells at an average of from 15 to 16 *seers* per rupee, or from 7s. to 7s. 6d. per cwt. Indian corn, which is only grown to a small extent, is sold 435 439 243

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

435 439 at the rate of two or three ears for a farthing; and sugar-cane, the [243] cultivation of which is also very limited, at from a little over a farthing 273 to three-farthings per cane. A fermented liquor called *kadam*, made 435 from rice, is sold at from three-farthings to threepence a quart, according to strength; and a distilled spirit called *phatika*, or *kakiad-kirak*, at from threepence to fourpence-halfpenny a quart. This latter description of liquor is sometimes made very strong. No records exist by which the present prices of the above articles can [731] be compared with the rates ruling ten years ago. The maximum price of rice during the famine of 1866-67 was 5 *sers* 6 *chhatáks* for the rupee, or about £1 a hundredweight.

804 Measures, Weights, etc.—The Hill people have no proper 805 measurement of time or distance. If there be any standard for measuring distance, it is by the number of *pins* a man chews in the course of a journey, generally about one every half hour. In some parts of the District, land is measured by a stick called *ka dieng-nung*, varying in length from six to seven cubits. Liquids are measured in gourds of different measures, varying from half a *chhaták* to a *ser*, and also in bamboo tubes. Rice, potatoes, beans, etc. are measured in baskets, varying in size in different markets from two to eighty pounds.

805 In the Khási Hills the inhabitants reckon eight days in the week, named as follows:—(1) Lyn-kah; (2) Nong-krem; (3) Um-long; (4) Rang-hep; (5) Shillong; (6) Pom-tih; (7) Um-nih; (8) Yeo-duh. In the Jáintiá Hills the eight days are named thus:—(1) Kyllao; (2) Pyn-sing; (3) Máo-long; (4) Máo-siang; (5) Máo-shai; (6) Pyn-kat; (7) Thym-blein; (8) Ka-hat. The Khási months of the year, calculated by moons, are as follow:—(1) U Kylla lynkot; (2) U Rym-pang; (3) U Lyber; (4) U Laiong; (5) U Jimmang; (6) U Jilliw; (7) U Nai-ting; (8) U Nai-lar; (9) U Nai-lúr; (10) U Rysow; (11) U Nai-wing; (12) U Noh-prah.

464 Landless Labouring Classes.—There is, and always has been, 423 a large class of labourers in the District who neither rent nor possess any land. Women and children are employed in manual out-door labour of all kinds.

Varieties of Land Tenure can hardly be said to exist. There 423 is nothing whatever resembling the relations between landlord and [427] tenant throughout the Khási Hills. The lands as a rule are either ancestral property or belong to village communities, and are cultivated under unwritten but well-understood agreements. Of the wide

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

extent of waste land, some is cultivated in a manner resembling the *jhum* system,—successive crops are grown on a patch of land till the soil is exhausted, and then another spot is selected, where the same process is repeated afresh, but without anything that can be called a *jhumi* tenure. Any renting of land is exceptional, and there are no recognised rates of rent. The Deputy-Commissioner, however, states that an ordinary rate for rented land would be from two to three shillings a year for as much land as an individual can cultivate with his own hands. 423 [427]

MANURE is generally used in raising rice and potatoes. It is seldom purchased, the dung and litter of the cattle and other animals about the house being generally utilized for the purpose. For rice fields a little less than half a ton of manure, but for potatoes upwards of two tons, is required per acre. Manure, if purchased, would cost from 2s. 7½d. to 3s. 9d. per acre for rice land, and for potato fields from 12s. to 18s. per acre. 243 244 [435]

IRRIGATION for agricultural purposes is regularly practised. Water is brought to the land by means of channels cut from the numerous hill streams in the neighbourhood of the fields. Wells and tanks are unknown. The work of irrigation by means of these channels is very easily carried on, and at a very trifling outlay. Rotation of crops is not practised in the Hills. 312

MODEL FARM.—The Shillong Model Farm, established in 1873, has not proved a success. Experiments tried with wheat give some hope that cold-weather crops may profitably be introduced into the Hills. Two new varieties of potato—'red rosgin' and 'pheasant's eye'—were successfully introduced in 1873-74; but these are not looked upon favourably by the Khásiás, as they only give one crop in the year, whereas the ordinary variety yields two crops. Several fruit-trees have been planted out, including apple, pear, cherry, nectarine, and plum; and the tables of the European residents are supplied with vegetables from the garden attached to the farm. A *Manual of Potato Cultivation* compiled by the superintendent has been translated into Assamese, and copies have been distributed among the adjoining Hill tribes. The general failure in all the agricultural experiments is attributed partly to the unfitness of the soil, and still more to the ravages of white ants and other insects peculiar to the Hills. The attempts to improve the indigenous breeds of live stock have been equally unfortunate. During the two years 1874-76 the sum of Rs. 1,744 177 244 647 654 177 245 647 654 [134] [136] 231 648 654

20: Hunter G-4 (no date) 1897 AR 7 Khasi AR 7

231 (£172. 8.) was expended on the purchase of stock, including
648 cattle, sheep, and pigs from England. Even native cattle at the
654 elevation of Shillong fell off very much in the months of January and February from want of forage, and the Khásiás at this season generally drive them to lower slopes. But one of the chief objects in keeping cattle at the farm was to obtain manure; and *mati kolái* (Phaseolus radiatus) was grown for them, cut green, and stocked for food. On this they did very well. In 1875-76, however, cattle disease broke out on the farm in a very virulent shape. Out of 39 cattle stocked, only 7, or 18 per cent., recovered, and the animals imported from England all died. There was also a heavy mortality in that year among the sheep and pigs. The following are the financial results for the two years:—1874-75—Expenditure, Rs. 13,257. 0. 5; receipts, Rs. 309. 2. 6: deficit, Rs. 12,987. 13. 11. 1875-76—Expenditure, Rs. 11,225. 8. 6; receipts, Rs. 1036. 15. 0: deficit, Rs. 10,428. 9. 6. Total deficit, Rs. 23,396. 7. 5, or £2339.
[731]

648 130. In view of these figures the Chief Commissioner has determined to restrict farming operations to small experiments in irri-
654 gated *rabi* crops, and, as a measure of economy, to dispense with the services of the superintendent. The future expenditure on the farm will be insignificant. The establishment now (1877) consists of a *sardár* on Rs. 30 and a *chaukidár* on Rs. 10 a month (total, £72 a year), under the direct control of the Deputy-Conservator of Forests; the total number of live stock is 64 head.

731 NATURAL CALAMITIES, such as blights, floods, or droughts, are not common in the District, although the crops in the *Jaintiá* Hills sometimes suffer from insects. So far as the Deputy-Commissioner is able to ascertain, no destruction of crops affecting the general harvest has occurred within the experience of the present generation. During the Orissa famine of 1866-67 the maximum price of common rice reached £1 per hundredweight, but no such distress was felt as to require Government relief operations. The price just mentioned was certainly equal to the rates prevalent in the famine-stricken districts; but prices always rule high in the Hills, and afford no just criterion of the state of affairs among the general body of the inhabitants. Distress was only felt by a small portion of the population, chiefly the Bengáli immigrants residing in the District, who are generally a well-to-do class. The Hill people, as a rule, do
262 not eat potatoes, which they grow only for export; but in case of
244 actual famine, they might fall back upon this crop for their own food
439 supply.

• [435]

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

 000

supply. As the District depends so largely for its supply of rice upon Sylhet and Kámrúp, the state of the markets in those places exercises a greater influence on the rates in the Hills than any failure of the local harvest. In the year 1858 the price of common rice is said to have risen as high as 6 *sers* for the rupee, or 18s. 8d. per cwt., in consequence of the failure of the crops in the plains. 243 433 439 [435]

ROADS AND MEANS OF COMMUNICATION.—The following are the eight principal lines of road in the Khási and Jáintiá Hills:—(1) Road from Shillong to Gauháti, in Kámrúp. This road has recently (1877) been opened for wheeled traffic throughout its entire length. The Deputy-Commissioner's Report for 1876-77 states that the number of passengers passing up and down may be estimated at about 800 or 1000 every month, and the number of carts already used at about 50. The *tonga dák* brings travellers up to Shillong from Gauháti in two days by a comfortable and easy carriage service, while for natives a cheaper conveyance by bullock cart is available. At Gauháti there is a good *dák* bungalow in charge of a *khánsámá*, where the usual accommodation provided in a hotel is to be found. The stages to Shillong are as follow:—(*a*) Gauháti to Bornihát, 17 miles. The road is good throughout. There is a *dák* bungalow in charge of a *chaukidár* at Bornihát, where grain and rice are procurable. (*b*) Bornihát to Nongpoh, 14½ miles. The road is hilly throughout, but good. At Nongpoh, which is at an elevation of 1900 feet, there is a *dák* bungalow in charge of a *khánsámá*, from whom tea, liquors, and biscuits, etc. can be obtained. The *dák* bungalow is furnished with bedding, linen, etc. Grain and rice can be purchased in the *bázár*. (*c*) Nongpoh to Um-sning, 16½ miles. At Um-sning, elevation 2700 feet, there is a *dák* bungalow in charge of a *chaukidár*. Supplies or coolies are not procurable, but sometimes grain and rice can be purchased. (*d*) Um-sning to Um-jam, 9½ miles. At Um-jam there is a Public Works Department rest-house in charge of a *chaukidár*. Supplies or coolies are not procurable. (*e*) Um-jam to Shillong, 9½ miles, of which 6½ are a continuous ascent. At Shillong there are *dák* bungalows in the Artillery Lines, containing four separate rooms. A *khánsámá* is in attendance, and the rooms are completely furnished with bedding, linen, etc. This entire road, which has a total length of 67 miles, is as perfect a hill road as could be seen in any country, and a model of engineering skill. (2) Road running from Gauháti across the Hills, *viâ* Nongklao, Máo-flang, Cherrá 491 [493] [485]

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

The coal strata at the former place are calculated to extend over one-third of a square mile, with an average thickness of from 3 feet 6 inches to 4 feet; and the yield of the coal, if it could be worked, is estimated at 447,000 tons. At the latter spot the area of the coal-fields is computed to extend over 0·394 of a square mile, and the estimated yield of the mineral is about 1,100,000 tons. The coal at Cherrá Púnjí and at Lá-ká-dong is in quality equal to some English coals; it is quick in its action, and consequently would generate steam rapidly; it cakes well, but gives out a large amount of smoke; it is fragile and easily broken. From the absence of that definite structure which produces the planes of division known to English miners as 'backs,' or joints in the coal, it breaks into unsymmetrical pieces, and consequently does not stow well. From its composition, quick combustion, and irregular cleavage, it is estimated to be from 5 to 7 per cent. inferior to good English coal; but as a gas-producing coal it is considered superior to English produce, both as regards quality and purity of the gas. It is also calculated to yield a good quality of coke. The market value of coal found in the Khási and Jáintiá Hills cannot be given with any approach to accuracy, owing to the expense of labour in the Hills and of carriage to the plains. The Station of Shillong, which consumes coal as fuel, derives its supply from the coal beds at Máo-beh-lyrkár, 18 miles distant, and the price is as high as £3 per ton. Lá-ká-dong is within six miles of Borghát, a village on an affluent of the Surmá, which is accessible all the year round by boats of 500 maunds, or 28 tons burden; but at present only coolie-carriage is available between Lá-ká-dong and Borghát.

The following is a brief history of the mines at Cherrá Púnjí in the Khási Hills, and at Lá-ká-dong in the Jáintiá Hills:—Government holds a perpetual lease of the Cherrá Púnjí mines from the chief or Siem of Cherrá, conditionally upon the payment by Government of a royalty of two shillings and eightpence for every five tons of coal quarried and removed from the mine, and also upon the terms that the people of Cherrá shall be permitted to work the beds on their own account. In 1844 Government transferred its right to work the mine to Captain Engledue, then agent of the Peninsular and Oriental Company, for a period of twenty years; but in the following year this gentleman, with the permission of Government, made over his lease to Messrs. Gisborne & Co., of Calcutta, who worked the mine for about two years,

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

316 and in 1851 transferred their rights to Mr. W. Moran, of Calcutta.
648 The last lessee, however, preferred buying his coal to mining it; and
655 Government, seeing that the mines were not worked in a satisfactory manner, resumed the beds in 1859, and advertised them for letting. No person, however, has since come forward to work the mine. The Lá-ká-dong coal mines are the sole property of Government, which in the year 1848 leased the mining rights to Mr. B. W. Darley. This gentleman in the following year made over his lease to Messrs. Gisborne & Co., who soon afterwards transferred it to Mr. Moran. This gentleman surrendered his lease in 1859, when the mines were advertised for letting, but no one has since come forward and undertaken to work the coal. Between 1850 and 1856, while the mines were worked, about 5100 tons of coal were extracted for exportation.

In Mr. Allen's Report, dated 1858, it is stated that the coal of the Hills then found a ready sale at Dacca and elsewhere at 8 *ánnás* per *maund;* and that the average quantity exported into Bengal was about
[435] 25,000 *maunds*, valued at Rs. 12,500, or £1250. According to the local trade reports, this exportation would appear to have entirely died out; but the Bengal registration returns record 2965 *maunds* of coal, valued at Rs. 1482, or £148, at the rate of 8 *ánnás* per *maund*, as exported from Sylhet District in the year 1876-77. This supply was probably derived from the Khásí and Jáintiá Hills.

317 LIMESTONE QUARRIES.—A limestone formation prevails more or less along the whole southern face of the Khásí and Jáintiá Hills. The quarries are chiefly situated in the beds and on the banks of rivers and water-courses.

The limestone-quarrying localities in the Khásí Hills are the following twenty-six:—(1) Bha-wál; (2) Bor-syr-mai; (3) By-rang, *alias* Wáh-long; (4) Bor-púnjí; (5) Chún-jurá; (6) Dholai; (7) Dwárá; (8) Ichhámati; (9) Lúm-dih-long; (10) Lan-grin; (11) Long-long; (12) Máo-nai; (13) Máo-don; (14) Máo-kár-tillá; (15) Mohesh-kháli; (16) Máo-long; (17) No-kriá; (18) Páthériá; (19) Ram-seng-rai-skeh; (20) Soh-lai; (21) Silai; (22) Shellá; (23) Tanglá; (24) Tang-wai; (25) Um-song; (26) Um-tymá. In the Jáintiá Hills, the following seven:—(1) Chún-chhorá; (2) Lámá-pushi; (3) Litháng; (4) Myrli Púnjí; (5) Nongthá-long; (6) Rúpnáth; (7) Rowai. The supply of limestone is literally inexhaustible. The wants of Calcutta and of the whole of Lower Bengal
648 have been satisfied from these hills from time immemorial. During
651 the year 1876-77 the estimated export was 1,600,000 *maunds*, valued
317

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

at Rs. 480,000, or £48,000, and the revenue derived by Government from the quarries was Rs. 67,266, or £6726. In addition, the Khásí Chiefs receive a revenue from this source of more than £2000. 648 651 317

IRON.—The smelting of iron was once the chief industry in the Khási Hills, and a considerable quantity of the metal used to be exported into Sylhet, both in the crude and the manufactured state. Recently, however, this industry has almost died out, in the face of the competition of the superior article imported from England and sold in the plains at a cheaper rate. The indigenous methods of extracting, washing, and smelting the ore have been minutely described by Professor Oldham. The following description is taken from Mr. Allen's Report, dated 1858, at which date the annual export of smelted iron was estimated at 45,000 *maunds*, valued at Rs. 67,500, or £6750, at the rate of Rs. 1. 8 per *maund:* —'The ore is said to be most abundant and of the best quality in the State of Khyrim, especially at the villages of Nongkrím and Noyandrí. A few iron articles, such as *dáos* or hill knives, *kodálís* or mattocks, spear and arrow-heads, are manufactured by the Khásí smiths in the Hills; but the greater bulk of the smelted iron is sent to the plains for sale in circular lumps weighing about 4 or 5 *sers*. These lumps, called *bírí*, sell at Chhaták for from Rs. 1. 4 to Rs. 1. 6 per *maund*. The best iron, however, which is beaten into bars called *peti*, sells for from Rs. 1. 10 to Rs. 1. 12 per *maund*. Khási iron is preferred to English, in consequence of its greater malleability. It is much used by the native boat-builders of Sylhet and the neighbouring Districts to make fastenings for the timbers of their boats. When brought into the market, it is more than half dross, and it is this circumstance which renders the iron trade unprofitable. The cost of carriage from the Hills to the plains is about 6 *ánnás* per *maund;* and the traders, who are all Khásiás themselves, affirm that they get an average profit of only 2 *ánnás* per *maund*.' The tables of trade for 1876-77 return no smelted iron as exported from the Hills, but Rs. 7000 of iron implements exported, against nails and ironmongery imported to the value of Rs. 18,000. 178 325 439 [326] [435] [501]

THE MANUFACTURES of the District, besides iron, consist of coarse cotton and *randia* cloth, plain silver work, rude implements of husbandry, netted bags made of the fibre of the pine-apple, common pottery, and mats and baskets. With the exception of the 28 433

1. Gurdon E-4, 5 (no date) 1907 AR1 Khasi AR1

shield of Cherrapunji is used as a protection from rain. 293
Those of Maharam and Mawiang are each of a peculiar pattern. 352
Smaller shields are used as protections from the sun or merely for show, and there are specially small sizes for children. Then there are the different kinds of basket (*ki khoh*) which are carried on the back, slung across the forehead 415 482
by a cane head-strap. These, again, are of different sizes. They are, however, always of the same conical shape, being round and broad-mouthed at the top and gradually tapering to a point at the bottom. A bamboo cover is used to protect the contents of the basket from rain. There is a special kind of basket made of cane or bamboo with a cover, which is used for carrying articles on a journey. These baskets, again, are of different sizes, the largest and best that the writer has seen being manufactured at Rambrai, in the south-western portion of the hills. 412
Paddy is husked in a wooden mortar by means of a heavy 415
wooden pestle. These are to be seen all over the hills. The 256
work of husking paddy is performed by the women. A bamboo sieve is sometimes used for sifting the husked rice, a winnowing fan being applied to separate the husk. The cleaned rice is exposed to the sun in a bamboo tray. Paddy is stored in a separate store-house in large circular bamboo receptacles. These hold sometimes as much as 30 maunds* of grain. Large baskets are also used for keeping paddy in. In 415
every Khasi house is to be found the net bag which is made 825
out of pineapple fibre, or of *u stein*, the Assamese *riha* 436
(Boehmeria nivea). These bags are of two sizes, the larger one for keeping cowries in, the cowrie in former days having been used instead of current coin in these hills, the smaller for the ever necessary betel-nut. *Pán* leaves are kept in a bamboo tube, and tobacco leaves in a smaller one. Lime, for eating with betel-nut, is kept in a metal box, sometimes of silver, which is made in two separate parts held together by a chain. The box is called *ka shanam*, and 415
is used all over the hills. This box is also used for 787
divination purposes, one end of it being held in the hand, and the other, by means of the chain, being allowed to swing

* The maund is 82 lbs. 804

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

301 This stone is apparently some rough gem which may be picked up by the Lynngams in the river beds. A rich man amongst
556 them, however, is one who possesses a number of metal gongs,
534 which they call *wiang*. For these they pay very high prices,
436 Rs. 100 being quite a moderate sum for one of them. Being curious to see one of these gongs, I asked a *sirdar*, or head-man, to show me one. He replied that he would do so, but it would take time, as he always buried his gongs in the jungle for fear of thieves. Next morning
[531] he brought me a gong of bell metal, with carvings of animals engraved thereon. The gong when struck gave out a rich deep note like that of Burmese or Thibetan gongs. These gongs have a regular currency in this part of the hills, and represent to the Lynngams "Bank of England" notes. It would be interesting to try to ascertain what is their history, for no one in the Lynngam country makes them in these days. Is it possible that the Garos brought them with them when
534 they migrated from Thibet? The gongs are well known in the
622 Garo Hills, and I hear that when a *nokma*, or head-man, there
778 dies his corpse is laid out upon them. They thus possess also an element of sanctity, besides being valuable for what they will fetch to the Garos or Lynngams. We may hope to hear more about them in Captain Playfair's account of the Garos.

304 The Lynngams do not tattoo. Their weapons are the large-
411 headed Garo spear, the dao, and the shield. They do not usually
243 carry bows and arrows, although there are some who possess them. They are by occupation cultivators. They sow two kinds of hill rice, red and white, on the hill-sides. They have no wet paddy cultivation, and they do not cultivate in terraces like the Nagas. They burn the jungle about February, after cutting down some of the trees and clearing away some of the debris, and then sow the paddy broadcast, without cultivating the ground in any way. They also cultivate millet and Job's-tears in the same way. With the paddy chillies are sown the
241 first year. The egg plant, arum, ginger, turmeric, and sweet
231 potatoes of several varieties are grown by them in a similar
784 manner. Those that rear the lac insect plant *landoo* trees (Hindi *arhal dal*) in the forest clearings, and rear the insect thereon. Some of these people, however, are prohibited by a

764

in the valley and been brought in from there.

[436]

richly decorated with paper flowers. The structure is over the head of the deceased. Shell money (sbai) is distributed to the people at this cremation.

3. Thang shan is that method of cremation, in which the expense goes still further. In addition to the above mentioned structure over the body, a baldachin of four high bamboo poles is also erected over the funeral pyre, which is kept up after the cremation. The baldachin is decorated with colored cloth or paper. Only the very eminent people and the group mother (Stammutter) are cremated in this fashion.

The wood for the cremations is always taken from a holy forest ('law kyndang). But dry wood is also always brought along from the hut, since the green wood fetched from the 'law kyndang would not burn immediately. The fire is also not lighted at the place of cremation, but one takes a firebrand from the hut.

[432] Not until all the relatives have arrived and all the preparations for the cremation are completed -- for no work may be done on the day of cremation -- is the dead man brought to the place of cremation. He is placed, fully clothed, on a bamboo bier (ka krong). At the four ends of the bier, often also at the middle of the long sides, so that there are six of them, bamboo sticks are raised upright and a white cloth is fastened around the whole or crosswise -- depending on whether the body is that of a man or a woman. Weapons,

right into the carrying baskets of the arriving sellers with little ceremony and takes as much as he can with one or two hands. 443 651

Toll is levied at the approaches to the market. Here and there is a toll hut where the people passing must pay their contribution. These receipts belong to the king in whose kingdom the market is located. These market tolls often form very good sources of income for the royal families, as the markets are held regularly and are well attended. In return for the market tolls the king must maintain the market halls (if there are any).

[709] b) Market Coercion. There is no actual market coercion. But nothing can be bought outside of the market, since the Khasi do not have any stores. Only in the larger villages are there one or two shops, which, however, do not count. These shops must all pay the "market toll" for all the articles which they sell at home with the exception of the sale of kiad, "rice liquor," which is never sold at the market.

c) Prices and Measures. The prices are based on supply and demand. They are freely determined by the sellers. It is not the custom to bargain and haggle. An exception is the price for the daily rice, which often causes quarrels. The sellers sit by their wares without shouting or praising. The visitors come to the market, look at the wares, touch them, weigh them in their hands, and finally ask about the price. 437

If the prices seems to them to be too high, they put the wares back in their places and go their way without making any remarks.

Coins are used for paying. The Khasi have the following names for the English-Indian money? 436

children, but Christian influence has eradicated or driven underground the consumption by women and children. **Industrial arts.** The only industrial arts traditionally practiced in all households were a rudimentary carpentry and a simple utilitarian basketry. Other arts were few, and were practiced as village specialties: the washing and smelting of iron ore and the forging of hoes, daos, knives, swords, and cooking pots (upland Khasis); the spinning of cotton thread (Mynso village, Jaintia); the dyeing of cotton thread and the weaving of cloth (Jaintias, Bhois, Lyngngams, Wars); the spinning and weaving of Eri silk (Khyrwang and Nongtung villages, Bhoi and Jaintia); and the hand manufacture, without wheel, of painted earthenware pots (Larnai village, Jaintia). Ironworking and the production of cotton goods have nearly died out through the competition of machine-made goods. Carpentry has greatly improved. An innovation of major importance is the sewing and tailoring, on sewing machines, of ready-made garments for both sexes. [Cf. Darrah 1896; C., W. 1832.] **Trade.** Khasi villages normally contain a number of household shops operated by women. Every Khasi also lives within walking distance of several village markets that are held on successive days of the eight-day week. The limits of market intercourse for the members of any particular village can be roughly distinguished by their naming the days of their week, which are called after the active markets. The exception is the huge market at Shillong, much of which is active daily, and which serves as a magnet for Khasis from all over the hills. The traditional barter has given way to currency in all markets. The small ones contain at least some local farm produce, plus other essentials like betel nut, and the food and tea stalls which serve as centers of social intercourse. The big markets contain not only regional produce and manufactures but also products from distant parts of the hills, brought for sale by traveling middlemen. There is also substantial trade, from the hills to the valleys, in potatoes, pears, hides, lac, cotton, caoutchouc, the wood of the sal tree, Eri silk thread, limestone, coal, ivory, bay leaf, betel nut, pan leaves, bananas, sugar cane, oranges, til, turmeric, and chilies. From the plains to the hills, there is trade in dried fish, paddy rice, salt, cooking oil, kerosene, matches, tea, sugar, wheat flour, machine-made cloth, shoes, metal pots, crockery, porcelain objects, coral beads, silver, and gold. Markets are important not only as economic institutions but also as centers for recreation (including archery competitions), courtship, reaffirmation of kinship ties with distant relatives, and the dissemination of information of all kinds. [Cf. Stegmiller 1924a.] **Division of labor.** Men do the heavy work, such as clearing and burning the swidden fields, caring for cattle and goats and driving them to market, butchering and selling large cuts of beef and pork, carpentry and mining, and driving and laboring on motor vehicles. They also tailor men's

extracted by squeezing the comb with the hand. Wax is 231
obtained by placing the comb in boiling water and allowing it to cool, when the wax floats to the surface. The Khasis do not systematically tend their bees, as they do not understand how to prevent swarming, and as the Khasi bee is a prolific swarmer, hives become weak very soon and a new hive has to be started from a captured natural swarm. The villages in which bees are regularly kept to any large extent in the Khasi and [438] •
Jaintia Hills are Thied-dieng, Mawphoo, Nongwar, Mawlong, Pynter, Tyrna, and Kongthong, but most of the Wár villagers rear bees and sell the honey at the neighbouring markets. The collection of the honey of the wild bee, or *u lywai*, is a hazardous occupation, the services of some six or seven persons being required, as the combs of this bee are generally built in the crevices of precipitous rocks, and sometimes weigh more than half a maund each. When such hives are discovered the bees are driven out by the smoke of a smouldering fire lit at the foot of the rock below the hive. Two or three men get to the top of the precipice, leaving two or three of their companions at the base. One of the men on the top of the rock is then lowered down in a sling tied to a strong rope, which is made fast by his companions above to a tree or boulder. The man in the sling is supplied with material to light a torch which gives out a thick smoke, with the aid of which the bees are expelled. The man then cuts out the comb, which he places in a leather bucket or bag, which, when filled, he lowers down to the persons in waiting at the foot of the rock. The wild honey may be distinguished from that of the domestic bee by being of a reddish colour. Honey from the last-mentioned bee is gathered twice or thrice in the year, once in the autumn and once or twice in the spring; that gathered in early spring is not so matured as that collected in autumn. The flora of the [137]
Khasi Hills being so numerous, there is no necessity for providing bees with artificial food. The bees are generally able to obtain their sustenance from clover, anemonies, "golden rod," bush honeysuckle, and numerous shrubs such as andromeda, daphne, &c., which abound about Shillong. There seem to be facilities 231
for apiculture on a large scale in these hills, and certainly the 263
honey which is brought round by the Khasis for sale in

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

247 nurseries are regularly watered, and are covered up with layers of leaves to ensure, as far as possible, the retention of the necessary moisture. When the plants are 3 or 4 in. high, they are transplanted to another and larger nursery, the soil of which has been previously well prepared for the reception of the young plants.

245 An orangery is prepared in the following manner:—

The shrubs, weeds and small trees are cut down, leaving only the big trees for the purpose of shade. The plants from the nurseries are planted from 6 ft. to 9 ft. apart. When they have become young trees, many of the branches of the sheltering trees mentioned above are lopped off, so as to admit the necessary amount of sunlight to the young orange trees. As the orange trees increase in size, the sheltering trees are gradually felled. The orchard requires clearing of jungle once in spring and once in autumn. The Khasis do not manure their orange trees, nor do they dig about and expose the roots. The [435] price of orange plants is from 75 to 100 plants per rupee for plants from 1 to 2 ft. in height, and from fifty to seventy-five plants per rupee for plants from 2 to 5 ft. in height. Orange trees bear fruit when from five to eight years old in ordinary soils. In very fertile soils they sometimes bear after four years. A full-grown tree yields annually as many as 1,000 438 oranges, but a larger number is not unknown. The larger portion of the produce is exported from the district to the plains, and to fruit markets at the foot of the hills such as Theria, Mawdon, and Phali-Bazar, on the Shella river, whence it finds its way to the Calcutta and Eastern Bengal markets.

244 Potatoes are raised on all classes of land, except *hali*, or wet paddy land. When the land has been properly levelled and hoed, drains are dug about the field. A cultivator (generally a female), with a basket of seed potatoes on her back and with a small hoe in her right hand, digs holes and with the left hand drops two seed-potatoes into each hole. The holes are about 6 in. in diameter, 6 in. deep, and from 6 to 9 in. apart from one another. Another woman, with a load of manure in a basket on her back, throws a little manure over the seed in the hole, and then covers both up with earth.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

basket is covered tightly with a cloth so as to be air-tight, and 273
it is allowed to remain in this condition for a couple of days, during which time the liquor has oozed out into the bowl. To make *ka'iad um* the material, the rice or millet from which the *ka'iad hiar* was brewed, is made use of. It is placed in a large earthen pot and allowed to remain there for about five days to ferment, after which the liquor is strained off. *Ka'iad hiar* is said to be stronger than *ka'iad um*. The former is used frequently by distillers of country spirit for mixing with the wort so as to set up fermentation. The people of the high plateaux generally prefer rice spirit, and the Wárs of the southern slopes of the Khasi and Jaintia Hills customarily partake of it also. The Khasis of the western hills, e.g. of the Nongstoin Siemship, and the Lynngams, Bhois, Lalungs, and Hadems almost invariably drink rice-beer, but the Syntengs, like the Khasi uplanders, drink rice-spirit. Rice-beer (*ka'iad um*) is a [776]
necessary article for practically all Khasi and Synteng religious ceremonies of importance, it being the custom for the officiating priest to pour out libations of liquor from a hollow gourd (*u klong*) to the gods on these occasions. As there is no Excise in the district, except within a five-mile radius of Shillong, liquor of both the above descriptions can be possessed and sold without restriction.

According to some Khasi traditions, the Khasis in ancient times used not to drink spirits, but confined themselves to rice-beer. It is only in the last couple of generations that the habit of drinking spirits has crept in, according to them. From Khasi accounts, the use of spirits is on the increase, but there is no means of testing these statements. There can be no doubt, however, that at the present time a very large amount of spirit is manufactured and consumed in the district. The spirit is 274
distilled both for home consumption and for purposes of sale; 438
in some villages, e.g. Mawlai and Marbisu, near Shillong, where there are fifty-nine and forty-nine stills respectively, there being a still almost in every house. Mawlai village supplies a great deal of the spirit which is drunk in Shillong, and from Marbisu spirit is carried for sale to various parts of the hills. Other large distilling centres are Cherrapunji, with forty-seven stills; Jowai, with thirty-one stills; Laitkynsew, with fifty-four stills;

1:Gurdon E-4.5 (no date) 1907 AR7 Khasi AR7

274 Nongwar, thirty-one stills; and Rangthang, thirty-seven
438 stills.

From what has been stated above some idea may be gathered
274 how very large the number of stills in the Khasi and Jaintia Hills is. I am not in a position to state with any degree of accuracy what is the amount of spirit manufactured or consumed in the year, but it is very considerable. The out-turn of a Khasi still has been reckoned at from four to eight bottles per day. From this estimate, and the fact that there are 1,530 stills in the district, it may be roughly calculated what is the consumption annually. Practically the whole of the spirit is consumed within the district. The liquor which is manufactured is far stronger than the spirit distilled in the ordinary out-stills in the plains.
273 It has been stated by an expert analyst that the Khasi spirit
735 contains 60 to 80 per cent. of proof spirit, and that it possesses "an exceptionally nice flavour and taste." The usual price at which it is sold is 4 to 6 annas a quart bottle, a second quality being sometimes sold for 3 annas. It will be seen that the
[465] liquor is exceedingly cheap. A Khasi in the villages of the interior can get drunk for 2 annas,* or a quarter of an ordinary coolie's daily wage. Drunkenness prevails on every market day at Cherrapunji, Jowai, and other large hâts, and on occasions when there are gatherings of the people for various purposes. This cheap but strong spirit is demoralizing the people, and some restriction of its use would be welcomed by
273 many. In the Khasi Welsh Methodist Church abstention from
797 liquor is made a condition of Church membership, but the vast number of stills and the facilities with which liquor can be obtained are a constant source of temptation to the Christian community, and cause many defections.

GAMES.

526 The Khasis have many games, but their principal game is archery, this may be said to be the national game, and is a very popular form of recreation amongst them, the sport being indulged in from about the beginning of January to the end of

* About threepence.

443 market for pleasure, I cannot agree with the
462 view, (3) that they would consider market busi-

ness beneath their dignity, if they had a wife or a grown girl (daughter) at home, to whom they could turn over this business. Not because the men would consider the business of the market beneath their dignity, but because the market is once and for all the preferred business of the women, men stay away from the market. If men are rarely seen offering provisions for sale, they are more frequently seen bringing the provisions to the women at the market. The men only sell personally birds they have caught themselves. Thus if the buying and selling of things is the business of the Khasi women, this position is not a subordinate and shameful one but a well established and dominant one.

2. The Market Wares

443 Food provisions are the chief items at the
438 Khasi markets. Sold are: rice (khau), dried fish (doh kha), potatoes (phan), sugar cane (u pai), an edible root which is eaten raw (u soh phlang; botanical name: flemingia vestita Benth); Job's tears (u soh rieu; botanical: name coix lachryma Jobi); Italian millet (u 'rai soh, botanical name: setreria italica); blood millet (u 'rai shan, botanical name: paspalum sanguinale); spadix millet (u 'rai truh, botanical name: eleusine Coracana); Khasi beans, two kinds: (u rymbai ja, botanical name: paseolus

calcaratus) and (u rymbai ktung, botanical 945
name: glycine soja); corn (u 'rieuhadem); 938
pineapple (u soh trun); lemons (u soh myndong);
oranges (u soh niamtra); mangoes (u soh pieng);
melons (u pathau); breadfruit (u soh kpu,
botanical name: artocarpus incisa); Khasi
cherries (u soh jong, botanical name: prunus
ferrunginea); bananas (ka kait), pepper (u soh
mrit); chilis (u soh myngken); papayas (u soh
kynphor, botanical name: carica papaya); a
kind of wild potato (u soh pyrsiu); cinnamon
(ka sisia, botanical name: cinamum cassia);
nutmeg (u joi phol); ginger (u 'sieng);
honey in honeycombs (ka ngap).

Goats, sheep, and cattle are sold, sometimes alive, sometimes slaughtered in small quantities. There are many chickens on the market, especially for sacrificial purposes.

In addition things are brought for sale that are necessary for the construction of houses or the cultivation of fields, such as grass for roofing huts; cut beams, bamboo poles, bamboo plaited into lattice work, dried cow manure, spades for the fields (mokhiu); Khasi knives (ka wait); [TOL: A/A P.M. Market Place in Laitkynsew" Material for roofing.] [705] plaited baskets in all sizes , waterproof plaited containers, carrying baskets (tanpa), bands for the forehead (u star), drinking cups of bamboo, gourd bottles, wooden mortars, water pipes made of coconuts, pipe bowls made out of clay and dried in the sun, plates and saucers of brass, cooking pots of iron, and earthern dishes; everything is the work of the Khasi.

Againtly European wares, such as loin cloths stockings, caps, combs, mirrors, mouth harmonicas, matches, and cigarettes are also seen in larger amounts.

443 At the markets of the Khasi not only food-
444 stuffs and other things necessary for life may
445 be obtained, but workers are also hired there. Whoever wishes to hire himself out goes to the market and stands around, hoping to find some kind of work for the coming (market) week. Day laborers can only be hired at the market. Therefore it is hard during the week to get any kind of a worker. It is also necessary when hiring a t the market to hire the worker for the whole "market week," i.e., until the next market day, as the coolies otherwise would have a hard time finding work and would not accept the work at all for only one or two days. The porters needed for traveling

[See photo; category [illegible], [illegible] m-if--Analyst]

must also be sought out and hired at the markets. 443

3. The Customs of the Market

a) The Preparation for Market. The sellers of both sexes normally carry their wares to the market themselves. They form smaller or larger groups and travel together. The wares are carried on their backs. The burden is packed according to its bulk or content. Larger objects, such as bamboo poles, beams, sugar cane, grass, and mats are carried without any covering by means of a forehead band plaited of reed grass (u star). Smaller items, such as salt or potatoes, are packed in sacks; others such as betel nuts, pepper leaves, fruit, vegetables, etc. are carried in baskets made of bamboo. The baskets are either pointed baskets which are round at the top or square baskets, which narrow to a point at the bottom but still are four feet long in size. The latter baskets are usually made with a cover, which, like the basket itself, is plaited and almost waterproof, so that flour or salt can be transported in them even during the rainy season. A round or oval object shaped like a shield, which in case of need is used as an umbrella (ka trap) and which is plaited out of bamboo, is inserted between the back and the burden (jingkit). On the one hand this object has the purpose of ameliorating the pressure of the burden and on the other hand it is pulled out in rainy weather to serve as an umbrella when it is held up against the rain by hand. [434] 443 482 438 285 443 [293]

With regard to the weight which the Khasi carry to market, the men carry about 100 and more pounds while the women seldom 482

children, but Christian influence has eradicated or driven underground the consumption by women and children. **Industrial arts.** The only industrial arts traditionally practiced in all households were a rudimentary carpentry and a simple utilitarian basketry. Other arts were few, and were practiced as village specialties: the washing and smelting of iron ore and the forging of hoes, daos, knives, swords, and cooking pots (upland Khasis); the spinning of cotton thread (Mynso village, Jaintia); the dyeing of cotton thread and the weaving of cloth (Jaintias, Bhois, Lyngngams, Wars); the spinning and weaving of Eri silk (Khyrwang and Nongtung villages, Bhoi and Jaintia); and the hand manufacture, without wheel, of painted earthenware pots (Larnai village, Jaintia). Ironworking and the production of cotton goods have nearly died out through the competition of machine-made goods. Carpentry has greatly improved. An innovation of major importance is the sewing and tailoring, on sewing machines, of ready-made garments for both sexes. [Cf. Darrah 1896; C., W. 1832.] **Trade.** Khasi villages normally contain a number of household shops operated by women. Every Khasi also lives within walking distance of several village markets that are held on successive days of the eight-day week. The limits of market intercourse for the members of any particular village can be roughly distinguished by their naming the days of their week, which are called after the active markets. The exception is the huge market at Shillong, much of which is active daily, and which serves as a magnet for Khasis from all over the hills. The traditional barter has given way to currency in all markets. The small ones contain at least some local farm produce, plus other essentials like betel nut, and the food and tea stalls which serve as centers of social intercourse. The big markets contain not only regional produce and manufactures but also products from distant parts of the hills, brought for sale by traveling middlemen. There is also substantial trade, from the hills to the valleys, in potatoes, pears, hides, lac, cotton, caoutchouc, the wood of the sal tree, Eri silk thread, limestone, coal, ivory, bay leaf, betel nut, pan leaves, bananas, sugar cane, oranges, til, turmeric, and chilies. From the plains to the hills, there is trade in dried fish, paddy rice, salt, cooking oil, kerosene, matches, tea, sugar, wheat flour, machine-made cloth, shoes, metal pots, crockery, porcelain objects, coral beads, silver, and gold. Markets are important not only as economic institutions but also as centers for recreation (including archery competitions), courtship, reaffirmation of kinship ties with distant relatives, and the dissemination of information of all kinds. [Cf. Stegmiller 1924a.] **Division of labor.** Men do the heavy work, such as clearing and burning the swidden fields, caring for cattle and goats and driving them to market, butchering and selling large cuts of beef and pork, carpentry and mining, and driving and laboring on motor vehicles. They also tailor men's

on a historical past, different from that of the Khasi proper, the former having been ruled by the powerful, but somewhat Hinduised dynasty of the Jaintia Rajas until the Jaintia Wars of the British; the latter by small independent chiefs. Yet Jaintia social organization appears on the whole to preserve the matrilineal social structure clearer and to be less influenced by plains-acculturation, than that of the Khasi, though a few features of Brahmanical religious observances and also some traces of racial admixture are found in the immediate vicinity of Jowei, the former summer residence of the Jaintia Rajas. Stronger no doubt, than this influence, was that exercised by the British and non-Assamese Indians in the provincial capital Shillong since 1866. Methods of agriculture and other aspects of material civilization differ but little in the Jaintia- and Khasi plateau-areas.

The same cannot be said of both: the Wár-Khasi and Wár-Jaintias. Linguistically their affiliations are with the Khasi or Jaintias respectively, in the plateau-areas. Economically, however, both Wár-groups form a separate pan-leaf cultivating unit in the little accessible steep southern slopes of the Khasi- and Jaintia Hill massif. Both Wár-groups live in the environment of luscious tropical flora and fauna, sharply differentiated from the cool, barren plateau with its perennial winds and the heroic, if solitary beauty of its highland heaths, which forms the background of both the Khasi- and Jaintia plateau-groups.

The age of the Wár-Khasi and -Jaintias, as one independent economic, — and two half-independent dialectical linguistic entities, is an intricate problem. The two Wár-groups subsist on pan-leaf cultivation as a money crop, grown in the thick tree-gardens as creepers; not on food-cultivation, as do the plateau-groups, because there is insufficient space on the steep slopes, for vegetable gardens or -fields. The pan-leaf cultivators therefore depend on food, purchased from outside. The slopes seem to have been uninhabited until not long ago. Yet pan-leaf chewing is such an integral part of Khasi life, that until quite recently, and occasionally even now, a distance between two places is not measured by the number of hours used for walking, but by the number of betelnut- and pan-leaf packages, consumed on the way. Also the common benediction among Khasi expresses the wish that so and so may eat pan in the Garden of God. Yet pan-cultivation and the settlements of the Wár-people as pan-leaf cultivators in the southern slopes seem comparatively young. Pan-cultivation on the plateau is impracticable. It is therefore possible that pan was for a long time only a much valued import article from the plains, bartered against Khasi ore and iron tools, though it is now an export article from the Wár-country, brought to the markets of the plains, by both Wár-Khasi and Wár-Jaintia women and men.

According to a tradition, across which I came among the Nonglamin clan of the Nongmuker village, the ancestors of the present Wár people were on the plateau at a time when no pan-cultivation was going on in the slopes and none of the present big estates of pan-tree gardens was yet held by their present (Wár-) owners. A not distant ancestor of a Nonglamin clan-member who about two or three generations ago told the story to U Siang (one of

JEWELLERY.

301 The Khasis, as a people, may be said to be fond of jewellery.
326 The women are specially partial to gold and coral bead necklaces. The beads are round and large, and are usually unornamented with filigree or other work. The coral is imported from
[439] Calcutta. The gold bead is not solid, but a hollow sphere filled with lac. These necklaces are worn by men as well as women, especially on gala occasions. Some of the necklaces are comparatively valuable, e.g. that in the possession of the Mylliem Siem family. The gold and coral beads are prepared locally by Khasi as well as by foreign goldsmiths. The latter derive considerable profits from the trade. The Assam Census Report of 1901 shows 133 goldsmiths in the Khasi and Jaintia Hills district, but does not distinguish between Khasis and foreigners. There are Khasi goldsmiths to be found in Mawkhar, Cherrapunji, Mawlai, and other villages. Sylheti goldsmiths are, however, more largely employed than Khasi in Mawsynram and certain other places on the south side of the hills. In Mr. Henniker's monograph on "gold and silver wares of Assam" it is stated that the goldsmiths of Karimganj in Sylhet make specially for Khasis certain articles of jewellery, such as men's and women's earrings, &c. An article of jewellery which is believed to be peculiar to the Khasis is the silver or gold crown. This crown is worn by the young women at
301 dances, such as the annual Nongkrem dance. An illustration of one will be seen by referring to the plate. These crowns are circlets of silver or gold ornamented with filigree work. There is a peak or, strictly speaking, a spike at the back, called *u'tiew-lasubon*, which stands up some six inches above the crown. There are long ropes or tassels of silver hanging from the crown down the back. Earrings are worn both by men and women. The former affect a pattern peculiar to themselves, viz. large gold pendants of a circular or oval shape. Women wear different patterns of earrings, according to locality. An ornament which I believe is also peculiar to the Khasis is the *rupa-tylli*, or silver collar. This is a broad flat silver collar which is allowed to hang down over the neck in front, and which is secured by a fastening behind.

[p. 26]

SECTION II.

OCCUPATION.

241 THE greater proportion of the population subsists by cultiva-
463 tion. Cultivation of rice may be divided under two headings,
[162] high land or dry cultivation and low land or wet cultivation. The total number of persons who subsist by agriculture generally in the hills, is given in the last Census Report as 154,907, but the term agriculture includes the cultivation of the potato, the orange, betel-nut and *pán*. A full description of the different forms of agriculture will be given under the
463 heading "Agriculture." A considerable number of Khasis earn
482 their livelihood as porters, carrying potatoes to the markets on
439 the Sylhet side of the district, from whence the crop is conveyed by means of country boats to the different places of call of river-steamers in the Surma Valley, the steamers carrying the potatoes to Calcutta. Potatoes are also largely carried to Shillong by porters, where the tuber is readily bought by Marwari merchants, who load it in carts to be conveyed by road to Gauhati, from which station it is again shipped to
482 Calcutta and Upper Assam. Many persons are also employed in
463 carrying rice up the hill from Theria to Cherrapunji, Shillong,
[466] and on to other places. Salt is also carried by porters by this route. Many Khasis, both male and female, live by daily labour in this way, earning as much as eight annas, and
[162] six annas a day, respectively. The Census Report of 1901 shows some 14,000 "general labourers" in the district, the greater number of whom are porters and coolies, both male
[357] and female, employed on road work and on building. In Shillong the Government Offices and the printing press give employment to a certain number of Khasis. There is also a fair demand for Khasi domestic servants, both among the Europeans and the Bengali and Assamese clerks who are employed at the headquarters of the Administration.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

243 same period) for the latter.* The average out-turn of both
433 kinds is extremely poor, as compared with that of any description of rice grown in the plains. The rice grown in the hills is said by the Agricultural Department to be of inferior quality, the grain when cleaned being of a red colour, and extremely
244 coarse. The cultivation of potatoes is practically confined to the Khasi Hills, there being little or none in the Jaintia Hills. The normal out-turn of the summer crop sown in February and harvested in June is reported by the Agricultural Department to be five times the quantity of seed used, and that of the winter crop, sown in August and September on the land from which the summer crop has been taken, and harvested in December, twice the quantity of seed. The winter crop is raised chiefly for the purpose of obtaining seed for the spring sowings, as it is found difficult to keep potatoes from the summer crop in good condition till the following spring. The usual quantity of seed used to the acre at each sowing is about 9 maunds, so that the gross out-turn of an acre of land cultivated with potatoes during the year may be taken at 63 máunds, and the net out-turn, after deducting the quantity of seed used, at 45 maunds. The above estimate of the Agricultural Department rests chiefly on the statements of the cultivators, and has not been adequately tested by experiment.

244 Since the appearance of the potato disease in 1885-86 there
439 has been a great decrease in the area under potato cultivation. In 1881-82 the exports of potatoes from the district were as high as 126,981 maunds. From 1886-87 the exports began annually to decrease until in 1895-96 the very low figure of 8,296 maunds was reached. The figures of export for the last nine years are as follows :—

1896-97	16,726	maunds.
1897-98	7,805	"
1898-99	9,272	"
1899-00	5,422	"
1900-01	29,142	"
1901-02	38,251	"
1902-03	36,047	"
1903-04	50,990	"

* See Bulletin No. 5 of the Agricultural Department of Assam, 1898, pp. 4 and 5.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

It will be seen that in the three years following the earthquake of 1897 the exports fell very low indeed. Since 1901 the trade has been steadily recovering, and the exports of 1904 reached half a lakh of maunds. 244 439 731

It will be observed that there has been some improvement, but the exports are still not half what they were in 1881-82. 244 There are two kinds of sweet potatoes grown in the district, the Garo potato (*u phan Karo*), which appears to have been introduced from the Garo Hills, and *u phan sawlia*, the latter being distinguished from the Garo potato by its having a red skin, the Garo potato possessing a white skin. These kinds of potato are planted on all classes of land except *hali*, they do best on jhumed and homestead lands. The yam proper (*u phan shynreh*) is also largely grown. The small plant with an edible root called by the Khasis *u sohphang* (*flemingia vestita Benth.*), is also largely grown. The roots of the plant after being peeled are eaten raw by the Khasis. As far as we know, this esculent is not cultivated in the adjoining hill districts. Job's tears (*coix lachryma-Jobi*) * are extensively grown, and 243 are planted frequently with the *sohphlang* mentioned above. This cereal forms a substitute for rice amongst the poorer cultivators. Maize or Indian corn (*u riew hadem*) is grown frequently, thriving best on homestead land, and requires heavy manuring; it is grown in rotation with potatoes. Next in importance to rice comes the millet (*u krai*), as a staple of food amongst the Khasis. There are three varieties of millets generally to be seen in the Khasi Hills:—*u 'rai-soh* (*setaria Italica*), *u 'rai-shan* (Paspalum sanguinale), and *u 'rai-truh* (Eleusine coracana). *U 'rai-shan* is cultivated in rotation with the potato, *u 'rai-soh* and *u 'rai-truh* are generally cultivated on jhumed land, where they thrive well. Millet is sometimes used instead of rice in the manufacture of spirit by the Khasis; [274] *u rymbai-ja* (*phaseolus calcaratus*), and *u rymbai ktung* (*glycine soja*) are beans which are cultivated occasionally. Khasis highly prize the fruit of the plantain, which they give to infants 245 mashed up. The following are the best known varieties:— 853 *Ka kait khún, ka kait siem, ka kait kulbuit, ka kait bamon, ka kait shyieng.*

* Khasi *u soh-riew.*

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

mould. The plant[1] is watered by means of small bamboo aqueducts which are constructed along the hill-sides, the water being conducted along them often considerable distances. As in the plains, the leaves of the *pán* creeper are collected throughout the year.

The bay leaf (*'la tyrpád*, or *tezpát*) is classified in the *Agricultural Bulletin* as *Cinnamomum tamala*, and there is a note in the column of remarks that "this tree, as well as one or two others of the same genus, yields two distinct products, *tezpát* (bay leaf) and cinnamon bark." The bay leaf is gathered for export from the extensive gardens in Maharam, Malaisohmat, Mawsynram, and other Khasi States. The plants are raised from seed, although there are no regular nurseries, the young seedlings being transplanted from the jungle, where they have germinated, to regular gardens. Bay leaf gardens are cleared of jungle and weeds periodically; otherwise no care is taken of them. The leaf-gathering season is from November to March. The leaves are allowed to dry for a day or two in the sun, and then packed in large baskets for export. The gathering of bay leaf begins when the trees are about four years old.

The following are the other minor crops which are grown in the Khasi and Jaintia Hills:—

Pineapples, turmeric, ginger, pumpkins and gourds, the egg plant, chillies, sesamum, and a little sugar-cane. The arum* (*ka shiriw*) is also extensively grown in the hills, and forms one of the principal articles of food amongst the poorer classes; it is generally raised in rotation with potatoes, or is planted along with Job's tears. The stem of the arum is sometimes used as a vegetable, also for feeding pigs.

In the Jowai Sub-Division, notably at Nartiang, there are fairly good mangoes, which are more free from worms than those grown in the plains of Assam.

The Bhois and Lynngams cultivate lac. They plant *arhar dal, u landoo*, in their fields, and rear the lac insect on this plant. Last year the price of lac at Gauhati and Palasbari markets rose as high as Rs. 50 per maund of 82 lbs., it is said, but the price at the outlying markets of Singra and Boko was

* Colocasia esculenta, Beng. *Kachu*.

[1] [i.e., the pán ---- Analyst]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

231 about Rs. 30. The price of lac has risen a good deal of late
435 years. Formerly the price was about Rs. 15 to Rs. 20 a maund. The lac trade in the Jaintia Hills and in the southern portion of the Khyrim State is a valuable one. The profits, how-
426 ever, go largely to middle-men, who in the Jaintia Hills are Syntengs from Jowai, who give out advances to the Bhoi cultivators on the condition that they will be repaid in lac.
443 The Marwari merchants from the plains attend all the plains
439 markets which are frequented by the hill-men, and buy up the lac and export it to Calcutta. The whole of the lac is of the kind known as stick lac.

HUNTING.

224 The weapons used by the Khasis for hunting are bows and
[411] arrows, the latter with barbed iron heads, and spears which are used both for casting and thrusting. Before proceeding on a
[787] hunting expedition the hunters break eggs, in order to ascertain whether they will be successful or not, and to which jungle
[176] they should proceed. Offerings are also made to certain village deities, e.g. *U. Ryngkew*, *u Basa*, and *u Basa ki mrád*. A lucky day having been selected and the deities propitiated, the hunters start with a number of dogs trained to the chase, the latter being held on leashes by a party of men called *ki nong-ai-ksew*. When the dogs have picked up the scent some hunters are placed as "stops" (*ki ktem*), at points of vantage in the jungle, and the drive commences with loud shouts from the hunters, the same being continued until the object of the chase breaks into the open. The man who draws the first blood is called *u nongsiat*, and the second man who scores a hit *u nongban*. These two men get larger shares of the flesh than the others. The *nongsiat* obtains the lower half of the body of the animal, thighs and feet excepted, called *ka tdong*, and the *nongban* one of the forequarters called *ka tabla*. The other hunters obtain a string of flesh each, and each hound gets a string of flesh to itself. These hunting parties pursue deer
224 sometimes for many miles, and are indefatigable in the chase,
782 the latter lasting occasionally more than one day. In the Jaintia Hills, at the end of the chase, the quarry is carried to

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

327 Colonel Lister, writing in 1853, estimated that 20,000 maunds
439 of iron were exported from the hills in the shape of hoes to
412 the Assam Valley, and in lumps of pig iron to the Surma Valley, where it was used by boat-builders for clamps. Nowadays the smelting of iron is carried on in very few places. There are still smelting-houses at Nongkrem and Nongsprung, but these are practically the only places left where smelting of iron ore goes on; there are many forges where rough iron brought from the plains is melted down and forged into bill-hooks and hoes. Messrs. Yule and Cracroft have described the
113 native process of smelting iron, and it is only necessary to refer
114 to their papers if information is required on the subject. Yule's
327 account is a very full one, and is to be found at page 853, vol. xi. part ii. of the Journal of the Asiatic Society of Bengal. The system pursued, both in the extraction and in the subsequent smelting of the ore, is the same at the present day as that
327 described by Yule. Dr. Oldham, writing in 1863, says, "The quality of this Khasi iron is excellent for all such purposes as Swedish iron is now used for. The impurity of the blooms (or masses of the metal in a molten state), however, as they are sent to market, is a great objection to its use, and the waste consequent thereon renders it expensive. It would also form steel or wootz (Indian steel) of excellent quality. I have no doubt that the manufacture could be greatly improved and possibly extended." Dr. Oldham, however, goes on to remark that the manufacture of iron could not be very much extended, owing to the scanty dissemination of the ore in the rocks, and
[312] the consequent high cost of obtaining it. At present the want of any permanent supply of water prevents the natives from working for more than a few days during the year, whilst the rains are heavy, and they can readily obtain sufficient force of water for the washing of the ore from its matrix. The export of iron in any form from the district has now almost died out, only a few hoes being brought down by the Khasis from Laitdom, in Khadsawphra, to the Burdwar and Palasbari markets in the Kamrup District of the Assam Valley. Iron of English manufacture has, of course, much cheapened the market, but probably the fact that the parts of the country in the neighbourhood of the rocks which contain the metal have

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

—the *Shyngkup*, or porch, being flush with the ground. The *nengpei*, or 342
centre room, is approached by a flight of steps. There are no windows, except one, which is bored on one side to admit light and air,—this is called the *pongshai*. Both Khasis and Syntengs, like other Indo-Chinese 524
races, are much addicted to gambling, and drinking to excess is a 273
national vice. Christianity has, through the agency of the Welsh Cal- 797
vinistic Mission, gained a very striking extension, and may be said in- 177
deed to be leavening the whole nation. Schools are numerous, and are pretty well attended by girls as well as boys. The Christians, and those who have come under the influence of Christianity, have adopted a high standard of comfort, and their houses resemble English cottages more nearly than the huts with which one is familiar in India.

Agriculture.—The Khasis do not use the plough; they cultivate their 241
fields with a peculiar-shaped hoe, or *mokkhiew*. They cultivate rice in the valleys, the rice being sown broadcast and the fields irrigated often after considerable labour. They also cultivate hill rice on the uplands, which they sow broadcast. The potato, which was introduced into the [177]
Khasi Hills by Mr. David Scott about the [439]
year 1830,[1] is extensively cultivated and forms one of the principal articles of export. Job's-tears (*Coix lachryma*), several kinds of millet, Indian-corn, the *Sohphlang* (*Flemingia vestita*), are also largely cultivated. The valleys on the 245
southern slopes of the hills have extensive orange groves, the oranges, especially those grown in the neighbourhood of Shella, being famous for their quality. The betel, vine, and areca nut are also largely grown on the southern side of the hills and in the low valleys, these plantations being irrigated by elaborate systems of aqueducts. The leaf of the bay tree (*'latyrpad*) is collected, and is exported to the Sylhet plains. The [439]
Syntengs differ from the Khasis, in that they make use of the plough. Both Khasis and Syntengs are industrious cultivators, and they possess a certain rough and ready knowledge of the uses of manure. A more detailed description of agriculture in these hills will be given in the monograph.

[1] Khasi and Jaintia Hills Administration Report for 1875-76 by Colonel Bivar.

2. *Matriarchal customs and law of inheritance of property.*—The 611
mother is the head of the house, and is both owner and the custodian of 428
the family property as long as she lives. Males can own no property amongst either Khasis or Syntengs except self-acquired property. On the death of the mother, in the case of the Khasis, the family property passes to the youngest daughter. According to some authorities, however, the property would in practice be divided amongst all the surviving daughters. Failing daughters, the property passes to the youngest niece, and failing a niece, to the youngest female cousin. The same

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

vation is impossible because of the cold climate. In the past, Khasi economy must have remained at a very primitive stage. 178 244

Potato cultivation has been much encouraged along with the development of Shillong and the opening of the motor road to Gauhati from Shillong after the Independence of India when Shillong became the seat of the Assam Government, as well as the capital of the Khasi-Jaintia Hills. Shillong has become an important trading centre, where big merchants collect the harvests of potatoes in exchange for rice, clothes and various other goods from the Assam valley. These changes have introduced the Khasis into an active commercial economy which again has brought about various changes in their social life. Recently coal excavations have started in the upland Khasi Hills, and many Khasi become miners. 178 433 369 [244] [633] [491] [439] [316]

Thus the history of the Khasi Hills during the last hundred years has changed a great deal the picture of the Hills. However, dark corners still remain in Bhoi, War and in the area bordering on the Garo Hills. These have been kept in a vacuum between the Hindu civilization of the bordering plain and the modernization of the uplands centred in Shillong. In these areas, the people are still practising primitive jhum cultivation. I have chosen two villages in War located in one of these area as subjects of my major field-work. 178 184

APPENDIX

SOME ADDITIONAL INFORMATION FROM SHELLA AND JATINGA

SHELLA

Shella is situated on the lowest of the southern slopes of the Khasi Hills, bordering on the Sylhet plain of East Pakistan. For centuries the people of Shella maintained close trading connections with the people of the plain, so that they have been much influenced by the Hindu. They have been to some extent divorced economically and culturally from their own people who live in the uplands and on higher part of the slopes. Actually, this is a natural result of their geographical location. From Cherrapunjee, the southern edge of the upland Khasi Hills, only a narrow footpath goes down to Shella. The altitude of Cherrapunjee is about 5,000 feet and of Shella from 500 to 1,000 feet, and the distance between them is 8 miles. The path descends very steeply and is full of hard stones. This difficulty of communication is also why the Hindu influence did not penetrate the upland Khasi, as in the case of the Jaintia Hills.[1]

This area has a unique political organization which differs from the majority of Khasi states who are traditionally ruled by the members of the Siem clan. Shella is organized as a confederation, called 'Shella Confederacy,' and consists of four local villages. The head of the village is called *wadadhar*, and is elected by the villagers every three years. The number of households of the Shella Confederacy was about 900 in January 1956. The names of the four villages and their *wadadhar* in 1956 were:

Name of village	*Name of wadadhar*
1. Shella	Devish Mohan Roy
2. Mushtoh	Ditojou Roy
3. Nongtrai	Orju Roy
4. Tyngnger	Jabuni Roy

Each village is divided into sections. For instance, Shella village has nine sections: (1) Jasir, (2) Disong, (3) Duba, (4) Jamau, (5) Nongrum, (6) Nongnong,

1. However, Shella was the only way out and the main gateway from the Khasi Hills to the plain; it was here that the British first entered the Khasi Hills. They proceeded from Shella to Cherrapunjee and made the latter headquarters of the Khasi Hills in 1833.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

Shella

Confederacy forms a more marked endogamous community, through being cut off geographically and economically from the rest of the Khasi, and socially from the neighbouring Hindu people. 621

The Economy and the People.

Shella lies along the upper part of the Shella River and stretches upwards along the steep slope, looking down towards the Bengal plain. The climate of this part of the hills is considered to be one of the worst in tropical India for human habitation. The Bengal plain, though warmer than this area, is considered more healthy. This border land is the zone of malaria, typhoid, black fever, cholera, etc. None of the Bengalee peasants dare to live in such an area. However, it is the most fertile for products such as betel-nuts, pan-leaves, oranges, bananas and pineapples, and it also produces limestone. These people seem to prefer to settle in this zone and to enjoy its prosperity, at the expense of human lives: every year, especially between March and September, the inhabitants suffer from various fevers and dysentry and other diseaes, many of the weaker facing death. 131 132 164 433 164 648

Before the Partition of India and Pakistan, the products of Shella were carried down the Shella River to Sylhet, one of the biggest centres in East Bengal, which brought unimaginable wealth to the Shella people. Their houses were built by carpenters from Sylhet. The style and structure of these houses were exceptionally elaborate for the Khasi. They purchased vast rice fields in the plain, which used to be cultivated by Bengalee and Garo labourers engaged by them. These Khasi do not themselves know how to cultivate rice fields; they have always been managers or landowners. Their boys used to be sent to high schools and colleges in Sylhet. As a result of their trading with the Bengalee, many of them read and speak fluent Bengalee. There is no difference between their style of clothing and that of the Bengalee, though the women maintain their traditional dress in the Shella style. 177 178 434 [439] 342 166 464 871 191 291

They have thus been distinguished from the rest of the Khasi not only geographically, but also economically and culturally. Their personality also differs sharply from the rest of the Khasi. They are very sociable, and quick, a quality lacking among the Khasi of Sohkynduh and Kongton. They are clever enough to deal with strangers. The upland Khasi say Shella people are very cunning. This remark shows one side of these people. They had to be cunning, since they traded with the Sylhet Bengalee who were said to be the most cunning of their race. Their role in the trade and in the history of the modernization of the Hills was considerable. For centuries they represented intellectual Khasi owing to their contact with Hindu civilization, while the Hills remained in darkness. They assumed an important role when the British established an administration in the Hills, and even up to now, many leading Khasi originated from this area: for instance, Lati Hat, the first interpreter of the British Headquarters at Cherrapunjee; Jeebon Roy, who was the first Magistrate among the Khasi; Maham Sing, a lawyer and Member of the Legislative Assembly (the grandson of Jeebon Roy); Nichols Roy, Minister of Health and Prisons of the Assam Government, Member of the Legislative Assembly, and Missionary of the Church of God; R. R. Thomas (brother of Nichols Roy), Principal of the Gauhati University, etc. 157 184 648 177 178 [439]

Through constant cultural contact with Hindu, and encouraged by their economic prosperity, the Shella Khasi, like the Jaintias, have been much influenced by Hindu culture. However, this does not mean that the people of Shella adopted the Hindu beliefs. Though there is a small Hindu shrine, and some ceremonial elements were borrowed from the Hindu, most of the 177 648 771 795

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

177 people remained non-Hindu in their basic beliefs and social customs. Hindu
648 influences are nevertheless predominant in their culture, especially in their way
771 of living which shows a practical adaptability, somewhat similar to the Japanese
795 acceptance of modern western culture without becoming Christian. In my
[797] census of Shella village, the people calling themselves 'Hindu' amount to 40 per
[162] cent of the total, but they are the recent converts to the Ramakrishna School which established a missionary station at Shella after the Partition. The Christians constitute 30 per cent of the total, most of them having been converted during the last ten years, as in the case of the Ramachrishna School.[1]
[458] The rest remain as they were, of Khasi belief. These conversions to either Ramachrishna or Christianity seem to have been encouraged by the unstable situation of the people resulting from the recent economic depression in this area.

439 The Partition of India and Pakistan in August 1947, which drew the bor-
458 derline a few miles south of Shella village, considerably upset village economy by stopping all trade with Bengal, though a limited amount of trade is allowed
648 with local people at the border. Because of this political change, all the produce of Shella gardens is rotting away for lack of markets, while all of the rice fields were taken by Pakistan. Goods now come to Shella only from the uplands, carried upon men's shoulders over the most difficult pass, which makes everything very expensive. Many families have sold their gold and other treasures, and some families are facing starvation.[2]

182 Concerning the conversion to a new religion, an interesting phenomenon
171 is to be observed. The conversion to Christianity or to Ramakrishna is mostly by individual: I found in my census that the wife and husband often belong to
592 different religions. This is a very different picture from the Garo, among whom
613 I always found that the husband and wife belonged to the same religion: the conversion of the husband to Christianity was always followed by that of the
771 wife. I think this reflects the structural differences which influence the actual relationship between the husband and wife. Among these Khasi, instead of
795 the husband and wife, the maternal uncle and his nephews and nieces are mostly of the same religion. The function of the *iing*, the most important social and religious unit, thus appears also in the conversion to a new religion, stronger than that of a domestic unit.

Intermarriage.

648 The close economic and cultural contact of the Shella people and the Bengalee
771 is not matched by social contact. The essential barrier between the two peoples is the difference of religion which dominates the entire social order in each
563 society. Though these Khasi were important traders, richer than the neighbouring Hindu peasants, they were considered by the Hindu as outcasts with whom they never shared social activities. Intermarriages were therefore very rare. In Shella village, only two exceptional cases were found in my census:

1. A Khasi woman married to a Gurka (cattle-keeper); they live at Shella Bazaar (Sholap).
2. A Khasi woman has marital relation with a Bengalee medical doctor who has resided at Disong in Shella for six years. He already has a Bengalee

1. These two entirely different missionary activities are competing with each other, and are somewhat related to the political powers within this area.
2. The state government is doing its best to provide them with additional facilities: for example, providing air transport for the transportation of oranges from Shella to Gauhati and Calcutta. However, such arrangements cannot cover the great economic loss suffered by the Shella people.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

178 like the Zemi-Naga, the Cacharee and the Kuki. But after the period of
563 economic prosperity as I shall describe in the next section, the Jatinga people
621 reached a rather high level of education, while most of the neighbouring tribes
[871] remained illiterate. Their standard of living likewise improved. Fashionable girls of Jatinga who have studied at the Convent school in Shillong, and speak English and Hindi, cannot marry half-naked tribesmen who work in the jungle. They prefer to intermarry with Moslem, Panjabee or Assamese who belong to amore sophisticated community, and through whom they can enjoy urban life. Thus the orientation of the intermarriage of the people of Jatinga has changed, along with the growth of Jatinga.

It should be noted that intermarriages came mostly through the contacts at Haflong, where people used to go once a week for the bazaar, rather than through direct contacts with neighbouring villages.

Economy of Jatinga and its Relation to Neighbouring Tribes.

178 It is very interesting to find two different kinds of economy in the same
171 ecological background: Jatinga Khasi practise pan-leaf and orange cultivation
245 and depend mainly on a trading economy, while the other neighbouring tribal peoples practise jhum cultivation, almost a subsistence economy. This situation has remained unchanged for the last fifty years since the establishment of Jatinga village.

101 The first Jatinga immigrants occupied one ridge of the mountain where the
245 present Jatinga is situated. Formerly, this land belonged to the Zemi-Naga, one of the old inhabitants of the Cachar Hills, who possessed a vast jungle area for jhum cultivation. It seems that there was no objection to the Khasi occupying this small spot: it was apparently too small an area for the jhum cultivator —pan-leaf cultivation of the Khasi requires less than one twentieth of the land of the usual jhum cultivation. The Khasi who started pan-leaf cultivation were able to accumulate some capital, and after several years they started orange gardens. They had had experience of orange cultivation in their homeland, but this was the first time they had operated commercially.

245 The success of this orange cultivation was beyond their dreams. Hearing
434 of good oranges at Jatinga, many Bengalee merchants from Dacca, Sylhet,
• 439 Silchar and Gauhati began to come to buy them. Moreover, the village had the great advantage of being situated near the railway station. Oranges were sold by carloads. Unimaginable wealth came to the Jatinga people. Especially the founder's family, including his brother's and sister's, became extraordinarily wealthy; their income used to be Rs. 20,000 a year. The children were sent to the school which was established in the village and some were educated at colleges in Dacca, Sylhet and Shillong. The villagers had beautiful houses built by Manipuri and Bengalee carpenters. Actually the houses of Jatinga were known as some of the best construction in Assam.

[496] [871] [362]

Like the Shella people, they were managers of gardens and employed workers.
245 Wealthy households used to engage several labourers annually, most of them
46 from Jaintia where the Jatinga people had originated. These workers were provided with shelter in the servant quarters of their employer's house, but they had to provide meals for themselves. They were paid daily according to the work done. They were available to other households, when their employer had no work. Some labourers were also engaged locally among the Zemi-Naga, the Cacharee and the Kuki, though not as many as among the Jaintia.
245 These local tribes were fairly well occupied by their jhum cultivation, and not
464 used to being employed as workers. Therefore, most of them were not regular

1903-28. 2, Barah 1962.] **Demography.** According to the 1951 census of India, the United Khasi-Jaintia Hills District contained 221,962 Khasis and 67,532 Syntengs, Pnars, and Jaintias (India [Republic] 1953-57). These figures, together with those for Khasis enumerated in Cachar (4,008), Mikir and North Cachar Hills (467), Lakhimpur (257), Sibsagar (270), and Darrang (211) districts, and those for Syntengs enumerated in Mikir and North Cachar District (464), yield a total of 295,224 Khasis. **History and cultural relations.** Khasis believe that they had supernatural origin in Khasi Hills (see Gait 1926: 280 for historical evidence, and Rafy 1920: 8-9 for myth, but see also Costa 1958, 1960; Gordon 1907: 10-11, and Chatterji 1953: 12). Khasi tradition also states that in early times they moved gradually from east to west, from Jaintia toward Khasi Hills, in the practice of swidden agriculture (Gotphob 1947: 97-98). The salient fact of known Khasi history, which begins generally in the mid-sixteenth century A.D. when there already existed the present-day 25 native Khasi chiefdoms, is the distinctive line of development followed by the separate kingdom of Jaintia. To the north, Jaintia was successively tributary, in part or in whole, to the Kachari kingdom (ca. 1200 A.D.), the Koch kingdom (strongest ca. 1500 A.D.), and the Ahom kingdom (strongest ca. 1700 A.D.) (Shakespear 1914: Map I). To the south, about 1500 A.D., Jaintia extended its rule over a tract of Sylhet, which was populated by Hindus and Muslims, and saw its kings fall thereafter under Brahman influence. In the early 1800s, Jaintia became involved in the fratricidal strife then prevalent in the ruling family of Manipur. In 1835, after the Jaintia king ignored British warnings not to seize British subjects for human sacrifice, Jaintia was punished by the British annexation of the Jaintia parganas in Sylhet. The Jaintia king then voluntarily turned over to the British the hills area of his domain, so that the whole of Jaintia became part of British India and, in 1860, came to be taxed as such, although the Jaintias were otherwise allowed to maintain their traditional system of village government. • By contrast, the remaining Khasi states had few formal external relations until British times. Khasis raided and traded in both the Brahmaputra and Sylhet valleys, but were basically turned inward on their own hills, where warfare between villages and between the states was apparently common. Khasis came into indirect relation with the British in 1765, when Sylhet and its markets became part of British India. In the 1790s, stepped-up Khasi raids into Sylhet caused the British to throw up a deterring line of forts along the foothills. Later, it became necessary to place an embargo on Khasi products in the Sylhet markets. In 1827, the British penetrated into western Khasi Hills by negotiating with the Khasi chief of Nongkhlaw State to build a road through his territory, linking the recently annexed Brahmaputra valley with Calcutta. For three decades

[437]

thereafter, the British negotiated treaties with all the Khasi states, the last treaty being signed in 1862. It was contracted that the chiefs would be subject to the authority of a resident political agent, whose duties would involve maintaining law and order, judging cases of heinous crimes, approving the popular selection of any new chief, and exercising control over certain categories of natural resources. Khasis were guaranteed noninterference in their customary way of life, and they were not then, nor are they now, taxed. Most Khasis, as opposed to Jaintias, were never an integral part of British India, but they did undergo social change as a result of British presence. To summarize Mills (n.d.): (1) The British introduced the potato, which the Khasis rapidly took up as a cash crop for marketing as far as Calcutta. The intensive specialization exhausted the soil and made for ever-poorer crops. (2) Christian missionaries made large numbers of converts, and there arose the difficult question of whether a Christian should inherit property that traditionally was earmarked for her performance of non-Christian religious rituals. (3) About 1864 the British transferred their headquarters from Cherrapunji to Shillong. When they made Shillong the capital of the entire state of Assam, non-Khasis flocked to it, land values soared, and the concept of private property became increasingly important. Khasis began to marry with members of other ethnic groups, which introduced confusion into traditional social patterns. These problems were exacerbated during World War II, when Shillong and its environs enjoyed enormous economic prosperity. One notable aftermath of this affluence has been the accelerated enrollments in schools and colleges. Hundreds of Khasis now have the B.A., M.A., and even the Ph.D. degree. • With the Independence of India in 1947, and under the Sixth Schedule of the Constitution of India (which was drafted by a Khasi), the United Khasi-Jaintia Hills District became a Part B, or Autonomous, Tribal Area, to be governed by a District Council composed largely of Khasis and Jaintias, and responsible not to the Legislature of Assam, but to the Governor of Assam as agent of the President of India. The native-state system and the chiefs still exist, and the District Council finds it difficult to effect legislation which is neither offensive to regional custom nor a simple blueprint of ill-fitting all-India legislation. The major political schism at this time is between Jaintias, who are accustomed to centralized authority and taxation, and Khasis, who resist the notion of taxation to support the work of a central District Council. [Cf. Gait 1926; Aitchison 1931; Bhuyan 1949; Morris 1910.]

CHAPTER III

The Border Area

121 131 **3. 1 Definition of Border Area.**—The term 'border area' although very frequently used does not refer to any well demarcated area. It was, therefore, decided after a joint discussion between the Director of Statistics with the Deputy Commissioner of the district and Subdivisional Officer, Jowai, that area within 20 miles of the Indo-Pak border line would be considered as the 'border area' for the purpose of the present survey. The list of the villages falling in this area was supplied by the Deputy Commissioner and the Subdivisional Officer.

3. 2 Condition of the Border Area before partition.—The border area under review thus consisted of the southern slopes of the Khasi and Jaintia Hills and a narrow strip of plains adjoining the southern slopes running along the Pakistan border. The area extends longitudinally over a length of about 120 miles, roughly from Mahadebbeli on the west to Sonapur on the east thus covering an area of 2,010 sq. miles approximately, comprising of 604 villages inhabited by population of 74 thousands. [161]

245 311 Barring the barren and rocky top plateaus the slopes are utilised for the production of valuable cash crops on intensive scale. These slopes provide suitable soil and climate for the production crops like areconut, betelnut, betelleaf, oranges, pineapples and other fruits. On account of rich yields which such plantations give to the cultivators these slopes were, more densely inhabited and intensively cultivated than would appear possible from the topography of the area. Even the most inaccessible tracts in the slopes has been converted into rich orchards, wherefrom the produce was carried by headloads over steep gradients for several miles. Due to steep gradients little arable land, except some jhooming here and there, could be made of this area. [482]

439 Because of the very topography, this land had its natural connections with Sylhet district now forming part of East Pakistan. From time immemorial the area had a flourishing trade with Sylhet district. It was a two-way traffic. The cash crops found eager buyers in the people of Sylhet, from whom in turn the people in the border area obtained supplies of rice, fish, vegetables and other necessities of daily life. Thus in pre-partition days they enjoyed a very prosperous and settled economy. The rich buildings in the border area villages which are now littering away, bear eloquent testimony to the past prosperity of the border economy.

439 458 648 With the partition of the country in 1947, trade with the plains of Sylhet, now forming part of East Pakistan, was obstructed. As a result the whole economy of this region was completely shattered and the countryside which once hummed with activity and abundance was over-shadowed with unemployment, poverty and despair. All the cash crops the mainstay of the border people lost the market in East Pakistan. For want of communication facilities the produce could not be

transported to other parts of Indian Union. The prices of some of the cash crops recorded a disproportionate fall as mentioned below. The price of orange which ruled at Rs. 20-00 to Rs. 25-00 per ton (1,016 kgs.) tumbled down to Rs. 3-00 to Rs. 10-00 per ton, that of betel nut which used to sell at Rs. 20-00 to Rs. 25-00 per kori (7,840 leaves) came down to Rs. 2-00 to Rs. 3-00 per kori. Tejpata and other fruits also suffered equally. The worst of all was that even at this rock bottom price the produce was not lifted. The following figures quoted from the memorandum submitted to the Prime Minister by the Border People's Association which are claimed to have been collected from individual growers are indicative of the extent to which the border trade suffered after partition.

TABLE A-6

Annual exports from United Khasi & Jaintia Hills to East Bengal before and after partition

(In thousand rupees)

Items	Pre-partition export					
	Quantity	1940-41 rupees	1945-46 rupees	1946-47 rupees	1951-52 rupees	1956-57 rupees
1. Oranges	15,000	2,000	15.0	35.0	1.0	10.0
2. Betel nut	4,500	600	30.0	60.0	200.0	70.0
3. Tejpata	3,000	600				
4. Vegetables	1,500	600	15.0	35.0	70.0	15.0
5. Arecanut	1,000	200	--	--	--	--
6. Betel	25	--	--	--	--	--
7. Betel-leaves	3,500	600	5.0	5.0	100.0	60.0
8. Bamboo, cane, rattan, etc.		--	--	--	--	--
9. Spices, turmeric, chillies, pepper.	20	0.1	0.2	0.1	0.1	0.2
10. Fruits, banana, plums, pine-apples, jackfruits, pears and papaya.	1,200	300	10.0	30.0	50.0	10.0
11. Limestone	34,000	17,000	11,000	6,000	1,000	5,000

The difficulty of getting adequate supply of foodgrains and other commodities of daily life posed a serious problem. Due to communication difficulties arrangements for adequate supply of these commodities from other parts of Indian Union could not be made. The supply from

19: Assam G-S (1958) 1963 AR7 Khasi AR7

East Pakistan to which the people in the border areas were entitled in the strength of various trade agreements of the Government of India with the authorities in Pakistan, were also scanty. The situation was still more aggravated due to the stringent measures adopted by authorities in Pakistan, on the plea of prevention of smuggling, in December, 1957 when the entire border trade virtually came to a standstill.

This chaos in border economy has resulted in widespread unemployment among the border people. There being no market for the produce, the owners ceased to take proper care of their orchards and plantations. As a result thousands of labourers who were employed in the orchards were thrown out of employment. Similar was the condition of those who were employed in the transportation of various commodities such as merchandise of trade etc. A large section of the people engaged in collection of limestone were also rendered unemployed with the set back received by the trade in limestone with East Pakistan. Due to stoppage of trans-border trade, petty traders engaged in distributive trade, also suffered.

Many of the border people possessing paddy lands and orchards in areas that are located in Pakistan had to abandon them. The following table will show the amount of land lying in Pakistan belonging to the former in the selected villages of border area :—

TABLE A-2

Name of villages	Area of land lost through partition		
	No. of families who possessed land in Pakistan	Area (acres)	Average per family (acres)
1. Mongpi	07	357·06	4·11
2. Sohlia	9	175·40	19·40
3. Shalangwi	18	130·00	7·20
4. Balay	2	19·00	0·95
5. Mawlum	nil	..	..
6. Lyngkhat	5	85·00	17·00
7. Dawang	10	330·75	33·15
8. Syndai	9	43·95	4·94
9. Arbil	8	40·17	5·02
10. Umkiang	nil	..	..

A few families who did not have any landed interest on this side of the border were reported to have migrated to Pakistan. Most of the families are even now paying tax to East Pakistan authorities even though they are not getting any returns because they do not want to lose their right on land.

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

There is considerable trade carried on in
245 *tejpát* or bay leaves, the trees being extensively cultivated by the
439 inhabitants of the lower slopes of the hills on the Sylhet border. The finest oranges in India are also grown in groves in the same tract, the value of the trade in which is now (1876) estimated to amount
237 to £3760 per annum. Lac is gathered by the Máfirs in the Jáintiá
439 Hills, but not to any great extent. Bees are both domesticated and found wild, and an extensive trade in bees-wax is carried on,
231 the amount exported being estimated at from three hundred to four hundred *maunds* annually. The whole of the Hills, where there is
233 no forest, and where the land is not under cultivation, consists of
621 rich pasture grounds, which are held in common by the villagers
651 and pay no revenue to Government.

137 The forests of the Khási and Jáintiá Hills do not yield much profit either to the British Government or to the chiefs. There
[648] are no reserved forests in the District; and according to the Deputy-Conservator, the total area of unreserved forest, *i.e.* of land covered
[659] with timber trees and not at present required for *júm* cultivation, is only 150 square miles. The trees found are chiefly pine, and those classified as 'mixed upper hill forests.' At an elevation of 3000 feet, the Pinus Kasia predominates over all other vegetation and forms almost pure pine forests. It is found also at lower heights, and there attains larger dimensions, but only in the case of isolated trees. The 'mixed upper hill forests' are confined to a series of sacred groves, which clothe the topmost ridge of the watershed between the valleys of the Brahmaputra and Surmá. The characteristic trees are those of a temperate vegetation, chiefly consisting of oaks, chestnuts, magnolia, Schima, Cinnamomum, Prunus, Engelhardtia, etc. There are also numerous other timber trees, including the valuable *sál* (Shorea robusta) and the rubber tree (Ficus elastica); but on the whole the Khási Hills are remarkable for the
[648] absence of forest. Early in 1874-75 measures were taken to put a
[659] stop to the indiscriminate burning of the forests, and the Siems and village officers were made responsible for the conservancy of the sacred groves. These endeavours have met with some success; but it is a very difficult thing to change the habits of a population, or to induce uncivilised tribes to incur a small temporary inconvenience for the sake of future benefit. The total area directly protected from fire during the year 1875-76 is returned at 3618 acres; the expenditure was Rs. 199; and in ten prosecutions for breaches of forest rules, twenty-three persons were convicted.

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

249 648 65 at Dárjiling, who reported unfavourably on them. They have since been made over to the Siem of Nongklao, who is responsible for their being kept clear of weeds and protected against fire. Up to the close of 1875–76 the total expenditure had been Rs. 672, or £67, 4s. 0d.

136 FERÆ NATURÆ.—Tigers, elephants, rhinoceros, buffaloes, *mithuns* or wild cows, bears, leopards, wolves, jackals, foxes, wild hog, and several kinds of deer abound in the Khási and Jáintiá Hills. The [224] expense of keeping down tigers in the shape of Government rewards [648] amounted to £44, 10s. 0d. in 1869-70. The rate of reward now paid is Rs. 25 or £2, 10s. 0d. per head. No rewards have ever been given for the destruction of venomous serpents. The number [165] of deaths from wild beasts and snake-bite reported to the police amounted to 28 in 1866-67, 18 in 1867-68, 16 in 1868-69, and 26 in 1869-70. The small game found in the Hills consists of black partridges, hill partridges, quails, ducks, teal, snipe, and woodcocks. 226 The *mahsir* fish is caught in the rivers. No regular trade is carried 439 on in the skins of wild animals; and, except in the case of wild elephants, the *feræ naturæ* are not made to contribute towards the wealth of the people.

224 ELEPHANTS.—Wild elephants are found in the lower ranges of the hills, and in the gorges opening on the valleys of the Surmá and 648 the Brahmaputra. Each State in the Khási Hills and each dolloi- 651 ship in the Jáintiá Hills constitutes a separate hunting circle or *mahál*. In the Khási States the conditions of elephant hunting are governed by rules framed in 1874-75 by the Chief Commissioner, and approved by the Government of India. These rules provide, (1) that the British Government will make no claim to royalty on account of elephants caught in the Khási Hills; (2) that one half of the proceeds of the sale of each elephant caught shall be paid over to the chief whose State forms the *mahál*, and the other half retained by Government; (3) that if a chief wishes to hunt elephants on his own account, the *mahál* composed of his State shall be reserved from sale, and a special arrangement shall be made with him on the basis that half the proceeds of the hunting shall accrue to Government. A special form of hunting licence in accordance with these rules has been settled by the Chief Commissioner. In the Jáintiá Hills, as being British territory, the ordinary Assam rules are in force, in accordance with which leases of the *mahálls* are sold at intervals of two years to the highest bidder at

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

243 the District, nor do any superior kinds of cereals appear to have been substituted for inferior ones.

THE DIFFERENT STAGES OF RICE CULTIVATION, in English and Khásí, are as follow:—The blade as it first shows, *spch-u-kyba;* the blade when well above the ground, *la-thylleng-u-kyba;* the ears when first formed, *lam-mat;* the ears beginning to ripen, *byr-tem;* the ripe ears, *la-hih;* unhusked rice, *u-kyba;* husked rice, *u-khaw;* cooked rice, *ka-ja.*

262 THE VARIOUS SOLID AND LIQUID PREPARATIONS made from rice
[435] are the following:—(1) *U-kypu*, cakes of different kinds, sold at six
[782] or twelve for a penny, according to size. (2) *U-shirí* or *gáh-khir*, prepared by the hillmen as an offering to their deity at the conclusion
273 of the harvest. (3) *Kadam*, fermented rice water, sold at the rate
435 of from three-farthings to threepence per quart, according to the strength of the liquor. (4) *Ka kiad-phatika* or *ka kiad-hárak*, a kind of spirits distilled from rice, and sold at from threepence to fourpence-halfpenny per quart.

243 OTHER CEREALS.—Indian corn, or *u-riu-ha-dem*, is grown on homestead lands. The ground is first manured, and the seed is sown about the middle of April. The crop is fit for cutting in September and October. A kind of millet seed called *u-krdi* is commonly sown with paddy on high lands. For want of more suitable land, however, this crop is often cultivated by itself on rocky slopes; and when this course is adopted, the jungle is first cut down in February and burnt. The seed is sown in April, and the crop gathered in December.

244 PULSES AND FIBRES.—Only two kinds of pulses are grown in the Hills, *u-rym-bai-ktung* and *u-rym-bai-jú*, both of which are varieties
283 of beans. They are sown on high lands in March and April, and gathered in December. The only fibre is that made from the pine-apple stalk, which is largely used for making netted bags.

245 MISCELLANEOUS CROPS.—(1) Oranges.—There are numerous
[439] orange plantations in the neighbourhood of Cherrá Púnjí, and the fruit is exported to all parts of Bengal. In the year 1876-77 the estimated exports were 9,400,000 in number, valued at Rs. 37,600, or £3760, at the rate of Rs. 12 or £1, 4s. per three thousand. These figures show a decrease in number as compared with the estimated export twenty years ago. The trees flower in March or April, and the fruit ripens in October and the following months. In some cases the oranges are allowed to remain on the trees till March, but

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

generally the gathering does not extend beyond January. As a rule, the cultivation is confined to the valleys and slopes on the southern face of the hills. (2) Pine-apples are also largely cultivated on the southern slopes, and grow to great perfection on the limestone formation. The fruit ripens in May or June, and is exported in considerable quantities. In 1876-77 the export of pine-apples was valued at Rs. 8000 or £800. (3) Potatoes are extensively grown on slopes of high land, and also in the low-lying fields where the land is well drained. The tuber was first introduced into the Hills in 1830 by Mr. Scott, who was then the Governor-General's Agent. The season for sowing commences about the middle of February when the rains set in early, and in April when they are late. The ground is dug up and carefully manured with burnt earth, and holes are dug about nine inches deep, and the same distance from each other. These holes are then partially filled in with loose earth, and a potato or two halves of one placed in each. They are then filled up with dry manure and soil. When the plant is fifteen or twenty days old, the ground about the roots is loosened and the plant earthed up, and the land is kept carefully weeded. In about four months after sowing, the crop is gathered. During the cold weather a second crop is raised, the seeds being planted in September and the tubers dug up in December. Potato cultivation has largely increased of late years in the District. In 1876-77 the exports were approximately estimated at 200,500 *maunds*, or 7480 tons, valued at Rs. 501,250 or £50,125, at the rate of Rs. 2. 8 per *maund*, or £7 per ton. (4) Sugar-cane is grown, but not to any great extent; cuttings are planted in March, and the cane ripens by November or December. (5) *Pán* is extensively cultivated, the runner being trained up trees standing in deep and shady valleys. Planting is carried on during the months of April and May, but the leaves are not fit to be gathered till the plant is two years old. (6) The *supári* or betel-nut (Areca catechu), called *u-kwai* by the Khásiás, is grown on the lower southern slopes of the hills, and, together with the *pán* leaf, is consumed in immoderate quantities by the inhabitants, who measure distance by the number of *páns* consumed on a journey. It is also exported to the plains. (7) *U-soh-phlang*, a root crop resembling a small turnip, is sown on high lands in April and gathered in September. It is a poor vegetable, but the natives of the Hills are fond of it, and eat it either raw or cooked. (8) Cotton is grown on high lands and

245 244 [439] [177] [439] 249 244 000

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

reared either for food or as articles of trade. A pair of ploughing oxen are worth about Rs. 32, or £3, 4s.; an ordinary cow, Rs. 12, or £1, 4s.; a score of kids six months old, Rs. 16, or £1, 12s.; and a score of full-grown pigs, from Rs. 100 to Rs. 160, or from £10 to £16. 231 435

THE AGRICULTURAL IMPLEMENTS in use in the District consist of a plough, called *ka-jing-lúr* in Khásí, and a hoe or *kedáli*, called *u-mo-khiw*. When the cultivation is carried on by means of oxen, the plough is used, the hoe alone being used when the land is cultivated by manual labour. In the Khási Hills the use of the plough, except in a few rare cases, is entirely unknown; but in the Jáintiá Hills, oxen and ploughs are used to a greater extent. What is technically termed 'a plough' of land is equivalent to four English acres; a pair of oxen, together with the necessary implements, would represent a capital of about Rs. 40, or £4. 241 407 [435]

WAGES.—The Deputy-Commissioner reports that the price of labour in the District has more than doubled in the last ten years. The rates obtaining at present are from eightpence to one shilling a day for an ordinary labourer, and from one shilling to eighteenpence a day for a porter. An agricultural day-labourer earns sixpence, and a woman at the same work fourpence-halfpenny a day. Bricklayers, carpenters, and blacksmiths earn from a shilling to eighteenpence a day. The new Station of Shillong, the present seat of the Local Government, was established in May 1864, and since that date the demand for labour has markedly increased. The extension of the cultivation of potatoes has also had an appreciable effect on the price of labour. 178 464 465 [244]

PRICES OF FOOD GRAINS.—Of the different descriptions of rice in the markets of the District, the better sorts are imported from the neighbouring Districts of Sylhet and Kámrúp. The local produce is considered fit only for the use of the Khásiás. The price of the better descriptions depends entirely upon the distance from which the supplies come. In a distant market like that of Shillong, rice of the best quality generally sells at from 6 to 7 *sers* for the rupee, or from 16s. to 18s. 8d. per cwt.; and rice of inferior quality, which is only used by the poorer classes, at from 9 to 10 *sers* for the rupee, or from 11s. 2d. to 12s. 5d. per cwt. Little or no trade is carried on in unhusked grain. Paddy produced in the District generally sells at an average of from 15 to 16 *sers* per rupee, or from 7s. to 7s. 6d. per cwt. Indian corn, which is only grown to a small extent, is sold 435 439 243

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

435 439 [243] 273 435

at the rate of two or three ears for a farthing; and sugar-cane, the cultivation of which is also very limited, at from a little over a farthing to three-farthings per cane. A fermented liquor called *kadam*, made from rice, is sold at from three-farthings to threepence a quart, according to strength; and a distilled spirit called *phatika*, or *kakiad-hárak*, at from threepence to fourpence-halfpenny a quart. This latter description of liquor is sometimes made very strong. No records exist by which the present prices of the above articles can be compared with the rates ruling ten years ago. The maximum price of rice during the famine of 1866-67 was 5 *sers* 6 *chhatáks* for the rupee, or about £1 a hundredweight.

[731]

804 805

MEASURES, WEIGHTS, ETC.—The Hill people have no proper measurement of time or distance. If there be any standard for measuring distance, it is by the number of *pins* a man chews in the course of a journey, generally about one every half hour. In some parts of the District, land is measured by a stick called *ka dieng-nong*, varying in length from six to seven cubits. Liquids are measured in gourds of different measures, varying from half a *chhaták* to a *ser*, and also in bamboo tubes. Rice, potatoes, beans, etc. are measured in baskets, varying in size in different markets from two to eighty pounds.

805

In the Khásí Hills the inhabitants reckon eight days in the week, named as follows:—(1) Lyn-kah; (2) Nong-krem; (3) Um-long; (4) Rang-hep; (5) Shillong; (6) Pom-tih; (7) Um-nih; (8) Yeo-duh. In the Jáintiá Hills the eight days are named thus:—(1) Kyllao; (2) Pyn-sing; (3) Máo-long; (4) Máo-siang; (5) Máo-shai; (6) Pyn-kat; (7) Thym-blein; (8) Ka-hat. The Khásí months of the year, calculated by moons, are as follow:—(1) U Kylla lynkot; (2) U Rym-pang; (3) U Lyber; (4) U Laiong; (5) U Jimmang; (6) U Jilliw; (7) U Nai-túng; (8) U Nai-lar; (9) U Nai-lúr; (10) U Rysow; (11) U Nai-wing; (12) U Noh-prah.

464 423

LANDLESS LABOURING CLASSES.—There is, and always has been, a large class of labourers in the District who neither rent nor possess any land. Women and children are employed in manual out-door labour of all kinds.

423 [427]

VARIETIES OF LAND TENURE can hardly be said to exist. There is nothing whatever resembling the relations between landlord and tenant throughout the Khásí Hills. The lands as a rule are either ancestral property or belong to village communities, and are cultivated under unwritten but well-understood agreements. Of the wide

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

231 (£174, 8s.) was expended on the purchase of stock, including
648 cattle, sheep, and pigs from England. Even native cattle at the
elevation of Shillong fall off very much in the months of January
654 and February from want of forage, and the Khásiás at this season
generally drive them to lower slopes. But one of the chief objects
in keeping cattle at the farm was to obtain manure; and *mati kaldi*
(Phaseolus radiatus) was grown for them, cut green, and stocked
[731] for food. On this they did very well. In 1875-76, however, cattle
disease broke out on the farm in a very virulent shape. Out of 39
cattle attacked, only 7, or 18 per cent., recovered, and the animals
imported from England all died. There was also a heavy mortality
in that year among the sheep and pigs. The following are the
financial results for the two years:—1874-75—Expenditure, Rs.
13,297. 0. 5; receipts, Rs. 309. 2. 6: deficit, Rs. 12,987. 13. 11.
1875-76—Expenditure, Rs. 11,445. 8. 6; receipts, Rs. 1036. 15. 0:
deficit, Rs. 10,408. 9. 6. Total deficit, Rs. 23,396. 7. 5, or £2339.
648 13s. In view of these figures the Chief Commissioner has deter-
mined to restrict farming operations to small experiments in irri-
654 gated *rabi* crops, and, as a measure of economy, to dispense with
the services of the superintendent. The future expenditure on the
farm will be insignificant. The establishment now (1877) consists
of a *sardár* on Rs. 50 and a *chaukidár* on Rs. 10 a month (total,
£72 a year), under the direct control of the Deputy-Conservator of
Forests; the total number of live-stock is 64 head.

731 NATURAL CALAMITIES, such as blights, floods, or droughts, are
not common in the District, although the crops in the Jáintiá Hills
sometimes suffer from insects. So far as the Deputy-Commissioner
is able to ascertain, no destruction of crops affecting the general
harvest has occurred within the experience of the present generation.
[435] During the Orissa famine of 1866-67 the maximum price of common
rice reached £1 per hundredweight, but no such distress was felt as
to require Government relief operations. The price just mentioned
was certainly equal to the rates prevalent in the famine-stricken
localities; but prices always rule high in the Hills, and afford no just
criterion of the state of affairs among the general body of the
inhabitants. Distress was only felt by a small portion of the
population, chiefly the Bengálí immigrants residing in the District,
262 who are generally a well-to-do class. The Hill people, as a rule, do
not eat potatoes, which they grow only for export; but in case of
244 actual famine, they might fall back upon this crop for their own food
439 supply.

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

 000

supply. As the District depends so largely for its supply of rice 243
upon Sylhet and Kámrúp, the state of the markets in those places 433
exercises a greater influence on the rates in the Hills than any 439
failure of the local harvest. In the year 1858 the price of common [435]
rice is said to have risen as high as 6 *sers* for the rupee, or 18s. 8d.
per cwt., in consequence of the failure of the crops in the plains.

ROADS AND MEANS OF COMMUNICATION.—The following are the 491
eight principal lines of road in the Khási and Jáintiá Hills:—(1)
Road from Shillong to Gauháti, in Kámrúp. This road has recently
(1877) been opened for wheeled traffic throughout its entire length.
The Deputy-Commissioner's Report for 1876-77 states that the
number of passengers passing up and down may be estimated
at about 800 or 1000 every month, and the number of carts
already used at about 50. The *tonga dák* brings travellers up [493]
to Shillong from Gauháti in two days by a comfortable and easy
carriage service, while for natives a cheaper conveyance by bullock
cart is available. At Gauháti there is a good *dák* bungalow in
charge of a *khánsámá*, where the usual accommodation provided
in a hotel is to be found. The stages to Shillong are as follow:—
(*a*) Gauháti to Bornihát, 17 miles. The road is good throughout.
There is a *dák* bungalow in charge of a *chaukidár* at Bornihát, where
grain and rice are procurable. (*b*) Bornihát to Nongpoh, 14½ miles.
The road is hilly throughout, but good. At Nongpoh, which is at
an elevation of 1900 feet, there is a *dák* bungalow in charge of a
khánsámá, from whom tea, liquors, and biscuits, etc. can be
obtained. The *dák* bungalow is furnished with bedding, linen, etc.
Grain and rice can be purchased in the *bázár*. (*c*) Nongpoh to
Um-sning, 16½ miles. At Um-sning, elevation 2700 feet, there is a
dák bungalow in charge of a *chaukidár*. Supplies or coolies are not
procurable, but sometimes grain and rice can be purchased. (*d*)
Um-sning to Um-jam, 9½ miles. At Um-jam there is a Public
Works Department rest-house in charge of a *chaukidár*. Supplies
or coolies are not procurable. (*e*) Um-jam to Shillong, 9½ miles, of
which 6½ are a continuous ascent. At Shillong there are *dák* [485]
bungalows in the Artillery Lines, containing four separate rooms.
A *khánsámá* is in attendance, and the rooms are completely fur-
nished with bedding, linen, etc. This entire road, which has a total
length of 67 miles, is as perfect a hill road as could be seen in any
country, and a model of engineering skill. (2) Road running
from Gauháti across the Hills, *via* Nongklao, Máo-flang, Cherrá

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

at Rs. 480,000, or £48,000, and the revenue derived by Government from the quarries was Rs. 67,266, or £6726. In addition, the Khásí Chiefs receive a revenue from this source of more than £2000. 648 651 317

IRON.—The smelting of iron was once the chief industry in the Khásí Hills, and a considerable quantity of the metal used to be exported into Sylhet, both in the crude and the manufactured state. Recently, however, this industry has almost died out, in the face of the competition of the superior article imported from England and sold in the plains at a cheaper rate. The indigenous methods of extracting, washing, and smelting the ore have been minutely described by Professor Oldham. The following description is taken from Mr. Allen's Report, dated 1858, at which date the annual export of smelted iron was estimated at 45,000 *maunds*, valued at Rs. 67,500, or £6750, at the rate of Rs. 1. 8 per *maund*: —'The ore is said to be most abundant and of the best quality in the State of Khyrim, especially at the villages of Nongkrím and Noyandri. A few iron articles, such as *dáos* or hill knives, *kodális* or mattocks, spear and arrow-heads, are manufactured by the Khásí smiths in the Hills; but the greater bulk of the smelted iron is sent to the plains for sale in circular lumps weighing about 4 or 5 *sers*. These lumps, called *birú*, sell at Chhaták for from Rs. 1. 4 to Rs. 1. 6 per *maund*. The best iron, however, which is beaten into bars called *peti*, sells for from Rs. 1. 10 to Rs. 1. 12 per *maund*. Khásí iron is preferred to English, in consequence of its greater malleability. It is much used by the native boat-builders of Sylhet and the neighbouring Districts to make fastenings for the timbers of their boats. When brought into the market, it is more than half dross, and it is this circumstance which renders the iron trade unprofitable. The cost of carriage from the Hills to the plains is about 6 *ánnás* per *maund*; and the traders, who are all Khásiás themselves, affirm that they get an average profit of only 2 *ánnás* per *maund*.' The tables of trade for 1876-77 return no smelted iron as exported from the Hills, but Rs. 7000 of iron implements exported, against nails and ironmongery imported to the value of Rs. 18,000. 178 325 439 [326] [435] [501]

THE MANUFACTURES of the District, besides iron, consist of coarse cotton and *randia* cloth, plain silver work, rude implements of husbandry, netted bags made of the fibre of the pine-apple, common pottery, and mats and baskets. With the exception of the 28 433

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

with the exception of the
326 manufacture of iron, in which the master blacksmith often employs
462 hired labourers, the other industries are generally followed by
463 females in their own houses. No class of labourers are hereditarily
452 attached to any manufacture in a manner that affects their personal
434 freedom. The system of advancing money for manufacturing purposes does not obtain in the Khásí and Jáintiá Hills. The total value of the manufactures of the District is stated to be between £2000 and £3000 per annum. No local manufactures are carried on by means of imported capital.

439 COMMERCE AND TRADE.—The external commerce of the Khásí and Jáintiá Hills is chiefly conducted on the southern boundary, through the District of Sylhet. The total value is more considerable than might be expected, owing to the fact that these Hills practically possess the monopoly of supplying Bengal with lime, potatoes, and oranges. Other important articles of export are raw cotton, stick-lac, betel-nut and *pán* leaves, and bay leaves or *tezpát*. The exportation of iron, which was once large, has now almost ceased. The chief imports consist of rice, dried fish, cotton cloth, salt, and tobacco. On the whole, it would appear that the course of trade is about equally balanced. Trade statistics of more or less value are in existence. The earliest of such statistics are to be found in the Report of Mr. W. J. Allen, dated 1858. The information there given was based for the most part upon oral statements furnished by numerous native traders to Mr. Hudson, who then filled the office of Principal Assistant-Commissioner. It may be accepted as 'a fair representation of the state of trade in
439 the Hills' at that time. The imports and exports on the Assam
434 side were each estimated at about Rs. 15,000, or £1500. The trade with the markets in the Surmá valley was much larger. The total of the exports was valued at Rs. 700,000, or £70,000, giving a profit to the traders of Rs. 170,705, or £17,070. The chief items were:—Limestone, 1,700,000 *maunds*, valued at Rs. 306,000; potatoes, 50,000 *maunds*, value Rs. 125,000; oranges, 45,000,000 in number, value Rs. 78,750; smelted iron, 45,000 *maunds*, value Rs. 67,500; cotton, 12,000 *maunds*, value Rs. 42,000; betel-nuts, value Rs. 37,500; coal, 25,000 *maunds*, value Rs. 12,500. The total value of the imports was estimated at Rs. 350,000, or £35,000, being just one-half the value of the exports; the estimated profits are given as Rs. 44,325, or £4432. The chief items were:—Rice, 150,000 *maunds*, value Rs. 225,000; cloth of sorts, Rs. 25,000;

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

fish, fresh and dried, Rs. 20,000; salt, 2000 *maunds*, value Rs. 10,000. For the last three years, from 1874-75 to 1876-77, elaborate tables of the external commerce have been drawn up by the successive Deputy-Commissioners in charge of the District. There is, however, no organized system of trade registration, and the Chief Commissioner of Assam has expressed the opinion that the figures 'cannot be at all relied upon.' The items vary greatly year by year, which is partly due to the different principles of valuation adopted. For the year 1874-75 the total exports were valued at Rs. 1,371,830, or £137,183, being just double the estimated value twenty years ago; the imports were valued at Rs. 1,359,300, or £135,930, being an increase in the same period of nearly forty-fold. The excess value of exports was Rs. 12,530, or £1253. In 1875-76 the exports were valued at Rs. 1,721,761, or £172,176; the imports at Rs. 1,617,455, or £161,745, showing an excess on the export side of Rs. 104,306, or £10,430. The tables for 1876-77, given in full on the following pages (pp. 238, 239), are quoted from the Administration Report for that year. They are based partly upon returns of trade at the marts of Bholáganj and Jáintiápur, and partly upon such approximations as could be supplied by local traders. The total value of the exports amounts to Rs. 1,603,530, or £160,353; that of the imports to Rs. 1,576,483, or £157,648, showing a balance of Rs. 27,047, or £2704, in favour of the District.

The export of limestone in 1876-77 was 1,600,000 *maunds*, valued at Rs. 480,000, at the rate of Rs. 300 for 1000 *maunds*. These figures show no increase in quantity, but a large increase in value, over the estimates of twenty years ago. The registration system of river traffic in Bengal shows a total export during 1876-77 from the two Districts of Sylhet and Cáchár of 1,056,159 *maunds* of lime and limestone, valued at Rs. 742,118 at the rate of 12 *ánnás* per *maund*. The difference between these two sets of figures for the same year is very considerable. It may be partly explained by the consideration that the Bengal estimate of value includes the stone after it has been calcined and reduced to lime. The trade in limestone is chiefly in the hands of Messrs. Inglis & Co., whose depot is at Chhaták, on the Surmá river. The connection of this firm with the trade of the Khási Hills is of very long standing. The founder, Mr. Henry Inglis, was the son-in-law of

439 Colonel Lister, who filled the office of Political Agent from 1835 to
648 1854. In 1858, when Mr. Allen drew up his Report on the District, the trade both in lime and oranges was a monopoly of this Mr. Inglis. The stone is exported to Chhaták and other marts on the Surmá river, where some portion is burned and made into lime, and the remainder sold in the rough. The trade name in Bengal is 'Sylhet lime.'

439 The export of potatoes in 1876-77 was 200,500 *maunds*, valued
434 at Rs. 501,250, or £50,125, at the rate of Rs. 2. 8 per *maund*.

Text continued from page 238.]

This price is about the same as it was twenty years ago, but the quantity has increased fourfold. The potato was first introduced into the Hills in 1830 by Mr. David Scott, who was then the Governor-General's Agent. 'No greater boon could have been conferred upon the people.' The local trade is entirely in the hands of the Khásiás themselves, and the larger portion of the produce is despatched direct to Calcutta. According to the registration returns of river traffic in Bengal, the export of provisions (including vegetables) from Sylhet in 1876-77 was 123,108 *maunds*, valued at Rs. 369,324, or £36,932, at the rate of Rs. 3 per *maund*.

[177]
[244]

The export of oranges in 1876-77 was 9,400,000 in number, valued at Rs. 37,600, at the rate of Rs. 12 per 3000. These figures apparently show a great decrease since 1858. At that time Mr. Inglis possessed the entire monopoly of the trade, by means of the leases which he held from the Khásí Chiefs of all the valuable groves. The annual produce of his groves was estimated at forty-five millions of oranges, having increased from eleven millions within the

439
434
245
648

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

439 previous twenty years. The oranges, like the lime, were brought
648 down to Mr. Inglis' depot at Chhaták, where they were sold to
245 the dealers at the rate of about Rs. 1. 12 per 1000, or less than
434 half their present estimated price. It is stated in Mr. Allen's Report, that the Calcutta market was then chiefly supplied from the groves of Shella Púnjí and Bor Púnjí; the produce of the other villages was more perishable, and required to be sold in the neighbouring Districts. The fruit is known in Calcutta as 'Sylhet oranges.' The Bengal registration returns for 1876-77 show a total export from Sylhet of 64,505 *maunds* of 'fruit,' valued at Rs. 193,515, or £19,351.

439 The export of raw cotton appears to have greatly increased. In 1876-77 the total quantity exported was 36,000 *maunds*, valued at Rs. 216,000, or £21,600, at the rate of Rs. 6 per *maund*. Twenty years before the export had been only 12,000 *maunds*, valued at Rs. 42,000, at the rate of only Rs. 3. 8 per *maund*. The cotton is of inferior quality, with a short and woolly staple. It is chiefly consumed by the Sylhet weavers. The total registered export from that District in 1876-77 was only 4300 *maunds*, valued at Rs. 64,500,
434 at the high rate of Rs. 15 per *maund*.

439 The chief article of import now, as twenty years ago, is rice; for
[178 the hill-men have never grown sufficient for their own consumption,
243] and the recent establishment of the Civil Station of Shillong has increased the demand. In 1876-77 the total imports of rice were estimated at 205,800 *maunds*, valued at Rs. 720,300, or £72,030, at the rate of Rs. 3. 8 per *maund*. Twenty years ago the imports were nearly as great, viz. 150,000 *maunds;* but the value was only Rs. 225,000, at the rate of Rs. 1. 8 per *maund*, or less than one-half the present value. The chief source of supply is Sylhet District, which sends its surplus to the tea gardens of Cáchár, as well as to these Hills, and also exported, in the year 1876-77, 214,000 *maunds* of rice and 433,100 *maunds* of paddy into Bengal.

The importation of fish (fresh and dried) has enormously increased. In 1876-77 the total amount was 35,900 *maunds*, valued at Rs. 215,400, or £21,540, at the rate of Rs. 6 per *maund*. Twenty years ago the value was only Rs. 20,000, but the quantity is not given. The preparation of dried fish is a flourishing industry in the adjoining District of Sylhet.

The importation of cotton cloth has increased in an almost equal proportion. The value in 1876-77 was Rs. 158,000, or £15,800, as

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

434
against Rs. 25,000, or £2,500, twenty years earlier. The supply of 439
piece-goods is derived directly from Dacca.

A curious feature in the trade of the Khásí and Jáintiá Hills is 441
the total absence of Márwárí or Jain merchants—an enterprising class, who are found everywhere else in Assam, even to the farthest corners of the Brahmaputra valley. There are a few Bengálí traders from Dacca, who do not take up a permanent residence in the Hills; but the great bulk of the business remains in the hands of the natives, who themselves reap the profits and are said to be keen at a bargain.

The principal markets at the foot of the Hills, on the Sylhet side, 443
are Bholáganj, Chhaták, Lakhát, Jaíntiápur, Jafling, Pharálbázár, Máodong, Ponatit, Sónápur, Molághul, and Lengjut. Many of these are situated within the Sylhet boundary; but they are all frequented by Khásí and Synteng traders, who spend their whole time in passing from one market village to another. The markets or *háts* are held at regular intervals of eight days (for the Khásí week consists of this number), with the object of permitting the same people to visit the different places in rotation.

CAPITAL.—Such little capital as the people possess is either 454
employed in trade or lent out upon interest. In a few cases it is hoarded and allowed to remain idle. In small loan transactions, whether articles are pledged as security or not, the interest usually charged is one *ánná* in the rupee per month, or 75 per cent. per annum. In larger transactions the rate of interest per month varies from 2 to 3 per cent. Nothing is charged in the name of interest where lands are mortgaged as security for a loan, as the land is always made over to the mortgagee in lieu thereof, and he is only bound to restore it on payment of the amount lent. In petty advances for agricultural purposes, part of the produce is given by the cultivator at something less than market rates in repayment of the amount borrowed. Limestone quarrying is the only industry in 316
the District carried on by European agency. 648

REVENUE AND EXPENDITURE.—The revenue realized from the 648
Khásí and Jáintiá Hills has increased considerably in recent years. 651
As the Khásí States are treated as semi-independent, the receipts from that portion of the District are altogether insignificant, with the exception of the dues levied from the lime quarries. The larger part of the revenue in Jáintiá is derived from the house tax. For 1835, when British authority was first established in the Khásí Hills,

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

182 very wealthy households still maintain their former economic activities, but
434 the majority have been impoverished, becoming daily labourers for the wealthy
ones or for road construction. Thus considerable internal economic differentiation has begun to appear in the community.

Though the recent economic depression brought poverty to Jaintiya, the
182 standard of living is still strikingly higher than that of neighbouring tribes.
Studying such economic aspects of Jaintiya, I wondered at first why these
245 neighbouring tribes have remained as they were, except for temporary employ-
648 ment at Jaintiya: why, looking at the prosperity of Jaintiya, they did not adopt the way of the Jaintiya people?

Indeed some of them attempted to imitate the Jaintiya economy, but the results were unfortunately not favourable to them. First, both pan-leaf and orange cultivations were entirely new to the tribal peoples, and the technique was quite different from that of dry rice cultivation in the jhum field. Pan cultivation requires very delicate care which is almost impossible to manage for people who have been accustomed to the primitive jhumming cultivation. For instance, when they go into pan gardens, they have to wash themselves and put on special clean clothes in order to prevent the spread of epidemic leaf diseases. Tribal people, who seldom wash their clothes, or mostly go naked, could hardly keep pan gardens. In this respect the Khasi are entirely universal, having specialized in this economy for a long period, even as they believe, from time immemorial.

On the other hand, the technique of orange cultivation is much easier than that of pan-leaf, but it takes several years to obtain a yield; it requires considerable capital to begin with. For the jhum cultivators, who usually did not have cash income nor funds, it was almost impossible to start it, while the Khasi were able to raise funds from the selling of the pan-leaf. Furthermore, the
[423] management of such gardens, either pan-leaf or orange, differs also from that of the jhum field as it entirely depends on individual enterprise based on private land ownership, which is new for these tribes where the community owns the land. Therefore the possibility of starting orange gardens is restricted to special individuals among them belonging to exceptionally rich and powerful households. A few households in neighbouring villages did, in fact, start orange gardens, adopting the technique of the Jaintiya people. This was around 1941 and they were expecting to have the yield around 1950. However, unfortunately, when their oranges began to come into production, orange disease started in Jaintiya and spread all over these areas. Their dream therefore never came true.

Besides oranges, some of them also established gardens of bananas, jackfruits, and papaias, which were more successful than the oranges. These plantations started much earlier than oranges in this area, though not in great quantity. The products were sold to the Jaintiya people who sold them again to Bengalee merchants. The question arises why were they not sold directly to Bengalee merchants, when the profit would have been much greater.

This aspect of the market economy touches upon very interesting problems
182 concerning the relations between tribal and Hindu peoples. Such tribal peoples
who live on a primitive subsistence level usually do not have direct contact
• 44 with the peoples of the plains. There is always an intermediary between them.
648 In this case it is the Jaintiya people who know both tribal life and Hindu life. They are also in between culturally. If a tribal cultivator sells his produce to a Hindu merchant, he would most certainly be cheated by the cunning merchant, as he is quite ignorant of trade. Tribal men do deal with markets directly, but only on a small scale at Hadong bazaar, and without making a profit: it is just the exchange of their basketful of jhum produce for an iron

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

spade or some dried fish, etc. Products such as large quantities of fruits should be sold to the Jatinga people who buy them at reasonable prices. 182

The Khasi are born traders. This must be closely related with their economic technique, such as pan cultivation which makes it impossible for them to live without trading. Hence, though they are hill people, they have had close economic contact with the peoples of the surrounding plains. At the same time, some of them have had a very similar economy to that of other tribes, such as that of Sohkyndah and of Kongton; hence they are familiar with tribal economy. On the whole, their dealings with the tribes as well as with the plains peoples are fair, though they are hard bargainers. Indeed the Khasi are quite welcomed by both sides. Thus the Khasi play an important role as intermediary between the tribes living in the hills and the Hindu (and Muslims) living in the plains.[1] 44 • 648

The economic contact is the most important of the many contacts between Jatinga and other tribal villages. Social contact, as appeared in intermarriages, is a rather marginal matter for the total population. Cultural contact is negligible: I only observed one indication—some fashionable tribal girls sometimes wear Khasi women's dress when they go to the Haflong bazaar. In their contact with tribes, the Jatinga Khasi speak Hindi, which is the common language at Haflong bazaar for all tribes and peoples in this area. A few men of Jatinga speak some tribal language, but none of the tribal speak the Khasi language. 648 182 [191]

In spite of such great differences in culture, economy and social organization, the relationship between the Jatinga people and the tribes has remained very friendly. For instance, as I mentioned before (p. 175, note 3), the tribes lent their land to Jatinga people who were suffering from a great economic depression. Their actual behaviour also reflects such a friendly relationship. It is said that at the time of the Golden Jubilee of Jatinga in November 1955, many Zemi-Naga, Kuki, and Cacharee came and performed their dances for the celebration.

1. The important role of the Khasi as intermediary is not only in the economic field, but also in the political and cultural fields: nowadays many Khasi officers are sent to tribal areas by the Government. They are very efficient in dealing with such work, because they are used to deal with both tribal and plain peoples.

[P. 178 is blank]

General area.—

1. Mankachar	Paddy and maize	...	Dao, hoe and plough	Seeds, dung and chemical.
2. Jaua	Paddy, maize and [illegible]		Dao, hoe and plough	No.
3. Gurkeb	Paddy, maize, etc.	...	Dao, hoe and plough	No.
4. Mankachar	Paddy, maize and potato	...	Dao, hoe and plough	No.
5. Aula	Paddy, maize and millet	...	Dao, hoe and plough	No.
6. Lengrong	Paddy, maize and millet	...	Dao, hoe and plough	Dung, etc.
7. Mankhi	Paddy, potato and maize	...	Dao, hoe and plough	Seeds.

9. Dwarra	Paddy, potato and maize	...	Dao and hoe	No.
10. Jyngpor	Tapioca, [illegible], millet and [illegible]		Dao and hoe	No.

This table reveals that in one region there is bias for cash crops and in the other for food crops—more or less depending upon the soil and topography of the regions. Extreme hardship occurs when there is deficiency in food production or a glut in the market of cash crops. The cash crop producers are, of course, trying to adapt their crops to the changing market conditions. With the loss of market for oranges, the people in the border areas are trying to increase their tendour production and start cultivating paddy, potatoes, etc. Throughout the district, people are trying to increase wet paddy cultivation. Wherever water is available, they spare no pain to convert it into a wet paddy field. Similarly, increasing interest is evident among the people in the cultivation of valuable crops like black-pepper, cashewnut, etc., which have a good prospect in the border areas. It is felt that there is considerable scope for intensification of cultivation of chillies, turmeric, coffee, etc. But any new endeavour demands heavy initial investment which also is not within the reach of cultivators. Government should continue to advance adequate agricultural loans to the needy cultivators in a better planned manner.

Only 19 out of 28 villages reported use of bullock driven ploughs for wet paddy cultivation. But even in these villages animal power is not universally used. Of course, in the rocky fields people have no alternative to the use of hoes and spades but in some areas particularly in the wet paddy field, bullock driven ploughs may profitably be utilised. It is sad that the farmers do not realise the advantage of ploughing for want of funds for purchase of bullocks, etc., is reported to be the cause of continuance of the old practice. Both broadcasting and transplanting methods are in vogue in paddy cultivation the latter being a recent introduction is gaining popularity. Some farmers in the project area villages have tried line sowing but according to them it is very laborious and measures to

24/ 9/ 93 **9.6—Relative importance of crops**—Total gross farm area harvested amounted to [illegible] acres in Border area, [illegible] acres in Project area and [illegible] acres in General area.

From chart table it will be seen that in Border area, maize accounted for the highest proportion of harvested area, i.e., [illegible] per cent, followed in order of importance by hand-run paddy, hand leaf and millet which respectively accounted for [illegible] per cent, [illegible] per cent, [illegible] per cent and [illegible] per cent of the total harvested area. Other crops which accounted for [illegible] acres (1 per cent) include onion, tapioca, banana, turmeric, tea, blackpepper and other field crops.

Considering sale proceeds, it is clear that betelnut happens to be the main option accounting for [illegible] per cent of the total sale proceeds followed by orange, paddy and hand leaf which respectively account for [illegible] per cent, [illegible] per cent and [illegible] per cent of the total sale proceeds. These orange and hand leaf which in pre-partition days were the main cash-crops in the Border area have been passed on second and forth position respectively—the proportions backed by them, particularly in hand leaf, being negligible. On other hand as there is a good market for hand run, Border people have taken to hand run cultivation in a more extensive scale.

24/ 24/ 9/ 93 It is significant that while in Border area total farm area is [illegible] acres, total area harvested came to only [illegible] acres including area under mixed cropping which is in wide practice in Border area particularly for orange, betelnut, and for some other minor crops. The proportion of unharvested farm area was orange cut to be considerable which can be accounted for the following reasons:—

(1) The farm area includes some new gardens particularly of betelnuts which usually take quite a few years to bear fruits.

(2) Apparently a large number of orange and hand-leaf gardens were not harvested as all as there was no market for them.

24/ 4/ 93 Turning our attention to Project area and General area, it will be found that paddy eclipses all other crops in as much as in the two areas it respectively covers [illegible] per cent and [illegible] per cent of the total harvested area in the respective area. In Project area paddy is followed by Hand leaf, orange, potato and betelnut in order of importance while in General area it is followed by potato, millet, orange, hand leaf and betelnut. In both the areas as will be seen from table above, almost all the crops retain their relative position in value. Considering sale proceed, in Project area, paddy occupies the highest position accounting for [illegible] per cent of the total sale proceeds followed by hand leaf, orange, betelnut and potato accounting respectively for [illegible] per cent, [illegible] per cent, [illegible] per cent and [illegible] per cent of the total sale proceeds. In General area, in order of importance of sale proceed paddy, potato and betelnut are worth mentioning having respectively [illegible] per cent, [illegible] per cent and [illegible] per cent of the total sale proceeds.

this way the dance continues.

After it has become dark a hen is sacrificed in front of the house of the S'iem sūd: to the ka S'iem synshar (the queen who rules the world) and to the Biskujom, the god who instructs in the playing of flutes and other instruments. Then various drums are beaten.

Then everyone goes inside the ïing sūd. The S'iem sūd hands the Sob Blei, the first sacrificial priest, who is from the family (jaid) Rumong, a hollowed-out gourd bottle (u skaw) with rice liquor. The Sob Blei pours out the contents in front of the riabot Blei in honor of the goddess of the markets (ka Blei jeu lei hat) so that the markets will be good, remunerative, and successful; so that the roads will be good and safe and everything will be blessed; so that the kingdom itself will progress and develop. It must be remembered here that the market system is very marked among the Khasi and is the chief source of their income. After this 'suit' the same sacrificial drink is offered to the Ka Blei long S'iem, in order to receive her blessings, so that the kings will be good and may make progress. Music and dancing then lasts until day break.

II. The Sacrificial Feast

The actual ceremony begins on the day of the large market. This day itself is called pom blang (goat heads). The S'iem sūd may not eat rice for three days, only a kind of bread, which is made from rice flour. On the large open place in front of the ïing sūd the men hold their sword dance (thad wait) and guns are shot off until the S'iem sūd, the S'iem and the Rangsah (elders) come out of the ïing sūd. Following the S'iem sūd, in her slave-girl (mraw), who carries the utensils and sacrificial gifts. These are arranged by the S'iem sūd herself and consist of a banana leaf, of which however only the upper part is taken (ka sla hait), five betel nut leaves (tympew), five portions of betel nuts, as much as is usually put in the mouth at one time (swai) /996/, a kind of bread made of rice flour (kpu), for which the rice is first put in water, then taken out, dried, and pounded into flour; then ryni bread, which is also baked with pounded rice or corn, mixed with sugar and rolled into the shape of bullets; some uncooked, shelled rice (u khaw), a gourd bottle with rice liquor (u khieng) and several leaves of the Khasi oak tree. The following utensils are used: a golden or silver water container (u lung), a silver dishlike plate (ka pilang ropi). All these are now given by the S'iem sūd to the Sob Blei and in addition a rooster and a white he-goat are brought to the place

16: McCormack E-4,5 (1956-1958) 1964
[P. 108 B] AR7 Khasi AR7

children, but Christian influence has eradicated or driven underground the consumption by women and children. **Industrial arts.** The only industrial arts traditionally practiced in all households were a rudimentary carpentry and a simple utilitarian basketry. Other arts were few, and were practiced as village specialties: the washing and smelting of iron ore and the forging of hoes, daos, knives, swords, and cooking pots (upland Khasis); the spinning of cotton thread (Mynso village, Jaintia); the dyeing of cotton thread and the weaving of cloth (Jaintias, Bhois, Lyngngams, Wars); the spinning and weaving of Eri silk (Khyrwang and Nongrung villages, Bhoi and Jaintia); and the hand manufacture, without wheel, of painted earthenware pots (Larnai village, Jaintia). Ironworking and the production of cotton goods have nearly died out through the competition of machine-made goods. Carpentry has greatly improved. An innovation of major importance is the sewing and tailoring, on sewing machines, of ready-made garments for both sexes. [Cf. Darrah 1800; C., W. 1832.] **Trade.** Khasi villages normally contain a number of household shops operated by women. Every Khasi also lives within walking distance of several village markets that are held on successive days of the eight-day week. The limits of market intercourse for the members of any particular village can be roughly distinguished by their naming the days of their week, which are called after the active markets. The exception is the huge market at Shillong, much of which is active daily, and which serves as a magnet for Khasis from all over the hills. The traditional barter has given way to currency in all markets. The small ones contain at least some local farm produce, plus other essentials like betel nut, and the food and tea stalls which serve as centers of social intercourse. The big markets contain not only regional produce and manufactures but also products from distant parts of the hills, brought for sale by traveling middlemen. There is also substantial trade, from the hills to the valleys, in potatoes, pears, hides, lac, cotton, caoutchouc, the wood of the sal tree, Eri silk thread, limestone, coal, ivory, bay leaf, betel nut, pan leaves, bananas, sugar cane, oranges, til, turmeric, and chillies. From the plains to the hills, there is trade in dried fish, paddy rice, salt, cooking oil, kerosene, matches, tea, sugar, wheat flour, machine-made cloth, shoes, metal pots, crockery, porcelain objects, coral beads, silver, and gold. Markets are important not only as economic institutions but also as centers for recreation (including archery competitions), courtship, reaffirmation of kinship ties with distant relatives, and the dissemination of information of all kinds. [Cf. Stoughton 1926a.] **Division of labor.** Men do the heavy work, such as clearing and burning the swidden fields, caring for cattle and goats and driving them to market, butchering and selling large cuts of beef and pork, carpentry and mining, and driving and laboring on motor vehicles. They also tailor men's

on from October to December. For millets the seed is sown in April-May and reaped about six months later. Maize is usually sown in April-May and ripens in August - September. For potato, generally three crops are raised in the district ; the first is sown in December-January and harvested in April-May, the second is sown in February-March and is gathered in June-July and the third is sown in July-August and is harvested in November-December.

For oranges and betelnut the orchards are cleared of weeds twice a year. Harvesting of orange takes place from October to January. Betelnut ripens at the beginning of the year and are collected between February and May.

2.6.3 **Agricultural implements.**—The usual agricultural implements are a hoe, a sickle, three or four kinds of dosi, a harrow, a crowbar which is used for the construction of irrigation channels, 'sierras' and winnowing baskets. Bullock drawn plough is used in wet paddy cultivation in parts of Jowai subdivision and in Bhoi area and resembles the one in use in the plains of the State.

2. 6. 4. **General cultural practices.**—The cultivators mostly adhere to their indigenous practices of cultivation. Rotation of crops is not widely used. Cultivation of rice is usually done by broadcasting the seeds though transplanting is also in vogue in some areas. Mixed cropping is widely practised. Cultivation by making terraces in the hill slopes is gaining popularity in the district.

2.7 **Cottage Industries.**—Cottage Industries, it appears, have not found very great favour among the people of the district. A few families here and there manufacture iron implements, earthenware, pottery, baskets, mats and jewellery. In striking contrast with other districts weaving of cotton clothes is rare among the Khasis. The Mikirs in Bhoi area and in areas adjoining North Cachar and Mikir Hills practice it only for their domestic consumption. At present, the Government is trying to popularise weaving in the district and this has been welcomed by the Khasis. Among other cottage industries production of eri cocoon in the northern part of the district adjoining Kamrup district and bee keeping throughout the district are worth mentioning.

2.8 **The People.**—The Khasis and Jaintias are a short sturdy race distinct from the neighbouring hill tribes. By nature they are hardy and laborious and in respect of manual labour, they are free from any inhibition. Side by side with the Khasis live the Mikirs, Garos and Nepalis who form respectively 7.22 percent, 3.38 percent and 3.27 per cent of the total rural population. Besides, there are plains people who are mainly concentrated in the town of Shillong. In the marketing centres of the border area there are a large number of Bengali Hindus who dominate the bulk of the trade in the border areas.

2.9 **Occupation.**—The greater portion of the population of the district subsists on cultivation. More than 75 percent of the rural households are predominantly agricultural. The industrious Khasi agriculturists male and females have a high regard for hard labour

and even the well to do ones do not feel anything to work as labourers in other's farms. It is almost customary among the agriculturists to work in other's farms on wage basis, when agricultural operation in one's own farm are over. This is probably an outcome of the difficult transport situation. Among the non-agriculturists and those who follow agriculture as subsidiary occupation, a large number are porters and labourers engaged in jobs like transporting of goods from place to place, collection of limestone, sand, fuel, Collieries and forests of the district also offer employment to a good number of people. Since the taking up of road programme under the plan, a large number of people are getting employment in construction of roads, etc. It is heartening to note that for construction of roads, nay for all kinds of works demanding unskilled labourers, the district locally supplies the whole labour force. People in the various local points of the district, particularly those living in higher hills are mainly engaged in trade. The Khasis are indefatigable traders and have been able to keep almost the whole of the small trade in the district in their own hands. A small proportion of the people are engaged in cottage industries such as stone cutting, brick making, bee keeping, blacksmithy, cane and bamboo works, etc.

The number of persons returned in the 1951 census under each of the eight main livelihood classes for the rural tract of the district was as follows.

TABLE 1

Number of Persons (Source 1951 Census)

Head	Male	Female	Total	P.C.
(1)	(2)	(3)	(4)	(5)
A. Agricultural class:—				
1. Cultivators of land wholly or mainly owned and their dependents.	99,683	92,107	1,82,710	59·03
2. Cultivators of land wholly or mainly unowned and their dependents.	16,014	16,109	32,123	10·53
3. Cultivating labourers and their dependents.	14,053	14,941	28,994	9·50
4. Non-cultivating owners of land, agricultural rent receivers and their dependents.	344	562	906	·30
Sub-total	1,30,014	1,23,719	2,44,733	80·22
B. Non-agricultural class:—				
5. Production other than cultivation.	11,790	10,399	22,189	7·24
6. Commerce	3,237	4,069	7,306	2·39
7. Transport	313	304	617	·20
8. Other services and miscellaneous sources.	17,602	12,324	29,926	9·81
Sub-total	32,942	27,096	60,038	19·68
Total	..	..	3,05,067	100·00

463 A perusal of the table above will show that proportion of families following non-agricultural labour as principal occupation is highest in 464 Border areas. Majority of these families were formerly engaged in [17] agriculture but due to adverse circumstances arising out of partition, one forced to take to other occupations. Test relief works and normal P. W. D. works gave employment to a large section of these people. Other avenues of employment are collection and carriage of limestone, 441 woodcutting, and carrying of merchandise, etc. Traders in stationery articles and groceries who formed the bulk of the traders in the border 433 area are largely the displaced persons and the Bengali people concentrated 563 in Bholaganj and Balat. Others are petty traders dealing in fruits, vegetables, fish, clothes and other foodstuff. Under small-scale manufacture, etc., come the liquor distillers, blacksmiths, carpenters, etc., Commission agents, fishermen, hunters, etc., are shown as others.

5.10 In the following table the families in the three village groups are classified according to their subsidiary occupation.

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

361 In the interior of the Hills the largest villages are mere clusters of
463 huts. The great majority of the inhabitants are employed in agriculture, but there are no data upon which a proportion of agriculturists to non-agriculturists could be based.

167 There is no immigration into the District. Both the Khásiás and
178 the Syntengs have been successful in preserving to the present day their primitive isolation, free from the interference of Hinduism. They still maintain their aboriginal forms of belief and re-
[771] ligious worship, and repudiate alike the authority of Bráhmans and
[262] the entire system of caste. To some extent, however, they have given way to Hindu prejudices in the matter of purity of food. The
[563] few Hindus to be found in the Hills are temporary residents, engaged in civil and military employ, who always contemplate returning to their own homes. The traders are for the most part natives of the
• [441] Hills; for the Márwári merchants, who penetrate into every other corner of Assam, have been able to obtain no footing in the face of Khási competition. There is likewise no emigration from the District. The hillmen are a well-to-do and contented race, and either produce themselves or obtain by trade sufficient to satisfy
[166] their scanty wants. A certain number of both Khásiás and Syntengs proceed southwards every year to work on the tea gardens of Cáchár and Sylhet, but such absence from home is only temporary.

243 AGRICULTURE: RICE.—Thirteen different varieties of rice are cultivated in the District, of which the following is a list, giving the Khási name as well as the description of the grain:—(1) *U-kyba-khyuriow* (*u*, the masculine article, meaning 'the,' and *kyba*, noun masculine, meaning 'paddy'), brown rice with long grain; (2) *u-kyba-khyuriow bai-lik*, a white rice with long grain; (3) *u-kyba la-teb*, round-grained rice; (4) *u-kyba kasi*, bearded, husked; (5) *u-kyba-dew-ha-iong*, black husked rice (literally *u* = 'the,' *kyba* = 'paddy,' *dew* = 'earth,' *ha* = 'that,' *iong* = 'black'); (6) *u-kyba-ha-lik*, white rice; (7) *u-kyba-arim*, scented rice (literally *u* = 'the,' *kyba* = 'paddy,' *arim* = 'royal'); (8) *u-kyba la-kruk*, large-grained rice; (9) *u-kyba-ha-tiang*, small-grained rice; (10) *u-kyba sa-bin*, early rice; (11) *u-kyba ra-dem*, late rice; (12) *u-kyba tang-la*, rice grown along with beans; (13) *u-kyba-ha-tik*, small rice.

Rice is cultivated in marshy fields situated near running water as well as in high lands. The first seven of the above thirteen species of rice are sown in marshy lands during the months of April and May,

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

434

against Rs. 25,000, or £2,500, twenty years earlier. The supply of 439
piece-goods is derived directly from Dacca.

A curious feature in the trade of the Khásí and Jáintiá Hills is 441
the total absence of Márwári or Jain merchants—an enterprising class, who are found everywhere else in Assam, even to the farthest corners of the Brahmaputra valley. There are a few Bengálí traders from Dacca, who do not take up a permanent residence in the Hills; but the great bulk of the business remains in the hands of the natives, who themselves reap the profits and are said to be keen at a bargain.

The principal markets at the foot of the Hills, on the Sylhet side, 443
are Bholáganj, Chhaták, Lakhát, Jaíntiápur, Jafling, Pharílbázár, Máodong, Ponatit, Sónápur, Molághul, and Lengjut. Many of these are situated within the Sylhet boundary; but they are all frequented by Khásí and Synteng traders, who spend their whole time in passing from one market village to another. The markets or *hats* are held at regular intervals of eight days (for the Khásí week consists of this number), with the object of permitting the same people to visit the different places in rotation.

CAPITAL.—Such little capital as the people possess is either 454
employed in trade or lent out upon interest. In a few cases it is hoarded and allowed to remain idle. In small loan transactions, whether articles are pledged as security or not, the interest usually charged is one *dwná* in the rupee per month, or 75 per cent. per annum. In larger transactions the rate of interest per month varies from 2 to 3 per cent. Nothing is charged in the name of interest where lands are mortgaged as security for a loan, as the land is always made over to the mortgagee in lieu thereof, and he is only bound to restore it on payment of the amount lent. In petty advances for agricultural purposes, part of the produce is given by the cultivator at something less than market rates in repayment of the amount borrowed. Limestone quarrying is the only industry in 316
the District carried on by European agency. 648

REVENUE AND EXPENDITURE.—The revenue realised from the 648
Khásí and Jáintiá Hills has increased considerably in recent years. 651
As the Khásí States are treated as semi-independent, the receipts from that portion of the District are altogether insignificant, with the exception of the dues levied from the lime quarries. The larger part of the revenue in Jáintiá is derived from the house tax. For 1835, when British authority was first established in the Khásí Hills,

4.3 **Marketing.**—The Khasis and Jaintias are market minded people. Rarely they sell their produce at the farm site. They have established markets at all vantage points of the district to which they carry over miles their produce on headload for sale. On market days it is a treat to see a stream of people with headloads coming to the market up and down hills from miles away. 442 443 [482]

Markets are held usually twice in every eight days of which one is a 'Barabazar' day which is held on every eighth day and the other is a 'Chota Bazar' day which is held two days ahead of the Barabazar day. The following table shows the marketing facilities available to the rural people in the sample villages.

Table B-7 below shows the number of markets classified according to distances from the selected villages served by them and charge per maund for transport of produces from the village to these markets. 442 443 465 489

231 about Rs. 30. The price of lac has risen a good deal of late
435 years. Formerly the price was about Rs. 15 to Rs. 20 a maund. The lac trade in the Jaintia Hills and in the southern portion of the Khyrim State is a valuable one. The profits, how-
426 ever, go largely to middle-men, who in the Jaintia Hills are Syntengs from Jowai, who give out advances to the Bhoi cultivators on the condition that they will be repaid in lac.
443 The Marwari merchants from the plains attend all the plains
439 markets which are frequented by the hill-men, and buy up the lac and export it to Calcutta. The whole of the lac is of the kind known as stick lac.

HUNTING.

224 The weapons used by the Khasis for hunting are bows and
[411] arrows, the latter with barbed iron heads, and spears which are used both for casting and thrusting. Before proceeding on a
[187] hunting expedition the hunters break eggs, in order to ascertain whether they will be successful or not, and to which jungle
[176] they should proceed. Offerings are also made to certain village deities, e.g. *U. Ryngkew*, *u Basa*, and *u Basa ki mrád*. A lucky day having been selected and the deities propitiated, the hunters start with a number of dogs trained to the chase, the latter being held on leashes by a party of men called *ki nong-ai-ksew*. When the dogs have picked up the scent some hunters are placed as "stops" (*ki ktem*), at points of vantage in the jungle, and the drive commences with loud shouts from the hunters, the same being continued until the object of the chase breaks into the open. The man who draws the first blood is called *u nongsiat*, and the second man who scores a hit *u nongban*. These two men get larger shares of the flesh than the others. The *nongsiat* obtains the lower half of the body of the animal, thighs and feet excepted, called *ka tdong*, and the *nongban* one of the forequarters called *ka tabla*. The other hunters obtain a string of flesh each, and each hound gets a string of flesh to itself. These hunting parties pursue deer sometimes for many miles, and are indefatigable in the chase,
224 the latter lasting occasionally more than one day. In the
782 Jaintia Hills, at the end of the chase, the quarry is carried to

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

mantris sit. This durbar must not be confused with the electoral durbar which will be referred to later. It is an executive council over which the Siem presides, and also possesses judicial powers (for a description of a judicial durbar, see page 91 of the monograph). The form of summons to appear before this durbar used to be a knotted piece of string or cane, the number of knots denoting the degrees of urgency of the summons, not a piece of pork, as one writer has said. Pork is a luxury which is not usually distributed gratis. The Siem manages the State business through his *mantris*, although it is true that in some States the members of the Siem family have been allowed a considerable share of the State management. This latter arrangement is, however, a departure from the ordinary rule in the Siemships, and is regarded as unconstitutional. In some States there are village headmen, styled Sirdars, who settle cases, collect labour, and assess and receive for the chief the *pynsuk*, which may be literally translated as "gratification." In Nongstoin there is an official styled *lyngskor*, who is the superior of a number of village sirdars, and who acts as the Siem's deputy-governor. In the Khasi Hills there is no land revenue, nor are there any tithes or other imposts levied upon the cultivator's produce. The land, to a great extent, is the property of the different clans and villages, although in some instances there are estates owned by private persons. The chief is entitled to receive the income that arises from what are known as the *raj* or State lands only. All that the Siem usually receives from his people in the way of direct revenue is the State subscription, or *pynsuk*, mentioned above. Even this is supposed to be a voluntary contribution, and it is not demanded in some States. This tax is nominally a collection to meet the expenses of the State ceremonies, but is really a means of increasing the chief's private income. The contribution varies in amount according to the means of the villagers. The Siem's principal source of income, however, in all the Khasi States is the toll (*khrong*), which he takes from those who sell at the markets in his territory. As the Khasis are great traders these tolls are often at the larger markets fairly valuable. The chief raises no excise revenue, the manufacture of both fermented and distilled

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

643 liquor being subject to no fiscal restrictions whatsoever. In a
651 few States the Siems are commencing to levy registration fees,
443 but the amounts are insignificant. Judicial fines are divided between the chief and the members of the durbar. In some States the Siems' incomes amount to a few hundreds a year only. Generally speaking, the Khasi chiefs are necessarily a very impecunious set of persons, and many of them are in-
643 debted to, comparatively speaking, large amounts. The Siem
631 is appointed from the Siem family, there being such a family in each of the fifteen Khasi States. The most important States are Khyrim, Myllieu, Cherra, Nongstoin, and Nongkhlaw. There are a few other petty States presided over by Lyngdohs, Sirdars, or Wahadadars. A fact which is of universal application is, that heirship to the Siemship lies through the female side. The customary line of succession is uniform in all cases, except in Khyrim, save that in some instances cousins rank with brothers, or are preferred to
643 grand-nephews, instead of being postponed to them. The
428 difference between the rule of succession and the rule of inheritance to real property should be noted. In the former case the sons of the eldest uterine sister inherit in order of priority of birth, although it is true that this rule has sometimes been disregarded. In cases of succession to realty, however, the inheritance goes to the youngest daughter of the deceased's mother, and after her to her youngest daughter. In successions to the Siemships, in the absence of male heirs from the eldest sister the succession passes, by what has been aptly described as the "knight's move," to the male children of the next eldest sister. In Khyrim the custom of succession is peculiar, there being a High Priestess, and heirship being
643 limited to her male relatives. Generally speaking, it would
614 appear that succession was originally controlled by a small
793 electoral body constituted of the heads (*lyngdohs*) of certain priestly clans, who, it is presumed, exercised their authority to reject candidates, when necessary, mainly on religious grounds. There has, however, been a distinct tendency towards the broadening of the elective basis. In the large State of Khyrim the number of the electoral body has been greatly increased by the inclusion of the representative headmen of certain dominant but non-priestly clans (mantris),

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

certain dominant but non-priestly clans (*mantris*). In other States the Council has been widened by the addition to it of village headmen (*sirdars*), or the chief superintendents (*basans*) of the village markets, tolls from which constitute the chief item in the public receipts of these States. A further step towards the recognition of the public will in the nomination of a Siem has been the introduction of popular elections, at which all the adult males vote. Such popular elections were very greatly due to the views held by Colonel Bivar, who was Deputy-Commissioner of the Khasi and Jaintia Hills from 1865 to 1877. These elections have been, in many States, an innovation which is hardly in accord with public sentiment, and in many cases the voters have done no more than confirm the selection of a special electoral body. It is, however, clear that the idea of popular elections is not one with which the people are unfamiliar, e.g. in Langrim State, where all the adult males customarily vote at an election of a Siem. Popular election has also been customary in the Nobosohpoh and Bhowal States, in cases where a special electoral body has been unable to agree upon a nomination, and also in Nongspung, if a Council of five *lyngdohs*, which has in this State authority to declare who is the rightful heir, but not to disqualify him, cannot come to an unanimous decision. The Siems are appointed by an assembly, or *durbar*, which will be described later. The chiefs, having been thus chosen by the *durbar*, which is supposed by the people to be an institution of Divine origin, are styled, *ki Siem u blei*, or Siems of God. In most States the Siem is the religious as well as the secular head, e.g. in the Cherra State, where the Siem is also *lyngdoh*. In Khyrim State the Siem has sacerdotal duties to perform at different religious ceremonies, especially at the time of the annual Nongkrem dance. It is the custom for the Siem to consult the auspices with the soothsayers for the good of the State. The Siem in matters judicial acts as a judge, the whole body of the *durbar* being the jury. In olden days the Siem marched to war at the head of his army. It is not customary to recognize an heir-apparent, and the young men of the Siem family pursue the ordinary avocations of a Khasi, not comporting themselves in the least like scions of royalty. In quite

000 643 651 622 443 643 666 641 643 793 787 693 643

[which elects the Siem --Analysis]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

643 occurring in the Siemship, three *lyngdohs* and two *mantris* assemble and decide who is to be Siem. They then summon the sirdars of villages to meet them in *durbar* and obtain the approval of the latter to their nomination. If the sirdars do not approve, the combined *durbar* then decides who is to become
173 Siem. In Nongspung there is a tradition that two sisters, Ka
643 Jah and Ka Jem, came to the village of Nongspung, which was then ruled by two *lyngdohs*, and that the latter, having ascertained that the two sisters were of royal birth, married them. They then travelled to other villages and obtained the consent of the *lyngdohs* of these villages to the formation of all their villages into a State, of which Nongspung became the capital, and over which U Sngi Shaflong, the son of Ka Jem, was appointed Siem by the five principal *lyngdohs*. After some generations the lyngdoh of Mairang with his villages became subject to the Siem of Nongkhlaw, an event which finds mention in the annals of the Nongkhlaw State as the conquest of the territory of the "Black" Siem of Nongspung. Another lyngdoh was appointed in place of the one whose territory had been thus annexed.

643 In the Mawiong State the ancient custom was that six *bosans*
[443] appointed the Siem, subject to the approval of the people of the
614 Siemship. In the Nokseohpoh State there are two Siem families, the "Black" and the "White," from either of which it has apparently been the custom for the people to select a Siem, as they wished. In Mawsynram the electors of the Siem are the heads of the four principal clans in the State. On a recent occasion, the electors being equally divided regarding the appointment of a Siem, it was necessary to appeal to the people of the State. In Langrin there are, as in Maharam and Nokseohpoh, two main branches of the Siem family, i.e. the
[641] "Black" and the "White" Siems. Here there is no special electoral body; all the adults of the state have the right to vote at the election of a Siem. In Bhawal State Siems are appointed by the heads of eight clans whose decision is apparently final, provided that it is unanimous. In Malai-Sohmat a bare majority of the heads of six clans would be sufficient for the election of a Siem. Presumably both in Bhawal and Malai-Sohmat, if the electors were equally divided, there would be an appeal to the people.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

(*hylla*) the fire-brand (*lyngkot*) in order to keep themselves warm in this month, hence its name *hylla-lyngkot*. 805 132

U Rymphang, the windy month, corresponding with February.

U Lyber, March. In this month the hills are again clothed with verdure, and the grass sprouts up (*lyber*), hence the name of the month, *u Lyber*.

U Iaiong, April. This name may possibly be a corruption of *u bynai-iong*, i.e. the black moon, the changeable weather month.

U Jymmang, May. This is the month when the plant called by the Khasis *u'ieu jymmang*, or snake-plant, blooms, hence the name.

U Jyllieu. The deep water month, the word *jyllieu* meaning deep. This corresponds to June.

U ndiwng. The evil-smelling month, when the vegetation rots owing to excessive moisture. This corresponds with July.

U'ndilar. The month when the weather is supposed to become clear, *synlar*, and when the plant called *ja'nailar* blooms. This is August.

U'ndi-lur. September. The month for weeding the ground.

U Ri-siw. The month when the Autumn tints first appear, literally, when the country, *ri*, becomes red, *siw*. This is October.

U'ndi wieng. The month when cultivators fry the produce of their fields in *wieng* or earthen pots, corresponding with November.

U Nah-prih. The month when the *prih* or baskets for carrying the crops are put away (*bah nah*). Another interpretation given by Bivar is "the month of the fall of the leaf." December.

The Khasi week has the peculiarity that it almost universally consists of eight days. The reason of the eight-day week is because the markets are usually held every eighth day. The names of the days of the week are not those of planets, but of places where the principal markets are held, or used to be held, in the Khasi and Jaintia Hills. The following are the names of the days of the week and of the principal markets in the district :— 805 4/3

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Khasi Hills.	Jaintia Hills.
1. Lyngkah (Sarpani or Khawang)	Kylla. (Sohtongs).
2. Nongkrem	Pynsing.
3. Um-long (Maslong the hat at Laban)	Maslong. (Narliang).
4. Rangbah (Iew-lah at Cherra) (Mawtawar in Mylliem) (Umsaw in Nongkhlaw)	Mawiang. (Jowai).
5. Shillong (Laitlyngkot)	Mawlai. (Shangpung).
6. Pomtih or Pomtiah (Mawkhar, small market)	Pynkan. (Myum).
7. Umsh	Thym-blein.
8. Yo-dah (Mawkhar, large market)	Ka-hat. (Jaintiapur).

In the *Wár* country, markets are usually held every fourth day, e.g. at Nongjri, Mawlong, Tyllop, and Shella. At Theria the market is held every Friday, and at Hat-nagai, or Bholagunj, every Tuesday.

THE LYNGAMS.

Although mention has been made incidentally in various parts of this monograph of Lyngams customs, it has been thought necessary to give the Lyngams a separate chapter, as these people differ so very greatly from the Khasis in their manner of life, and in their customs. *Lyngam* is the Khasi name; the Garo name for the Lyngams is *Mogam*. There are several *Mogam* villages in the north-eastern corner of the Garo Hills district, and there is regular communication kept up between these villages and the Lyngam inhabitants of the Khasi Hills district. The Lyngams must not be confused with the *Bhoi* or *Nindaniya* Garos who inhabit the low hills to the north of the Khasi Hills district, and are called by the Khasis *Dôn*. All Lyngams claim to be Khasis, they dislike being called Garos; but although it is true they speak what may be called a dialect of Khasi, and observe some of the Khasi customs, the Lyngams are more Garo than Khasi. Before proceeding further, it should be stated that the *Assamese* of Boko call the Lyngams *Nicipi* Garos, all hill people being Garos to the *Assamese* of that region, without distinction

l:Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

considering. Some of the leading characteristics of the Lynngams will now be detailed. The Lynngams are by complexion swarthy, with features of Mongolian type. The men are of middle height and the women remarkably short, both ~~sexes being~~ not nearly so robust as the Khasis, a result due probably to climatic influences, for the Lynngams live in fever-haunted jungles. The men have very little hair about the face, although a scanty moustache is sometimes seen, the hairs in the centre being carefully plucked out, the result being two tufts on either side. Beards are never seen. The women are ill-favoured, and wear very little clothing. The men wear the sleeveless coat of the Khasi and Mikir pattern, called *phongmarong*, which is made of cotton dyed red, blue, and white. This custom may have been borrowed from the Khasis. They do not grow their own cotton, but obtain it from the plains. They make their own dyes, *changlong* (red) and *kur sai-iong* (black). A cotton cloth, barely enough for purposes of decency, is tied between the legs, the ends being allowed to hang down in front and behind. Sometimes an apron is worn in front. At the present day the men wear knitted woollen caps, generally black or red, of the Nongstoin pattern (a sort of fisherman's cap), but the elderly men and head-men wear turbans. The females wear a cotton cloth about eighteen inches broad round the loins, sometimes striped red and blue, but more often only dark blue. A blue or red cloth is thrown loosely across the shoulders by unmarried girls, but married women only wear the waist-cloth, like the Garos. A cloth is tied round the head by married women, sometimes, Garo fashion. The women wear quantities of blue beads as necklaces, like their Garo sisters. They obtain the beads from the Garo markets at the foot of the hills. Brass ear-rings are worn by both sexes; the women, like the Garos, load their ears to such an extent with brass rings as to distend the lobes greatly. Silver armlets are worn by the head-men only, or by those who possess the means to give a great feast to the villagers. This is the custom of the Garo *nokmas*, or head-men. Both sexes wear bracelets. The men also wear necklaces of beads. The rich wear necklaces of cornelian and another stone which is thought by the Lynngams to be valuable. A necklace of such stones is called *u'pieng blei* (god's necklace).

The Market Life of the Khasi
(with ten original photographs by the author)
by P.F. Stegmiller, S.V.D., Munich

[101] The mountains in the northeast corner of India which lie between the valleys of the Brahmaputra and the Barak are inhabited by a [161] tribe, the Khasi, numbering about 200,000 people. Although they rarely cross the borders of their homeland and live almost cut off from their [484] neighbors, they have an active traffic amongst themselves and travel a lot. This traveling is determined by the very distinct market life of the Khasi. It is truly the pulse beat of the people. The rest of their homelife, their activities, and their private, public, and religious life. (1) Time is divided accord-

1. P.F. Stegmiller, "Aus dem religiösen Leben der Khasi" [The Religion Life of the Khasi], Anthropos, 1921-1922, pp. 485 ff.

ing to the market; the market replaces the daily newspaper and the information service; the market unites the individual villages; the market offers a living to many and for many has become a source of wealth.

How much the Khasi depend on a thriving 469 782 market may be seen in their prayers which are spoken every year at the great state sacrifices in honor of the god Shillong by the sacrificer (lyngdoh) presenting the service: "O god, Shillong! Thou who receivest this prayer, this sacrifice of goats, of fowl, of kou and rymsi (a kind of bread of rice flour or cornmeal with pounded sugar), of utensils used in the preparation, as thou has given them to the royal

rare, so that once in every year a sacrifice
can be celebrated in thy name, so that we will
live happily and be healthy and increase in
numbers, so that kings will arise, the markets
will enjoy progress and success, and the
children of the kingdom will spread out and
increase in thy name and to thy honor."

After this prayer the chief sacrificer (lyngkoh rangbah) pours rice liquor (ka kiad ua) out of a gourd bottle (u klong) into the ground in honor of the goddess of the markets (ka kiei jew lei hat) and prays thus: "Hear us, o goddess, so that the markets will be good and safe and everything be blessed, so that the kingdom will progress and develop, so (is it not so)?" (2)

2. P.F. Stegmiller, "Opfer und Opferbräuche der Khasi" [Sacrifice and Sacrificial Customs of the Khasi], Mitteilungen der Anthropologischen Gesellschaft in Wien [Proceedings of the Vienna Anthropological Society], Vol. LIV (1924).

[Thus] Among the Khasi, the women [in the market
personnel] are so in the majority among the
selling personnel that it is tempting to con-
sider them the founders of the markets.
Since provisions form the chief articles of
the market, and these are grown by the women,
[illegible]
the market. The masculine element certainly
participates actively in the market, but only
dealing in such articles as belong to him
especially, such as dishes of iron which he has
made or goats and sheep which he has raised.
Although the men as an average only go to

443 market for pleasure. I cannot agree with the
442 view, (3) that they would consider market busi-

3. F.C. Decker, S.D.S., Salvatorianische Mitteilungen (Salvatorian Communications), 1961, Nr. 4, p. 60.

ness beneath their dignity. If they had a wife or a grown girl (daughter) at home, to whom they could turn over this business. Not because the men would consider the business of the market beneath their dignity, but because the market is once and for all the preferred business of the women, men stay away from the market. If men are rarely seen offering provisions for sale, they are more frequently seen bringing the provisions to the women at the market. The men only sell personally birds they have caught themselves. Thus if the buying and selling of things is the business of the Khasi women, this position is not a subordinate and scanty one but a well established and dominant one.

2. The Market Scene

443 Food provisions are the chief items at the
442 Khasi markets. Sold are: rice (shaw), dried fish (kon sha), potatoes (pnan), sugar cane (u kyn shiang; botanical name: Flemingia vestita Benth); Job's tears (u sah rieu; botanical name coix lacryma Jobi); Italian millet (u 'rai sno, botanical name: setaria italica); blood millet (u 'rai shan, botanical name: paspalum longiflorum); sesame millet (u 'rai trah, botanical name: eleusine Coracana); Khasi beans, two types (u symbai ja, botanical name: pseudus

calcaratum) and (u rymbai ktung, botanical name: glycine soja); corn (u 'rieuhadom); pineapple (u soh trun); lemons (u soh myndong); oranges (u soh niantre); mangoes (u soh pieng); melons (u pathau); breadfruit (u soh epu, botanical name: artocarpus incisa); Assai cherries (u soh jong, botanical name: prunus ferrunginea); bananas (ka kait), pepper (u soh krit); chilis (u soh myngkeu); papayas (u soh symphor, botanical name: carica papaya); a kind of wild potato (u soh pyrsiu); cinnamon (ka sisia, botanical name: cinamum cassia); nutmeg (u jai phoi); ginger (u 'sieng); honey in honeycombs (ka ngmo).

Goats, sheep, and cattle are sold, sometimes alive, sometimes slaughtered in small quantities. There are many chickens on the market, especially for sacrificial purposes.

In addition things are brought for sale that are necessary for the construction of houses or the cultivation of fields, such as grass for roofing huts; cut beams, bamboo poles, bamboo plaited into lattice work, dried cow manure, spades for the fields (mukhia); Khasi knives (ka wait); [Fig.: 6/7 P.A. Schmidt-Festschrift. Photo: P. Fr. Stegmiller. Market Trough. They go in groups for fear of murderers (khlang owners)] [Fig.: 5/7 P.A. Schmidt-Festschrift. Photo: P. Fr. Stegmiller. Fr. Stegmiller. Market Place in Dawkhi.] [Ill.: j] [P.W. Schmidt-Festschrift. Photo: P. Fr. Stegmiller. Market Place in Laitkynsew" Material for roofing.] [105] plaited baskets in all sizes , waterproof plaited containers, carrying baskets (tapa), bands for the forehead (a star), drinking cups of bamboo, gourd bottles, wooden mortars, water pipes made of cocoanuts, pipe bowls made out of clay and dried in the sun, plates and saucers of brass, cooking pots of iron, and earthern dishes; everything is the work of the Khasi.

Recently European wares, such as loin cloths, coverings, caps, combs, mirrors, mouth harmonicas, matches, and cigarettes are also seen in larger amounts.

At the markets of the Khasi not only foodstuffs and other things necessary for life may be obtained, but workers are also hired there. Whoever wishes to hire himself out goes to the market and stands around, hoping to find some kind of work for the coming (market) week. Day laborers can only be hired at the market. Therefore it is hard during the week to get any kind of a worker. It is also necessary when hiring a t the market to hire the worker for the whole "market week," i.e., until the next market day, as the coolies otherwise would have a hard time finding work and would not accept the work at all for only one or two days. The porters needed for traveling

must also be sought out and hired at the markets. 443

3. The Customs of the Market

a) The Preparation for Market. The sellers of both sexes normally carry their wares to the market themselves. They form smaller or larger groups and travel together. The wares are carried on their backs. The burden is packed according to its bulk or content. Larger objects such as bamboo poles, beams, sugar cane, grass, and mats are carried without any covering by means of a forehead band plaited of reed grass (u star). Smaller items, such as salt or potatoes, are packed in sacks; others such as betel nuts, pepper leaves, fruit, vegetables, etc. are carried in baskets made of bamboo. The baskets are either pointed baskets which are round at the top or square baskets, which narrow to a point at the bottom but still are four feet long in size. The latter baskets are usually made with a cover, which like the basket itself, is plaited and almost waterproof, so that flour or salt can be transported in them even during the rainy season. A round or oval object shaped like a shield, which in case of need is used as an umbrella (ka trap) and which is plaited out of bamboo, is inserted between the back and the burden (jingkit). On the one hand this object has the purpose of ameliorating the pressure of the burden and on the other hand it is pulled out in rainy weather to serve as an umbrella when it is held up against the rain by hand. [484] 443 482 438 285 443 [201]

With regard to the weight which the Khasi carry to market, the men carry about 100 and more pounds while the women seldom 482

472 laden themselves with more than 60 to 65 pounds.

474 Many Khasi have to start during the afternoon because of the great distance to the market. They spend the night with acquaintances. In the dark [706] they march by torch light. The torches consist of several igra, i.e., very thin bamboo tube, saturated with petroleum and lighted. Or a large bamboo tube is filled with cloth that has been saturated in petroleum. The burning torches are swung in circles while the Khasi march so that only a glow is provided, but this prevents the torches from going out. The glow is quite sufficient for giving enough light for the road (foot path).

[276] Betel nuts are chewed (4) all the way and

4. The length of the road is also measured in "betel nuts."

water pipes are smoked during the rests.

943 b) The Market Place. It is not possible
361 to talk about a definite place where the Khasi usually hold the market. This varies considerably according to the region. First of all the place chosen for the market lies outside the village. By preference they hold their markets on high ground or some such safe place. A place that has once been chosen remains the market place for that particular village. The market place is often found very close to the memorial stones, just as if the spirits of the ancestors honored there should offer aid and protection to the visitors to the market. On the southern slopes of the Khasi Mountains the market is often held on the bank of a river, for the reason that the Khasi come to these markets in boats. The market place in Mawkhar is quite isolated. Also the one in

Laban, but there is a small wood near there. 443
The market place is also often found under 361
trees, at the edge of a forest or near the memorial stones.

c) Market Huts. Usually the market is 443
held in the open air. Grass offers places 347
to sit as well as places for laying out the wares. But in many places there are also market halls or market huts. These are simple halls, open on all sides, made with a framework of bamboo poles and a roof of straw or palm leaves. The market huts or market halls are built with square corners and have gabled roofs. They offer the women sellers protection from the sun or rain only, but no other comforts. Neither tables nor chairs nor other arrangements for displaying wares are there. On the side where the wind blows these market halls are often covered with bamboo mats.

d) Choosing the Place for Selling. 443
The choice of the place for selling is left 462
up to the seller. Yet a certain division can be recognized at every market. This division could be called a division according to sex. In the middle the food stuffs are usually sold which the women take care of. Utensils and cattle which are the business of the men, are sold at the edges. Therefore there is a definite arrangement to the market which is taken for granted by the Khasis: in the middle the women, outside the men (there is a similar order for the dance: in the middle the feminine sex, outside the masculine sex). The individual types of wares have [illegible] definite places, although individual sellers are not assigned definite places.

The women settle down at the place that 443
seems good to them after their arrival at the market. They spread out in front of them the

food provisions which they have brought to sell. They sit close to each other and form long lines which double or treble when the market is heavily attended. There is little room for the visitors to the market, who must work their way through the wares that are spread out and through the women sellers who are sitting so close together. A woman seldom sits off to one side. Since there is no stealing at the market, sitting apart is also unnecessary, although a better view of the wares that are laid out for sale would be obtained.

The large objects, such as bamboo and beans are always set up on the outer side of the market and sold there even when the selling is managed by women (which is an exception).

c) Selecting the Time. 1. Choosing the market day. The Khasi have a week that is eight or four days long. Every eight (5) days

5. P.F. Stegmiller, "Pfeilschiessen und Jagdgebräuche der Khasi" [Arrow Shooting and Hunting Customs of the Khasi], Anthropos, 1925, pp. 613 ff.

there is a large market and every fourth day there is a small market, always at the same place. The large and the small markets are also held daily, but at different places in a certain district. In this district or defined area the market days for the various villages are so determined that they never coincide with each other, and each Khasi can attend this market or that one as he wishes. The sequence of the markets is regulated so precisely that every Khasi knows exactly where a market is being held at the moment. The days are also named from the markets that are to be held. They do not talk about a Sunday or a Wednesday, but of the

ew duh (large market) in Shillong, in Nongkren, 443 ●
n Umlong, in Mawphew, in Pomtiah, in Iamih, 705
etc. Thus each day is precisely established, and at the same time the market for the place concerned.

In the territory of the War the markets are held every fourth day in the following order: In Nongjiri, in Mawbang, in Tyllap and in Shella. Here the week days are either named according to the market days or they say: the day before the market day, the market day, the day after the market day and the day between the markets. Every Khasi in this district knows then without any doubt which day is meant.

2. Determining the time of day. As concerns the time of day during which the markets are held, no generally valid rule can be set up. This varies according to the individual places. In general from noon until late in the afternoon is the time for the chief market. The market places are usually still empty before 10 o'clock in the morning. The end is about 5 o'clock in the afternoon, if not earlier.

The duration of the markets results from what has been already said. In general [706] the duration of a large market is about six hours, while a small market lasts only about four hours.

f) Order at the Market or Market Peace. 443
Although there are no guards or other agents of 707
order on duty at the Khasi markets, the great peace and order at even the largest Khasi markets seem most pleasant to everyone. I have never heard any complaint of foodstuffs or other objects for sale being stolen. The Khasi consider the market as something holy, as something to be respected, as something that belongs to everybody, which nobody can claim for his own. Attacks on a person's life also do not occur.

443 Quarrels and fights are exceptional. It is most
778 natural to the Khasi not to disturb the peace of the markets, since the markets stand under the protection of the goddess. (Cf. The prayer in the introduction to this article.)[1] Also the memorial stones, in the shadow of which the markets are so often held, may exert some influence on the visitors to the markets, since the Khasi imagine themselves to be protected by the spirits of their ancestors and believe that any kind of disorder at the market would be avenged by these spirits.

443 Nearly all the men at the market are armed.
884 The reason for this lies in the fact that the
411 people are thus protected on the way to the market and are safe from the attacks of the "killers" (nongshonnoh), i.e., those who got out to murder people in order to dedicate their victims to the devil snake. Therefore the visitors to the market never go alone but always in groups. The men are armed with the ka wait (a chopping knife), with which they know how to defend themselves very well.

4. The Law of the Market

443 a) The Market Toll. All sellers who at-
651 tend the market must pay a contribution on entering the market place. Only those inhabitants of the village or district in which the market is held are excepted. This market tax is paid partly in money and partly in products. In many villages it is paid only in cash. The amount of the tax laid is 2 or 3 paisas, often even one anna (5--8--10 pfennigs, German peace evaluation). Only betel nuts and pepper leaves are preferred to money. In many villages everything is paid in produce, insofar as foodstuffs are concerned. The market tax collector reaches

[1] [See category 116, pp 1-2--Analyst]

right into the carrying baskets of the arriving sellers with little ceremony and takes as much as he can with one or two hands. 498 487

Toll is levied at the approaches to the market. Here and there is a toll hut where the people passing must pay their contribution. These receipts belong to the king in whose kingdom the market is located. These market tolls often form very good sources of income for the royal families, as the markets are held regularly and are well attended. In return for the market tolls the king must maintain the market halls (if there are any).

[709] b) Market Coercion. There is no actual market coercion. But nothing can be bought outside of the market, since the Khasi do not have any stores. Only in the larger villages are there one or two shops, which, however, do not count. These shops must all pay the "market toll" for all the articles which they sell at home with the exception of the sale of kiad, "rice liquor," which is never sold at the market.

c) Prices and Measures. The prices are based on supply and demand. They are freely determined by the sellers. It is not the custom to bargain and haggle. An exception is the price for the daily rice, which often causes quarrels. The sellers sit by their wares without shouting or praising. The visitors come to the market, look at the wares, touch them, weigh them in their hands, and finally ask about the price. 497

If the prices seems to them to be too high, they put the wares back in their places and go their way without making any remarks.

Coins are used for paying. The Khasi have the following names for the English-Indian money: 436

brother (actually not likely to happen), the levirate has no sociological implication in the social structure, which is specifically related to the residence rule. The levirate seems to have a significant function only when a marriage is violent—when the husband has full rights over his residence and property. This is also another aspect where the Khasi structure shows a marked difference from that of the Ashanti and the Ila, etc. 182 187

VI. Marriage or the Man as Authority of an Ing

Among these successful matrilineal families, there are also clashes of a matrilineal order. These affect especially those men who are in the position of authority in an ing. Such a man, though he has an independent household with his wife and children, often visits his youngest sister's (or niece's) house, ing (his ing sw), and sometimes stays there. Such a man's attachment to his ing is not only social or psychological, but also often economic. The man, as authority of his natal ing, usually has economic control over the management, particularly so, if his ing has considerable property or active trading business. As husband/father in his family he works for his wife and children, but often takes into consideration as well the interests of his ing. I found such cases especially among richer villagers in Mylliu and Jaintiya, where the main economic activities were based on trading. 592 599 602 619 [192]

Among the Khasi, it is quite a traditional rule of the division of labour that women engage in trading activities at markets whether on a large or small scale. Husbands may carry goods from field to market, but male members are kept away from the actual scene of the selling and buying. However, these activities on the part of the women are controlled and accounted for by their uncle or brother, or even son (or, if no male member is available, by the husband), though in many cases they form separate domestic families. The man's control over the trade appears more marked when the scale of business is large. [641] [642]

A man of Jaintiya, who worked in a shop in Shillong, spent his salary in keeping his wife and children, but at the same time he kept the accounts of his sister who was a professional merchant. Thus, the economy of the ing and that of the co-residential group are crossed by the dual role of the man. Hence, among the Khasi, co-residential autonomy is not always an indication of economic autonomy. However, it should be clearly understood that a man's acquired property goes to his co-residential group, not to his ing. [62]

A man of authority is attached to his ing by the stronger ties of religious, social and economic (management) duties as well as by

[illegible]

[illegible]

[illegible]

Ashton, but Chenjiao influence has endeared to them underground the consumption by women and children. Industrial arts. The only industrial arts normally practiced in all households were a rude hunter; carpentry and a simple utilitarian leather. Other arts were few, and were practiced in village specialties: the washing and washing of iron ore and the forging of bars, fans, knives, swords, and sickles; gold (Qiaoqu), the spinning of cotton thread (Nyaw village, Jiaoxia); the dyeing of cotton thread and the weaving of cloth (Jiaoxia, Shiu, Longqiao, Yuan); the spinning and weaving of the silk (Shiwang and Xiaqiang villages, Shiu and Jiaoxia); and the hand manufacture without wheel, of pointed earthenware pots (Lamai village, Jiaoxia). Lumbering and the production of cotton goods have much declined due to the competition of machine-made goods. Carpentry has greatly improved by the introduction of major importance is the sewing and tailoring, on sewing machines, of ready-made garments for both sexes. [illegible] Trade. Khmu villages normally contain a number of household shops operated by women. Every Khmu also lives within walking distance of several village markets that are held on successive days of the eight-day week. The limits of market attendance for the members of any particular village can be roughly demarcated by their opening the days of those week, which are called after the active markets. The exception is the large market at Hoffang, much of which is active daily, and which serves as a magnet for Khmu from all over the hills. The traditional barter has given way to currency in all markets. The most often contain at least some local farm produce, plus other essentials like betel nut, and the food and tea stalls which serve as centers of social intercourse. The big markets contain not only regional produce and manufactures but also products from distant parts of the hills, brought for sale by travelling middlemen. There is also substantial trade from the hills to the valleys, in potatoes, gourd, bulbs, tea, cotton, rice-chaff, the wood of the oil tree, for silk thread, bamboo, coal, iron, tea leaf, betel nut, jute leaves, tamarind, sugar cane, oranges, of tamarind, and chillies. From the plains to the hills, there is trade in dried fish, pickle, rice salt, cooking oil, bananas, matches, tea, sugar, white liver, machine-made cloth, dyes, metal pots, needles, porcelain objects, coral beads, silver, and gold. Markets are important not only as economic institutions but also as centers for recreation (including archery competitions), courting, or alternation of leading lies with distant relatives, and for dissemination of information of all kinds. [illegible] Specialist Hills. Division of labor. Men do the heavy work, such as clearing and burning the swidden fields, caring for cattle and goats and driving them to market, hunting and selling large sum of wood and pots, carpentry and sewing, and driving and tinkering on motor vehicles. Men also raise many

clothing, operate the large Khasi business establishments in Shillong, and provide all civil and religious leadership. Women care for children and for the home, do the marketing, and sell dried fish, betel nut, lime fruits, and raw breads at markets. Other tasks can be performed by either sex. Land tenure. Land was formerly divided into ch land and public domain. Ch land was corporately held in perpetuity and was inalienable except by the unanimous consent of all members of the ch. The public domain was subject to unrestricted right by anyone who kept the land regularly under habitation or cultivation, with a lapse of no more than three years. Most villages grew up on public domain, and then enclosed all land adjacent to under cultivation by a village member as village land. Forests were public, except for sacred groves presented by villages or lineage groups, and everyone was free to gather branches for fuel. Wastelands and streams were also public. Do now most public domain and village land, together with its forest cover, has been pre-empted as private property, and a living wanted and sold as such. Ch land cannot sell, unless the ch agree to sell, lease, or mortgage. (O Gandhi 1956)

[71]

GEN (2010:17). Descent. Descent is matrilineal, and the Khasi is a member exclusively of his own matrilineage from birth to death. Adoption, which is very rare, is only within the matrilineage. Site groups. The maximal matrilineage is the ch, that is a named, widely dispersed, strictly exogamous, lineage group which claims but cannot trace its origin from a single ancestress. Ch used to meet as corporate group from time to time. Some ch are linked with others in large exogamous groups that are remembered and are defined solely by kinship. Such a group is composed of two or more ch, the ancestresses of which are claimed to have been either real sisters or close friends who out of affection declared that thereafter both their descendants would be as consanguinals. The origin and function of ch-linkage is now unknown, and today the members of a ch will often disagree on whether or not their ch is linked with another. ● The maximal matrilineage is the local descent group or ing. This is the largest kin group that normally collect at life crises. It is said that the ing formerly spanned six generations, today it encompasses only four. If an ing grows to more than four generations in a single village it segments. New houses are located at some distance from the old and the ing soon forgets exactly how to trace genealogical connection, except for which segment descended from a youngest sister. The term ing may also be applied to an extended family, an elementary family, and a house. The elementary family is the basic domestic unit in Khasi society. In any village there are likely to be one or two households which stand as ch level representatives of the lineage of the female household head. Such a household is known as an

[illegible] [illegible] [illegible] [

[illegible]

[illegible]—The [illegible] and [illegible] are [illegible] people. [illegible] and their produce in the farm size. They have [illegible] [illegible] of average points of the dances in which they were [illegible] their produce on [illegible] for sale. The market days is a [illegible] to an [illegible] of people with headloads moving to the market up and down hills from [illegible].

Markets are held usually twice in every eight days of which one is a 'Sunshine' day which is held on every eighth day and the other is a 'Dark Moon' day which is held two days ahead of the Sunshine day. The following table shows the marketing facilities available to the rural people in the sample villages.

Table 9.7 below shows the number of markets classified according to distances from the selected villages served by them and charge per unit for conveyance of produces from the village to these markets.

TABLE 9.7

dissipated from the practice. Adults will chew as many as four or five betel-nuts a day, with the usual accompaniment of pan leaves. The estimated cost of maintaining an average family of the labouring class is about Rs. 8 or 10s. a month. 276 [434]

TOWN: SHILLONG.—There are no towns in the usual acceptance of the word; but the chief places in the Hills, looked upon by the inhabitants as cities, are Shillong, Jowai, Cherrá Pinji, and Shella. According to the Census of 1891, Shillong had only 1,833 inhabitants, Cherrá Pinji 423, and Jowai 4,000. Jowai, however, is a collection of rural hamlets, and the population of Shillong has entirely altered with the date of the Census. The latter place has become the Civil Station in 1864, in substitution for Cherrá Pinji; and which house was started were an independent Province in 1874, it was selected as the permanent seat of the Local Government. The Chief Commissioner resides there, and also the heads of all departments in the Administration. The area of the Station is 3 miles in length by 1½ to 1¾ miles in breadth. A considerable native population is already settled, and is increasing from day to day. One of the largest weekly markets in Khásí is held in the Station; and with a view to facilitate access to the Station, which is the centre for the Province of Assam, a cart road has recently been completed to Gauhati on the Brahmaputra, which will tend to make the place more and more important. An excellent water supply is introduced into Shillong through an aqueduct which has its source in the neighbouring hill streams, and sanitary measures are carefully enforced. Large sums of money have annually been expended on the erection of the public buildings necessary for the offices of the administration. A printing-press has been established, from which issue all the official documents and reports of the Province. The climate is excellent, the temperature being more equable than that of any other hill station in India, and therefore admirably suited to the constitution of Europeans. There is a church at Shillong, and a chaplain on the Bengal establishment officiates both there and at Gauhati. The cantonments were occupied in 1879 by the 42d Regiment of Assam Light Infantry, with their surgeon. The strength was 3 European officers, 18 native commissioned officers, 60 non-commissioned officers, 770 fighting men, and 28 paid camp followers and non-combatants; grand total, 1,111. The total cost, including contingencies, was Rs. 1,78,000, or £17,800. 632 672 648 [34] [34] [34]

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

against Rs. 15,000, or £1,500, twenty years earlier. The supply of 439
piece-goods is derived directly from Dacca.

A curious feature in the trade of the Khásí and Jaintia Hills is 441
the total absence of Marwárí or Jain merchants—an enterprising class, who are found everywhere else in Assam, even to the furthest corners of the Brahmaputra valley. There are a few Bengáli traders from Dacca, who do not take up a permanent residence in the Hills; but the great bulk of the business remains in the hands of the natives, who themselves reap the profits and are said to be keen at a bargain.

The principal markets at the foot of the Hills, on the Sylhet side, 443
are Shillongi, Chhaták, Lakhá, Jaintiápur, Jaflong, Phaidibári, Wázúng, Pawáh, Sindipur, Shillghat, and Lengpui. Many of these are situated within the Sylhet boundary; but they are all frequented by Khásí and Syeng traders, who spend their whole time in passing from one market village to another. The markets or hát are held at regular intervals of eight days (for the Khásí week consists of this number), with the object of permitting the same people to visit the different places in rotation.

Capital.—Such little capital as the people possess is either 454
employed in trade or lent out upon interest. In a few cases it is hoarded and allowed to remain idle. In small loan transactions, whether articles are pledged as security or not, the interest usually charged is one *dand* in the rupee per month, or 25 per cent. per annum. In larger transactions the rate of interest per month varies from 2 to 3 per cent. Nothing is charged in the name of interest where lands are mortgaged as security for a loan, as the land is always made over to the mortgagee in lieu thereof, and he is only bound to restore it on payment of the amount lent. In petty advances for agricultural purposes, part of the produce is given by the cultivator at something less than market rates in repayment of the amount borrowed. Limestone quarrying is the only industry in 316
the District carried on by European agency. 648

Revenue and Expenditure.—The revenue realised from the 648
Khásí and Jaintia Hills has increased considerably in recent years. 651
As the Khásí States are treated as semi-independent, the receipts from that portion of the District are altogether insignificant, with the exception of the dues levied from the lime quarries. The larger part of the revenue in Jaintia is derived from the house tax. For 1835, when British authority was first established in the Khásí Hills,

14- McCormack R-4.5 (1954-1958) 1964
[P 108 B] AR 7 Khasi AR 7

children, but Christian influence has weakened or
drove underground the consumption by women and 276
children. Industrial arts. The only industrial arts be- 177
domestic practised in all households were a rude
weaver, carpenter, and a simple utilitarian basketry. 335
Other arts were less low, and were practised as village 285
specialties: the washing and smelting of iron ore and
the forging of hoes, dues, knives, swords, and cook- 194
ing pots (upland Khasi); the spinning of cotton
thread (Nokre village, Jaintia); the dyeing of cotton [illegible]
thread and the weaving of cloth (Jaintia, Khasi, [illegible]
Lyngngam, War); the spinning and weaving of Eri [illegible]
silk (Khwiang and Sohpetang villages, Khasi and [illegible]
Jaintia); and the hand manufacture, without wheel, [illegible]
of pointed earthenware pots (Lamet village, Jaintia).
Interweaving and the production of cotton goods have 177
much died out through the competition of machine- 178
made goods. Carpentry has greatly improved, by [illegible]
innovation of major importance in the sewing and [illegible]
tailoring, on sewing machines, of ready-made gar- [illegible]
ments for both sexes. (J. Dyrsch 1906, C. V. 1906.)
Trade. Khasi villages usually contain a number of [illegible]
household shops operated by women. Every Khasi 997
also lives within walking distance of several village [illegible]
markets that are held on successive days of the [illegible]
eight-day week. The hours of market assessment for [illegible]
the members of any particular village can be roughly
distinguished by their naming the days of their week,
which are called after the active markets. The exam-
ples is the huge market at Shillong, much of which
is active daily, and which serves as a magnet for [illegible]
Khasi from all over the hills. The traditional barter [illegible]
has given way to currency in all markets. The small [illegible]
cases contain at least some local farm produce, plus
other essentials the betel nut, and the betel and tu-
nuts which serve as centers of social intercourse. [illegible]
The big markets contain not only regional produce
and manufactures but also products from distant parts [illegible]
of the hills, brought for sale by travelling middlemen.
There is also substantial trade, from the hills to the
valleys, in potatoes, pears, betel, tea, cotton, cast-
chow, the wood of the ai tree, Eri silk thread, lime-
stone, coal, iron, lac, betel, betel nut, gun, bayan,
bamboo, rope-cane swagger, ai bamboo, and dalbo.
From the plains to the hills, there is trade in dried
fish, gudrik rice salt, cooking oil, bananas, matches,
tea, sugar, wheat flour, machine-made cloth, shoes,
metal pots, crockery, porcelain objects, coral beads,
silver, and gold. Markets are important not only as
economic institutions but also as centers for recreation (including archery competitions), courtship, re- [illegible]
affirmation of kinship ties with distant relatives, and [illegible]
the dissemination of information of all kinds. (J. [illegible]
Inspector 1906.) Division of labor. Men do the [illegible]
heavy work, such as clearing and burning the wood- [illegible]
den fields, caring for cattle and goats and driving
them to market, butchering and selling large cuts of [illegible]
beef and pork, carpentry and mining, and driving [illegible]
and laboring on motor vehicles. They also take more [illegible]

927 928 [Tol.: 17. P.M. Schmidt-Festschrift. Photo: P. Fr. Stegmiller. Market Place in Shillong.] [Tol.: 18. P.M. Schmidt-Festschrift. Photo: P. Fr. Stegmiller. Market Place in Laitkynsew' Material for roofing.] [Tol.] plaited baskets in all sizes , waterproof plaited containers, carrying baskets (tapa), bands for the forehead (u star), drinking cups of bamboo, gourd bottles, wooden mortars, water pipes made of cocoanuts, pipe bowls made out of clay and dried in the sun, plates and saucers of brass, cooking pots of iron, and earthern dishes; everything is the work of the Khasi.

Mostly European wares, such as loin cloths, bangles, caps, combs, mirrors, mouth harmonicas, matches, and cigarettes are also sold in larger amounts.

443 444 445 At the markets of the Khasi not only foodstuffs and other things necessary for life may be obtained, but workers are also hired there. Whoever wishes to hire himself out goes to the market and stands around, hoping to find some kind of work for the coming (market) week. Day labourers can only be hired at the market. Therefore it is hard during the week to get any kind of a worker. It is also necessary when hiring a t the market to hire the worker for the whole "market week," i.e., until the next market day, as the coolies otherwise would have a hard time finding work and would not accept the work at all for only one or two days. The porters needed for travelling [illegible]

[illegible]

7.6 The purposes for which the loans were incurred and different sources of loans are summarised in the following table :—

DS: Hudson C-4 (no date) 1897 AR? Khasi AR?

ACCOUNT OF KHASI AND JAINTIA HILLS.

326 in the neighbourhood of the
462 manufacture of iron, in which the master blacksmith often employs hired labourers, the other industries are generally followed by
463 females in their own houses. No class of labourers are hereditarily attached to any manufacture in a manner that affects their personal freedom. The system of advancing money for manufacturing purposes does not obtain in the Khasi and Jaintia Hills. The total
452 value of the manufactures of the District is stated to be between
434 £[illegible] and £[illegible] per annum. No local manufactures are carried on by means of imported capital.

439 Commerce and Trade.—The external commerce of the Khasi and Jaintia Hills is chiefly conducted on the southern boundary, through the District of Sylhet. The total value is more considerable than might be expected, owing to the fact that these Hills practically possess the monopoly of supplying Bengal with lime, potatoes, and oranges. Other important articles of export are raw cotton, stick-lac, betel-nut and nuts leaves, and bay leaves or tejpat. The exportation of iron, which was once large, has now almost ceased. The chief imports consist of rice, dried fish, cotton cloth, salt, and tobacco. On the whole, it would appear that the course of trade is almost equally balanced. Trade statistics of more or less value are in existence. The outlines of such statistics are to be found in the Report of Mr. W. J. Allen, dated 1878. The information there given was based for the most part upon and statements furnished by numerous native traders to Mr. Hudson, who then filled the office of Principal Assistant-Commissioner. It may be accepted as "a fair representation of the state of trade in
439 the Hills" at that time. The imports and exports on the Assam
434 side were each estimated at about Rs. 15,000, or £1,500. The trade with the markets in the Surma valley was much larger. The total of the exports was valued at Rs. 700,000, or £70,000, giving a profit to the traders of Rs. 170,705, or £17,070. The chief items were:—Limestone, 1,500,000 maunds, valued at Rs. 300,000; potatoes, 50,000 maunds, value Rs. 125,000; oranges, 45,000,000 in number, value Rs. 78,750; smelted iron, 45,000 maunds, value Rs. 67,500; cotton, 12,000 maunds, value Rs. 42,000; betel-nuts, value Rs. 33,500; coal, 15,000 maunds, value Rs. 12,500. The total value of the imports was estimated at Rs. 350,000, or £35,000, being just one-half the value of the exports; the estimated profits are given as Rs. 44,325, or £4432. The chief items were:—Rice, 150,000 maunds, value Rs. 225,000; cloth of sorts, Rs. 25,000;

TABLE G-7

Investment in Assets

Items	Border area			Project area			General area		
	No. of farm families purchasing items	Average value of assets acquired		No. of farm families purchasing items	Average value of assets acquired		No. of farm families purchasing items	Average value of assets acquired	
		per capita (Rs.)	per family (Rs.)		per capita (Rs.)	per family (Rs.)		per capita (Rs.)	per family (Rs.)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1. Land	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
2. Agricultural tools, etc.									
(a) Implements	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
(b) Implements and equipment	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
(c) Other									
3. Building	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
4. Furniture & fixtures	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
5. Farm & implements tools, etc. for livestock enterprises	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
6. Others	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

Thus it is seen that proportion of families purchasing livestock is highest in all the three areas, followed by that purchasing agricultural tools, implements. Considering investment by items, building is conspicuous in all the three areas, contributing largely towards a net investment in assets in all the three areas. Others of importance are land and agricultural assets.

3.3. **Consumption expenditure of the family.**— The following tables show the broad pattern of the average family consumption expenditure in the three village-groups. The components of annual expenditure on food, clothing and other items of consumption which determine the standard of living of the rural families are displayed separately.

Size of average family—In Border area 6.7 members,
Project area 6.8 members and
General area 6.9 members.

against [illegible] in 1901, or [illegible] per cent, twenty years earlier. The supply of piece-goods is derived directly from Dacca.

A certain factor in the trade of the Khasi and Jaintia Hills is the total absence of Bihari or Jain merchants—an enterprising class, who are found everywhere else in Assam, even in the farthest corners of the Brahmaputra valley. There are a few Bengali traders from Dacca, who do not take up a permanent residence in the Hills; but the great bulk of the business remains in the hands of the natives, who themselves reap the profits and are said to be quite at a bargain.

The principal markets at the foot of the Hills, on the Sylhet side, are Shillong, Chhatak, Lakhib, Jaintiapur, Jaflong, Phulbari, Sherpur, Fenchuganj, Sikalpur, Sunjibari, and Longai. Many of these are situated within the Sylhet boundary; but they are all frequented by Khasi and Syntengs traders, who spend their whole time in passing from one market village to another. The markets at Jaintiapur are held at regular intervals of eight days (for the Khasi week consists of this number), with the object of permitting the same people to visit the different places in rotation.

Credit.—Such little capital as the people possess is either employed in trade or lent out upon interest. In a few cases it is hoarded and allowed to remain idle. In small loan transactions, whether articles are pledged as security or not, the interest usually charged is one anna in the rupee per month, or 75 per cent. per annum. In larger transactions the rate of interest per month varies from 2 to 3 per cent. Nothing is charged in the name of interest where lands are mortgaged as security for a loan, as the land is always made over to the mortgagee in lieu thereof, and he is only bound to account it as payment of the amount lent. In petty advances for agricultural purposes, part of the produce is given by the cultivator as something less than market rates in repayment of the amount borrowed. Limestone quarrying is the only industry in the District carried on by European agency.

Revenue and Expenditure.—The revenue realized from the Khasi and Jaintia Hills has increased considerably in recent years. As the Khasi States are treated as semi-independent, the receipts from that portion of the District are altogether insignificant, with the exception of the dues levied from the lime quarries. The larger part of the revenue in Jaintia is derived from the house tax. For 1875, when British authority was first established in the Khasi Hills,

Th. Nakano E-3 (1973-1976) 1987 AR7 Khas AR7

people remained non-Hindu in their own beliefs and social customs. Hindu influences are nevertheless predominant in their culture, especially in their way of living which shows a practical adaptability, somewhat similar to the Japanese acceptance of modern western culture without becoming Christian. In my census of Sheila village, the people calling themselves 'Hindu' amount to 40 per cent of the total, but they are the recent converts to the Ramakrishna School which established a missionary station at Sheila after the Partition. The Christians constitute 20 per cent of the total, most of them having been converted during the last ten years, as in the case of the Ramakrishna School.[1] The rest remain as they were, of Khas belief.[2] These conversions to other Ramakrishna or Christianity seem to have been encouraged by the unstable situation of the people resulting from the recent economic depression in this area.

The Partition of India and Pakistan (in August 1947), which drew the boundary a few miles south of Sheila village, considerably upset village economy by stopping all trade with Bengal, though a limited amount of trade is allowed with local people at the border. Because of this political change, all the produce of Sheila gardens is rotting away for lack of markets, while all of the rice fields were taken by Pakistan. Goods now come to Sheila only from the uplands, carried upon men's shoulders over the most difficult pass, which makes everything very expensive. Many families have sold their gold and other treasures, and some families are facing starvation.[3]

Concerning the conversion to a new religion, an interesting phenomenon is to be observed. The conversion to Christianity or to Ramakrishna is mostly by individual. I found in my census that the wife and husband often belong to different religions. This is a very different picture from the Garo, among whom I always found that the husband and wife belonged to the same religion: the conversion of the husband to Christianity was always followed by that of the wife. I think this reflects the structural differences which influence the actual relationship between the husband and wife. Among these Khas, instead of the husband and wife, the maternal uncle and his nephews and nieces are mostly of the same religion. The function of the ring, the most important social and religious unit, thus appears also in the conversion to a new religion, stronger than that of a domestic unit.

Intermarriage

The close economic and cultural contact of the Sheila people and the Bengalis is not matched by social contact. The essential barrier between the two peoples is the difference of religion which dominates the entire social order in each society. Though these Khas were important traders, rather than the neighbouring Hindu peasants, they were considered by the Hindu as outcasts with whom they never shared social activities. Intermarriages were therefore very rare. In Sheila village, only two exceptional cases were found in my census:

1. A Khas woman married to a Gurka (cattle-keeper), they live at Sheila Bazaar (Sholag).
2. A Khas woman has marital relation with a Bengalee medical doctor who has resided at Dhaing in Sheila for six years. He already has a Bengalee

1. These two entirely different missionary activities are competing with each other, and are somewhat related to the political powers within this area.

2. The state government is doing its best to provide them with additional facilities: for example, providing air transport for the transportation of oranges from Sheila to Gauhati and Calcutta. However, such arrangements cannot cover the great economic loss suffered by the Sheila people.

there are none of their descendants in Jaitinga. Summing up, the first party who settled at Jaitinga was composed of people of the following five clans:

a. Suchiang — Lakhumbang, his sister, Lapsiin, and her daughter, Khorbon, his brother, Pyntah.
b. Suchen — Hunik and his younger brother, Sain.
c. Thawnar — Shohon and her younger sister, Dawhon.
d. Rupsi — Suru, the wife of Pyntah.
e. Dainen — Tuhon, the wife of Sain.

Among them, Suchen had no female member. Thawnar had no successor. Shohon had no issue and Dawhon did not marry. Therefore, Suchiang, Rupsi and Suru are the oldest clans in present Jaitinga. Suchiang and Rupsi especially are the dominant and richest groups among the present population.

This was the time when the railway from Gauhati to Silchar was being constructed. Some Khasi labourers were working at Hadong on the construction of the railway. After the foundation of Jaitinga, these Khasi workers established marriage relations with the Khasi of Jaitinga, and finally, upon completion of the railway, many of them became the inhabitants of Jaitinga. The present members of the Dome and Sangphai clans are the descendants of these people, and they form a considerable number of the present inhabitants of Jaitinga. Besides them, there were a few other Khasi at Hadong who were engaged in trading business. In the course of time, they also had marital relations with Jaitinga people and came to Jaitinga.

After five years had elapsed they found that in spite of their hard work the land was not favourable to them. Many of them left Jaitinga. This was the hardest period of Jaitinga history.

The second migration (1919-1925).

The railway which once had been blocked was reopened in 1919. The people who had left Jaitinga came back to settle there. This time the circumstances seemed to them quite favourable. The pan tree which they had planted earlier were growing and they could gather considerable produce. The village grew bigger around 1920 as a result of new immigrants from Jaintia; most of them were people from Ihawn, the village of the founder. In this period, many immigrants came from Jaintia not only to Jaitinga but also to Sylhet, Barkhola and other places outside the Khasi-Jaintia Hills. It seems that by this time the over-populated Jaintia realised that these areas were favourable for their new home. However, the successive waves of Jaintia immigrants to Jaitinga ceased by 1925, its population having reached saturation point.

Orange production brought economic prosperity to the people of Jaitinga. Wealthy villagers employed temporary labourers from the Jaintia Hills every year. Some of these labourers came with their families and others came individually. During their stay at Jaitinga, some of them married and settled there. Hence, there are also descendants of such labourers among the present inhabitants of Jaitinga.

Some Aspects of Descent Groups.

Throughout the history of Jaitinga, immigrations have always been undertaken by a family (elementary family, siblings) or by an individual, but never by a group of clan members. Therefore, the present population is grouped in small descent groups according to each migration. Though some of them happened to have the same clan name, their history of migration and their

workers and they were few in number.[1] They were particularly employed for cultivation or for clearing of jungle for new jum gardens to increase.

In the orange season (December to February) the number of workers increased and they were paid more. Rs. 1.8 were paid[2] for one load (one person carring 80 pounds of oranges, from an orange garden to the railway station—about two miles). Usually a worker made three to five trips a day. Many workers from Jaintia used to come for this particular season.

Non-permanent workers were engaged for wet rice fields. They were usually Khasi cultivators since those Khasi and other tribes do not know the technique of wet cultivation, plains people like the Khasis immigrants were engaged. These workers were provided with servants' quarters where they lived with their wives and children. However, very few Jaintiya households possessed rice fields.

The economic prosperity of Jaintiya reached its climax during the period from 1939 to 1946. Since 1947, the orange production has been decreasing. In 1951, a serious disease attacked the orange gardens as well as the pan-leaf gardens. Besides, by dispersing Jaintiya, as it had Garos, of their most important markets, Dacca and Sylhet, the Partition of India and Pakistan in 1947 caused a serious economic depression in the whole region. On the other hand, because of the past prosperity, the population has rapidly increased during the last ten years. The serious economic condition of Jaintiya is illustrated in the petition which was submitted by the Jaintiya people when the Governor of Assam visited there even in January 1956. It runs thus:

"Since the last ten years or so, with the increase of population in the village and with the loss of fertility of the soil, the people were faced with economic depression. At present they are facing acute shortage of land they have also no scope to adopt other forms of cultivation like jhooming and wet rice cultivation etc. Moreover, there has been successive attack of Bright's disease which destroyed and wiped out all the orange and pan gardens. And as such, majority of the families have to depend for their livelihood on daily wages.

It is indeed a serious situation for them, because the Khasi do not produce staple foods, such as rice, their economy is completely dependent on the trade of their products by which they purchase their main provisions, clothes, etc. Other peoples round Jaintiya, being jhum cultivators, can at least get rice and cotton, the minimum requirements, staple foods and clothing are available even in the worst conditions, so that they can at least maintain themselves though the standard of living is low. As I stated before, a few households in Jaintiya possessed rice fields, but the majority had none. Recently they rented some plots of jhum field for rice cultivation from Zemi-Naga of neighbouring villages.[3] However, its yield was but a small percentage of their consumption. A few

1. If they had worked in the gardens of Jaintiya, they might have got more profit than from their own jhum fields. For one day's labour, they got Ans. 8. For one month, they could earn Rs. 15 with which they could buy about 4-5 maunds of rice (one maunds paddy cost Rs. 3-4). For one year it became 50 maunds, which was impossible to produce in a jhum field by a single person's labour.

2. These rates, including the figures of note 1, apply to 1956.

3. Jaintiya villagers told me that Zemi-Naga were kind enough to lend them their field for a negligible rent, though they had not enough for themselves. Zemi-Naga said that they owed much to Jaintiya in the past, so that now they sympathised with the condition of Jaintiya, and offered some parts of their jhum field.

12

CHAPTER III

The Border Area

3.1 **Definition of Border Area.**—The term 'border area' although very frequently used does not refer to any well demarcated area. It was, therefore, decided after a joint discussion between the Director of Statistics with the Deputy Commissioner of the district and Subdivisional Officer, Jaccob, that area within 20 miles of the Indo-Pak border line would be considered as the 'border area' for the purpose of the present survey. The list of the villages falling in the area was supplied by the Deputy Commissioner and the Subdivisional Officer.

3.2 **Conditions of the Border Area before partition.**—The border area under review was composed of the southern slopes of the Kirtar and Jaccob Hills and a narrow strip of plains adjoining the southern slopes running along the Pakistan border. The area extends roughly over a length of about 120 miles, roughly from Mehrabpur on the east to Sonjhar on the west thus covering an area of 2,800 sq. miles approximately comprising of 484 villages inhabited by population of 24 thousands.

Barring the barren and rocky top plateau the slopes are utilized for the production of valuable cash crops on terraced decks. These slopes provide suitable soil and climate for the production crops like amrood, mangoes, bankhal, mangos, pomegrite and other fruits. On account of rich yields which such plantations give to the cultivators these slopes were more densely inhabited and intensively cultivated than would appear possible from the topography of the area. Even the most inaccessible spots in the slopes has been converted into such orchards, whereinto the produce was carried by headloads over steep gradients for several miles. Due to steep gradients little other use, except some jhuming here and there, could be made of this area.

Because of the very topography, this land had its natural connections with Sylhet district now forming part of East Pakistan. From ancient times, the area had a flourishing trade with Sylhet district. It was a transit trade. The cash crops found eager buyers in the people of Sylhet, from whom in turn the people in the border area obtained supplies of rice, fish, vegetables and other necessities of daily life. This in pre-partition days the area enjoyed a very prosperous and settled economy. The cash buildings in the border area villages which are now falling away, bear eloquent testimony to the past prosperity of the border economy.

With the partition of the country in 1947, trade with the plains of Sylhet, now forming part of East Pakistan, was reversed. As a result the whole economy of this region was completely shattered and the countryside which once hummed with activity and abundance was overshadowed with unemployment, poverty and despair. All the cash crops the majority of the border people but the market in East Pakistan. For want of communication facilities the produce could not be

compared to other parts of Indian Union. The prices of some of the food crops recorded a disproportionate fall immediately before. The price of mango which ruled at Rs. [illegible] or Rs. [illegible] per lot [illegible] fell down to Rs. [illegible] to Rs. [illegible] per lot, that of betel nut which used to sell at Rs. [illegible] to Rs. [illegible] per lot [illegible] came down to Rs. [illegible] to Rs. [illegible] per lot. Tapioca and other fruits also suffered equally. The worst of all was that even at this rock bottom price the produce was not lifted. The following figures quoted from the memorandum submitted to the Prime Minister by the Malabar People's Association which are claimed to have been collected from individual growers are indicative of the extent to which the trade had suffered after partition.

TABLE 6.5

Annual export from United Kingdom & Travancore-Cochin to Ceylon through Indian and other ports before

(In thousand cwts.)

Items	Pre-partition export	Post-partition export				
	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
1. Oranges	12,000	2,000	12.0	10.0	1.0	10.0
2. Potato	6,000	80.0	30.0	60.0	300.0	70.0
3. Tapioca	3,000	60.0				
4. Vegetables	1,000	60.0	12.0	32.0	70.0	50.0
5. Arecanuts	1,000	20.0	--	--	--	--
6. Betel	2.5	--	--	--	--	--
7. Dried-fruits	2,500	50.0	3.2	2.0	100.0	80.0
8. Rice-bran, cake, husk, etc.		--	--	--	--	--
9. Spices, turmeric, chillies, pepper	2.0	0.5	0.2	0.1	0.2	0.2
10. Fruits, banana, plums, pine-apples, jack-fruits, pears and papaya.	1,200	30.0	15.0	30.0	30.0	30.0
11. Limestone	24,000	17,000	17,000.00	6,000.0	1,000.0	1,000.0

The difficulty of getting adequate supply of foodgrains and other necessities of daily life posed a serious problem. Due to communication difficulties arrangement for adequate supply of these commodities from other parts of Indian Union could not be made. The supply from

[illegible]

[illegible] East Pakistan to which the people in the border areas were entitled in the exercise of various trade agreements of the Government of India with the authorities in Pakistan, were discovered. The situation was still more aggravated due to the stringent measures adopted by authorities in Pakistan, on the plea of prevention of smuggling, in the results, [illegible] were the entire border trade actually came to a standstill.

[illegible] This class in border economy has resulted in widespread unemployment among the border people. There being no market for the produce, the owners ceased to take proper care of their orchards and plantations. As a result thousands of labourers who were employed in the orchards were thrown out of employment. Similar was the condition of those who were employed in the transportation of various commodities such as merchandise of trade etc. A large section of the people engaged in collection of timbers were also rendered unemployed with the set back received by the trade in timbers with East Pakistan. Due to stoppage of smuggling trade, petty traders engaged in distributive trade, also suffered.

[illegible] Many of the border people possessing paddy lands and orchards in areas that are located in Pakistan had to abandon them. The following table will show the amount of land lying in Pakistan belonging to the farmers in the selected villages of border area :—

TABLE A-3

Name of villages	Area of land lost through partition		
	No. of families who possessed land in Pakistan	Area (acres)	Average per family (acres)
1. Shagin	[illegible]	[illegible]	[illegible]
2. Qirfin	[illegible]	[illegible]	[illegible]
3. Shalgam	[illegible]	[illegible]	[illegible]
4. Balaj	[illegible]	[illegible]	[illegible]
5. Mandan	nil	—	—
6. Lyaghlan	[illegible]	[illegible]	[illegible]
7. Darwaq	[illegible]	[illegible]	[illegible]
8. Sunda	[illegible]	[illegible]	[illegible]
9. Anni	[illegible]	[illegible]	[illegible]
10. Chalang	nil	—	—

[illegible] A few families who did not have any landed interest on this side of the border were reported to have migrated to Pakistan. Most of the families are even now paying tax to East Pakistan authorities even though they are not getting any returns because they do not want to lose their right on land.

Economic crops—

[illegible]	Paddy and maize	Dam, hoe and plough	[illegible]	
[illegible]	Paddy, maize and [illegible]	Dam, hoe and plough	No	
[illegible]	Paddy, maize, etc.	Dam, hoe and plough	No	
[illegible]	Paddy, maize and [illegible]	Dam, hoe and plough	No	
[illegible]	Paddy, maize and millet	Dam, hoe and plough	No	
[illegible]	Paddy, maize and millet	Dam, hoe and plough	[illegible]	
[illegible]	Paddy, [illegible] and maize	Dam, hoe and plough	[illegible]	
[illegible]	Paddy and maize	Dam, hoe and plough	No	
[illegible]	Paddy, [illegible] and maize	Dam and hoe	No	
[illegible]	[illegible], maize, millet and [illegible]	Dam and hoe	No	

This table reveals that in one region there is Nao for cash crops and in the other for food crops—more or less depending upon the soil and topography of the region. Extreme hardship occurs when there is deficiency in food production or a glut in the market of cash crops. The cash crop producers are, of course, trying to adapt their crops to the changing market conditions. With the loss of market for oranges, the people in the border areas are trying to increase their foodgrain production and start cultivating paddy, pulses, etc. Throughout the district, people are trying to increase wet paddy cultivation. Wherever water is available, they spare no pain to convert it into a wet paddy field. Similarly, increasing interest is evident among the people in the cultivation of valuable crops like black-pepper, cardamom, etc., which have a good prospect in the border areas. It is felt that there is considerable scope for intensification of cultivation of chillies, turmeric, coffee, etc. But any new enterprise demands heavy initial investment which often is not within the reach of cultivators. Government should continue to advance adequate agricultural loans to the needy cultivators in a better planned manner.

Only 10 out of 20 villages reported use of bullock driven ploughs for wet paddy cultivation. But even in these villages animal power is not universally used. Of course, in the rocky fields people have no alternative to the use of hoes and spades but in some areas particularly in the wet paddy field, bullock driven ploughs may profitably be utilised. It is not that the farmers do not realise the advantage of ploughing but want of funds for purchase of bullocks, etc., is reported to be the cause of continuance of the old practice. Both broadcasting and transplanting methods are in vogue in paddy cultivation the latter being a recent introduction is gaining popularity. Some farmers in the project area villages have tried line sowing but according to them it is very laborious and amounts to

like the Zemi-Naga, the Cachares and the Kuki. But after the period of economic prosperity as I shall describe in the next section, the Jaintiya people reached a rather high level of education, while most of the neighbouring tribes remained illiterate. Their standard of living likewise improved. Fashionable girls of Jaintiya who have studied at the Convent school in Shillong, and speak English and Hindi, cannot marry half-naked tribesmen who work in the jungle. They prefer to intermarry with Bhadros, Panjabis or Assamese who belong to more sophisticated communities, and through whom they can enjoy urban life. Thus the orientation of the intermarriage of the people of Jaintiya has changed, along with the growth of Jaintiya.

It should be noted that intermarriages came mostly through the contacts at Shillong, where people used to go once a week for the bazaar, rather than through direct contacts with neighbouring villages.

Economy of Jaintiya and its Relation to Neighbouring Tribes

It is very interesting to find two different kinds of economy in the same ecological background. Jaintiya Khasi practice pan-leaf and orange cultivation and depend mainly on a trading economy, while the other neighbouring tribal peoples practice jhum cultivation, almost a subsistence economy. This situation has remained unchanged for the last fifty years since the establishment of Jaintiya village.

The first Jaintiya immigrants occupied one ridge of the mountain where the present Jaintiya is situated. Formerly, this land belonged to the Zemi-Naga, one of the old inhabitants of the Cachar Hills, who possessed a vast jungle area for jhum cultivation. It seems that there was no objection to the Khasi occupying this small spot. It was apparently too small an area for the jhum cultivation—pan-leaf cultivation of the Khasi requires less than one twentieth of the land of the usual jhum cultivation. The Khasi, who started pan-leaf cultivation were able to accumulate some capital, and after several years they started orange gardens. They had had experience of orange cultivation in their homeland, but this was the first time they had operated commercially.

The success of this orange cultivation was beyond their dreams. Hearing of good oranges at Jaintiya, many Bengalee merchants from Dacca, Sylhet, Silchar and Gauhati began to come to buy them. Moreover, the village had the great advantage of being situated near the railway station. Oranges were sold by carloads. Unimaginable wealth came to the Jaintiya people. Especially the founder's family, including his brother's and sister's, became extraordinarily wealthy; their income used to be Rs. 20,000 a year. The children were sent to the school which was established in the village and some were educated at colleges in Dacca, Sylhet and Shillong. The villagers had beautiful houses built by Manipuri and Bengalee carpenters. Actually the houses of Jaintiya were known as some of the best construction in Assam.

Like the Shella people, they were managers of gardens and employed workers. Wealthy households used to engage several labourers annually, most of them from Jaintia where the Jaintiya people had originated. These workers were provided with shelter in the servant quarters of their employer's house, but they had to provide meals for themselves. They were paid daily according to the work done. They were available to other households, when their employer had no work. Some labourers were also engaged locally among the Zemi-Naga, the Cachares and the Kuki, though not as many as among the Jaintia. These local tribes were fairly well occupied by their jhum cultivation, and not used to being employed as workers. Therefore, most of them were not regular

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

young are comely, of a buxom type, and, like the men, with highly-developed calves, the latter always being considered a beauty. The children are frequently remarkably pretty. Khasis carry very heavy burdens, it being the custom for the coolly of the country to carry a maund, or 82 lbs. weight, or even more occasionally, on his back, the load being fixed by means of a cane band which is worn across the forehead; women carry almost as heavy loads as the men. The coolies, both male and female, commonly do the journey between Cherrapunji and Shillong, or between Shillong and Jowai, in one day, carrying the heavy loads above mentioned. Each of the above journeys is some thirty miles. They carry their great loads of rice and salt from Therria to Cherrapunji, an ascent of about 4,000 feet in some three to four miles, in the day. The Khasis are probably the best porters in the north of India, and have frequently been requisitioned for transport purposes on military expeditions.

The people are cheerful in disposition, and are light-hearted by nature, and, unlike the plains people, seem to thoroughly appreciate a joke. It is pleasant to hear on the road down to Theriaghat from Cherrapunji, in the early morning the whole hillside resounding with the scraps of song and peals of laughter of the coolies, as they run nimbly down the short cuts on their way to market. The women are specially cheerful, and pass the time of day and bandy jokes with passers-by with quite an absence of reserve. The Khasis are certainly more industrious than the Assamese, are generally good-tempered, but are occasionally prone to sudden outbursts of anger, accompanied by violence. They are fond of music, and rapidly learn the hymn tunes which are taught them by the Welsh missionaries. Khasis are devoted to their offspring, and the women make excellent nurses for European children, frequently becoming much attached to their little charges. The people, like the Japanese, are fond of nature. A Khasi loves a day out in the woods, where he thoroughly enjoys himself. If he does not go out shooting or fishing, he is content to sit still and contemplate nature. He has a separate name for each of the commoner birds and flowers. He also has names for many butterflies and moths. These are traits which are not found usually in the people of India.

l: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

000 which are not found usually in the people of India. He is
461 not above manual labour, and even the Khasi clerk in the
333 Government offices is quite ready to take his turn at the hoe
335 in his potato garden. The men make excellent stonemasons and carpenters, and are ready to learn fancy carpentry and
276 mechanical work. They are inveterate chewers of *supari* and
504 the pan leaf (when they can get the latter), both men, women, and children; distances in the interior being often measured by the number of betel-nuts that are usually chewed on a
273 journey. They are not addicted usually to the use of opium or other intoxicating drugs. They are, however, hard drinkers, and consume large quantities of spirit distilled from rice or millet. Rice beer is also manufactured; this is used not only as a beverage, but also for ceremonial purposes. Spirit drinking is confined more to the inhabitants of the high plateaux and to the people of the Wár country, the Bhois and Lyngngams
276 being content to partake of rice beer. The Mikirs who inhabit
751 what is known as the "Bhoi" country, lying to the north of the district, consume a good deal of opium, but it must be remembered that they reside in a malarious *terai* country, and that the use of opium, or some other prophylactic, is probably
525 beneficial as a preventive of fever. The Khasis, like other people of Indo-Chinese origin, are much addicted to gambling.
577 The people, and especially those who inhabit the Wár country, are fond of litigation. Col. Bivar remarks, "As regards truthfulness the people do not excel, for they rarely speak the truth unless to suit their own interests." Col. Bivar might have confined this observation to the people who live in the larger centres of population, or who have been much in contact with the denizens of the plains. The inhabitants of the far interior are, as a rule, simple and straightforward people, and are quite as truthful and honest as peasants one meets in other countries. My impression is that the Khasis are not less truthful certainly than other Indian communities. McCosh, writing in 1837, speaks well of the Khasis. The following is his opinion of them:—"They are a powerful, athletic
[47] race of men, rather below the middle size, with a manliness of gai[illegible] demeanour. They are fond of their mountains, and look down with contempt upon the degenerate race of the

[the khasis - Angel]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[499] this manner, the males earning on an average 8 annas and the
463 females 6 annas a day. Col. Bivar writes that in 1875 the
465 wages for ordinary male labourers were 4 to 8 annas a day, and for females 2½ to 4 annas, so that the wages rates have almost doubled in the last thirty years. Contractors, however, often manage to obtain daily labour at lower rates than those paid by Government. Stonemasons and skilled labourers are able to
482 get higher rates. It is easier to obtain coolies in the Khasi
241 than in the Jaintia Hills, where a large proportion of the population is employed in cultivation. The Khasis are excellent
461 labourers, and cheerful and willing, but they at once resent bad treatment, and are then intractable and hard to manage. Khasis are averse to working in the plains in the hot-weather months.

APICULTURE.

231 I am indebted to Mr. Rita for the following remarks on apiculture in the Khasi and Jaintia Hills.

There are two kinds of indigenous bees in the Khasi Hills, one domesticated, called *u ngap* (*apis Indica*), and the other *u lywai*, which is never domesticated, and is very pugnacious; its hives are difficult of access, being always located in very high cliffs. A few hives of a third class of bee are now-a-days to be found in and around the station of Shillong, i.e. the Italian.
[177] This bee was imported into the hills by Messrs. Dobbie and Rita, and the species became propagated in the following manner. The bees had been just established in a hive, where they had constructed a brood comb, when the hive was robbed by some Khasis for the sake of the *larvæ* it contained, which they wished to consume as food; but the queen bee escaped and established other colonies, one of which was afterwards captured by Mr. Rita, the others establishing themselves at places in the neighbourhood. The hive used by the Khasis is of a very primitive description. It is usually a hollow piece of wood, about 2½ to 3 ft. in length and 10 or 12 in. in diameter. A small door is placed at each end of the log, one for the bees to go in and out, and the other for the removal of the honey when wanted. The honey-combs are broken and the honey is

764
782 rich, or in a kind of coffin (shyngoid). In the first case, a steer (ox) is sacrificed, in the other case a pig (u 'niang shyngoid). The horns of the steer (u masi pyllait) are painted gold or silver. Today one does this only with gold or silver paper. Then the animal is let loose after it has been strewn with rice and sprinkled with water ('iad-um). Anybody who captures it can keep it or kill it. As soon as the animal is let loose, one calls it masi-tamrong. If one wants to set up on the cremation area bamboo poles with white cloth pieces on them as if they were flags, which is only done for the very well-to-do, a rooster (u 'iar kait) is sacrificed.

[461] Since no work may be done on the day of cremation, all the preparations must be completed, such as fetching wood from the forest ('law kyndang), erecting the funeral pyre, arranging for the necessary sacrificial animals and other sacrificial gifts, etc.

4. The Cremation (ka jingthang).

The Khasi burn their dead. At the crematory ceremony one can distinguish various classes or kinds, either according to the wood [431] which is used or according to the catafalque (scaffolding for the body or structure above the dead person) which is erected.

The methods of cremation according to the differences in the wood are:

1. The cremation, for which only uncut wood is used, that is, wood as it is found without any kind of preparation. This type of cremation is made only by the very poor (uba duk eh) who have no more relatives. There is no sacrifice made at this cremation

on from October to December. For millets the seed is sown in April-May and reaped about six months later. Maize is usually sown in April-May and ripens in August - September. For potato, generally three crops are raised in the district ; the first is sown in December-January and harvested in April-May, the second is sown in February-March and is gathered in June-July and the third is sown in July-August and is harvested in November-December.

For oranges and betelnut the orchards are cleared of weeds twice a year. Harvesting of orange takes place from October to January. Betelnut ripens at the beginning of the year and are collected between February and May.

2.6.3 **Agricultural implements.**—The usual agricultural implements are a hoe, a sickle, three or four kinds of dras, a harrow, a crowbar which is used for the construction of irrigation channels, 'sierras' and winnowing baskets. Bullock drawn plough is used in wet paddy cultivation in parts of Jowai subdivision and in Bhoi area and resembles the one in use in the plains of the State.

2. 6. 4. **General cultural practices.**—The cultivators mostly adhere to their indigenous practices of cultivation. Rotation of crops is not widely used. Cultivation of rice is usually done by broadcasting the seeds though transplanting is also in vogue in some areas. Mixed cropping is widely practised. Cultivation by making terraces in the hill slopes is gaining popularity in the district.

2.7 Cottage Industries.—Cottage Industries, it appears, have not found very great favour among the people of the district. A few families here and there manufacture iron implements, earthenware, pottery, baskets, mats and jewellery. In striking contrast with other districts weaving of cotton clothes is rare among the Khasis. The Mikirs in Bhoi area and in areas adjoining North Cachar and Mikir Hills practice it only for their domestic consumption. At present, the Government is trying to popularise weaving in the district and this has been welcomed by the Khasis. Among other cottage industries production of eri cocoon in the northern part of the district adjoining Kamrup district and bee keeping throughout the district are worth mentioning.

2.8 The People.—The Khasis and Jaintias are a short sturdy race distinct from the neighbouring hill tribes. By nature they are hardy and laborious and in respect of manual labour, they are free from any inhibition. Side by side with the Khasis live the Mikirs, Garos and Nepalis who form respectively 7.32 percent, 3.38 percent and 3·27 per cent of the total rural population. Besides, there are plains people who are mainly concentrated in the town of Shillong. In the marketing centres of the border area there are a large number of Bengali Hindus who dominate the bulk of the trade in the border areas.

2.9 Occupation.—The greater portion of the population of the district subsists on cultivation. More than 75 percent of the rural households are predominantly agricultural. The industrious Khasi agriculturists males and females have a high regard for hard labour

and even the well to do ones do not feel anything to work as labourers in other's farms. It is almost customary among the agriculturists to work in other's farms on wage basis, when agricultural operation in one's own farm are over. This is probably an outcome of the difficult transport situation. Among the non-agriculturists and those who follow agriculture as subsidiary occupation, a large number are porters and labourers engaged in jobs like transporting of goods from place to place, collection of limestone, sand, fuel, etc. Collieries and forests of the district also offer employment to a good number of people. Since the taking up of road programme under the plan, a large number of people are getting employment in construction of roads, etc. It is heartening to note that for construction of roads, nay for all kinds of works demanding unskilled labourers, the district locally supplies the whole labour force. People in the various local points of the district, particularly those living in higher hills are mainly engaged in trade. The Khasis are indefatigable traders and have been able to keep almost the whole of the small trade in the district in their own hands. A small proportion of the people are engaged in cottage industries such as stone cutting, brick making, bee keeping, blacksmithy, cane and bamboo works, etc.

The number of persons returned in the 1951 census under each of the eight main livelihood classes for the rural tract of the district was as follows.

TABLE 1

Number of Persons (Source 1951 Census)

Head	Male	Female	Total	P.C.
(1)	(2)	(3)	(4)	(5)
A. Agricultural class:—				
1. Cultivators of land wholly or mainly owned and their dependents.	90,603	92,107	1,82,710	59·89
2. Cultivators of land wholly or mainly unowned and their dependents.	16,014	16,109	32,123	10·53
3. Cultivating labourers and their dependents.	14,053	14,941	28,994	9·50
4. Non-cultivating owners of land, agricultural rent receivers and their dependents.	344	562	906	·30
Sub-total	1,21,014	1,23,719	2,44,733	80·22
B. Non-agricultural class:—				
5. Production other than cultivation.	11,794	10,309	22,103	7·24
6. Commerce	3,237	4,069	7,306	2·39
7. Transport	355	264	619	·20
8. Other services and miscellaneous sources.	17,462	12,864	30,326	9.95
Sub-total	32,848	27,506	60,354	19.780

been denuded completely of timber, charcoal being necessary 327
for smelting, has affected the production almost as much as the presence of cheap iron in the market.

MANUFACTURE OF ERI SILK CLOTHS AND COTTON CLOTHS IN THE JAINTIA HILLS.

The number of weavers in the district at the last Census 288
was 533. This number in the Census Report is ascribed to [162]
the cotton industry, no mention being made of weavers of silk. The spinning of Eri silk thread, and weaving it into cloths is, however, a fairly considerable industry amongst the Khyrwang and Nongtung villages of the Jaintia Hills. The Nongtungs and Khyrwangs rear their own Eri worms, and spin the silk from the cocoons. The late Mr. Stack, in his admirable note on silk in Assam, says, "Throughout the whole range of the southern hills, from the Mikir country, Eri thread is in great request for weaving those striped cloths, in which the mountaineers delight," but this observation should have been confined to the Jaintia Hills portion of this district, the Khasis not weaving themselves either in silk or cotton. The Khasis obtain their silk cloths from the Assam Valley, and from the Nongtung or Khyrwang villages in Jaintia. The latter villages have given the name to the striped cloth, *ka jáin Khyrwang*, which is almost invariably worn by the Syntengs. Mr. Stack has given in detail a description of the silk industry in Assam; and it is not therefore necessary to go over the same ground here. The Khyrwang cloth is red and white, mauve and white, or chocolate and white, the cloth being worn by both men and women. The Khyrwang cloths vary in price from Rs. 5 to [435]
Rs. 25, according to size and texture. These cloths are the [462]
handiwork of women alone, and a woman working every day regularly will take six months to manufacture a cloth valued at Rs. 25; but, as a rule, in the leisurely manner in which they work, it takes a year to complete it.

race, so that once in every year a sacrifice 443
can be celebrated in thy name, so that we will 782
live happily and be healthy and increase in numbers, so that kings will arise, the markets will enjoy progress and success, and the children of the kingdom will spread out and increase in thy name and to thy honor."

After this prayer the chief sacrificer (lyngdoh rangbah) pours rice liquor (ka kiad um) out of a gourd bottle (u klong) onto the ground in honor of the goddess of the markets (ka blei jeu lei hat) and prays thus: "Hear us, o goddess, so that the markets will be good and safe and everything be blessed, so that the kingdom will progress and develop,mo (is it not so)!" (2)

2. P.F. Stegmiller, "Opfer und Opferbräuche der Khasi"/Sacrifice and Sacrificial Customs of the Khasi/, Mitteilungen der Anthropologischen Gesellschaft in Wien"/Proceedings of the Vienna Anthropological Society/, Vol. LIV (1924).

/704/ Among the Khasi, the women /The Market 443
Personnel/ are so in the majority among the 462●
selling personnel that it is tempting to consider them the founders of the markets. Since provisions form the chief articles of the market, and these are grown by the women, this may be the reason why the woman dominates the market. The masculine element certainly participates actively in the market, but only dealing in such articles as belong to him specially, such as dishes of iron which he has made or goats and sheep which he has raised. Although the men as an average only go to

443 market for pleasure, I cannot agree with the
462 view, (3) hat they would consider market busi-

3 P.C. Becker, S.D.S., Salvatorianische Mitteilungen /Salvatorian Communications/, 1911, No. 4, p. 60.

ness beneath their dignity, if they had a wife or a grown girl (daughter) at home, to whom they could turn over this business. Not because the men would consider the business of the market beneath their dignity, but because the market is once and for all the preferred business of the women, men stay away from the market. If men are rarely seen offering provisions for sale, they are more frequently seen bringing the provisions to the women at the market. The men only sell personally birds they have caught themselves. Thus if the buying and selling of things is the business of the Khasi women, this position is not a subordinate and shameful one but a well established and dominant one.

2. The Market Wares

443 Food provisions are the chief items at the
438 Khasi markets. Sold are: rice (khau), dried fish (doh kha), potatoes (phan), sugar cane (u pai), an edible root which is eaten raw (u son phlang; botanical name: flemingia vestita Benth); Job's tears (u soh rieu; botanical: name coix lachryma Jobi); Italian millet (u 'rai soh, botanical name: setreria italica); blood millet (u 'rai shan, botanical name: paspalum sanguinale); spadix millet (u 'rai truh, botanical name: eleusine Coracana); Khasi beans, two kinds: (u rymbai ja, botanical name: paseolus

Laban, but there is a small wood near there. 443
The market place is also often found under 361
trees, at the edge of a forest or near the
memorial stones.

c) Market Huts. Usually the market is 443
held in the open air. Grass offers places 347
to sit as well as places for laying out the
wares. But in many places there are also
market halls or market huts. These are
simple halls, open on all sides, made with a
framework of bamboo poles and a roof of
straw or palm leaves. The market huts or
market halls are built with square corners
and have gabled roofs. They offer the women
sellers protection from the sun or rain only,
but no other comforts. Neither tables nor
chairs nor other arrangements for displaying
wares are there. On the side where the wind
blows these market halls are often covered
with bamboo mats.

d) Choosing the Place for Selling. 443
The choice of the place for selling is left 462
up to the seller. Yet a certain division can
be recognized at every market. This division
could be called a division according to sex.
In the middle the food stuffs are usually
sold which the women take care of. Utensils
and cattle which are the business of the men,
are sold at the edges. Therefore there is a
definite arrangement to the market which is
taken for granted by the Khasi: in the middle
the women, outside the men (there is a similar
order for the dance: in the middle the feminine
sex, outside the masculine sex). The indivi-
dual types of wares have [707] their definite
places, although individual sellers are not
assigned definite places.

The women settle down at any place that 443
seems good to them after their arrival at the
market. They spread out in front of them the

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

brother (actually not likely to happen), the levirate has no sociological implication in the social structure, which is specifically related to the residence rule. The levirate seems to have a significant function only when a marriage is virilocal—when the husband has full rights over his residence and property. This is also another aspect where the Khasi structure shows a marked difference from that of the Ashanti and the Ila, etc. 182 587

VI. Marriage of the Man of Authority of an *Iing*

Among these successful marital families, there are also shadows of a matrilineal order. These affect especially those men who are in the position of authority in an *iing*. Such a man, though he has an independent household with his wife and children, often visits his youngest sister's (or niece's) house, *iing (ka iing sen)*, and sometimes stays there. Such a man's attachment to his *iing* is not only social or psychological, but also often economic. The man, as authority of his natal *iing*, usually has economic control over the management, particularly so, if his *iing* has considerable property or active trading business. As husband/father in his family he works for his wife and children, but often takes into consideration as well the interests of his *iing*. I found such cases especially among richer villagers in Shella and Jatinga, where the main economic activities were based on trading. 592 593 602 613 [182]

Among the Khasi, it is quite a traditional rule of the division of labour that women engage in trading activities at markets whether on a large or small scale. Husbands may carry goods from field to market, but male members are kept away from the actual scene of the selling and buying. However, these activities on the part of the women are controlled and accounted for by their uncle or brother, or even son (or, if no male member is available, by the husband), though in many cases they form separate domestic families. The man's control over the trade appears more marked when the scale of business is large. [443] [462]

A man of Jatinga, who worked in a shop in Haflong, spent his salary in keeping his wife and children, but at the same time he kept the accounts of his sister who was a professional merchant. Thus, the economy of the *iing* and that of the co-residential group are crossed by the dual role of the man. Hence, among the Khasi, residential autonomy is not always an indication of economic autonomy. However, it should be clearly understood that a man's acquired property goes to his co-residential group, not to his *iing*. [421]

A man of authority is attached to his *iing* by the stronger ties of religious, social and economic (management) duties as well as by

children, but Christian influence has eradicated or driven underground the consumption by women and children. **Industrial arts.** The only industrial arts traditionally practiced in all households were a rudimentary carpentry and a simple utilitarian basketry. Other arts were few, and were practiced as village specialties: the washing and smelting of iron ore and the forging of hoes, daos, knives, swords, and cooking pots (upland Khasis); the spinning of cotton thread (Mynso village, Jaintia); the dyeing of cotton thread and the weaving of cloth (Jaintias, Bhois, Lyngngams, Wars); the spinning and weaving of Eri silk (Khyrwang and Nongtung villages, Bhoi and Jaintia); and the hand manufacture, without wheel, of painted earthenware pots (Larnai village, Jaintia). Ironworking and the production of cotton goods have nearly died out through the competition of machine-made goods. Carpentry has greatly improved. An innovation of major importance is the sewing and tailoring, on sewing machines, of ready-made garments for both sexes. [Cf. Darrah 1896; C., W. 1832.] **Trade.** Khasi villages normally contain a number of household shops operated by women. Every Khasi also lives within walking distance of several village markets that are held on successive days of the eight-day week. The limits of market intercourse for the members of any particular village can be roughly distinguished by their naming the days of their week, which are called after the active markets. The exception is the huge market at Shillong, much of which is active daily, and which serves as a magnet for Khasis from all over the hills. The traditional barter has given way to currency in all markets. The small ones contain at least some local farm produce, plus other essentials like betel nut, and the food and tea stalls which serve as centers of social intercourse. The big markets contain not only regional produce and manufactures but also products from distant parts of the hills, brought for sale by traveling middlemen. There is also substantial trade, from the hills to the valleys, in potatoes, pears, hides, lac, cotton, caoutchouc, the wood of the sal tree, Eri silk thread, limestone, coal, ivory, bay leaf, betel nut, pan leaves, bananas, sugar cane, oranges, til, turmeric, and chilies. From the plains to the hills, there is trade in dried fish, paddy rice, salt, cooking oil, kerosene, matches, tea, sugar, wheat flour, machine-made cloth, shoes, metal pots, crockery, porcelain objects, coral beads, silver, and gold. Markets are important not only as economic institutions but also as centers for recreation (including archery competitions), courtship, reaffirmation of kinship ties with distant relatives, and the dissemination of information of all kinds. [Cf. Stegmiller 1924a.] **Division of labor.** Men do the heavy work, such as clearing and burning the swidden fields, caring for cattle and goats and driving them to market, butchering and selling large cuts of beef and pork, carpentry and mining, and driving and laboring on motor vehicles. They also tailor men's

clothing, operate the large Khasi business establishments in Shillong, and provide all civic and religious leadership. Women care for children and for the home, do the marketing, and sell dried fish, betel nut, lime, fruits, and rice breads at markets. Other tasks can be performed by either sex. **Land tenure.** Land was formerly divided into sib land and public domain. Sib land was corporately held in perpetuity, and was inalienable except by the unanimous consent of all members of the sib. The public domain was subject to usufructuary right by anyone who kept the land regularly under habitation or cultivation, with a lapse of no more than three years. Most villages grew up on public domain, and then reckoned all land inhabited or under cultivation by a village member as village land. Forests were public, except for sacred groves possessed by villages or lineage groups, and everyone was free to gather branches for fuel. Wastelands and streams were also public. By now, most public domain and village land, together with its forest cover, has been pre-empted as private property and is being rented and sold as such. Sib lands remain intact, unless the sibs agree to rent, lease, or sell. [Cf. Cantlie 1934.]

462 294 343 622 423 [78]

KIN GROUPS. **Descent.** Descent is matrilineal, and the Khasi is a member exclusively of his own matrilineage from birth to death. Adoption, which is very rare, is only within the matrilineage. **Kin groups.** The maximal matrilineage is the sib; this is a named, widely dispersed, strictly exogamous, lineage group, which claims but cannot trace its origin from a single ancestress. Sibs used to meet as corporate groups from time to time. Some sibs are linked with others in large amorphous groups that are unnamed and are defined solely by exogamy. Such a group is composed of two or more sibs, the ancestresses of which are claimed to have been either real sisters or dear friends who out of affection declared that thenceforth their descendants would be as consanguineals. The origin and function of sib-linkage is now unknown, and today the members of a sib will often disagree on whether or not their sib is linked with another. • The minimal matrilineage is the local descent group, or *iing*. This is the largest kin group that normally rallies at life crises. It is said that the *iing* formerly spanned six generations; today, it encompasses only four. If an *iing* grows to more than four generations in a single village, it segments. New houses are located at some distance from the old and the *iing* soon forgets exactly how to trace genealogical connection, except for which segment descended from a youngest sister. The term *iing* may also be applied to an extended family, an elementary family, and a house. The elementary family is the basic domestic unit in Khasi society. In any village there are likely to be one or two households which stand as sole local representatives of the lineage of the female household head. Such a household is known as an

611 [597] 614 602 [59]

*162 From the above table it is seen that the proportion of earners in
434 the Border area, Project area and General area are respectively 50 per
cent, 48 per cent and 55 per cent of the corresponding total population.
• 462 Thus each earner has to support himself and roughly one dependent.
Thus the burden of dependency is not very heavy in the district.
This is because of the fact that men, women and adolescents all join
the labour force. Number of women engaged wholly on domestic
works is few. Only in big families having a number of women, one
or two of them are engaged in domestic works, otherwise the Khasi
women attend to the domestic works in addition to their work in
the field.

From table C 5·1 in the appendix it will be seen that respectively 4·7 per cent, 7.8 per cent and 10.2 per cent of the earners in Border area, Project area and General area are below 15 years of age.

5·6—Attempt was made to study the employment position in the selected villages. For this purpose the following definition of employed and unemployed persons was adopted.

125 Persons working for pay or profit on one day during a
464 period of 30 days preceding the date of enquiry would be classified
as employed. Those who did not work on any day during the last
30 days, may be employed or unemployed. The person is unemployed
if—

(i) He who was without a job for the whole reference period.

(ii) Who was seeking one, and

(iii) Who was in a position to accept job if offered one.

A person is also unemployed if he did not work because of his protracted illness, believed that no work was available, or was expecting to return to a job from which he had been indefinitely laid off.

On the other hand a person is employed if he had a job, although temporarily absent from work during the reference period due to illness, vacation, industrial disputes or being laid off temporarily. Also a person would be considered employed if he was waiting to take up a new job which he had been offered or to start a new business.

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

with the exception of the
326 manufacture of iron, in which the master blacksmith often employs
462 hired labourers, the other industries are generally followed by
463 females in their own houses. No class of labourers are hereditarily
452 attached to any manufacture in a manner that affects their personal
434 freedom. The system of advancing money for manufacturing purposes does not obtain in the Khásí and Jáintiá Hills. The total value of the manufactures of the District is stated to be between £2000 and £3000 per annum. No local manufactures are carried on by means of imported capital.

439 COMMERCE AND TRADE.—The external commerce of the Khásí and Jáintiá Hills is chiefly conducted on the southern boundary, through the District of Sylhet. The total value is more considerable than might be expected, owing to the fact that these Hills practically possess the monopoly of supplying Bengal with lime, potatoes, and oranges. Other important articles of export are raw cotton, stick-lac, betel-nut and *pán* leaves, and bay leaves or *tezpát*. The exportation of iron, which was once large, has now almost ceased. The chief imports consist of rice, dried fish, cotton cloth, salt, and tobacco. On the whole, it would appear that the course of trade is about equally balanced. Trade statistics of more or less value are in existence. The earliest of such statistics are to be found in the Report of Mr. W. J. Allen, dated 1858. The information there given was based for the most part upon oral statements furnished by numerous native traders to Mr. Hudson, who then filled the office of Principal Assistant-Commissioner. It may be accepted as 'a fair representation of the state of trade in
439 the Hills' at that time. The imports and exports on the Assam
434 side were each estimated at about Rs. 15,000, or £1500. The trade with the markets in the Surmá valley was much larger. The total of the exports was valued at Rs. 700,000, or £70,000, giving a profit to the traders of Rs. 170,705, or £17,070. The chief items were:—Limestone, 1,700,000 *maunds*, valued at Rs. 306,000; potatoes, 50,000 *maunds*, value Rs. 125,000; oranges, 45,000,000 in number, value Rs. 78,750; smelted iron, 45,000 *maunds*, value Rs. 67,500; cotton, 12,000 *maunds*, value Rs. 42,000; betel-nuts, value Rs. 37,500; coal, 25,000 *maunds*, value Rs. 12,500. The total value of the imports was estimated at Rs. 350,000, or £35,000, being just one-half the value of the exports; the estimated profits are given as Rs. 44,325, or £4432. The chief items were:—Rice, 150,000 *maunds*, value Rs. 225,000; cloth of sorts, Rs. 25,000;

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

142 young are comely, of a buxom type, and, like the men, with highly-developed calves, the latter always being considered a beauty. The children are frequently remarkably pretty. Khasis carry very heavy burdens, it being the custom for the 482 cooly of the country to carry a maund, or 82 lbs. weight, or even more occasionally, on his back, the load being fixed by means of a cane band which is worn across the forehead; women carry almost as heavy loads as the men. The coolies, both male and female, commonly do the journey between Cherrapunji and Shillong, or between Shillong and Jowai, in one day, carrying the heavy loads above mentioned. Each of the above journeys is some thirty miles. They carry their great loads of rice and salt from Therria to Cherrapunji, an ascent of about 4,000 feet in some three to four miles, in the day. The Khasis are probably the best porters in the north of India, and have frequently been requisitioned for transport purposes on military expeditions.

157 The people are cheerful in disposition, and are light-hearted by nature, and, unlike the plains people, seem to 522 thoroughly appreciate a joke. It is pleasant to hear on the road down to Theriaghat from Cherrapunji, in the early morning the whole hillside resounding with the scraps of song and peals of laughter of the coolies, as they run nimbly down the short cuts on their way to market. The women are specially cheerful, and pass the time of day and bandy jokes with passers-[461] by with quite an absence of reserve. The Khasis are certainly more industrious than the Assamese, are generally good-tempered, but are occasionally prone to sudden outbursts of [533] anger, accompanied by violence. They are fond of music, and [797] rapidly learn the hymn tunes which are taught them by the Welsh missionaries. Khasis are devoted to their offspring, 593 and the women make excellent nurses for European children, ●463 frequently becoming much attached to their little charges. The people, like the Japanese, are fond of nature. A Khasi 517 loves a day out in the woods, where he thoroughly enjoys 824 himself. If he does not go out shooting or fishing, he is con-825 tent to sit still and contemplate nature. He has a separate name for each of the commoner birds and flowers. He also has names for many butterflies and moths. These are traits which are not found usually in the people of India.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

SECTION II.

OCCUPATION.

241 THE greater proportion of the population subsists by cultiva-
463 tion. Cultivation of rice may be divided under two headings,
[162] high land or dry cultivation and low land or wet cultivation. The total number of persons who subsist by agriculture generally in the hills, is given in the last Census Report as 154,907, but the term agriculture includes the cultivation of the potato, the orange, betel-nut and *pán*. A full description of the different forms of agriculture will be given under the
463 heading "Agriculture." A considerable number of Khasis earn
482 their livelihood as porters, carrying potatoes to the markets on
439 the Sylhet side of the district, from whence the crop is conveyed by means of country boats to the different places of call of river-steamers in the Surma Valley, the steamers carrying the potatoes to Calcutta. Potatoes are also largely carried to Shillong by porters, where the tuber is readily bought by Marwari merchants, who load it in carts to be conveyed by road to Gauhati, from which station it is again shipped to
482 Calcutta and Upper Assam. Many persons are also employed in
463 carrying rice up the hill from Theria to Cherrapunji, Shillong,
[465] and on to other places. Salt is also carried by porters by this route. Many Khasis, both male and female, live by daily labour in this way, earning as much as eight annas, and
[162] six annas a day, respectively. The Census Report of 1901 shows some 14,000 "general labourers" in the district, the greater number of whom are porters and coolies, both male
[857] and female, employed on road work and on building. In Shillong the Government Offices and the printing press give employment to a certain number of Khasis. There is also a fair demand for Khasi domestic servants, both among the Europeans and the Bengali and Assamese clerks who are employed at the headquarters of the Administration.

P. Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

headquarters of the Administration. The manufacture of country spirit gives employment to a considerable number of persons, most of whom are females. At a recent census of the country stills in the district, undertaken by the district officials, the number of stills has been found to be 1,530. There must be at least one person employed at each still, so that the number of distillers is probably not less than 2,000, possibly more. The spirit is distilled both for home consumption and for purposes of sale, in some villages almost entirely for sale. In the Jaintia Hills stock-breeding and dealing in cattle provides occupation for 1,295 people, according to the last census. The cattle are reared in the Jaintia Hills and are driven down to the plains when they reach the age of maturity, where they find a ready market amongst the Sylhetis. Cattle are also driven into Shillong for sale from the Jaintia Hills. Another place for rearing cattle is the Siemship of Nongkhlaw, where there is good pasturage in the neighbourhood of Mairang. These cattle are either sold in Shillong or find their way to the Kamrup district by the old Nongkhlaw road. Cattle-breeding is an industry which is capable of expansion in these hills. There are a few carpenters to be found in Shillong and its neighbourhood. The Khasis are said by Col. Waddell to be unacquainted with the art of weaving; but the fact that a considerable weaving industry exists amongst the Khyrwang villages of the Syntengs, and at Mynso and Suhtnga, has been overlooked by him. The Khyrwangs weave a special pattern of cotton and silk cloth, striped red and white. In Mynso and Suhtnga similar cloths are woven, also the sleeveless coat. In former days this industry is said to have been considerable, but it has been displaced to a large extent of late years by Manchester piece goods. The number of weavers returned at the last census in the district was 533. The Khasis and Mikirs of the low country, or Bhois as they are called, weave cotton cloths which they dye with the leaves of a plant called *u noli*. This is perhaps the wild indigo, or *ram*, of the Shan settlers in the Assam Valley. The weavers are almost always females. An important means of subsistence is road and building work; a considerable number of coolies, both male and female, are employed under Government, practically throughout the year, in

1:Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

[499] this manner, the males earning on an average 8 annas and the
463 females 6 annas a day. Col. Bivar writes that in 1875 the
465 wages for ordinary male labourers were 4 to 8 annas a day, and for females 2½ to 4 annas, so that the wages rates have almost doubled in the last thirty years. Contractors, however, often manage to obtain daily labour at lower rates than those paid by
482 Government. Stonemasons and skilled labourers are able to
241 get higher rates. It is easier to obtain coolies in the Khasi than in the Jaintia Hills, where a large proportion of the popu-
461 lation is employed in cultivation. The Khasis are excellent labourers, and cheerful and willing, but they at once resent bad treatment, and are then intractable and hard to manage. Khasis are averse to working in the plains in the hot-weather months.

APICULTURE.

231 I am indebted to Mr. Rita for the following remarks on apiculture in the Khasi and Jaintia Hills.

There are two kinds of indigenous bees in the Khasi Hills, one domesticated, called *u ngap* (*apis Indica*), and the other *u lyngai*, which is never domesticated, and is very pugnacious; its hives are difficult of access, being always located in very high cliffs. A few hives of a third class of bee are now-a-days to be found in and around the station of Shillong, i.e. the Italian.
[177] This bee was imported into the hills by Messrs. Dobbie and Rita, and the species became propagated in the following manner. The bees had been just established in a hive, where they had constructed a brood comb, when the hive was robbed by some Khasis for the sake of the *larvæ* it contained, which they wished to consume as food; but the queen bee escaped and established other colonies, one of which was afterwards captured by Mr. Rita, the others establishing themselves at places in the neighbourhood. The hive used by the Khasis is of a very primitive description. It is usually a hollow piece of wood, about 2½ to 3 ft. in length and 10 or 12 in. in diameter. A small door is placed at each end of the log, one for the bees to go in and out, and the other for the removal of the honey when wanted. The honey-combs are broken and the honey is

16: McCormack. E-4,5 (1956-1958) 1964
[P. 107 B] AR7 Khasi AR7

permdable water supply. Villages are about two to five miles apart, and have no boundary markers. In the past, villages contained sacrificial buildings and grounds: the house of the village priest (also the house of a chief if he resided in that village), the village marketplace, and tree groves, cremation grounds, or other awesome spots that were believed to be inhabited by supernatural beings. Villages today may have also one or more Christian churches, government social welfare buildings, and schools. Formerly, villages were entered through a guarded gateway; this is no longer the case, and paths feed into villages from all directions. Often several villages are nucleated into one large unit, named and also described as a "village." These were once defense units, but were so unorganized otherwise that institutionalized rivalry obtained among the component villages. Now, they have been integrated through the agency of all-village public services, especially schools. **Housing.** The traditional Khasi house is entered through a door at the rounded end of a U-shaped ground plan, and is about 20 feet at widest extent, it is about 30 feet deep, and is elliptical or hogback in profile. Its walls are of stone blocks cemented with mud. The roof of grass thatch, supported by a bamboo frame, overhangs the walls on three outside, down to about three feet above the ground. The house is divided into two parts: the front one-third is on the ground level, floored either with stone blocks or tamped earth, and is used for storage of occupational instruments and as a shelter for poultry. The rear two-thirds is raised four feet on piles of stone blocks to a platform of planks, and is partitioned into six rooms, comprising a kitchen, areas for storage of food and water, and sleeping quarters. Furniture is minimal, and the house is totally undecorated. There are no windows, and no smoke vents. A house generally has a companion shed, walled of wood and grass matting and thatched with grass. This serves as a pigsty, but it may be partitioned also to house cows, and it may have a loft for fuel storage. Compounds often contain garden plots, and are fenced around with stone or bamboo and mud. Nowadays, the traditional house has given way to Western-style bungalows of wood and tin, especially in and around Shillong. (Cf. Mukherjee et al. 1961.)

ECONOMY. The Khasi economy is a market economy based on agriculture, and most Khasis are primary producers, sellers, middlemen, and/or providers of services in connection with markets. Khasis are often multioccupational: they produce goods for partial subsistence, and also play some part in trade. Agriculture. On the Shillong plateau, the major field crops are potatoes, maize, millets, and dry rice, still produced mostly through swidden farming, with a two- to three-year period of fallow, but increasingly through continuous use of a single field with the aid of ma-

he employees who comprise over 22 per cent, 13 per cent and 9 per cent respectively. It may be noted that the large number of families who engaged agricultural labourers on daily basis as and when necessary were not classed as 'employers'. 162* 164 [125]

Occupation

3.8: In the following tables attempt has been made to depict the occupational distribution of the population. 163 125

As agriculture is the principal occupation of the majority of the villagers the following schemes of classification of occupation, has been adopted—

125
463

Families have been classified into three main classes, *viz.* :—

(1) Wholly agricultural

(2) Partly agricultural

(*a*) Agriculture as principal occupation

(*b*) Agriculture as subsidiary occupation.

(3) Independent of Agriculture.

5.9: The following table shows the distribution of families by occupational type in the three village groups :—

TABLE C·8

*162
463

Occupational distribution of families in different village groups

Occupational type	Border area	P. C. to total no. of families (house hold)	Project area	P. C. to total no. of families	General area	P.C. to total
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. Wholly agricultural	511	50·80	394	60·90	128	69·57
2. Partly agricultural—						
(*a*) agriculture as principal occupation.	168	16·70	95	14·68	37	20·11
(*b*) agriculture as subsidiary occupation.	183	18·19	108	16·69	17	9·24
3. Independent of agriculture.	144	14·31	50	7·73	2	1·08
	1006	100·00	647	100·00	184	100·00

It will be seen that wholly agricultural families, in Border area, Project area and General area are 51, 61 and 70 p. c. respectively of the total families. Classifying the wholly agricultural families and families pursuing agriculture as principal occupation, as predominantly agricultural families—the proportion of such families for Border area, Project area and General area stand at 68 p. c. 76 p.c. and 90 p.c. respectively. Thus it is clear that in the Border area the proportion of predominantly agricultural families is the lowest. The reason for this can be safely ascribed to the set-back received due to closure of markets after partition. A close study of tables C·10 and C.11 below and table C.11.1 at the appendix will bear testimony to the fact that in Border area there is evidence of a shift of occupation from agriculture to non-agricultural enterprise especially labour (non-agricultural). 162* 463

Predominantly agricultural families have been classified into five groups— Non-cultivating owner, owner cultivator, tenants, part-owner and part-tenants and landless agricultural labourers. The number of families and the proportion of each of these groups in the three areas are as follows— 125 241 423 427 463

Apart from private lands, Raj lands possessed by a family and land possessed through settlement by District Council have been considered as 'land owned' for the purpose of this survey. Tenants usually take in rent from land-owners only those lands which are possessed by the later as private land or through settlement through District Council. A perusal of table C 9 given above will show that proportion of tenants are higher in Jowai subdivision which is due to the existence in this subdivision of some big landholders who are known as zamindars. Majority of the families shown against 'non-cultivating owner' are in fact agricultural labour families who also possess some land but due to some reason or other left it uncultivated. Among owner cultivators, tenants and part-owner and part-tenant families also there are some whose major income is derived from agricultural labour. Consideration of these two facts along with the number of landless agricultural families goes to show that the proportion of agricultural labourers in the district is rather high. 423 463 427 [125]

TABLE C1·0

Occupational distribution of families whose principal occupation is other than agriculture

162* 463

principal occupation	No. of families					
	Border area		Project area		General area	
	Total	P.C. to total	Total	P.C. to total	Total	P.C. to total
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. Non-agricultural labour.	188	57·49	70	44·30	6	31·58
2. Service, profession, etc.	34	10·40	39	24·68	3	15·79
3. Trader.	65	19·88	21	13·29	4	21,05
4. Small scale manufacture & handicraft.	23	7·03	19	12·03	1	2·56
5. Poultry & dairy farming.	7	2·14	..	..	5	26·32
6. Others	10	3·06	9	5·70	...	...
Total ..	327	100·00	158	100·00	19	100·00

463 464 [178] A perusal of the table above will show that proportion of families following non-agricultural labour as principal occupation is highest in Border areas. Majority of these families were formerly engaged in agriculture but due to adverse circumstances arising out of partition, one forced to take to other occupations. Test relief works and normal P. W. D. works gave employment to a large section of these people. Other avenues of employment are collection and carriage of limestone, 441 woodcutting, and carrying of merchandise, etc. Traders in stationery articles and groceries who formed the bulk of the traders in the border 433 area are largely the displaced persons and the Bengali people concentrated 563 in Bholaganj and Balat. Others are petty traders dealing in fruits, vegetables, fish, clothes and other foodstuff. Under small-scale manufacture, etc., come the liquor distillers, blacksmiths, carpenters, etc., Commission agents, fishermen, hunters, etc., are shown as others.

5.10 In the following table the families in the three village groups are classified according to their subsidiary occupation.

19: Assam G-5 (1958) 1963 AR7 Khasi AR7

In the border areas 25 p.c. of the predominantly agricultural families had some subsidiary occupation, the most important of which was non-agricultural labour followed as trade. Majority of (64 per cent) of the predominantly non-agricultural families has some subsidiary occupation, the most important of which is agriculture accounting for 88 per cent of such families. 162* 463

The picture for the project area is more or less the same except that among agricultural families a relatively higher proportion of families have small scale manufacture as subsidiary occupation while trading is relatively less popular.

In the general area among the agricultural families with some subsidiary occupation the majority are engaged in small scale manufacture as subsidiary occupation, labour occupying a minor place. Almost all the predominantly non-agricultural families have agriculture as subsidiary occupation.

5.11 The following table shows the distribution of employed persons according to major industry groups (according to principal occupation).

TABLE C-12

Distribution of employed persons by Industries

Name of industry	No. of persons		
	Border area	Project area	General area

Principal occupation	Total No. of families	No of indebted families	Amount of loan outstanding (Rs.)	Average Amount outstanding per household (Rs.)
(1)	(2)	(3)	(4)	(5)
C. General area :—				
1. Agriculture ..	165	51	9,264	181·65
2. Labour ...	6	1	100	100·00
3. Service profession, etc.	3	..	.	..
4. Trade ..	4	.	..	..
5. Small scale manufacture and handicraft.	1	..	..	..
6. Poultry and diary farming, etc. ..	5	..	..	..
7. Others ..	...	...	..	...
Total: ..	184	52	9,364	180·08

From the above table it will be seen that predominantly agricultural families constitute the highest proportion of the indebted class in all the three areas. In Border area they constitute 73 per cent of the total number of indebted families, accounting for 57 per cent of the total amount of loan. In Project area and General area these proportions were respectively 77 per cent, 98 per cent and 99 per cent. It is clear that in Border area, average amount of loan per family is higher of the non-agricultural class which ranges from Rs. 377·69 nP to Rs. 1,490·00 nP. These averages, as a matter of fact were inflated due to inclusion of a few families in each class who have very high amount of outstanding loan ranging from Rs. 600 to Rs. 10,000 per family. Otherwise indebtedness in agricultural and non-agricultural class did not visualise any wide difference. In Project area indebtedness among agricultural families is definitely higher than that among their counterparts in Border area and they accounted for a fair proportion (78 per cent) of the total amount of loan. Different occupational groups in non-agricultural class, of course, revealed among themselves wide variation in average per family indebteness ranging from Rs. 80 to Rs. 752 per family. On the other hand, in General area, agricultural families account for almost the entire amount of loan.

Per family indebtedness taking all the families into consideration stands at, for Border area Rs. 157·34, for Project area Rs. 138·35 and for General area Rs. 50·89.

19: Assam G-5 (1958) 1963 AR7 Khasi AR7

CHAPTER IX

Income and Expenditure

434 592 9·1 The great majority of rural people are members of families of two or more persons sharing a common income earned mostly by joint efforts of family members an also disbursed in supplying the consumption needs of the family as a whole. An attempt is made below, therefore, to analyse the aspects of income and expenditure of the rural families family-wise.

434 463 592 9.2 It has already been mentioned that the majority (*i.e.*, above 75 per cent) of the families of all the three areas pursued agriculture as a principal occupation. Some of these families follow cottage industries, trade, transport, labour, etc. as subsidiary occupations. The rest of the families had either agriculture as subsidiary occupation or were independent of agriculture. The larger section of these families were non-agricultural labourers. The following table gives the distribution of families in different income groups.

TABLE G-1

Frequency distribution of families in different income groups

Total ..	679 (100.00)	177 (100.00)	1005 (100.00)	10,[illegible] --	168 (100.00)	348 (100.00)	640 (100.00)	1,[illegible] --	35 (100.00)	1 (100.00)	16 (100.00)	[illegible] --

From table above, it is difficult to judge the relative prosperity of agricultural and non-agricultural families. The annual gross income of 49 per cent of the agricultural families is less than Rs.750·00 a year while that of 87 per cent of them is below Rs.1,500 a year. Thus the remaining 13 per cent of the families only have a gross annual income of above Rs.1,500 a year. Among non-agricultural families the corresponding proportions are 52 per cent, 79 per cent and 21 per cent. Thus proportion of non-agricultural families with annual gross income less than Rs.750, is greater than the corresponding proportion of agricultural families. The petty traders, porters and other non-agricultural labourers who are necessarily very poor constitute this non-agricultural class. On the other hand proportion of non-agricultural families with annuae gross income of more than Rs.750 exceeds the corresponding proportion for agricultural families. These non-agricultural families comprise of a good number of business men, contractors, etc., who are comparatively a bit well off than the agriculturists. 162* 434 463 592

In Project area proportion of agricultural families and non-agricultural families with annual gross income of less than Rs.750 is 36 per cent and 29 per cent respectively as against 49 per cent and 52 per cent of their respective counterpart in Border area. Proportions of families with gross income below Rs.1,500 a year is 84 per cent and 66 per cent indicating that proportions of agricultural as well as non-agricultural families with income above Rs.1,500 a year are greater than their corresponding counterparts in Border area.

In general area villages it is significant to note that proportion of agricultural families with gross annual income of over Rs.2,000 is negligible (·61 per cent) while those under Rs.750 and Rs.1,500 are 45 per cent and 93 per cent respectively.

Table below further reveals that 58 per cent of the gross income in the Border area, 54 per cent in the Project area and 86 per cent in the General area is earned by families in the income group less Rs.1,500 constituting as much as 85 per cent of the total number of families in the respective areas.

CHAPTER—X

Summary of main findings

125 10.1. Twenty-eight villages were selected for the purpose of the survey. Out of the 28 villages selected, 10 from Border area and 8 from Project area were selected purposively while the remaining 10 were selected at random from the entire district which is referred hereafter as general area.

166 Migration from big villages was rare but some migration was reported in respect of small villages.

164 Occurrence of Malaria, influenza and dysentery is a regular phenomenon in the area. Medical facilities were not found satisfactory and
243 as much as 78 per cent of the villages have no dispensary within a
871 radius of five miles. In regard to education, the facilities cannot also
489 be said to be unsatisfactory for more than 60 per cent of the villages have a Lower Primary School. Transport facilities were not satisfac-
482 tory and as much as 86 per cent of the villages still depend upon primitive mode of transport, namely head load. Correlated with outmoded form of transport, is the prevalence of unduly high cost of transport.

*162 10.2. The number of the families covered by the survey was 1006 in the Border area, and 647 in the Project area and 184 in the
161 General area. The average size of a village in the respective area is 100·6, 80·9 and 18·4 families. In the Border and Project areas females out number males being respectively 1076 and 1092 females per 1,000 males as against 940 females per 1,000 males in the general area
212 Literacy is as high as 34 per cent in the border area and 31 per cen
[562] in the Project area but as low as 17 per cent in the general area In all the areas literacy among females is very low.

*162 The working population (earners and earning dependents) is as high as 55 per cent in the Border area, 54 per cent in the Project area and 63 per
464 cent in the general area. While there were no cases of unemployment in the Project and General areas, 53 persons were reported unemployed from border area.

241 10.3. 51 per cent of the families in Border area are wholly agricul-
* 162 tural, 35 per cent partly agricultural and 14 per cent independent o agriculture. The corresponding figures for the Project area are 61, 31
• 463 and 8 per cent respectively while for the General area they are 70 per cent, 29 per cent, 1 per cent respectively.

Predominantly agricultural families constitute 67, 76 and 90 per cent of the families in Border, Project and General areas respectively.

*162 10.4. 31 per cent of the families in Border area, 29 per cent in Project area and 10 per cent in General area were absolutely without any land while
423 25 per cent, 39 per cent and 24 per cent of the families in the respective areas possessed small holding ranging from 0·24 to 2·30 acres representing 11,24 and 26 per cent of the total holding area in the respective areas. 36 per cent of the families in Border and Project areas and 41 in General area possessed medium sized holding (3 to less than 10 acres)

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

361 In the interior of the Hills the largest villages are mere clusters of
• 463 huts. The great majority of the inhabitants are employed in agri-
culture, but there are no data upon which a proportion of agricul-
turists to non-agriculturists could be based.

167 There is no immigration into the District. Both the Khásiás and
178 the Syntengs have been successful in preserving to the present
day their primitive isolation, free from the interference of Hin-
[771] duism. They still maintain their aboriginal forms of belief and re-
[262] ligious worship, and repudiate alike the authority of Bráhmans and
the entire system of caste. To some extent, however, they have
given way to Hindu prejudices in the matter of purity of food. The
[563] few Hindus to be found in the Hills are temporary residents, en-
gaged in civil and military employ, who always contemplate returning
[441] to their own homes. The traders are for the most part natives of the
Hills; for the Márwárí merchants, who penetrate into every other
corner of Assam, have been able to obtain no footing in the face of
Khásí competition. There is likewise no emigration from the
District. The hillmen are a well-to-do and contented race, and
either produce themselves or obtain by trade sufficient to satisfy
[166] their scanty wants. A certain number of both Khásiás and
Syntengs proceed southwards every year to work on the tea
gardens of Cáchár and Sylhet, but such absence from home is only
temporary.

243 AGRICULTURE: RICE.—Thirteen different varieties of rice are cultivated in the District, of which the following is a list, giving the Khásí name as well as the description of the grain:—(1) *U-kyba-khynriam* (*u*, the masculine article, meaning 'the,' and *kyba*, noun masculine, meaning 'paddy'), brown rice with long grain; (2) *u-kyba-khynriam bai-lih*, a white rice with long grain; (3) *u-kyba la-toh*, round-grained rice; (4) *u-kyba ksai*, bearded, husked; (5) *u-kyba-dew-ba-iong*, black husked rice (literally *u* = 'the,' *kyba* = 'paddy,' *dew* = 'earth,' *ba* = 'that,' *iong* = 'black'); (6) *u-kyba-ba-lih*, white rice; (7) *u-kyba-seim*, scented rice (literally *u* = 'the,' *kyba* = 'paddy,' *seim* = 'royal'); (8) *u-kyba la-kroh*, large-grained rice; (9) *u-kyba-ba-tlang*, small-grained rice; (10) *u-kyba sa-bia*, early rice; (11) *u-kyba ra-bon*, late rice; (12) *u-kyba tang-la*, rice grown along with beans; (13) *u-kyba-ba-túk*, small rice.

Rice is cultivated in marshy fields situated near running water as well as in high lands. The first seven of the above thirteen species of rice are sown in marshy lands during the months of April and May,

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

with the exception of the
326 manufacture of iron, in which the master blacksmith often employs
462 hired labourers, the other industries are generally followed by
463 females in their own houses. No class of labourers are hereditarily
attached to any manufacture in a manner that affects their personal
freedom. The system of advancing money for manufacturing pur-
452 poses does not obtain in the Khásí and Jáintiá Hills. The total
434 value of the manufactures of the District is stated to be between
£2000 and £3000 per annum. No local manufactures are carried
on by means of imported capital.

439 COMMERCE AND TRADE.—The external commerce of the Khásí and Jáintiá Hills is chiefly conducted on the southern boundary, through the District of Sylhet. The total value is more considerable than might be expected, owing to the fact that these Hills practically possess the monopoly of supplying Bengal with lime, potatoes, and oranges. Other important articles of export are raw cotton, stick-lac, betel-nut and *pán* leaves, and bay leaves or *tez-pát*. The exportation of iron, which was once large, has now almost ceased. The chief imports consist of rice, dried fish, cotton cloth, salt, and tobacco. On the whole, it would appear that the course of trade is about equally balanced. Trade statistics of more or less value are in existence. The earliest of such statistics are to be found in the Report of Mr. W. J. Allen, dated 1858. The information there given was based for the most part upon oral statements furnished by numerous native traders to Mr. Hudson, who then filled the office of Principal Assistant-Commissioner. It may be accepted as 'a fair representation of the state of trade in
439 the Hills' at that time. The imports and exports on the Assam
434 side were each estimated at about Rs. 15,000, or £1500. The trade with the markets in the Surmá valley was much larger. The total of the exports was valued at Rs. 700,000, or £70,000, giving a profit to the traders of Rs. 170,705, or £17,070. The chief items were:—Limestone, 1,700,000 *maunds*, valued at Rs. 306,000; potatoes, 50,000 *maunds*, value Rs. 125,000; oranges, 45,000,000 in number, value Rs. 78,750; smelted iron, 45,000 *maunds*, value Rs. 67,500; cotton, 12,000 *maunds*, value Rs. 42,000; betel-nuts, value Rs. 37,500; coal, 25,000 *maunds*, value Rs. 12,500. The total value of the imports was estimated at Rs. 350,000, or £35,000, being just one-half the value of the exports; the estimated profits are given as Rs. 44,325, or £4432. The chief items were:—Rice, 150,000 *maunds*, value Rs. 225,000; cloth of sorts, Rs. 25,000;

sizes , waterproof plaited containers, carry-
ing baskets (tappa), bands for the forehead
(u star), drinking cups of bamboo, gourd bot-
tles, wooden mortars, water pipes made of
cocoanuts, pipe bowls made out of clay and
dried in the sun, plates and saucers of brass,
cooking pots of iron, and earthern dishes;
everything is the work of the Khasi.

Recently European wares, such as loin
cloths stockings, caps, combs, mirrors,
mouth harmonicas, matches, and cigarettes are
also seen in larger amounts.

443 At the markets of the Khasi not only food-
● 464 stuffs and other things necessary for life may
445 be obtained, but workers are also hired there.
Whoever wishes to hire himself out goes to the
market and stands around, hoping to find some
kind of work for the coming (market) week.
Day laborers can only be hired at the market.
Therefore it is hard during the week to get
any kind of a worker. It is also necessary
when hiring a t the market to hire the worker
for the whole "market week," i.e., until the
next market day, as the coolies otherwise
would have a hard time finding work and would
not accept the work at all for only one or
two days. The porters needed for traveling
must also be sought out and hired at the markets.

1 [See plates, category 116, pp. 11-15--Analyst]

428 613 no girls, only sons, the inheritance passes to the youngest daughter of the sister of the deceased clan mother. If there are no such sisters or if they have no daughters, the nearest, youngest female relative is next in line. If she has not lived in the family clan of the deceased up to now, she must first spend at least 3 months in the hut of the clan mother in order to be able to enter into her rights and duties. In such cases usually the successor to the office is taken into the hut previously by the clan mother and prepared for the later activity. It can happen that the successor is not even 13 years old and therefore is not of age and capable of marrying. In this case the mother or a sister of the deceased clan mother manages the rule and the household until the majority of the inheritress. But even as a child the latter has the honored name mother; she is called kmie or kmie san.

The great principle, which determines all conditions of inheritance, is that the sons and husbands are excluded from all family property, which is always passed on to the girls, the female world. But what if a fellow or a man creates or acquires property? The case is possible and also occurs.

428 556 /304/ As mentioned, each person must help with the work in his own family clan in order to have a claim on care from the common property. Between sowing the rice and the harvest and other possible common labors there are still many days and weeks. Instead of [464] spending these with archery, hunting or the popular shong kai, or loafing around, a young man can earn money by cutting wood for others and carrying loads for native traders or also for Europeans, since in the mountains nearly everything has to be carried on the back. He can also do work in the fields or gardens for pay for others outside his clan or carry on a small trade by buying wares at the market such as dried fish, betel nuts, pepper leaves and such, and carrying them a few days' journey away to the markets in the interior of the mountains where these items are not otherwise available and selling them there for a profit. What the man earns in this fashion is his property and is not counted as part of the clan property. An industrious man can thus gradually earn enough money to rent a rice field. Through sale of the surplus crop, he will finally have enough so that he is able to buy a rice field himself, which is also 429 his property. If such a man dies unmarried, the inheritance passes to his mother. If he is married then he can, if he wishes, found a clan property for his family who may be poor and without property. The property will then pass to the youngest daughter and be passed on then in the usual manner of inheritance. Thus everything finally

Shella

Confederacy forms a more marked endogamous community, through being cut off geographically and economically from the rest of the Khasi, and socially from the neighbouring Hindu people. 621

The Economy and the People.

Shella lies along the upper part of the Shella River and stretches upwards along the steep slope, looking down towards the Bengal plain. The climate of this part of the hills is considered to be one of the worst in tropical India for human habitation. The Bengal plain, though warmer than this area, is considered more healthy. This border land is the zone of malaria, typhoid, black fever, cholera, etc. None of the Bengalee peasants dare to live in such an area. However, it is the most fertile for products such as betel-nuts, pan-leaves, oranges, bananas and pineapples, and it also produces limestone. These people seem to prefer to settle in this zone and to enjoy its prosperity, at the expense of human lives: every year, especially between March and September, the inhabitants suffer from various fevers and dysentry and other diseaes, many of the weaker facing death. 131 132 164 433 164 648

Before the Partition of India and Pakistan, the products of Shella were carried down the Shella River to Sylhet, one of the biggest centres in East Bengal, which brought unimaginable wealth to the Shella people. Their houses were built by carpenters from Sylhet. The style and structure of these houses were exceptionally elaborate for the Khasi. They purchased vast rice fields in the plain, which used to be cultivated by Bengalee and Garo labourers engaged by them. These Khasi do not themselves know how to cultivate rice fields; they have always been managers or landowners. Their boys used to be sent to high schools and colleges in Sylhet. As a result of their trading with the Bengalee, many of them read and speak fluent Bengalee. There is no difference between their style of clothing and that of the Bengalee, though the women maintain their traditional dress in the Shella style. 177 178 434 [439] [342] [166] [464] [871] [191] [291]

They have thus been distinguished from the rest of the Khasi not only geographically, but also economically and culturally. Their personality also differs sharply from the rest of the Khasi. They are very sociable, and quick, a quality lacking among the Khasi of Sohkynduh and Kongton. They are clever enough to deal with strangers. The upland Khasi say Shella people are very cunning. This remark shows one side of these people. They had to be cunning, since they traded with the Sylhet Bengalee who were said to be the most cunning of their race. Their role in the trade and in the history of the modernization of the Hills was considerable. For centuries they represented intellectual Khasi owing to their contact with Hindu civilization, while the Hills remained in darkness. They assumed an important role when the British established an administration in the Hills, and even up to now, many leading Khasi originated from this area: for instance, Lati Hat, the first interpreter of the British Headquarters at Cherrapunjee; Jeebon Roy, who was the first Magistrate among the Khasi; Maham Sing, a lawyer and Member of the Legislative Assembly (the grandson of Jeebon Roy); Nichols Roy, Minister of Health and Prisons of the Assam Government, Member of the Legislative Assembly, and Missionary of the Church of God; R. R. Thomas (brother of Nichols Roy), Principal of the Gauhati University, etc. 157 184 648 177 178 [439]

Through constant cultural contact with Hindu, and encouraged by their economic prosperity, the Shella Khasi, like the Jaintias, have been much influenced by Hindu culture. However, this does not mean that the people of Shella adopted the Hindu beliefs. Though there is a small Hindu shrine, and some ceremonial elements were borrowed from the Hindu, most of the 177 648 771 795

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

there are none of their descendants in Jatinga. Summing up, the first party who settled at Jatinga was composed of people of the following five clans: 166

1. Suchiang — Lakhanbang, his sister, Laptho, and her daughter, Kloribon, his brother, Pryntah. 551
2. Suchen — Munik and his younger brother, Sain. 614
3. Phanwar — Misibon and her younger sister, Diasibon. 621
4. Rupsi — Sintu, the wife of Pryntah. 175
5. Suiam — Tahin, the wife of Sain.

Among them, Suchen had no female member. Phanwar had no successor: Misibon had no issue and Diasibon did not marry. Therefore, Suchiang, Rupsi and Suiam are the oldest clans in present Jatinga. Suchiang and Rupsi especially are the dominant and richest groups among the present population.

This was the time when the railway from Gauhati to Silchar was being constructed. Some Khasi labourers were working at Haflong on the construction of the railway. After the foundation of Jatinga, these Khasi workers established marriage relations with the Khasi of Jatinga, and finally, upon completion of the railway, many of them became the inhabitants of Jatinga. The present members of the Dome and Siangshai clans are the descendants of these people, and they form a considerable number of the present inhabitants of Jatinga. Besides them, there were a few other Khasi at Haflong who were engaged in trading business. In the course of time, they also had marital relations with Jatinga people and came to Jatinga. 166 175 458 621 [499] [464]

After five years had elapsed they found that in spite of their hard work the land was not favourable to them. Many of them left Jatinga. This was the hardest period of Jatinga history.

The second migration (1919-1925).

The railway which once had been blocked was reopened in 1919. The people who had left Jatinga came back to settle there. This time the circumstances seemed to them quite favourable. The pan trees which they had planted earlier were growing and they could gather considerable produce. The village grew bigger around 1920 as a result of new immigrants from Jaintia; most of them were people from Bataw, the village of the founder. In this period, many immigrants came from Jaintia not only to Jatinga but also to Sylhet, Borkhala and other places outside the Khasi-Jaintia Hills. It seems that by this time the over-populated Jaintia realised that these areas were favourable for their new home. However, the successive waves of Jaintia immigrants to Jatinga ceased by 1925, its population having reached saturation point. [499] [245]

Orange production brought economic prosperity to the people of Jatinga. Wealthy villagers employed temporary labourers from the Jaintia Hills every year. Some of these labourers came with their families and others came individually. During their stay at Jatinga, some of them married and settled there. Hence, there are also descendants of such labourers among the present inhabitants of Jatinga. [245] [464]

Some Aspects of Descent Groups.

Throughout the history of Jatinga, immigrations have always been undertaken by a family (elementary family, siblings) or by an individual, but never by a group of clan members. Therefore, the present population is grouped in small descent groups according to each migration. Though some of them happened to have the same clan name, their history of migration and their 621 [175] [614] [166]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

178 like the Zemi-Naga, the Cacharee and the Kuki. But after the period of
563 economic prosperity as I shall describe in the next section, the Jatinga people
621 reached a rather high level of education, while most of the neighbouring tribes
[871] remained illiterate. Their standard of living likewise improved. Fashionable girls of Jatinga who have studied at the Convent school in Shillong, and speak English and Hindi, cannot marry half-naked tribesmen who work in the jungle. They prefer to intermarry with Moslem, Panjabee or Assamese who belong to amore sophisticated community, and through whom they can enjoy urban life. Thus the orientation of the intermarriage of the people of Jatinga has changed, along with the growth of Jatinga.

It should be noted that intermarriages came mostly through the contacts at Haflong, where people used to go once a week for the bazaar, rather than through direct contacts with neighbouring villages.

Economy of Jatinga and its Relation to Neighbouring Tribes.

178 It is very interesting to find two different kinds of economy in the same
171 ecological background: Jatinga Khasi practise pan-leaf and orange cultivation
245 and depend mainly on a trading economy, while the other neighbouring tribal peoples practise jhum cultivation, almost a subsistence economy. This situation has remained unchanged for the last fifty years since the establishment of Jatinga village.

101 The first Jatinga immigrants occupied one ridge of the mountain where the
245 present Jatinga is situated. Formerly, this land belonged to the Zemi-Naga, one of the old inhabitants of the Cachar Hills, who possessed a vast jungle area for jhum cultivation. It seems that there was no objection to the Khasi occupying this small spot: it was apparently too small an area for the jhum cultivator —pan-leaf cultivation of the Khasi requires less than one twentieth of the land of the usual jhum cultivation. The Khasi who started pan-leaf cultivation were able to accumulate some capital, and after several years they started orange gardens. They had had experience of orange cultivation in their homeland, but this was the first time they had operated commercially.

245 The success of this orange cultivation was beyond their dreams. Hearing
434 of good oranges at Jatinga, many Bengalee merchants from Dacca, Sylhet,
439 Silchar and Gauhati began to come to buy them. Moreover, the village had the great advantage of being situated near the railway station. Oranges were
[496] sold by carloads. Unimaginable wealth came to the Jatinga people. Especi-
[871] ally the founder's family, including his brother's and sister's, became extraordinarily wealthy; their income used to be Rs. 20,000 a year. The children were sent to the school which was established in the village and some
[362] were educated at colleges in Dacca, Sylhet and Shillong. The villagers had beautiful houses built by Manipuri and Bengalee carpenters. Actually the houses of Jatinga were known as some of the best construction in Assam.

Like the Shella people, they were managers of gardens and employed workers.
245 Wealthy households used to engage several labourers annually, most of them
46 from Jaintia where the Jatinga people had originated. These workers were provided with shelter in the servant quarters of their employer's house, but they had to provide meals for themselves. They were paid daily according to the work done. They were available to other households, when their employer had no work. Some labourers were also engaged locally among the Zemi-Naga, the Cacharee and the Kuki, though not as many as among the Jaintia.
245 These local tribes were fairly well occupied by their jhum cultivation, and not
464 used to being employed as workers. Therefore, most of them were not regular

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

workers and they were few in number.[1] They were particularly employed for such work as the clearing of jungle for new pan gardens in summer. 245 464

In the orange season (December to February) the number of workers increased and they were paid more: Rs. 1/8 were paid[2] for one load (one person carrying 80 pounds of oranges, from an orange garden to the railway station—about two miles). Usually a worker made three to five trips a day. Many workers from Jaintia used to come for this particular season. 245 464 465

Semi-permanent workers were engaged for wet rice fields. They were usually Hindu cultivators: since these Khasi and other tribes do not know the technique of wet cultivation, plains people like the Biharee immigrants were engaged. These workers were provided with servants' quarters where they lived with their wives and children. However, very few Jatinga households possessed rice fields. 243 464

The economic prosperity of Jatinga reached its climax during the period from 1934 to 1940. Since 1942, the orange production has been decreasing. In 1945, a serious disease attacked the orange gardens as well as the pan-leaf gardens. Besides, by depriving Jatinga, as it had Shella, of their most important markets, Dacca and Sylhet, the Partition of India and Pakistan in 1947 caused a serious economic depression in the whole region. On the other hand, because of the past prosperity, the population has rapidly increased during the last ten years. The serious economic condition of Jatinga is illustrated in the petition which was submitted by the Jatinga people when the Governor of Assam visited those areas in January 1956. It runs thus: 245 434 731 161 458

"Since the last ten years or so, with the increase of population in the village and with the loss of fertility of the soil, the people were faced with economic depression. At present they are facing acute shortage of land they have also no scope to adopt other forms of cultivation like jhuming and wet rice cultivation, etc. Moreover, there has been successive attack of Bright's disease which destroyed and wiped out all the orange and pan gardens. And as such, majority of the families have to depend for their livelihood on daily wages. . . ."

It is indeed a serious situation for them, because the Khasi do not produce staple foods, such as rice; their economy is completely dependent on the trade of their products by which they purchase their main provisions, clothes, etc. Other peoples round Jatinga, being jhum cultivators, can at least get rice and cotton: the minimum requirements, staple foods and clothing are available even in the worst conditions, so that they can at least maintain themselves though the standard of living is low. As I stated before, a few households in Jatinga possessed rice fields, but the majority had none. Recently they rented some plots of jhum field for rice cultivation from Zemi-Naga of neighbouring villages.[3] However, its yield was but a small percentage of their consumption. A few 182 434 [433] [243]

1. If they had worked in the gardens of Jatinga, they might have got more profit than from their own jhum fields. For one day's labour, they got Ans. 8/. For one month, they could earn Rs. 15 with which they could buy about 4-5 maunds of rice (one maunds paddy cost Rs. 3-4). For one year it became 50 maunds, which was impossible to produce in a jhum field by a single person's labour. [435]

2. These rates, including the figures of note 1, apply to 1956.

3. Jatinga villagers told me that Zemi-Naga were kind enough to lend them their field for a negligible rent, though they had not enough for themselves. Zemi-Naga said that they owed much to Jatinga in the past, so that now they sympathised with the condition of Jatinga, and offered some parts of their jhum field. [427] [628]

and even the well to do ones do not feel anything to work as labourers in other's farms. It is almost customary among the agriculturists to work in other's farms on wage basis, when agricultural operation in one's own farm are over. This is probably an outcome of the difficult transport situation. Among the non-agriculturists and those who follow agriculture as subsidiary occupation, a large number are porters and labourers engaged in jobs like transporting of goods from place to place, collection of limestone, sand, fuel, Collieries and forests of the district also offer employment to a good number of people. Since the taking up of road programme under the plan, a large number of people are getting employment in construction of roads, etc. It is heartening to note that for construction of roads, nay for all kinds of works demanding unskilled labourers, the district locally supplies the whole labour force. People in the various local points of the district, particularly those living in higher hills are mainly engaged in trade. The Khasis are indefatigable traders and have been able to keep almost the whole of the small trade in the district in their own hands. A small proportion of the people are engaged in cottage industries such as stone cutting, brick making, bee keeping, blacksmithy, cane and bamboo works, etc.

The number of persons returned in the 1951 census under each of the eight main livelihood classes for the rural tract of the district was as follows.

TABLE 1

Number of Persons (Source 1951 Census)

Head	Male	Female	Total	P.C.
(1)	(2)	(3)	(4)	(5)
A. Agricultural class:—				
1. Cultivators of land wholly or mainly owned and their dependents.	99,683	92,107	1,92,710	39·89
2. Cultivators of land wholly or mainly unowned and their dependents.	16,116	16,109	32,123	10·53
3. Cultivating labourers and their dependents.	14,553	14,953	29,506	9·53
4. Non-cultivating owners of land, agricultural rent receivers and their dependents.	366	542	908	·30
Subtotal	1,21,018	1,13,159	2,34,177	60·22
B. Non-agricultural class:—				
5. Production other than cultivation.	11,796	10,320	22,116	7·26
6. Commerce	3,127	4,609	7,736	2·10
7. Transport	355	264	619	·20
8. Other services and miscellaneous sources.	17,642	12,314	29,956	9,86
Subtotal	32,840	27,505	60,316	19·78
Total	..	..	3,05,007	100.00

241 464 **2.10 Labour and Wages:** It has already been mentioned above that a large number of people subsist on labour—agricultural as well as non-agricultural. Owners of big orchards employ labourers for clearing of their orchards twice or thrice a year, plucking and transporting of produce to markets. Paddy cultivators with large farm engage labourers for ploughing and hoeing of fields, sowing, harvesting and threshing of paddy. It should be mentioned that due to the peculiar agricultural practices prevalent in the district, the input of labourer even for paddy cultivation is higher than that in any of the plains district of the State, which compels cultivators to hire 241 labourer even for small paddy fields. In the case of cash crops, wages 464 are usually paid in cash and for food crops it is paid in cash and 465 kind more usually in kind. Wage rates for males and females are different which generally vary from Rs.1.50 to 1.25 for males and Rs.1.25 to Re. 1.00 for females.

There are, however, numerous instances of engaging agricultural labourers at the rate of Re. 0.50 per day. During the scarcity months the well-to-do farmers advance loans to the poorer section of the people on condition that repayment will have to be made by rendering labour on wage basis at the rate of Re. 0.50 per day in the creditors farms whenever their services are demanded. Thus whenever their services are demanded the poor people have to work in creditor's farm even at the cost of ruining their own cultivation.

There are other instances where the labourers are paid less then usual wages. In some villages where there is dearth of work all the agricultural labourers gather together at some specified place early in the morning. The well-to-do farmers go there and through bargaining manage to engage the number of hands they want at very low rates Similar bidding down of wages of non-agricultural labourers is also. prevalent whenever demand for labour is very low.

Land utilisation and cropping

423 659 **2.11 Land tenure system.**—The district of United K-J. Hills is not cadastrally surveyed and so far as land tenure is concerned, there is no rigid uniform or regular system worth the name, with the exception of those lands under the control of the State Forest Department and the Local District Council. There are different kinds of land under different systems, though for obvious reasons no reliabe statistics can be gathered in respect of them. As far as land tenure system is concerned, Jowai subdivision is conspicuously different from Shillong subdivision. However, land in the whole district can be broadly placed under the following categories:—

423 [692] [651] **1. Rilyngai or Private land.**—They are private land belonging to certain clans or families but not to an individual according to Khasi custom. Neither Sylem nor District Council has got any power over them except the judicial powers to settle any dispute that may arise over any plot of land. The only connection is with the State Forests Department in respect of private protected forests who collects royalty from the produces of these forests if they are used for purposes of

439 East Pakistan to which the people in the border areas were entitled
648 in the strength of various trade agreements of the Government of
458 India with the authorities in Pakistan, were also scarcy. The situation was still more aggravated due to the stringent measures adopted by authorities in Pakistan, on the plea of prevention of smuggling, in December, 1957 when the entire border trade virtually came to a standstill.

245 This chaos in border economy has resulted in widespread unemployment among the border people. There being no market for the
439 produce, the owners ceased to take proper care of their orchards and
458 plantations. As a result thousands of labourers who were employed in the orchards were thrown out of employment. Similar was the condition
464 of those who were employed in the transportation of various commodities such as merchandise of trade etc. A large section of the people engaged in collection of licensees were also rendered unemployed with the set back received by the trade in licences with East Pakistan. Due to stoppage of trans-border trade, petty traders engaged in distributive trade, also suffered.

423 Many of the border people possessing paddy lands and orchards in
648 areas that are located in Pakistan had to abandon them. The following
458 table will show the amount of land lying in Pakistan belonging to the farmer in the selected villages of border area :—

TABLE A-3

Name of villages	Area of land lost through partition		
	No. of families who possessed land in Pakistan	Area (acres)	Average per family (acres)
1. Hongri	91	[illegible]	[illegible]
2. Shilla	9	[illegible]	[illegible]
3. Sholagaj	18	[illegible]	[illegible]
4. Baloj	2	[illegible]	[illegible]
5. Mawdon	nil	—	—
6. Lyngbiat	1	[illegible]	[illegible]
7. Darwing	18	[illegible]	[illegible]
8. Syndai	5	[illegible]	[illegible]
9. Amkil	9	[illegible]	[illegible]
10. Umkawang	nil	—	—

167 A few families who did not have any landed interest on the side
63 of the border were reported to have migrated to Pakistan. Most of the families are even now paying tax to East Pakistan authorities even though they are not getting any income because they do not want to lose their right on land.

From the above table it is seen that the proportion of women in the Border area, Project area and General area are respectively 33 per cent, 33 per cent and 33 per cent of the corresponding total population. Thus each earner has to support himself and roughly one dependent. Thus the burden of dependency is not very heavy in the district. This is because of the fact that men, women and adolescents all join the labour force. Number of women engaged wholly on domestic work is few. Only in big families here, a number of women, one or two of them are engaged in domestic work, otherwise the Khasi women attend to the domestic works in addition to their work in the field.

From table G 2-1 in the appendix it will be seen that respectively 0.7 per cent, 1.8 per cent and 1.3 per cent of the women in border area, Project area and General area are below 15 years of age.

2.6—Attempt was made to study the employment position in the selected villages. For this purpose the following definition of employed and unemployed persons was adopted.

Persons working for pay or profit on that day during a period of 30 days preceding the date of enquiry would be classified as employed. Those who did not work on any day during the last 30 days, may be employed or unemployed. The person is unemployed if—

(i) He who was without a job for the whole reference period.

(ii) Who was seeking one, and

(iii) Who was in a position to accept job if offered one.

A person is also unemployed if he did not work because of his permanent illness, believed that no work was available, or was expecting to return to a job from which he had been indefinitely laid off.

On the other hand a person is employed if he had a job, although temporarily absent from work during the reference period due to illness, vacation, industrial dispute or being laid off temporarily. Also a person would be considered employed if he was waiting to take up a new job which he had been offered or to start a new business.

TABLE C·6

Number of Persons Employed, Unemployed and outside Labour force in the selected villages

Employment status	Border area				Project area				General area			
	Male	Female	Total	P.C. to total persons	Male	Female	Total	P.C. to total persons	Male	Female	Total	P.C. to total persons
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
1. Employed	1070	945	2015	54·94	788	788	1576	53·15	319	246	565	62·63
	(53·10)	(46·90)	(100·00)		(50·00)	(50·00)	(100·00)		(56·46)	(43·54)	(100·00)	
2. Unemployed	32	21	53	1.44	—	—	—	—	—	—	—	—
	(60·40)	(39·61)	(100·00)									
3. Within labour force	1102	966	2068	56·38	788	788	1576	53·15	319	246	565	62·63
	(53·29)	(46·71)	(100.00)		(50·00)	(50·00)	(100·00)		(56.46)	(43.54)	(100·00)	
4. Outside labour force	568	939	1606	43.72	629	760	1389	46.85	146	191	337	37.37
	(35·37)	(58·43)	(100·00)		(45·28)	(54·72)	(100·00)		(43·32)	(56·68)	(100·00)	
Total	1670	1905	3674	100·00	1417	1548	2965	100·00	465	437	902	100·00

162*
464

*162 464 The above table speaks of the employment position in the three village groups. It will be seen that more than half of the population fall within working force the percentage for the general area being 63. As is natural in rural areas, incidence of unemployment is negligible. The few cases of reported unemployment from border areas were mainly due to inability to accept work due to protracted illness or inability to take up some new work by those persons who were engaged by some employer and recently discharged. The percentage of employed persons is however not a true index of the employment situation of the rural areas—as the incidence of under-employment is very high. For agricultural population the slack season is rather very long owing to lack of diversification of the cropping pattern. In most of the areas only one or two seasonal crops are raised each year. Labour population are even more hard hit. Considering the high percentage of labour population, work available to them is rather very small. There are instances as has been mentioned already—where labourers gather together early in the morning for work on wage basis and have to work for a wage of .50 nP. a day. The picture is even more bleak for the Border area. Orchards and plantations are being less attended and a large section of cultivators and the labourers who were formerly working there have to look for alternative work for increasing their purchasing power against the limited opportunities opened to them. The test relief schemes introduced by Government have succeeded in giving seasonal employment to those people only in a very limited scale.

5·7 The relative preponderance of different industrial status groups among the employed persons can be judged from the following:—

TABLE C·7

Industrial status	Border area		Project area		General area	
	No. of Persons	P.C. to total employed persons	No. of persons	P.C. to total employed persons	No. of persons	P.C. to total employed persons
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1. Employer	16	0·79	1	0·06	3	0·53
2. Employee	459	22·78	210	13·32	54	9·56
3. Own account worker	1540	76·43	1365	86·62	508	89·91
Total employed	2015	100·00	1576	100·00	565	100·00

The own account workers form the largest group comprising over 76 per cent, 86 per cent and 89 per cent of the total employed persons in the Border area, Project area and General area respectively followed

by employees who comprise over 22 per cent, 13 per cent and 9 per cent respectively. It may be noted that the large number of families who engaged agricultural labourers on daily basis as and when necessary were not classed as 'employers'. 162* 464 [125]

Occupation

5.8: In the following tables attempt has been made to depict the occupational distribution of the population. 463 125

As agriculture is the principal occupation of the majority of the villagers the following schemes of classification of occupation, has been adopted—

463 A perusal of the table above will show that proportion of families following non-agricultural labour as principal occupation is highest in 464 Border areas. Majority of these families were formerly engaged in [178] agriculture but due to adverse circumstances arising out of partition, one forced to take to other occupations. Test relief works and normal P. W. D. works gave employment to a large section of these people. Other avenues of employment are collection and carriage of limestone, 441 woodcutting, and carrying of merchandise, etc. Traders in stationery articles and groceries who formed the bulk of the traders in the border 433 area are largely the displaced persons and the Bengali people concentrated 563 in Bholaganj and Balat. Others are petty traders dealing in fruits, vegetables, fish, clothes and other foodstuff. Under small-scale manufacture, etc., come the liquor distillers, blacksmiths, carpenters, etc., Commission agents, fishermen, hunters, etc., are shown as others.

5.10 In the following table the families in the three village groups are classified according to their subsidiary occupation.

*162 464 433 As is expected, agriculture comes out to be the single major industry giving employment to about 3/4th of the employed persons. In Border area this accounts for 72 per cent of the total employed persons. Among the other industries giving employment to the rest of the employed persons come in order of importance, construction (8 per cent), trade and commerce (6 per cent), mining and quarrying (6 per cent) and manufacture such as manufacture of foodstuff, production of garments, other wood and stone products (4 per cent). In Project area, apart from agriculture which accounts for 78 per cent other industries in order of importance of employment come construction (11 per cent), service and profession, manufacture, trade and livestock (2per cent each), and rearing (4 per cent). In General area agriculture gives employment to 88 per cent of the population. Next to it come livestock rearing, manufacture and forestry which account for 6 per cent and 2 per cent respectively of the total employed persons.

CHAPTER—X

Summary of main findings

125 10.1. Twenty-eight villages were selected for the purpose of the survey. Out of the 28 villages selected, 10 from Border area and 8 from Project area were selected purposively while the remaining 10 were selected at random from the entire district which is referred hereafter as general area.

166 Migration from big villages was rare but some migration was reported in respect of small villages.

164 743 871 489 482 Occurrence of Malaria, influenza and dysentery is a regular phenomenon in the area. Medical facilities were not found satisfactory and as much as 78 per cent of the villages have no dispensary within a radius of five miles. In regard to education, the facilities cannot also be said to be unsatisfactory for more than 60 per cent of the villages have a Lower Primary School. Transport facilities were not satisfactory and as much as 86 per cent of the villages still depend upon orimitive mode of transport, namely head load. Correlated with outmoded form of transport, is the prevalence of unduly high cost of transport.

*162 161 10.2. The number of the families covered by the survey was 1006 in the Border area, and 647 in the Project area and 184 in the General area. The average size of a village in the respective area is 100·6, 80·9 and 18·4 families. In the Border and Project areas females out number males being respectively 1076 and 1092 females per 1,000 males as against 940 females per 1,000 males in the general area 212 Literacy is as high as 34 per cent in the border area and 31 per cen [562] in the Project area but as low as 17 per cent in the general area In all the areas literacy among females is very low.

*162 464 The working population (earners and earning dependents) is as high as 55 per cent in the Border area, 54 per cent in the Project area and 63 per cent in the general area. While there were no cases of unemployment in the Project and General areas, 53 persons were reported unemployed from border area.

241 *162 463 10.3. 51 per cent of the families in Border area are wholly agricultural, 35 per cent partly agricultural and 14 per cent independent o agriculture. The corresponding figures for the Project area are 61, 31 and 8 per cent respectively while for the General area they are 70 per cent, 29 per cent, 1 per cent respectively.

Predominantly agricultural families constitute 67, 76 and 90 per cent of the families in Border, Project and General areas respectively.

*162 423 10.4. 31 per cent of the families in Border area, 29 per cent in Project area and 10 per cent in General area were absolutely without any land while 25 per cent, 39 per cent and 24 per cent of the families in the respective areas possessed small holding ranging from 0·24 to 2·30 acres representing 11,24 and 26 per cent of the total holding area in the respective areas. 36 per cent of the families in Border and Project areas and 41 in General area possessed medium sized holding (3 to less than 10 acres)

162 464

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

reared either for food or as articles of trade. A pair of ploughing oxen are worth about Rs. 32, or £3, 4s.; an ordinary cow, Rs. 12, or £1, 4s.; a score of kids six months old, Rs. 16, or £1, 12s.; and a score of full-grown pigs, from Rs. 100 to Rs. 160, or from £10 to £16. 231 435

THE AGRICULTURAL IMPLEMENTS in use in the District consist of a plough, called *ka-jing-lúr* in Khásí, and a hoe or *kodáli*, called *u-mo-khiw*. When the cultivation is carried on by means of oxen, the plough is used, the hoe alone being used when the land is cultivated by manual labour. In the Khási Hills the use of the plough, except in a few rare cases, is entirely unknown; but in the Jáintiá Hills, oxen and ploughs are used to a greater extent. What is technically termed 'a plough' of land is equivalent to four English acres; a pair of oxen, together with the necessary implements, would represent a capital of about Rs. 40, or £4. 241 407 [435]

WAGES.—The Deputy-Commissioner reports that the price of labour in the District has more than doubled in the last ten years. The rates obtaining at present are from eightpence to one shilling a day for an ordinary labourer, and from one shilling to eighteenpence a day for a porter. An agricultural day-labourer earns sixpence, and a woman at the same work fourpence-halfpenny a day. Bricklayers, carpenters, and blacksmiths earn from a shilling to eighteenpence a day. The new Station of Shillong, the present seat of the Local Government, was established in May 1864, and since that date the demand for labour has markedly increased. The extension of the cultivation of potatoes has also had an appreciable effect on the price of labour. 178 464 465 [244]

PRICES OF FOOD GRAINS.—Of the different descriptions of rice in the markets of the District, the better sorts are imported from the neighbouring Districts of Sylhet and Kámrúp. The local produce is considered fit only for the use of the Khásiás. The price of the better descriptions depends entirely upon the distance from which the supplies come. In a distant market like that of Shillong, rice of the best quality generally sells at from 6 to 7 *sers* for the rupee, or from 16s. to 18s. 8d. per cwt.; and rice of inferior quality, which is only used by the poorer classes, at from 9 to 10 *sers* for the rupee, or from 11s. 2d. to 12s. 5d. per cwt. Little or no trade is carried on in unhusked grain. Paddy produced in the District generally sells at an average of from 15 to 16 *sers* per rupee, or from 7s. to 7s. 6d. per cwt. Indian corn, which is only grown to a small extent, is sold 435 439 243

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

SECTION II.

OCCUPATION.

241 THE greater proportion of the population subsists by cultiva-
463 tion. Cultivation of rice may be divided under two headings,
[162] high land or dry cultivation and low land or wet cultivation. The total number of persons who subsist by agriculture generally in the hills, is given in the last Census Report as 154,907, but the term agriculture includes the cultivation of the potato, the orange, betel-nut and *pán*. A full description of the different forms of agriculture will be given under the
463 heading "Agriculture." A considerable number of Khasis earn
482 their livelihood as porters, carrying potatoes to the markets on
439 the Sylhet side of the district, from whence the crop is conveyed by means of country boats to the different places of call of river-steamers in the Surma Valley, the steamers carrying the potatoes to Calcutta. Potatoes are also largely carried to Shillong by porters, where the tuber is readily bought by Marwari merchants, who load it in carts to be conveyed by road to Gauhati, from which station it is again shipped to
482 Calcutta and Upper Assam. Many persons are also employed in
463 carrying rice up the hill from Theria to Cherrapunji, Shillong,
[465] and on to other places. Salt is also carried by porters by this route. Many Khasis, both male and female, live by daily labour in this way, earning as much as eight annas, and
[162] six annas a day, respectively. The Census Report of 1901 shows some 14,000 "general labourers" in the district, the greater number of whom are porters and coolies, both male
[357] and female, employed on road work and on building. In Shillong the Government Offices and the printing press give employment to a certain number of Khasis. There is also a fair demand for Khasi domestic servants, both among the Europeans and the Bengali and Assamese clerks who are employed at the headquarters of the Administration.

I: Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

headquarters of the Administration. The manufacture of country spirit gives employment to a considerable number of persons, most of whom are females. At a recent census of the country stills in the district, undertaken by the district officials, the number of stills has been found to be 1,530. There must be at least one person employed at each still, so that the number of distillers is probably not less than 2,000, possibly more. The spirit is distilled both for home consumption and for purposes of sale, in some villages almost entirely for sale. In the Jaintia Hills stock-breeding and dealing in cattle provides occupation for 1,295 people, according to the last census. The cattle are reared in the Jaintia Hills and are driven down to the plains when they reach the age of maturity, where they find a ready market amongst the Sylhetis. Cattle are also driven into Shillong for sale from the Jaintia Hills. Another place for rearing cattle is the Siemship of Nongkhlaw, where there is good pasturage in the neighbourhood of Mairang. These cattle are either sold in Shillong or find their way to the Kamrup district by the old Nongkhlaw road. Cattle-breeding is an industry which is capable of expansion in these hills. There are a few carpenters to be found in Shillong and its neighbourhood. The Khasis are said by Col. Waddell to be unacquainted with the art of weaving; but the fact that a considerable weaving industry exists amongst the Khyrwang villages of the Syntengs, and at Mynso and Suhtnga, has been overlooked by him. The Khyrwangs weave a special pattern of cotton and silk cloth, striped red and white. In Mynso and Suhtnga similar cloths are woven, also the sleeveless coat. In former days this industry is said to have been considerable, but it has been displaced to a large extent of late years by Manchester piece goods. The number of weavers returned at the last census in the district was 533. The Khasis and Mikirs of the low country, or Bhois as they are called, weave cotton cloths which they dye with the leaves of a plant called *u noli*. This is perhaps the wild indigo, or *ram*, of the Shan settlers in the Assam Valley. The weavers are almost always females. An important means of subsistence is road and building work; a considerable number of coolies, both male and female, are employed under Government, practically throughout the year, in

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[499] this manner, the males earning on an average 8 annas and the
463 females 6 annas a day. Col. Bivar writes that in 1875 the
465 wages for ordinary male labourers were 4 to 8 annas a day, and for females 2½ to 4 annas, so that the wages rates have almost doubled in the last thirty years. Contractors, however, often manage to obtain daily labour at lower rates than those paid by Government. Stonemasons and skilled labourers are able to
482 get higher rates. It is easier to obtain coolies in the Khasi
241 than in the Jaintia Hills, where a large proportion of the popu-
461 lation is employed in cultivation. The Khasis are excellent labourers, and cheerful and willing, but they at once resent bad treatment, and are then intractable and hard to manage. Khasis are averse to working in the plains in the hot-weather months.

APICULTURE.

231 I am indebted to Mr. Rita for the following remarks on apiculture in the Khasi and Jaintia Hills.

There are two kinds of indigenous bees in the Khasi Hills, one domesticated, called *u ngap* (*apis Indica*), and the other *u lywai*, which is never domesticated, and is very pugnacious; its hives are difficult of access, being always located in very high cliffs. A few hives of a third class of bee are now-a-days to be found in and around the station of Shillong, i.e. the Italian.
[177] This bee was imported into the hills by Messrs. Dobbie and Rita, and the species became propagated in the following manner. The bees had been just established in a hive, where they had constructed a brood comb, when the hive was robbed by some Khasis for the sake of the *larvæ* it contained, which they wished to consume as food; but the queen bee escaped and established other colonies, one of which was afterwards captured by Mr. Rita, the others establishing themselves at places in the neighbourhood. The hive used by the Khasis is of a very primitive description. It is usually a hollow piece of wood, about 2½ to 3 ft. in length and 10 or 12 in. in diameter. A small door is placed at each end of the log, one for the bees to go in and out, and the other for the removal of the honey when wanted. The honey-combs are broken and the honey is

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

274 Nongwar, thirty-one stills; and Rangthang, thirty-seven
438 stills.

From what has been stated above some idea may be gathered
274 how very large the number of stills in the Khasi and Jaintia Hills is. I am not in a position to state with any degree of accuracy what is the amount of spirit manufactured or consumed in the year, but it is very considerable. The out-turn of a Khasi still has been reckoned at from four to eight bottles per day. From this estimate, and the fact that there are 1,530 stills in the district, it may be roughly calculated what is the consumption annually. Practically the whole of the spirit is consumed within the district. The liquor which is manufactured is far stronger than the spirit distilled in the ordinary out-stills in the plains.
273 It has been stated by an expert analyst that the Khasi spirit
135 contains 60 to 80 per cent. of proof spirit, and that it possesses "an exceptionally nice flavour and taste." The usual price at which it is sold is 4 to 6 annas a quart bottle, a second quality being sometimes sold for 3 annas. It will be seen that the
[465] liquor is exceedingly cheap. A Khasi in the villages of the interior can get drunk for 2 annas,* or a quarter of an ordinary coolie's daily wage. Drunkenness prevails on every market day at Cherrapunji, Jowai, and other large hats, and on occasions when there are gatherings of the people for various purposes. This cheap but strong spirit is demoralizing the people, and some restriction of its use would be welcomed by
273 many. In the Khasi Welsh Methodist Church abstention from
797 liquor is made a condition of Church membership, but the vast number of stills and the facilities with which liquor can be obtained are a constant source of temptation to the Christian community, and cause many defections.

GAMES.

526 The Khasis have many games, but their principal game is archery, this may be said to be the national game, and is a very popular form of recreation amongst them, the sport being indulged in from about the beginning of January to the end of

* About threepence.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

workers and they were few in number.[1] They were particularly employed for such work as the clearing of jungle for new pan gardens in summer. 245 464

In the orange season (December to February) the number of workers increased and they were paid more: Rs. 1/8 were paid[2] for one load (one person carrying 80 pounds of oranges, from an orange garden to the railway station—about two miles). Usually a worker made three to five trips a day. Many workers from Jaintia used to come for this particular season. 245 464 465

Semi-permanent workers were engaged for wet rice fields. They were usually Hindu cultivators: since these Khasi and other tribes do not know the technique of wet cultivation, plains people like the Biharee immigrants were engaged. These workers were provided with servants' quarters where they lived with their wives and children. However, very few Jatinga households possessed rice fields. 243 464

The economic prosperity of Jatinga reached its climax during the period from 1934 to 1940. Since 1942, the orange production has been decreasing. In 1945, a serious disease attacked the orange gardens as well as the pan-leaf gardens. Besides, by depriving Jatinga, as it had Shella, of their most important markets, Dacca and Sylhet, the Partition of India and Pakistan in 1947 caused a serious economic depression in the whole region. On the other hand, because of the past prosperity, the population has rapidly increased during the last ten years. The serious economic condition of Jatinga is illustrated in the petition which was submitted by the Jatinga people when the Governor of Assam visited those areas in January 1956. It runs thus: 245 434 781 161 458

"Since the last ten years or so, with the increase of population in the village and with the loss of fertility of the soil, the people were faced with economic depression. At present they are facing acute shortage of land they have also no scope to adopt other forms of cultivation like jhuming and wet rice cultivation, etc. Moreover, there has been successive attack of Bright's disease which destroyed and wiped out all the orange and pan gardens. And as such, majority of the families have to depend for their livelihood on daily wages. . . ."

It is indeed a serious situation for them, because the Khasi do not produce staple foods, such as rice; their economy is completely dependent on the trade of their products by which they purchase their main provisions, clothes, etc. Other peoples round Jatinga, being jhum cultivators, can at least get rice and cotton: the minimum requirements, staple foods and clothing are available even in the worst conditions, so that they can at least maintain themselves though the standard of living is low. As I stated before, a few households in Jatinga possessed rice fields, but the majority had none. Recently they rented some plots of jhum field for rice cultivation from Zemi-Naga of neighbouring villages.[3] However, its yield was but a small percentage of their consumption. A few 182 434 [433] [243]

1. If they had worked in the gardens of Jatinga, they might have got more profit than from their own jhum fields. For one day's labour, they got Ans. 8/. For one month, they could earn Rs. 15 with which they could buy about 4-5 maunds of rice (one maunds paddy cost Rs. 3-4). For one year it became 50 maunds, which was impossible to produce in a jhum field by a single person's labour. [435]

2. These rates, including the figures of note 1, apply to 1956.

3. Jatinga villagers told me that Zemi-Naga were kind enough to lend them their field for a negligible rent, though they had not enough for themselves. Zemi-Naga said that they owed much to Jatinga in the past, so that now they sympathised with the condition of Jatinga, and offered some parts of their jhum field. [427] [628]

241 464 2.10 **Labour and Wages**: It has already been mentioned above that a large number of people subsist on labour—agricultural as well as non-agricultural. Owners of big orchards employ labourers for clearing of their orchards twice or thrice a year, plucking and transporting of produce to markets. Paddy cultivators with large farm engage labourers for ploughing and hoeing of fields, sowing, harvesting and threshing of paddy. It should be mentioned that due to the peculiar agricultural practices prevalent in the district, the input of labourer even for paddy cultivation is higher than that in any of the plains district of the State, which compels cultivators to hire 241 labourer even for small paddy fields. In the case of cash crops, wages 464 are usually paid in cash and for food crops it is paid in cash and 465 kind more usually in kind. Wage rates for males and females are different which generally vary from Rs.1.50 to 1.25 for males and Rs.1.25 to Re. 1.00 for females.

There are, however, numerous instances of engaging agricultural labourers at the rate of Re. 0.50 per day. During the scarcity months the well-to-do farmers advance loans to the poorer section of the people on condition that repayment will have to be made by rendering labour on wage basis at the rate of Re. 0.50 per day in the creditors farms whenever their services are demanded. Thus whenever their services are demanded the poor people have to work in creditor's farm even at the cost of ruining their own cultivation.

There are other instances where the labourers are paid less than usual wages. In some villages where there is dearth of work all the agricultural labourers gather together at some specified place early in the morning. The well-to-do farmers go there and through bargaining manage to engage the number of hands they want at very low rates. Similar bidding down of wages of non-agricultural labourers is also prevalent whenever demand for labour is very low.

Land utilisation and cropping

423 659 2.11 **Land tenure system.**—The district of United K.-J. Hills is not cadastrally surveyed and so far as land tenure is concerned, there is no rigid uniform or regular system worth the name, with the exception of those lands under the control of the State Forest Department and the Local District Council. There are different kinds of land under different systems, though for obvious reasons no reliable statistics can be gathered in respect of them. As far as land tenure system is concerned, Jowai subdivision is conspicuously different from Shillong subdivision. However, land in the whole district can be broadly placed under the following categories:—

423 [692] [657] I. **Rikyntí or Private land.**—They are private land belonging to certain clans or families but not to an individual according to Khasi custom. Neither Syiem nor District Council has got any power over them except the judicial powers to settle any dispute that may arise over any plot of land. The only connection is with the State Forests Department in respect of private protected forests who collects royalty from the produces of these forests if they are used for purposes of

4.1 **Marketing.**—The Khasis and Jaintias are market minded people. Rarely they sell their produce at the farm site. They have established markets at all vantage points of the district to which they carry over miles their produce on headload for sale. On market days it is a treat to see a stream of people with headloads coming to the market up and down hills from miles away. 442 443 [483]

Markets are held usually twice in every eight days of which one is a 'Sutabazar' day which is held on every eighth day and the other is a 'Choto Bazar' day which is held two days ahead of the Sutabazar day. The following table shows the marketing facilities available to the rural people in the sample villages.

Table B-7 below shows the number of markets classified according to distances from the selected villages served by them and charges per maund for transport of produces from the village to these markets. 442 443 465 489

TABLE B-7

Portage per maund from village to market	Distance from village to market: 0 mile	Less than 5 miles	5—10 miles	Above 10 miles	Total
(1)	(2)	(3)	(4)	(5)	(6)
Rs. nP. Rs. nP.

No. of villages served by—

1	market?	13
2	markets	8
3	„	7
4	„	1

465 419 The above table shows clearly that the producers have to pay heavy charges when porters are engaged which becomes inevitable particularly when the distance to market is very long or the way to the market is difficult to negotiate. The table shows that out of a total of 45 markets with which the people in the 28 selected villages use to carry on transactions, 10 are situated at a distance of 5 to 10 miles, while 13 are situated more than 10 miles away from the village. Considering the fact that transport is to be done by head load only, marketing of the agricultural produce is indeed a difficult task. The transport charges to be paid are also high. It is seen from the above table that out of the 45 markets, transport charges in as many as 11 markets work out to be higher than Rs. 2 a maund.

474 4.9 **Co-operation** - Twelve co-operative societies were met within the selected villages. Out of these as many as 7 were engaged in marketing or trading. These organisations grew up sometime earlier under direct sponsorship of Government but mostly at the initiative of the villagers themselves to meet certain situations. The following statement shows a list of the co-operative societies in the sample villages.

TABLE B-2

20: Hunter G-4 (no date) 1897 AR? Khasi AR?

428 to the sisters of his wife, or to her nearest relatives if there are no sisters. The rank and titles of a deceased male descend to his brother; when no brother exists, then to the male children of his mother's sisters (maternal aunts); should the maternal aunts have no male children living at the time, then to the eldest male child of his sisters. When no relatives are to be found, the property of the deceased goes to the ruler of the country; or if a man dies leaving no relative other than wife and children, *i.e.* no relatives on the mother's side, the property in this case also goes to the ruler, who, as the wife and children cannot preserve the ashes of the deceased, takes charge of them, and for so doing takes all the property also. With regard to the inhabitants of the Lower Hills at Sheillá, the custom as to succession is as follows:—Property belonging to a subject of Sheillá is divided into two classes—(1) Property inherited from ancestors, which descends to the nearest of kin or to the relative of a deceased person who can perform his obsequies. (2) Property acquired during the lifetime of the holder, which is inherited by the children, whose duty it is to provide for the maintenance of their mother until she re-marries or dies.'

434 Material Condition of the People.—The Khásis and the
• 465 Syntengs are as a people prosperous. Common labourers, if adult males, can earn wages as high as one shilling per diem, and adult
342 females as high as eighpence. The dwellings of the well-to-do classes are generally constructed of masonry, with thatched roof and
352 plank floor, and divided into two or three rooms. The furniture consists of a bedstead (*charpái*), a seat or two (*mora*), some cooking
342 utensils, and a few boxes. The ordinary peasants and poorer
184 classes construct their huts of stone, mud, or plank walls, with a thatch or cane roof. These are fitted with wooden platforms
262 or loose planks placed on the ground to serve as beds. The food of the well-to-do classes consists of rice, fish when obtainable, fowl
434 or meat, curry, vegetables, oil, bag's lard, fermented and spirituous liquor. It may be estimated that the living expenses of an average-sized household of this class would be about Rs. 25 or £2, per a month, valuing the articles of consumption at *bázár* prices. An ordinary husbandman or labourer lives on rice, dry fish, occasionally a
276 little meat, oil, or bag's lard. *Pán* leaf, betel-nut, and lime are essential to the comfort of all the hill people, who are inveterate chewers of *pán*. They commence at an early age, and are rarely seen without a *pán* leaf in their mouths; the females are quite

20: Muster G-4 (no date) 1937 AR? Khasi AR?

(8) Cotton is grown on high lands, and
248 ripens; it is sown in April, and becomes fit for picking by January.

311 Area and Distribution of Crops.—According to the Assam Administration Report for 1899-1900, the area of the British portion of
241 the Khasi and Jaintia Hills District amounts to 2,160 square miles,
640 of which only 120 are under cultivation; of the remainder, 1,337 square miles are set down as culturable, and 703 as uncultivable. The total area of the semi-independent Khasi States is given as 3,997 square miles, of which 178 are under cultivation, 1,560 are culturable, and 1,260 uncultivable. In another portion of the same Report, the area under various crops throughout the entire District is thus approximately estimated:—Rice, 75,780 acres; other food grains, 37,800 acres; cotton, 1,038 acres; potatoes, 33,180 acres. The average outturn of rice per acre is returned at 8 maunds, or nearly 6 cwt.; of other food grains, 3 maunds, or over 2 cwt.; of cotton, 2 maunds, or 1½ cwt.; of
(4 35) potatoes, 33 maunds, or nearly 40 cwt. The price of rice in 1899-1900 was Rs. 4 8 per maund, or cwt. Rs. 2 cwt., which gives Rs. 36 or £2 10s. as the value of the rice crop obtained from one acre.

241 Condition of the Peasantry.—The Khasis can scarcely be considered as agricultural people, as they do not grow sufficient
923 grain for their own subsistence, and are dependent to a great
433 extent on imports of rice from the neighbouring Districts. Ten acres is generally considered a comfortable holding for a husbandman in the position of an ordinary Bengal peasant, but scarcely any man in the Hills depends entirely upon the produce of his land for his support. In the Jaintia Hills a cultivator's position is considered to be very low if he possesses no cattle, but performs all the operations of agriculture with his own hands. In that portion
(231) of the District, five acres is all that can be cultivated with a single
(774) pair of oxen, the average being four acres. A husbandman with a
(465) holding of five acres would not be so well off as a small shopkeeper, nor would it enable him to live as comfortably as he could on a money wage of Rs. 8 or 10 a month. The peasantry, however, as a class are not in debt. The land is owned chiefly by small proprietors, who occupy and cultivate their hereditary fields. The relations of landlord and tenant do not exist in the Hills, and no rent is payable to any one; consequently the principle of Act 8 of 1869 (the Rent Law of Bengal) has no application.

231 The domestic cattle in agriculture are oxen; goats and pigs are
426

20: Hunter G-4 (no date) 1897 AR? Khasi AR?

231
435

round either for food or as articles of trade. A pair of ploughing oxen are worth about Rs. 30, or £2, 0s.; an ordinary cow, Rs. 12, or £1, 4s.; a score of kids six months old, Rs. 16, or £1, 10s.; and a score of full-grown pigs, from Rs. 100 to Rs. 160, or from £10 to £16.

241
407

THE AGRICULTURAL IMPLEMENTS in use in the District consist of a plough, called *kopyrtir* in Khásí, and a hoe or *dokit*, called *cowdikir*. When the cultivation is carried on by means of oxen, the plough is used, the hoe alone being used where the land is cultivated by manual labour. In the Khásí Hills the use of the plough, except in a few rare cases, is entirely unknown; but in the Jaintia Hills, oxen and ploughs are used to a greater extent. What is [495]
colloquially termed "a plough" of land is equivalent to four English acres; a pair of oxen, together with the necessary implements, would represent a capital of about Rs. 40, or £2.

178
469
465 •

WAGES.—The Deputy-Commissioner reports that the price of labour in the District has more than doubled in the last ten years. The rates obtaining at present are from eighteen to one shilling a day for an ordinary labourer, and from one shilling to eighteen pence a day for a parrah. An agricultural day-labourer earns eighteen, and a woman at the same work fourpence-halfpenny a day. Smiths, masons, carpenters, and blacksmiths earn from a shilling to eighteen pence a day. The new Rupee of Shillong, the present seat of the Local Government, was established in May 1882, and since that date the demand for labour has markedly increased. The extension of the cultivation of potatoes has also had an appreciable [204]
effect on the price of labour.

435
439
243

PRICES OF FOOD GRAINS.—Of the different descriptions of rice in the markets of the District, the better sorts are imported from the neighbouring Districts of Sylhet and Kámrúp. The local produce is considered fit only for the use of the Khásís. The price of the better descriptions depends entirely upon the distance from which the supplies come. In a dispersed market like that of Shillong, rice of the best quality generally sells at from 6 to 7 seers for the rupee, or from 16s. to 18s. 8d. per cwt.; and rice of inferior quality, which is only used by the poorer classes, at from 9 to 10 seers for the rupee, or from 11s. 6d. to 12s. 9d. per cwt. Little or no trade is carried on in unhusked grain. Paddy produced in the District generally sells at an average of from 15 to 18 seers per rupee, or from 7s. to 7s. 6d. per cwt. Indian corn, which is only grown to a small extent, is sold

20: Hunter G-4 (no date) 1897 AR 7 Khasi AR 7

625 In 1835, when British authority was first extended to the Khási
648 Hills, the cost of maintaining the police, from the rank of *jemádár*
465 or head constable upwards, was £45; and in 1840, £57, 16s. By
1860, when the Jáintiá Hills had been annexed, and a *thána* opened
at Jowái, the cost had risen to £480. In the year 1869 the strength
of the regular police was 149 men in the Khási Hills, and 20
additional 29 in Jáintiá.

In 1875 the police statistics of the Khási and Jáintiá Hills were
as follow:—The force consisted of 2 inspectors on a salary of
upwards of Rs. 100 a month, or £100 a year; 3 sub-inspectors and
13 head constables on a salary of less than Rs. 100 a month; and
113 constables on an average pay of Rs. 9 a month, or £10, 16s. a
year. The total pay of subordinate officers amounted to Rs. 8,340
or £834 a year; and the total pay of constables to Rs. 12,168 or
£1216, 16s. Certain contingencies brought up the aggregate expenses
to Rs. 24,563 or £2456, 13s. The total number of men of all
ranks was 131. As compared with the area and population of the
District, these figures show one man to every 16·49 square miles, or
to every 153 persons of the population, maintained at a cost of
Rs. 2, 1 or 5s. 1½d. per square mile, and of 2 *annás* 10 *pies* or 4½d.
per head of population. Of the total force, 1 officer and 13 men
were employed to guard the jail, 3 officers and 23 men to guard the
treasury and lock-up and to serve as escorts, leaving 14 officers and
77 men available for general duty.

648 Criminal Statistics.—The District of the Khási and Jáintiá Hills,
692 like the other Hill Districts of Assam, is administered by political
officers, under special rules formed under Act xxiii. of 1869. Petty
criminal cases are disposed of by the indigenous magistracy, and
only cases of a heinous character are reported to the political officers.
Similarly, civil causes are referred to arbitration, according to the
indigenous system of village *pancháyats*; and the Deputy-Commissioner
reports that this system, while affording equal justice to the
people, tends to preserve them from the evil of litigiousness.

679 In 1874 the total number of cases reported by the police to the
178 political officers was 83, as compared with 63 in the previous year.
In these 83 cases, 102 persons were arrested, of whom 72 were put
on their trial; 62 persons, or 86 per cent., were convicted, and 10
were acquitted.

Though little serious crime exists in the Hills, yet the number of
offences shows a tendency towards increase. The Report of the

465 489 The above table shows clearly that the producers have to pay heavy charges when porters are engaged which becomes inevitable particularly when the distance to market is very long or the way to the market is difficult to negotiate. The table shows that out of a total of 12 markets with which the people in the 28 selected villages use to carry on transactions, 10 are situated at a distance of 5 to 10 miles, while 13 are situated more than 10 miles away from the village. Considering the fact that transport is to be done by headload only, marketing of the agricultural produce is indeed a difficult task. The transport charges to be paid are also high. It is seen from the above table that out of the 45 markets, transport charges to as many as 11 markets work out to be higher than Rs. 2 a maund.

474 4.9 **Co-operation** - Twelve co-operative societies were met within the selected villages. Out of these as many as 7 were engaged in marketing or trading. These organisations grew up sometime earlier under direct sponsorship of Government but mostly at the initiative of the villagers themselves to meet certain situations. The following statement shows a list of the co-operative societies in the sample villages.

TABLE B-8

Name of village	Name of society	Sponsored by

474

4.10 **Cottage Industries.**—It has already been mentioned that Village and Cottage Industries are not very popular in the district. 433

The following table shows the industries reported from the sample villages:—

TABLE B-9

Industry (1)	No. of villages reporting existence of the industries. (2)	No. of villages reporting production for sale. (3)	
Cane and bamboo works ...	9	7	322
Blacksmithy	5	5	326
Tailoring	2	2	294
Handloom	...	...	286
Weaving and Spinning ...	3	1	284
Rearing of cocoons, etc. ...	1	1	283
Rearing of lac	1	1	231
Others	2	1	

Blacksmithy and making of baskets, cane products, etc., out of cane and bamboo, are a traditional occupation. Weaving and spinning of cotton, rearing of endi cocoon and weaving of endi, etc., are in vogue only in the Bhoi area and the areas adjoining Kamrup and North Cachar and Mikir Hills districts. Lac rearing is found in the northern portion of the district, *i.e.*, Nongpoh area. 184

Except cane and bamboo works and blacksmithy other industries are practised in a very limited scale. There is thus a lot of scope for introducing cottage industries in the district.

776 Therefore nobody dares to appropriate the ob-
782 jects that have been thrown away or even to touch
783 them. Only into the house of the S'iem and into the whole royal family can no entrance be found by the thlen, and therefore some valuable things may be given to the Khasi king. This may be connected with the fact that usually on the next morning after the above ceremony nothing more is to be found of the objects that were given away. Therefore it rarely happened in former times that anyone kept a found object from fear that it might be thlen property and he might bring the thlen devil into his house with it. But if they did take an object they found, a piece of money or such, home with them, the oracle was first asked by egg throwing whether it contained any evil, and only when this was denied and the real owner could not be found did they keep a part of it; the rest had to be used for sacrificial purposes.

The immovable property is treated the same way as the movable property. Fields which the family formerly possessed lie fallow; nobody dares to take them over or to plant anything on them.
• [476] But the whole village hastens to help the former thlen[1] owners who have lost all their property. They are given clothes and rice and helped in building a hut so that they can begin an honest life again.

c) Story of a Former Thlen Worshipper.

776
593 How is all this known about the thlen,[1] many ask, if the owners try to hide their secret? An indirect answer is already given by the whole previous presentation. Then it also happens, for example, that men marry into the house of a woman who is a thlen owner. Certainly this is not always known beforehand, although real thlen

1 [devil snake; see Cat 116, pp 28 ff. --Anonyst]

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

cover what their ancestors are doing for them, and what their views and inclinations may be as regards the amount of aid they may give. To a Khasia there is no difficulty about the matter; when in distress or requiring aid of any kind, seeking omens by the breaking of eggs (which I will hereafter describe) he appeals to and propitiates any one ancestor he may select; only one or two may promise such protection, and these it may so happen have died years ago. The benefit also conferred may be very trivial, and sufficiently acknowledged by the setting up of stones of small size; on the contrary, if great favours are conferred on the wealthy we find large monoliths forming conspicuous landmarks on many a hill-top, scattered over a large area of country, and which are mostly known to the country round by the name of the individuals who have wrought so much good in their after state. 764 769 211 [782]

These stones are never erected in pairs or in even numbers; in counting over a very large series still perfect, I found them invariably in sets of three, five, seven, or, as I have before mentioned in the case of the Nongtariang clan, in two sets, five and five, on opposite sites, to the same individual.* Even numbers are considered unfinished or imperfect. 801 211 764

A reference to the plans given, numbers 1, 2, 3, 4, will show the various arrangements in which the stones are set up, both in a segment of a circle and at right angles to each other, as in fig. 3. The most common form, however, is in line, fig. 4. Fig. 1 consisted of a circular platform raised about two feet, faced with rough stones on the front face. These three examples were observed on the hill of Lailang-kote, where the bazar is held, and I have not seen anywhere else the monoliths so arranged; in other parts of the country they are invariably set up in a straight row.

These monuments are also erected for such a reason as the following:—During the illness of a person, every kind of propitiation and exorcism either by the breaking of eggs, sacrifice of fowls, pigs, etc., and by the examination of the liver and viscera, having been made, and then failing to restore him; the sick man may vow that should he recover, he will erect a set of stones to one of his ancestors, who, it is presumed, on knowing of the intention, will do his best to save him. 764 211 [782] [787]

In setting up these slabs all members of the community are under an obligation to assist on such an occasion, and are not paid for their labour, beyond receiving in the evening a little food or liquor at the dwelling of the family who have sought the aid. The skilled workmen employed on the stone-cutting are, 764 211 476

* Three and five are the most frequent numbers met with, nine very rare I have seen eleven.

1/9 [See end charts 1-4, category 116 -- Analyst]

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

476
764 however, regularly paid, as is done when cutting the stones for
211 the funeral platform; while this work is in progress musicians
[533] are also entertained, and a continual beating of tom-toms (hand-drums) is kept up while the work is in progress.

That many of these monuments, and by far the larger number,
764 are of great age, may be inferred from the fact that their history
211 is quite lost.
171 As to their distribution, they are to be found over all the higher part of the range; the finest, certainly, in the central portion and in the vicinity of the larger villages, such as Cherra Poonjee, Juwai, Nurtiang, etc.

In Nongstoin, on the west, they gradually die out, and a few, not exceeding three or four feet in height, are to be found in the Khasia village towards the Garo tribes, but at this limit the Langams come in, and their customs assimilate more with the former-named people. It is the same on the east and north-east of Jaintia; the stones set up are smaller and of rougher form, and by no means so numerous, yet they are to be seen in all kinds of out-of-the-way places quite overgrown with grass and jungle, where villages have not existed for years. Indications were not wanting, shewing that the country had been formerly much more populous, especially on the northern slopes of the Khasi and Jaintia Hills. I have, on the other hand, never come across structures of the kind anywhere beyond the limits of Khasi-speaking people, that is, between longitude 91 deg. and 92 deg. 30 min., which includes the Jaintia Hills, the people of which part are called "Sintengs", differing in some minor points from the Khasis; the dialect is distinct, and there is so strong a type-form of likeness and expression, the two can be generally separated without inquiry. The same remarks hold good for the western side; a Khasi of the border Nongstoin villages can be told off at a glance: so strong are the great clan likenesses.

I have traversed the whole country on the east: viz., the North Cachar Hills, inhabited by tribes of Kookis and Nāgas, and had the Khasi ever occupied permanently a larger area either on the east or west, particularly the former, emigrating, as they are supposed to have done, from that side, I think we might have expected to find, occasionally, remains of their imperishable monuments. The only exception that I know of occurs on the road from Nenglo to Hangrūng, in the North Cachar Hills district, beyond Asālua, part of the country now in the occupation of Nagas, and formerly entirely in that of Kacharis, who are Bodos or Méchis. The road lies through forest, keeping along the high spur; at about two miles from the peak of Hemeo are to be seen several large slabs of stone nearly level with the ground, one ten feet by six, covering some sort of receptacle, for the ends of the

142 young are comely, of a buxom type, and, like the men, with highly-developed calves, the latter always being considered a beauty. The children are frequently remarkably pretty. Khasis carry very heavy burdens, it being the custom for the 482 cooly of the country to carry a maund, or 82 lbs. weight, or even more occasionally, on his back, the load being fixed by means of a cane band which is worn across the forehead; women carry almost as heavy loads as the men. The coolies, both male and female, commonly do the journey between Cherrapunji and Shillong, or between Shillong and Jowai, in one day, carrying the heavy loads above mentioned. Each of the above journeys is some thirty miles. They carry their great loads of rice and salt from Therria to Cherrapunji, an ascent of about 4,000 feet in some three to four miles, in the day. The Khasis are probably the best porters in the north of India, and have frequently been requisitioned for transport purposes on military expeditions.

157 The people are cheerful in disposition, and are light-hearted by nature, and, unlike the plains people, seem to 522 thoroughly appreciate a joke. It is pleasant to hear on the road down to Theriaghat from Cherrapunji, in the early morning the whole hillside resounding with the scraps of song and peals of laughter of the coolies, as they run nimbly down the short cuts on their way to market. The women are specially cheerful, and pass the time of day and bandy jokes with passers-[461] by with quite an absence of reserve. The Khasis are certainly more industrious than the Assamese, are generally good-tempered, but are occasionally prone to sudden outbursts of [533] anger, accompanied by violence. They are fond of music, and [797] rapidly learn the hymn tunes which are taught them by the Welsh missionaries. Khasis are devoted to their offspring, 593 and the women make excellent nurses for European children, 463 frequently becoming much attached to their little charges. The people, like the Japanese, are fond of nature. A Khasi 517 loves a day out in the woods, where he thoroughly enjoys 824 himself. If he does not go out shooting or fishing, he is con-825 tent to sit still and contemplate nature. He has a separate name for each of the commoner birds and flowers. He also has names for many butterflies and moths. These are traits which are not found usually in the people of India.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

SECTION II.

OCCUPATION.

241 THE greater proportion of the population subsists by cultiva-
463 tion. Cultivation of rice may be divided under two headings,
[162] high land or dry cultivation and low land or wet cultivation. The total number of persons who subsist by agriculture generally in the hills, is given in the last Census Report as 154,907, but the term agriculture includes the cultivation of the potato, the orange, betel-nut and pan. A full description of the different forms of agriculture will be given under the
463 heading "Agriculture." A considerable number of Khasis earn
482 their livelihood as porters, carrying potatoes to the markets on
439 the Sylhet side of the district, from whence the crop is conveyed by means of country boats to the different places of call of river-steamers in the Surma Valley, the steamers carrying the potatoes to Calcutta. Potatoes are also largely carried to Shillong by porters, where the tuber is readily bought by Marwari merchants, who load it in carts to be conveyed by road to Gauhati, from which station it is again shipped to
482 Calcutta and Upper Assam. Many persons are also employed in
463 carrying rice up the hill from Theria to Cherrapunji, Shillong,
[466] and on to other places. Salt is also carried by porters by this route. Many Khasis, both male and female, live by daily labour in this way, earning as much as eight annas, and
[462] six annas a day, respectively. The Census Report of 1901 shows some 14,000 "general labourers" in the district, the greater number of whom are porters and coolies, both male
[857] and female, employed on road work and on building. In Shillong the Government Offices and the printing press give employment to a certain number of Khasis. There is also a fair demand for Khasi domestic servants, both among the Europeans and the Bengali and Assamese clerks who are employed at the headquarters of the Administration.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[499] this manner, the males earning on an average 8 annas and the
463 females 6 annas a day. Col. Bivar writes that in 1875 the
465 wages for ordinary male labourers were 4 to 8 annas a day, and for females 2½ to 4 annas, so that the wages rates have almost doubled in the last thirty years. Contractors, however, often manage to obtain daily labour at lower rates than those paid by
•482 Government. Stonemasons and skilled labourers are able to
241 get higher rates. It is easier to obtain coolies in the Khasi than in the Jaintia Hills, where a large proportion of the popu-
461 lation is employed in cultivation. The Khasis are excellent labourers, and cheerful and willing, but they at once resent bad treatment, and are then intractable and hard to manage. Khasis are averse to working in the plains in the hot-weather months.

APICULTURE.

231 I am indebted to Mr. Rita for the following remarks on apiculture in the Khasi and Jaintia Hills.

There are two kinds of indigenous bees in the Khasi Hills, one domesticated, called *u ngap* (*apis Indica*), and the other *u lyncai*, which is never domesticated, and is very pugnacious; its hives are difficult of access, being always located in very high cliffs. A few hives of a third class of bee are now-a-days to be found in and around the station of Shillong, i.e. the Italian.
[177] This bee was imported into the hills by Messrs. Dobbie and Rita, and the species became propagated in the following manner. The bees had been just established in a hive, where they had constructed a brood comb, when the hive was robbed by some Khasis for the sake of the *larvæ* it contained, which they wished to consume as food; but the queen bee escaped and established other colonies, one of which was afterwards captured by Mr. Rita, the others establishing themselves at places in the neighbourhood. The hive used by the Khasis is of a very primitive description. It is usually a hollow piece of wood, about 2½ to 3 ft. in length and 10 or 12 in. in diameter. A small door is placed at each end of the log, one for the bees to go in and out, and the other for the removal of the honey when wanted. The honey-combs are broken and the honey is

I: Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

shield of Cherrapunji is used as a protection from rain. 293
Those of Maharam and Mawiang are each of a peculiar pattern. 352
Smaller shields are used as protections from the sun or merely for show, and there are specially small sizes for children. Then there are the different kinds of basket (*ki* 415
khoh) which are carried on the back, slung across the forehead 482
by a cane head-strap. These, again, are of different sizes. They are, however, always of the same conical shape, being round and broad-mouthed at the top and gradually tapering to a point at the bottom. A bamboo cover is used to protect the contents of the basket from rain. There is a special kind of basket made of cane or bamboo with a cover, which is used for carrying articles on a journey. These baskets, again, are of different sizes, the largest and best that the writer has seen being manufactured at Rambrai, in the south-western portion of the hills. 412
Paddy is husked in a wooden mortar by means of a heavy 415
wooden pestle. These are to be seen all over the hills. The 256
work of husking paddy is performed by the women. A bamboo sieve is sometimes used for sifting the husked rice, a winnowing fan being applied to separate the husk. The cleaned rice is exposed to the sun in a bamboo tray. Paddy is stored in a separate store-house in large circular bamboo receptacles. These hold sometimes as much as 30 maunds* of grain. Large baskets are also used for keeping paddy in. In 415
every Khasi house is to be found the net bag which is made 825
out of pineapple fibre, or of a *stein*, the Assamese *riha* 436
(Bochmeria nivea). These bags are of two sizes, the larger one for keeping cowries in, the cowrie in former days having been used instead of current coin in these hills, the smaller for the ever necessary betel-nut. *Pân* leaves are kept in a bamboo tube, and tobacco leaves in a smaller one. Lime, for eating with betel-nut, is kept in a metal box, sometimes of silver, which is made in two separate parts held together by a chain. The box is called *ka shanam*, and 415
is used all over the hills. This box is also used for 981
divination purposes, one end of it being held in the hand, and the other, by means of the chain, being allowed to swing

* The maund is 82 lbs.

304

calcaratus) and (u rymbai ktung, botanical 945
name: glycine soja); corn (u 'rieuhadem); 438
pineapple (u soh trun); lemons (u soh syndong); oranges (u soh niamtra); mangoes (u soh pieng); melons (u pathau); breadfruit (u soh kpu, botanical name: artocarpus incisa); Khasi cherries (u soh jong, botanical name: prunus ferrunginea); bananas (ka kait), pepper (u soh srit); chilis (u soh syngken); papayas (u soh kynphor, botanical name: carica papaya); a kind of wild potato (u soh pyrsiu); cinnamon (ka sisia, botanical name: cinamum cassia); nutmeg (u joi phol); ginger (u 'sieng); honey in honeycombs (ka ngap).

Goats, sheep, and cattle are sold, sometimes alive, sometimes slaughtered in small quantities. There are many chickens on the market, especially for sacrificial purposes.

In addition things are brought for sale that are necessary for the construction of houses or the cultivation of fields, such as grass for roofing huts; cut beams, bamboo poles, bamboo plaited into lattice work, dried cow manure, spades for the fields (mokhiu); Khasi knives (ka sait); [704: A]* [P.S. [illegible]

must also be sought out and hired at the markets. 443

3. The Customs of the Market

a) The Preparation for Market. The sellers of both sexes normally carry their wares to the market themselves. They form smaller or larger groups and travel together. The wares are carried on their backs. The burden is packed according to its bulk or content. Larger objects, such as bamboo poles, beans, sugar cane, grass, and mats are carried without any covering by means of a forehead band plaited of reed grass (u star). Smaller items, such as salt or potatoes, are packed in sacks; others such as betel nuts, pepper leaves, fruit, vegetables, etc. are carried in baskets made of bamboo. The baskets are either pointed baskets which are round at the top or square baskets, which narrow to a point at the bottom but still are four feet long in size. The latter baskets are usually made with a cover, which, like the basket itself, is plaited and almost waterproof, so that flour or salt can be transported in them even during the rainy season. A round or oval object shaped like a shield, which in case of need is used as an umbrella (ka trap) and which is plaited out of bamboo, is inserted between the back and the burden (jingkit). On the one hand this object has the purpose of ameliorating the pressure of the burden and on the other hand it is pulled out in rainy weather to serve as an umbrella when it is held up against the rain by hand. [484] 443 482 438 285 443 [241]

With regard to the weight which the Khasi carry to market, the men carry about 100 and more pounds while the women seldom 482

laden themselves with more than 60 to 65 pounds.

Many Khasi have to start during the afternoon because of the great distance to the market. They spend the night with acquaintances. In the dark [700] they march by torch light. The torches consist of several igra, i.e., very thin bamboo tube, saturated with petroleum and lighted. Or a large bamboo tube is filled with cloth that has been saturated in petroleum. The burning torches are swung in circles while the Khasi march so that only a glow is provided, but this prevents the torches from going out. The glow is quite sufficient for giving enough light for the road (foot path).

[256] Betel nuts are chewed (4) all the way and

4. The length of the road is also measured in "betel nuts."

water pipes are smoked during the rests.

b) The Market Place. It is not possible to talk about a definite place where the Khasi usually hold the market. This varies considerably according to the region. First of all the place chosen for the market lies outside the village. By preference they hold their markets on high ground or some such safe place. A place that has once been chosen remains the market place for that particular village. The market place is often found very close to the memorial stones, just as if the spirits of the ancestors honored there should offer aid and protection to the visitors to the market. On the southern slopes of the Khasi Mountains the market is often held on the bank of a river, for the reason that the Khasi come to these markets in boats. The market place in Mawkhar is quite isolated. Also the com

CHAPTER III

The Border Area

3. 1 **Definition of Border Area.**—The term 'border areas' although very frequently used does not refer to any well demarcated area. It was, therefore, decided after a joint discussion between the Director of Statistics with the Deputy Commissioner of the district and Subdivisional Officer, Jowai, that area within 20 miles of the Indo-Pak border line would be considered as the 'border area' for the purpose of the present survey. The list of the villages falling in this area was supplied by the Deputy Commissioner and the Subdivisional Officer.

3. 2 **Condition of the Border Area before partition.**—The border area under review thus comprised of the southern slopes of the Khasi and Jaintia Hills and a narrow strip of plains adjoining the southern slopes running along the Pakistan border. The area extends laterally over a length of about 120 miles, roughly from Mahashola on the west to Sonapur on the east thus covering an area of 2,400 sq. miles approximately, comprising of 454 villages inhabited by population of 74 thousands.

Barring the barren and rocky top plateau the slopes are utilised as the production of valuable cash crops on intensive scale. These slopes provide suitable soil and climate for the production crops like arecanut, betelnut, betelleaf, oranges, pineapples and other fruits. On account of rich yields which such plantations give to the cultivators these slopes were more densely inhabited and intensively cultivated than would appear possible from the topography of the area. Even the most inaccessible tracts in the slopes has been converted into rich orchards, wherefrom the produce was carried by headloads over steep gradients for several miles. Due to steep gradients little other use, except some jhooming here and there, could be made of this area.

Because of the very topography, this land had its natural connections with Sylhet district now forming part of East Pakistan. From time immemorial the area had a flourishing trade with Sylhet district. It was a two-way traffic. The cash crops found eager buyers in the people of Sylhet, from whom in turn the people in the border area obtained supplies of rice, fish, vegetables and other necessities of daily life. Thus in proportion days the area enjoyed a very prosperous and settled economy. The rich buildings in the border area villages which are now lingering away, bear eloquent testimony to the past prosperity of the border economy.

With the partition of the country in 1947, trade with the plains of Sylhet, now forming part of East Pakistan, was restricted. As a result the whole economy of this region was completely shattered and the countryside which once hummed with activity and abundance was over-shadowed with unemployment, poverty and despair. All the cash crops the mainstay of the border people lost the market in East Pakistan. For want of communication facilities the produce could not be

4.3 **Marketing.**—The Khasis and Jaintias are market minded people. Rarely they sell their produce at the farm site. They have established markets at all vantage points of the district to which they carry over miles their produce on headload for sale. On market days it is a treat to see a stream of people with headloads coming to the market up and down hills from miles away. 442 443 [482]

Markets are held usually twice in every eight days of which one is a 'Barabazar' day which is held on every eighth day and the other is a 'Chota Bazar' day which is held two days ahead of the Barabazar day. The following table shows the marketing facilities available to the rural people in the sample villages.

Table B-7 below shows the number of markets classified according to distances from the selected villages served by them and charge per maund for transport of produces from the village to these markets. 442 443 465 489

CHAPTER—X

Summary of main findings

10.1. Twenty-eight villages were selected for the purpose of the survey. Out of these 18 villages selected, 10 from Border area and 8 from Project area were selected purposively while the remaining 10 were selected at random from the entire district which is referred hereafter as general area.

Migrant from big villages was rare but some migration was reported in respect of small villages.

Occurrence of Malaria, influenza and dysentery is a regular phenomenon in the area. Medical facilities were not found satisfactory and as much as 78 per cent of the villages have no dispensary within a radius of 10 miles. In regard to education, the facilities cannot also be said to be satisfactory for more than 60 per cent of the villages have a lower Primary School. Transport facilities were not satisfactory and as much as 56 per cent of the villages still depend upon primitive mode of transport, namely head load. Correlated with outmoded fair of transport, is the prevalence of unduly high cost of transport.

10.2. The number of the families covered by the survey was 1006 in the Border area, and 942 in the Project area and 1064 in the General area. The average size of a village in the respective area is 100·6, 80·1 and 106·4 families. In the Border and Project areas females out number males being respectively 1076 and 1062 females per 1,000 males as against 940 females per 1,000 males in the general area. Literacy was high as 34 per cent in the border area and 31 per cent in the Project area but as low as 17 per cent in the general area. In all the areas literacy among females is very low.

The working population (earners and earning dependents) is as high as 53 per cent in the Border area, 54 per cent in the Project area and 60 per cent in the general area. While there were no cases of unemployment in the Project or General areas, 18 persons were reported unemployed from border area.

10.3. 1 per cent of the families in Border area are wholly agricultural, 35 per cent partly agricultural and 64 per cent independent agriculture. The corresponding figures for the Project area are 63, 34 and 3 per cent respectively while for the General area they are 98 per cent, 29 per cent and 1 per cent respectively.

Predominantly agricultural families constitute 67, 98 and 80 per cent of the families in Border, Project and General areas respectively.

10.4. 31 per cent of the families in Border area, 29 per cent in Project area and 10 per cent in General area were absolutely without any land while 25 per cent, 31 per cent and 24 per cent of the families in the respective areas possessed small holding ranging from 0·24 to 2·50 acres representing 11,24 and 30 per cent of the total holding area in the respective areas. 34 per cent of the families in Border and Project areas and 41 in General area possessed medium sized holding (3 to less than 10 acres)

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

211 which a figure, evidently of a Hindu god, has been carved, without
171 doubt after the erection of the stone. Here we have a striking parallel case to the painted and carved menhir near Tregastel in Brittany, upon which has been carved the representation of a crucifix. There are also some carved stones near Nartiang (said to represent two women) called *mouthaudar brisw*.

211 The Khasis say that these great stones were brought
• 483 sometimes from considerable distances. After being hewn, the stones were laid on a large, wooden trolley and dragged
283 across country by means of ropes of cane, of which plenty can be had from the Wár country on the southern side of the district, and then placed in position by means of ropes and levers. It seems little short of marvellous that these stones, which sometimes weighed many tons, were placed in position by such primitive means, especially when we consider the great trouble there was to re-erect one of the fallen stones at Stonehenge lately. Nowadays only comparatively small stones are erected, which are generally hewn and erected on the spot, so that there is no necessity for any conveyance.

000 In conclusion, it may be remarked that the subject of the Khasi monoliths is in reality a large one, on which a great deal could be written, but owing to considerations of space it has been found necessary to compress the account within its present limits.

FESTIVITIES, DOMESTIC AND TRIBAL.

536 Dancing forms the principal part of all the Khasi festivities,
776 and is an important adjunct of some of their religious
776 ceremonies. One of the greatest festivals in the Khasi Hills is
789 the Nongkrem dance; it may be said to be as important
782 an event to the Khasis as the *Bah diang-bdam* festivities are to the Syntengs.

The Nongkrem dance is really part of what is known as the *pomblang* or goat-killing ceremony, performed by the Siem of Khyrim (or Nongkrem) with the aid of his *sob-bdi* (high priest) and the various *lyngdoh* (or priests) to Ka Blei Synshar (the ruling goddess), that the crops may prosper and that there may

triumphal procession with the slain beast through the home village. 224

A litter is prepared outside of the village of firm bamboo and decorated with palm leaves and other tree branches. In the middle of the litter a strong frame of bamboo is set up so that the spoil of the hunt (gazelle, antelope, bear, tiger, leopard, etc.) is placed on it belly down. The feet hang down stretched out. The head is held high by a forked branch, and a bunch of grass is placed in the animal's open mouth. The slain animal thus has an appearance of being alive. Arrow and bow are placed on the bier to the left and right of the animal. If the animal has been killed by a bullet, the Khasi carry the guns in their hands; if it was hit by an arrow, the first arrow which wounded it is placed in front on the bier before the animal. Then eight men lift the decorated bier with the slain animal on their shoulders and they all go towards the village with great ceremony. Blank shots announce the approach of the triumphal procession. The Khasi come from all sides. The hunters are congratulated, and all rejoice in the booty. Everybody watches the parade with pleasure. Some bring fresh rice brandy in bamboo pipes as thick as an arm; others bring betel nuts and water pipes. This as well as other refreshments are offered the hunters. The crowd surges around the bier, and after the slain animal has been thoroughly discussed, the procession begins. 224 224 483 224

The village boys run noisily ahead. Beaters and hunters follow. Then comes the bier carried by eight men. To the left and right go the women and girls of the village, swinging branches and bunches of leaves. Shouts of joy resound. Several hundred people

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

764 I never saw the Khasis engaged in raising a stone into the
211 upright position, but I saw the spars which had formed a sort of
cradle on which the stones forming the monument erected by
[453] the Nongtariang clan previously alluded to had been dragged from
the spot where they had been quarried. They consisted of strong
curved limbs of trees roughly smoothed and rounded, and would
present a very small surface to friction. These stones had been
taken from the side of a hill near, and had apparently been
wedged out of the face of a step in the exposed sand-stone strata.

It may be as well that I should here give some account of the funeral rites of the Khasis, which will show there is no connection between them and the monuments I have been describing, and with which the other stone erections have no doubt been often confounded. In their funeral rites there is much that is wonderfully strange, and to those unacquainted with their
771 superstitions, appears unmeaning. There can be no doubt but
769 the Khasis have a very strong belief in a future state, and to say
778 that they have no religion, as has been stated by some writers, is erroneous. True, they have no temples for either worship or idols, the religion of the people is principally a demon worship, and we find the Khasi ever in communion with or in the power, as he supposes, of the spirits of those who have gone before him. While, added to these spirits of their ancestors are numberless demons, male and female, ever ready, if not propitiated, to bring evil upon himself or his undertakings, and whose power even extends over the spirits of the dead. Every dark shady wood, every stream, every conspicuous hill has its presiding demon, which in many instances gives the name to the site. Thus, the hill of Lárk, in North Jaintia, beyond Nongjinghi, is the abode of a one-legged demon, whom to see is death, but who was occasionally heard in the dense forest that clothed the northern steep face of the mountain, so said the credulous villagers of Nongtáng.

764 The dead are burnt on a funeral pyre, the logs of which are arranged very regularly, and the body lies in a sort of bed formed by them.

The calcined bones and ashes are collected and placed in an earthen vessel (small "ghara"), and are generally buried in some adjacent spot, a stone being placed over the vase for security; they do not, however, remain permanently in this place. Every family or clan has a separate receptacle for these remains, constructed in several ways, but always covered with a heavy slab of stone: these receptacles are called "Mao-bah," the great stone "Mao-shiing," a bone depository—lit., the "bone stone."

M. Schlagintweit has fallen into an error regarding the dolmen-shaped structures, and was not aware that this form is so

10:Clarke U-3 (no date)1874 AR7 Khasi AR7

316 were all found within 200 yards of where they now stand, as may be inferred from the straystone at about that distance from Stonehenge and not made use of: the small stones were probably brought a considerable distance from the greensand area in the north of the county.

316 8. In the setting up of these monuments the Khasis at the
483 present day use only the simplest and most direct mechanical means. For transporting a big stone wooden rollers are placed beneath it and the stone is then drawn by a large number of men harnessed to it by rattan ropes. To set one of the slabs upright, one end is slipped into a hole dug 1-3 feet in the ground, while the other end is tugged by similar ropes. For putting one stone upon another, as in a horizontal slab monument, it is drawn up a sloping stage of bamboo, but if the slab be of great weight, a slope of earth must be constructed, up which it may be pulled. These are the present Khasi methods, and it is, of course, highly probable that similar resources were employed in ancient times. I add a more particular account of some of the larger monuments.

211 9. The monument on the Government main road, about six miles north of Cherra, not fly from the village of Lirinow, stands on sheets of Cherra sandstone, out of which the slabs were cut. The tallest stones were about fifteen feet out of the ground. The five stones on the left-hand side (west) of the road were erected when I first visited the hills. The five stones on the right-hand side were erected about four years ago, the family to whom the monument belongs having determined on such an addition. The two portions form one indivisible monument, and exactly correspond, the stones being accurately worked and rounded. The two top-knots are seen in several other monuments, but most, I think, be held proof always of a very late date for their erection. At the Mawmluh
[531] monument a large rosette is carved, on the face of the middle of the big central upright slab, which is also I presume modern work.

10. The monument at Mamloo village. This is, perhaps, the monument in all the hills which exhibits the largest slabs of Cherra sandstone. It stands on sheets of the same rock and there can be little doubt that the slabs were cut on the spot. It is of the (less usual) binary type.

11. The monuments at Rambrai in the west of Khasi-land. These consist of numerous horizontal and vertical slabs of no great size, the upright slabs being 4-8 feet out of the ground, but remarkable for their arrangement on a long open slope outside the village. The monuments stand all close together, collected as in a churchyard, so that it is not easy to expatiate

The Kyrli (Kyrli).

539 133 484 782

The Kyrli river rises in the "Block Mountains,"† and flows northwards into the Brahmaputra. It is the boundary between the country of the Syntengs and that of the Hadems.‡ Any traveller who wishes to cross this river must leave behind him the rice which he has taken for his journey, and any other food that he may have taken with him. If he does not do so, even if he crosses the river at an unforbidden point, he is liable to offer a sacrifice to the Kyrli goddess. The people offer to her three fowls and three goats outside the village, i.e. one to the goddess herself, and the other two to her sons, U Shyngkram and U Jali; and five fowls, that

* Both rivers, Umngot and Umiew, or Umiam, have their sources in or close to the Shillong Peak. The word "Rupatylli" signifies in Khasi a solid silver necklace of a peculiar shape. In order to appreciate this pretty tale thoroughly, the reader ought to view the river "Rupatylli" from the heights of Laitkynsew, or Mahadeo, whence it is to be seen glittering in the sun like a veritable rupatylli or silver necklace.

† These mountains are the high hills which lie to the east of the Jowai Sub-Division, and which form part of the boundary line between the Khasi and Jaintia Hills District and North Cachar.

‡ The word Hadem is possibly a corruption of "Hidimba," the old name for North Cachar.

they may all three feast together; this is in the case of one transgression only. But in the case of a man who has committed more than one, it is not possible to say how many goats and fowls must be sacrificed, because the river often demands offerings on account of a man's parents or relatives having crossed the river at some time or other.

From the time of the old Siem to that of U Ram Singh Siem, they used to sacrifice to this great goddess two persons during the months of November and December at the time of offering a sacrifice at Jaintiapur. After a ceremony performed by the Brahmins at Jaintiapur, the victims are led to the Mawshai (Shangpung) market, where they are allowed to take and eat anything they like. After that they conduct them to Sumer; but some say that the stone on which the victims are beheaded is situated below the village of Ka Iew Kai, near a stream which falls into the Kupli, and where there is a maw-lynthei (flat table-stone) close to that sacred river.

They place the victims on that stone, where the executioner beheads them with a terrible sword. After that they throw the dead bodies and their heads into the river. Even in the days of U Markhain (U Raj Indra Singh) "who was our contemporary," they have ceased to do so out of fear of the East India Company. The victims are known by the name of "Maghs Khara."

At that time all the people of the territory of the twelve dolois were in a great state of sgut shi khiin shi kynin, kata ka long baba long tang kawei ka lait, hinrei baba ka long kaiba shong ka lait u briew lai-lai, ngam tip ka'n long kaino biang kaino war namar baba dei ka'n wan pain ka jingkhin namar ka la khin ia ka na khlah lane na kyjat da u kyllu u kypa kano-kano ka ing lane kano-kano ka tur. How Do the People Accept These Facts?

a) The Fear among the People

/172 /176 A great fear of these murderers who are in the service of the thlen permeates the whole life of the Khasi; this feeling is still especially strong in the kingdoms of Cherra, Nylliem, and Nongkrem. Naturally they guard themselves well from people who are supposed to be in possession of a devil snake and they often do not even dare to speak their names out loud for fear that misfortune could befall them. Many of them are certainly known by the people; others are just guessed at. We tried very hard to get a photograph of such people who are considered to be thlen owners; but we met only with complete refusal from them. Their bad consciences probably made them fearful. I was able to photograph the house of a woman thlen worshipper in Mawsrai, several [12] miles away from Cherra. In contrast to most of the Khasi huts, indications of wealth were evident on the outside, since the [p18] hut was covered with tin. In spite of all my pleas the woman could not be prevailed upon to have herself photographed. Such an idea frightened her so that she cried out loud: "O, we are investigated so much!"

/172 /174 At night a Khasi does not readily trust himself alone outside of his hut. If he is overtaken by darkness on the way home, he may be seen hurrying towards his home, singing or calling in a loud voice from time to time to give himself courage. A single man, even if he does not have to go far from his hut to work is not likely to go without his big knife -- ka wait -- under his arm to protect himself against all possible attacks. The people usually go together (in groups)

682 on the way to or from more distant markets.
684 When they go to the even bigger markets which are several days' journey away, they only go to the markets where they have good friends along the way, where they can spend the night. Even the missionary has to endure this general feeling of fear. For example, if he has to send something from one place to another which one man could easily carry; or if he is on a journey when he might like to send on his small amount of luggage, his laundry, and food. Even if the place is only a day distant, it is not possible for him to hire one man for such an errand. There is nothing for him to do other than to hire two porters and naturally also to pay them, or to wait until a group of market people are going along the same way, to whom a single man can attach himself. If you criticize the people for the foolishness of their behavior or the inconvenience it causes, their simple answer is: "I am afraid of the nongshon noh" (killers).

682 On the other hand the people defend themselves
776 against such criminals. According to ancient Khasi justice, the killing of such a nongshoh noh is not considered murder and is not punished by death. Whoever has killed a nonshoh noh does not need to do more than he who kills a robber, namely to give 5 rupees (7 gold marks) and a pig to the S'iem (king). In the kingdom of Nongkrem the official lyngdoh has the right to confiscate all the property of those persons who are convicted for harboring an evil spirit — jingbih — in their house. The lyngdohs can keep the objects of value for themselves, while the house, including contents, is burned down. At the same time the people take justice into their own hands. In the year 1909 one of these murderers in the service of the devil snake was caught in the act in Nongkrem. Without more ado his nose was cut off and he was let go with the mark of Cain.

[703]

The Market Life of the Khasi
445 (with ten original photographs by the author)
by P.F. Stegmiller, S.V.D., Munich

[101] The mountains in the northeast corner of India which lie between the valleys of the Brahmaputra and the Barak are inhabited by a [161] tribe, the Khasi, numbering about 200,000 people. Although they rarely cross the borders of their homeland and live almost cut off from their [484] neighbors, they have an active traffic amongst themselves and travel a lot. This traveling is determined by the very distinct market life of the Khasi. It is truly the pulse beat of the people. The rest of their homelife, their activities, and their private, public, and religious life. (1) Time is divided accord-

1. P.F. Stegmiller, "Aus dem religiösen Leben der Khasi" [The Religion Life of the Khasi], Anthropos, 1921-1922, pp. 483 ff.

ing to the market; the market replaces the daily newspaper and the information service; the market unites the individual villages; the market offers a living to many and for many has become a source of wealth.

445 How much the Khasi depend on a thriving
782 market may be seen in their prayers which are spoken every year at the great state sacrifices in honor of the god Shillong by the sacrificer (lyngdoh) presenting the service: "O god, Shillong! Thou who receivest this prayer, this sacrifice of goats, of fowl, of kpu and rynai (a kind of bread of rice flour or cornmeal with pounded sugar), of utensils used in the preparation, as thou has given them to the royal

must also be sought out and hired at the markets. 983

3. The Customs of the Market

a) The Preparation for Market. The villagers of both sexes normally carry trade goods to the market themselves. They form smaller or larger groups and travel together. The women are carried on trade boats. The burden is packed according to its bulk or content. Larger objects, such as bamboo poles, beams, sugar cane, grass, and mats are carried without any covering by means of a forehead band plaited of reed grass (a strip). Smaller items, such as salt or potatoes, are packed in sacks; others such as betel nuts, pepper leaves, fruit, vegetables, etc. are carried in baskets made of bamboo. The baskets are either pointed baskets which are round at the top or square baskets, which narrow to a point at the bottom but still are four feet long in size. The latter baskets are usually made with a cover, which, like the basket itself, is plaited and almost waterproof, so that flour or salt can be transported in time even during the rainy season. A round or oval object shaped like a shield, which in case of rain is used as an umbrella (see text) and which is plaited out of bamboo, is inserted between the back and the burden (jingkit). On the one hand this object has the purpose of ameliorating the pressure of the burden and on the other hand it is pulled out in rainy weather to serve as an umbrella when it is held up against the rain by hand.

As regards to the weight which the chief carry to market, the men carry about 100 and more pounds while the women seldom

[924] 985 986 987 988 989 990 991 992 993

[182] laden themselves with more than 80 to 85 pounds.

[174] Many Khasi have to start during the afternoon because of the great distance to the market. They spend the night with acquaintances. In the dark [?] they march by torch light. The torches consist of several igra, i.e., very thin bamboo tube, saturated with petroleum and lighted. -or a large bamboo tube is filled with cloth that has been saturated in petroleum. The burning torches are swung in circles while the Khasi march so that only a glow is provided, but this prevents the torches from going out. The glow is quite sufficient for giving enough light for the road (foot path).

[176] Betel nuts are chewed (a) all the way and

(a) The length of the road is also measured in "betel nuts."

water pipes are smoked during the route.

[181] [182] b) The Market Place. It is not possible to talk about a definite place where the Khasi usually hold the market. This varies considerably according to the region. First of all the place chosen for the market lies outside the village. By preference they hold their markets on high ground or some such safe place. A place that has once been chosen remains the [178] market place for that particular village. The market place is often found very close to the memorial stones, just as if the spirits of the ancestors honored there should offer aid and protection to the visitors to the market. On the southern slopes of the Khasi Mountains the market is often held on the bank of a river, for the reason that the Khasi come to these markets in boats. The market place in which we is quite singular. Also the one in

Quarrels and fights are exceptional. It is most natural to the Khasi not to disturb the peace of the markets, since the markets stand under the protection of the goddess. (Cf. The prayer in the introduction to this article.)[8] Also the memorial stones, in the shadow of which the markets are so often held, may exert some influence on the visitors to the markets, since the Khasi imagine themselves to be protected by the spirits of their ancestors and believe that any kind of disorder at the market would be avenged by these spirits.

Nearly all the men at the market are armed. The reason for this lies in the fact that the people are thus protected on the way to the market and are safe from the attacks of the "killers" (nongshonnoh), i.e., those who get out to murder people in order to dedicate their victims to the devil snake. Therefore the visitors to the market never go alone but always in groups. The men are armed with the ka wait (a chopping knife), with which they know how to defend themselves very well.

4. The Law of the Market

a) The Market Toll. All sellers who attend the market must pay a contribution on entering the market place. Only those inhabitants of the village or district in which the market is held are excepted. This market tax is paid partly in money and partly in products. In many villages it is paid only in cash. The amount of the tax laid is 2 or 3 paises, often even one anna (3--6--10 pfennigs, German peace evaluation). Only betel nuts and pepper leaves are preferred to money. In many villages everything is paid in produce, insofar as foodstuffs are concerned. The market tax collector reaches

on a historical plan, different from that of the Khasi groups, the former having been ruled by the powerful, but somewhat Hinduized dynasty of the Jaintia Raja until the Jaintia Wars of the British, the latter by small independent chiefs. Yet Jaintia social organization appears on the whole to preserve the matrilineal social structure closer and to be less influenced by photo-conditions, than that of the Khasi, though a few features of Hindusanized religious observances and also some traces of social admixture are found in the immediate vicinity of Jowai, the former summer residence of the Jaintia Raja. Younger in death, than this influence, was that exerted by the British and non-Assamese Indians in the provincial capital Shillong since 1866. Methods of agriculture and other aspects of material civilization differ but little in the Jaintia and Khasi plateau-areas.

The same cannot be said of both : the War-Khasi and War-Jaintia. Linguistically their affiliations are with the Khasi or Jaintia respectively, as the plateau-areas. Economically, however, both War-groups form a separate pan-leaf cultivating unit in the little accessible steep southern slopes of the Khasi and Jaintia Hill massif. Both War-groups live in the environment of bamboo-roofed thatch and bamboo, sharply differentiated from the well-known plateau with its pastoral winds and the forests, if solitary beauty of its highland heights, which forms the background of both the Khasi and Jaintia plateau-groups.

The age of the War-Khasi and Jaintias, as one independent community, — and two half-independent historical linguistic entities, is an intricate problem. The two War-groups subsist on pan-leaf cultivation on a steep steep, grown in the thick tree-gardens as creepers, not on food-cultivation, as do the plateau-groups, because there is insufficient space on the steep slopes, for vegetable gardens or fields. The pan-leaf cultivation therefore depend on food, purchased from outside. The slopes seem to have been established until not long ago. Yet pan-leaf chewing is such an integral part of Khasi life, that until quite recently, and occasionally even now, a distance between two places is not measured by the number of hours needed for walking, but by the number of betelnut and pan-leaf packages, consumed on the way. Also the common benediction among Khasi expresses the wish that as and as many out pan in the Garden of God. Yet pan-cultivation and the settlements of the War-people on pan-leaf cultivation in the southern slopes seem comparatively young. Pan-cultivation on the plateau is impossible. It is therefore possible that pan was for a long time only a much valued import article from the plains, bartered against Khasi ore and iron tools, though it is not an export article from the War-country, brought to the markets of the plains, by both War-Khasi and War-Jaintia women and men.

According to a traditional lyrical which I were among the Nongkhlaw clan of Mil Nongkhlaw village, the ancestors of the present War people were on the plateau at a time when no pan-cultivation was going on in the slopes and some of the present big estates of pan-tree gardens was yet held by their present (War-) owners. A not distant ancestor of a Nongkhlaw clan-member who about ten to three generations ago with the deity to U Syang was at

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

72 2 River goddess. Many of the Syntengs regard the River Kopili
72 to this day with superstitious reverence. Some of these people
123 will not cross the river at all; others can do so after having performed a sacrifice with grain and fowls. Any traveller who wishes to cross the river must leave behind him the rice which he has taken for the journey, and any other food supplies he may have brought with him. This superstition often results in serious inconvenience to travellers between the Jaintia Hills and North Cachar, unless they have arranged for another batch of coolies to meet them on the Cachar side of the River Kopili, for the Syntengs coolies throw down their loads at the river side, and nothing will induce them to cross the river. The Kopili is propitiated by pujas in many parts of the Jaintia Hills, and at Nartiang a tank where sacrifices are regularly performed is called Ka U-ubru Kopili.

[194]

1:Garden E-4, 5 (no date) 1907 AR7 Khasi AR7

(b) *Mawbynna*, or memorial, which are stones erected to commemorate a parent or some other near relation.

(c) *Mew-ombai*, which are put up to mark the position of tanks or *umkoi*, the water of which is supposed to cleanse the ashes and bones of those who have died unnatural deaths.

(d) *Mew-shnaphait*, or flat table-stones, often accompanied by vertical stones, which are placed in the market-places and by the side of roads to serve as seats for weary travellers. Taking the above main divisions aviation, *mawlpati*, or *mawbjat*, may be described as follows. These generally consist of three upright stones, the tallest being in the centre, and a flat table-stone being placed in front. There are, however, some cases which erect more than three upright stones, as *ithwlpati*, or *mawbjat*. As already stated, the ancients used to erect these stones, *mawlpati* (the stone of the way), or *mawbjat* (the stone of the leg) at each place at which they halted for the night on their way to deposit the bones of their deceased maternal relations in the *ulu wynthiw*, or *mawlah*. The stones are called *mawbjat*, or stones of the leg, because it is supposed that the spirits of the departed sit and rest their limbs on the flat table-stones. The upright stones are not as a rule more than 3 or 4 ft. high, and are not massive like the great *mawbynna*, or memorial stones. They are to be found in great numbers all along the roads or paths which lead to the *ulu wynthiw*. These stones, unlike the *mawbynna*, have no names.

(e) *Mawbynna*, or memorial, are erected to commemorate deceased parents or deceased ancestors, and consist of 3, 5, 7, 9, or even, in an exceptional case, 11, upright stones with flat table-stones in front. The upright stones are called *mew-ryngong*, or male stones, and the flat table-stones *mew-kyrthei*, or female stones. Turning to the plate of the Laitkor stones, it will be observed that there are nine upright stones, and one large flat table-stone in front. Counting from right to left, stone No. 5 is called *u mew kui*, or the maternal uncle's stone, and the stones to the right and left of it, *ki mew ryngong ki paw*, i.e. the stones of the maternal brothers and nephews. The table-stone is called *ka Kyrkhi Synnai*, or *ka Kyrkhi Synnoh*, literally the grandmother of the root, or the old grandmother, in contradistinction to *ka*

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

and that the latter were originally used by both of them for sacrificing human victims. Sometimes, immediately on either side of the *mawbri*, or large central stone, there are two much smaller stones called *mawkhing*, or the stone of the drum, and *mawkait*, the stone of the plantain; the drum being used in all religious ceremonies by the Khasis, and the plantain relating to their custom of feeding young children on plantains. The *mawsiem* must be described separately from the *mawbynna*, because they differ from them in an important particular, i.e. that the former may be erected to commemorate the father, while the latter are set up to perpetuate the memory of the ancestors on the female side of the family. *Mawsiem* consist of three upright stones and one flat table-stone in front. The large central stone is called a *maw lhawkong*, or the stone of the father, and the upright stones on either side are meant to represent the father's brothers or nephews. The flat table-stone is *ka lyndoi*, i.e. the grandmother of the father, not the first grandmother of the clan, as is the case of the *mawbynna*.

(c) The *maw sodai* have already been described. They are erected to mark the sites of purificatory tanks, which have been dug so that the remains of deceased persons may be cleansed from the impurities attending an unnatural death, and to counteract the adverse influence upon the sites of *Ka Tyrsi*, or the goddess of death. These stones are sometimes called *mawtyrsi*.

(d) *Maw-shnglhait*, or stones upon which every traveller sits, are to be found alongside all the principal lines of communication in the district. It may serve as an example of these stones to describe the very interesting collection of stones at Nartiang *hât*, or market. A reference is invited to the plate which gives a representation of some of the Nartiang stones. The great height of the upright stone will at once be seen; it is 27 ft. in height and 2½ ft. thick. This stone is the largest erect stone in the Khasi and Jaintia Hills at the present day, and is a very fine specimen. The upright stones and the flat table-stones at Nartiang are called "*ki maw jong Siem*." There is no separate designation for each of them. These stones are popularly supposed to have been erected long ago by two men,

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

U Lah Lakor and U Mer Phalyngki, to commemorate the establishment of Nartiang market, which is called Iew Mawlong. "Lakor" is the Syntengu equivalent of the Khasi *lyngdoh*, or prime minister. "Mer" is a Syntengu word meaning a giant, the idea amongst the people being that in the olden days there were giants in the land who performed marvellous feats of strength, e.g. the erection of the megalithic remains at Nartiang and elsewhere. A puja is performed upon a great flat stone by the *dolui* and his officers in honour of the founders of the market, but no animals are sacrificed, rice and *opoi* (balls of rice) only being offered. In the days of the Jaintia kings only the Raja could sit upon the great flat stone; hence the name *maw jong Siem* (or Siem's stone). The great upright stone is said to have been brought by U Lah Lakor and a great number of people from Syriang, a place near Nartiang. With reference to the Nartiang stones I would refer to my theory, formulated above, that they were originally connected with human sacrifices. It may be mentioned that at Nartiang there is a bridge constructed out of a single stone, which is also said to have been set in position by U Lah Lakor. Near Sohtinga there is a group of stones, said to have been originally thirty in number, together with *maw shongthait*, or stones to rest the weary, which were erected to the memory of a woman, Ka Kempatwat, who in generations past is alleged to have had no less than *thirty* husbands. The lady is not supposed to have been polyandrous, nor sinful, but to have divorced one husband after another. As she probably established a record for divorce her descendants afterwards commemorated her in the manner described. There is another very large stone at Nongkseh, which unfortunately fell to the ground in the great earthquake-shock of 1897. This stone must have stood over 20 ft. above the ground. It is called a *mawbri Siem*, the stone of the Siem's maternal uncle, and it used to form the central stone, or *mawbri*, of a line of stones. These stones belong to the clan of the Siems of Nongkseh, which furnishes the *mahbri*, or head sacrificer, of the Siems of Khyrim. The stones at Rewmai, which in ancient days used to be the headquarters of a Siem, are some of the best carved in the hills. At Mawmyngong, in the Jaintia sub-division, is a stone upon

29: Hunter G-4 (no date) 1897 AR 7 Khasi AR 7

supply. As the District depends so largely for its supply of rice upon Sylhet and Kamrup, the rates of the markets in those places exercise a greater influence on the rates in the Hills than any failure of the local harvest. In the year 1898 the price of common rice is said to have risen as high as 8 seers for the rupee, or 18½ per cent., in consequence of the failure of the crops in the plains.

Roads and Means of Communication.—The following are the eight principal lines of road in the Khasi and Jaintia Hills:—(1) Road from Shillong to Cherrapunji, in Khasi. This road has recently (1897) been opened for wheeled traffic throughout its entire length. The Deputy-Commissioner's Report for 1896-97 states that the number of passengers passing up and down may be estimated at about five or ten every month, and the number of carts already used at about 50. The mail dâk brings coolies up to Shillong from Cherrapunji in two days by a comfortable and easy carriage service, while for native travellers or chargers by bullock cart is available. At Cherrapunji there is a good dâk bungalow in charge of a khansamah, where the usual accommodation provided in a hotel is to be found. The stages to Shillong are as follows:—(a) Cherrapunji to Sumdah, 17 miles. The road is good throughout. There is a dâk bungalow in charge of a chaukidar at Sumdah, where grain and rice are procurable. (b) Sumdah to Nongpoh, 14½ miles. The road is hilly throughout, but good. At Nongpoh, which is at an elevation of 1,500 feet, there is a dâk bungalow in charge of a khansamah, from whom tea, liquors, and biscuits, etc. can be obtained. The dâk bungalow is furnished with bedding, linen, etc. Coolies and rice can be purchased in the bazar. (c) Nongpoh to Umsning, 18½ miles. At Umsning, elevation 1,500 feet, there is a dâk bungalow in charge of a chaukidar. Supplies or coolies are not procurable, but sometimes grain and rice can be purchased. (d) Umsning to Umjata, 14½ miles. At Umjata there is a Public Works Department rest-house in charge of a chaukidar. Supplies or coolies are not procurable. (e) Umjata to Shillong, 14½ miles, of which 4½ are a metalled macadam. At Shillong there are dâk bungalows in the Artillery Lines, containing four separate rooms. A khansamah is in attendance, and the rooms are completely furnished with bedding, linen, etc. This entire road, which has a total length of 67 miles, is so perfect a hill road as could be seen in any country, and a model of engineering skill. (f) Road running from Cherrapunji across the Hills, via Sangsiar, Mawkyrwat, Cherrapunji

15: Nakane K-5 (1955-1956) 1967 AR7 Khasi AR7

1. Setting and Economic Background of Sohkynduh and Kongton

Sohkynduh and Kongton are villages of the Kuhadhiong,[1] one of the areas under the Cherra Chief. The Kuhadhiong is situated on the southern slope of the Khasi Hills, in what is called War country. These two villages are situated at the furthest point from both Shella, the centre bordered by the plain, and Cherrapunjee, the seat of the Cherra Chief, one of the centres of the upland Khasi Hills. The people at Cherrapunjee say that these villages are one of the most backward parts of the Khasi Hills. They correspond to Rombagiri in the Garo Hills, as they lie in the innermost parts and more traditional economic and social settings have been preserved there than in other villages. These are also the reasons why I selected these villages as my field.

It is nine miles to Sohkynduh from Cherrapunjee, crossing two deep valleys towards the east. Kongton is located at the heart of the mountain ranges, ten miles from Cherrapunjee, towards the north-east. It is about twelve miles from Sohkynduh to Kongton, and the way leads through one of the most difficult passes, where even villagers seldom travel. In December, 1955, Sohkynduh was a community of 48 households (List 6), and Kongton of 62 households (List 9). The settlements of both villages are clustered in the southern depressions of a mountain, not far from the summit, a typical location of Khasi villages. Sohkynduh has poor soil, covered with plenty of pieces of stones. The yield therefore is very poor. On the other hand, Kongton, a much older village, enjoys fertile soil, and is one of the most prosperous communities in the Kuhadhiong.

The major economy of both villages is shifting cultivation. We have already seen, in the chapters on the Garo, the fundamental technique of "jhuming cultivation." The differences between the Garo and the Khasi shifting cultivation are to be found in two aspects: one in the nature of the crops and the other in the type of landownership. In this area, the main crop is millet, while that of the Garo is rice. Besides the shifting cultivation, the Khasi have pan-leaf gardens and sometimes pineapple gardens, though on a small scale and not in every household. The most important feature of Khasi shifting cultivation is the development of private ownership. In the tribal areas in Assam, such private ownership of the jhum field is quite un-

1. Kuhadhiong is the name of a group of villages. Its literal meaning is "twelve villages," and it comprises the following villages: Sohkynduh, Kymmai, Shelkamin, Shwelkut, Shwemang, Kongton, Shwelang, Kodhaiwhat, Pilai, Tmaiton, Sohpyrung, and Dongkyw. [Khasi spelling follows the customary usage in Cherra State.]

15: Nakane E-5 (1955-1956) 1957 AR? Khasi AR?

APPENDIX

SOME ADDITIONAL INFORMATION FROM SHELLA AND JAITINGA

Shella

Shella is situated on the lowest of the southern slopes of the Khasi Hills, bordering on the Sylhet plain of East Pakistan. For centuries the people of Shella maintained close trading connections with the people of the plain, so that they have been much influenced by the Hindu. They have been to some extent divorced economically and culturally from their own people who live in the uplands and on higher part of the slopes. Actually, this is a natural result of their geographical location. From Cherrapunjee, the southern edge of the upland Khasi Hills, only a narrow footpath goes down to Shella. The altitude of Cherrapunjee is about 3,000 feet and of Shella from 300 to 1,000 feet, and the distance between them is 8 miles. The path descends very steeply and is full of hard stones. This difficulty of communication is also why the Hindu influence did not penetrate the upland Khasi, as in the case of the Jaintia Hills.[1]

This area has a unique political organization which differs from the majority of Khasi states who are traditionally ruled by the members of the Siem class. Shella is organized as a confederation, called 'Shella Confederacy,' and consists of four local villages. The head of the village is called sadbhar, and is elected by the villagers every three years. The number of households of the Shella Confederacy was about 300 in January 1958. The names of the four villages and their sadbhar in 1958 were:

Name of village	*Name of sadbhar*
1. Shella	Dwaish Mohan Roy
2. Shadrish	Dhanpu Roy
3. Nongtrai	Gyan Roy
4. Tyngngar	Jairam Roy

Each village is divided into sections. For instance, Shella village has seven sections: (1) Jaiti, (2) Dhang, (3) Dalia, (4) Jaiman, (5) Nongtrai, (6) Nongsong,

1. However, Shella was the only way out and the main gateway from the Khasi Hills to the plain; it was here that the British first entered the Khasi Hills. They proceeded from Shella to Cherrapunjee and made the latter headquarters of the Khasi Hills in 1833.

(1965:2); J. Barah (1962). **Demography.** According to the 1961 census of India, the United Khasi-Jaintia Hills District contained 321,962 Khasis and 97,932 Syntengs, Pnars, and Jaintias (India [Republic] 1963: 57). These figures, together with those for Khasis enumerated in Cachar (4,000), Mikir and North Cachar Hills (487), Lakhimpur (27), Sibsagar (270), and Darrang (211) districts, and those for Syntengs enumerated in Mikir and North Cachar District (404), yield a total of 398,219 Khasis. **History and cultural relations.** Khasis believe that they had supernatural origin in Khasi Hills (see Gait 1925: 89 for historical evidence, and Roy 1935: 9-3 for myth, but see also Costa 1899, 1900; Gordon 1907: 10-11, and Chatterji 1951: 12). Khasi tradition also states that in early times they moved gradually from east to west, from Jaintia toward Khasi Hills, in the practice of swidden agriculture (Campbell 1947: 97-98). The salient fact of known Khasi history, which begins generally in the mid-eighteenth century A.D. when there already existed the present-day 25 native Khasi chiefdoms, is the distinctive line of development followed by the separate kingdoms of Jaintia. To the north, Jaintia was successively tributary, in part or in whole, to the Kachari kingdom (ca. 1250 A.D.), the Koch kingdom (emerged ca. 1500 A.D.), and the Ahom kingdom (emerged ca. 1750 A.D.) (Shakespear 1914: Map 1). To the south, about 1500 A.D., Jaintia extended its rule over a tract of Sylhet, which was populated by Hindus and Muslims, and saw its kings fall thereafter under Brahman influence. In the early 1800s, Jaintia became involved in the fratricidal strife then prevalent in the ruling family of Manipur. In 1835, after the Jaintia king ignored British warnings not to seize British subjects for human sacrifice, Jaintia was punished by the British annexation of the Jaintia pergunna in Sylhet. The Jaintia king then voluntarily turned over to the British the hills-area of his domain, so that the whole of Jaintia became part of British India and, in 1908, came to be treated as such, although the Jaintias were otherwise allowed to maintain their traditional system of village government. • By contrast, the remaining Khasi states had few formal external relations until British times. Khasis raided and traded in both the Brahmaputra and Sylhet valleys, but were basically turned inward on their own hills, where warfare between villages and between the states was apparently common. Khasis came into indirect relations with the British in 1765, when Sylhet and its markets became part of British India. In the 1770s, engaged-up Khasi raids into Sylhet caused the British to drive up a defensive line of forts along the foothills. Later, it became necessary to place an embargo on Khasi goods sold in the Sylhet markets. In 1827, the British penetrated into western Khasi Hills by negotiating with the Khasi chief of Nongkhlaw Siem to build a road through his territory, linking the capital, Nongpoh, Brahmaputra valley with Calcutta. For thirty decades

20: Hunter G-6 (no date) 1897 AR? Khasi AR?

homicide), to which their own subjects are concerned. All cases of homicide, or matters involving disputes between people belonging to different States, are adjudicated upon by the British officers of the District.

In the British possessions, the principal sources of revenue are rents and royalties derived from mineral workings, such as lime and coal; rents of fisheries; and a house tax, which varies, according to situation and productiveness of the soil, from R. 1 to Rs. 5 or from 4a. to 4r. per house. A land tax is only levied in towns where the Government possesses the actual proprietary right to the soil. Again, in the Khasi States, the British Government, which undertakes the management of the natural products of the country, such as waste lands, coal, lime, etc., receives a half-share of the rents realised from these sources, the other half belonging to the native Chiefs. The other sources of revenue of the Chiefs are market fees, cesses levied occasionally for State purposes, and fines realised in the administration of justice.

Elevenue.—Our first knowledge of the Khasi Hills dates from the time when the East India Company acquired the diwani of Bengal in 1765. The adjoining District of Sylhet was included in that grant; but as the hillmen had never acknowledged any subjection to the Muhammadans, so they still remained absolutely independent of the British power. However, the necessities of commerce, arising from their monopoly of the lime quarries, from which Bengal has drawn its supply from time immemorial, soon attracted European enterprise to the country. As stated in the Appendix to the Statistical Account of Sylhet, the control of the profits of the lime trade formed in early times one of the most valuable advantages attaching to the position of the official in charge of that District. It does not appear that any Europeans had been attracted to reside in the Hills before 1815. In that year the Raja of Nongkhlaw entered into an agreement with certain European British subjects to allow a road to be made across the Hills, to connect the Surma valley with Jaintia Proper. These Europeans took up their residence at Nongkhlaw. Misunderstandings unfortunately arose, and, partly by the connivance of some of their Bengali followers, the growing discontent and apprehension were formed into a flame. On 4th April 1829 the Khiddi was to arise and massacred Lieutenant Bedingfield and Sarkies, together with some others. This led to military operations on the part of the British Government, which

3.3 **Measures so far taken.**—Since 1947, there has been continuous demand from border people for relief and rehabilitation. Government undertook various measures to alleviate their difficulties. Government's attention to border problems has however, not been adequate. The common feeling of border people was that whenever the border problem deteriorated due to some adverse measures adopted by East Pakistan authorities more attention was attracted, on the other hand, when the situation eased comparatively the Government's vigilance also slackened.

The various measures so far adopted by Government in border area, have been fully discussed and commented upon by the Border Rehabilitation Committee. These need no mention here. But a few points emerging from the interviews put forward by the villagers during our investigation are noted below.

On the question of the schemes linked up with the issue of diversification of agriculture in border area, a large section of the border people skilled in the maintenance and operation of orchards are opposed to the idea of a complete switch over from cash crops to food crops in the cultivation of which they have no adequate experience. Moreover, there is the problem of getting adequate land in the vicinity for wet paddy cultivation. Indeed, having lost the market for some of the cash crops, some cultivators are trying to increase cultivation of paddy and other suitable crops on their own initiative whenever suitable land is available. But the problem of getting adequate funds for reclamation and improvement of land has proved to a serious handicap to them. Financial assistance to the needy and willing cultivators for reclamation work and taking up of more minor irrigation projects is very necessary.

As regards Government loans granted to cultivators, people complained that apart from being inadequate they are also untimely. As a result the people, needy as they are, utilise the amount for meeting their day to day consumption expenses.

There have been complaints that various improved seeds supplied by Government are of very inferior quality leading to waste of time and money of the poor people. The Department of Agriculture should not only check the quality of the seeds before issue but should also see that the seed are properly used by inexperienced cultivators who are newly taking up cultivation of these crops.

With the opening up of a few vital P. W. D. Roads transport of border products to Shillong and other places has greatly been facilitated but the problem of transporting from from remote interior to the various local points on P. W. D. roads still remains unsolved. While during worse times these places may be negotiated by a man on foot up and down the very problems, during rainy season these roads become slippery, the arteries are overflooded and it becomes impossible for a man to cross them, thus isolating the villages from each other leading to cessation of trade and all other activities between villages. Properly planned rural relief schemes for construction of feeder roads and bridges linking up these villages, will, apart from giving some works to the people alleviate much of the difficulties of transportation of agricultural produce.

6.1 **Marketing**.—The Khasis and Jaintias are market minded people. Rarely they sell their produce at the farm site. They have established markets at all vantage points of the district to which they carry over miles their produce on headload for sale. On market days it is a treat to see a stream of people with headloads crossing to the market up and down hills from miles away.

Markets are held usually twice in every eight days of which one is a 'Sunshaw' day which is held on every eighth day and the other is a 'Chum Tamu' day which is held two days ahead of the Sunshaw day. The following table shows the marketing facilities available to the rural people in the sample villages.

Table 6.1 below shows the number of markets classified according to distances from the selected villages served by them and charge per maund for transport of produces from the village to these markets.

TABLE 6.1

Charge per maund from village to market	Distance from village to market: 5 miles	Less than 5 miles	5—10 miles	Above 10 miles	Total
(1)	(2)	(3)	(4)	(5)	(6)
Rs. nil. Rs. nil.					
0·00 to less	7	...	...	...	7
0·00 „ 0·05	...	1	...	...	1
0·05 „ 0·10	1	1	...	...	2
0·10 „ 0·15	1	8	1	...	2
0·15 „ 0·20	...	6	7	...	13
0·20 „ 0·25	...	1	9	2	6
0·25 „ 0·30	...	1	...	8	9
0·30 „ 0·35	...	...	...	3	3
Above Rs. 0·35	...	...	...	1	1
Total ...	9	18	17	14	58

No. of villages served by—

1	„market"	18
2	markets	8
3	„	7
4	„	1

The above table shows clearly that the producers have to pay heavy charges when porters are engaged which becomes inevitable particularly when the distance to market is very long or the way to the market is difficult or negotiate. The table shows that out of a total of 15 markets with which the people in the 28 selected villages use to carry on transactions, 10 are situated at a distance of 5 to 10 miles, while 13 are situated more than 10 miles away from the village. Considering the fact that transport is to be done by head-load only, marketing of the agricultural produce is indeed a difficult task. The transport charges to be paid are also high. It is seen from the above table that out of the 15 markets, transport charges to as many as 11 markets work out to be higher than Rs. 2 a maund.

6.9 **Co-operation** - Twelve co-operative societies were met within the selected villages. Out of these as many as 7 were engaged in marketing or trading. These organisations grew up sometime earlier under direct sponsorship of Government but mostly at the initiative of the villagers themselves to meet certain situations. The following statement shows a list of the co-operative societies in the sample villages.

TABLE B-8

Name of village	Name of society	Sponsored by
(1)	(2)	(3)

CHAPTER—X

Summary of main findings

125 10.1. Twenty-eight villages were selected for the purpose of the survey. Out of the 28 villages selected, 10 from Border area and 9 from Project area were selected purposively while the remaining 9 were selected at random from the entire district which is selected hereafter as general area.

166 Migration from big villages was rare but some migration was reported in respect of small villages.

164 Occurrence of Malaria, influenza and dysentery is a regular phenomenon in the area. Medical facilities were not found satisfactory and
293 as much as 78 per cent of the villages have no dispensary within a
871 radius of five miles. In regard to education, the facilities cannot also
• 489 be said to be unsatisfactory for more than 60 per cent of the villages
482 have a Lower Primary School. Transport facilities were not satisfactory and as much as 96 per cent of the villages still depend upon primitive mode of transport, namely head load. Coupled with outmoded form of transport, is the prevalence of unduly high cost of transport.

*162 10.2. The number of the families covered by the survey was 1006
161 in the Border area, and 647 in the Project area and 104 in the General area. The average size of a village in the respective area is 100·6, 80·9 and 10·4 families. In the Border and Project areas females out number males being respectively 1076 and 1062 females per 1,000 males as against 940 females per 1,000 males in the general area.
212 Literacy is as high as 34 per cent in the border area and 31 per cent
[562] in the Project area but as low as 17 per cent in the general area. In all the areas literacy among females is very low.

*162 The working population (earners and earning dependents) is as high
464 as 55 per cent in the Border area, 54 per cent in the Project area and 48 per cent in the general area. While there were no cases of unemployment in the Project and General areas, 18 persons were reported unemployed from border area.

241 10.3. 51 per cent of the families in Border area are wholly agricul-
* 162 tural, 35 per cent partly agricultural and 14 per cent independent of
463 agriculture. The corresponding figures for the Project area are 61, 31 and 8 per cent respectively while for the General area they are 98 per cent, 39 per cent, 1 per cent respectively.

Predominantly agricultural families constitute 67, 90 and 96 per cent of the families in Border, Project and General areas respectively.

*162 10.4. 31 per cent of the families in Border area, 29 per cent in Project
423 area and 10 per cent in General area were absolutely without any land while 25 per cent, 39 per cent and 24 per cent of the families in the respective areas possessed small holding ranging from 0·24 to 2·50 acres representing 11,24 and 26 per cent of the total holding area in the respective areas. 36 per cent of the families in Border and Project areas and 41 in General area possessed medium sized holding (3 to less than 10 acres)

U Lah Lankor and U Mar Phalyngki, to commemorate the establishment of Nartiang market, which is called Iew Mawlong. "Lankor" is the Syntengi equivalent of the Khasi *lyngdoh*, or prime minister. "Mar" is a Syntengi word meaning a giant, the idea amongst the people being that in the olden days there were giants in the land who performed marvellous feats of strength, e.g. the erection of the megalithic remains at Nartiang and elsewhere. A puja is performed upon a great flat stone by the *dolloi* and his officers in honour of the founders of the market, but no animals are sacrificed, rice and *opoi* (balls of rice) only being offered. In the days of the Jaintia kings only the Raja could sit upon the great flat stone; hence the name *mar jong Siem* (or Siem's stone). The great upright stone is said to have been brought by U Lah Lankor and a great number of people from Syriang, a place near Nartiang. With reference to the Nartiang stones I would refer to my theory, formulated above, that they were originally connected with human sacrifices. It may be mentioned that at Nartiang there is a bridge constructed out of a single stone, which is also said to have been set in position by U Lah Lankor. Near Sohtinga there is a group of stones, said to have been originally thirty in number, together with *mawphoi*, or stones to rest the weary, which were erected to the memory of a woman, Ka Kanpatwat, who in generations past is alleged to have had no less than *thirty* husbands. The lady is not supposed to have been polyandrous, nor nine-lived, but to have divorced one husband after another. As she probably established a record for divorce, her descendants afterwards commemorated her in the manner described. There is another very large stone at Nongkseh, which unfortunately fell to the ground in the great earthquake shock of 1897. This stone must have stood over 20 ft. above the ground. It is called a *mawkai Siem*, the stone of the Siem's maternal uncle, and it used to form the central stone, or *mawkai*, of a line of stones. These stones belong to the clan of the *bneng* of Nongkseh, which furnishes the *sokhlei*, or head sacrificer, of the Siems of Khyrim. The stones at Mawmai, which in ancient days used to be the head-quarters of a Siem, are some of the best carved in the hills. At Mawrongjong, in the Jaintia sub-division, is a stone upon

had finished speaking to her, she awoke from her fit of drowsiness and found herself holding a handful of money. On her way home she pondered over what he had said to her, and her heart was full of joy that she had met a god Who had given her so much money, and who had spoken such words to her. She then constructed a bridge over that stream with a single stone, which remains till this day.* When she was about to build her house, it happened that she got married notwithstanding; she gave birth to a blind child, and died shortly afterwards. So the people called the village "Mew-pun-ka-Rytiang," or, when abbreviated, "Mawpunkyrtiang."

The Siem of Malyniang.

The Siem of Malyniang was one of those kings who, people said, was one of the "god-kings." He lived in the village of Madur, which is now in the Maskut township. There arose from the royal family of Malyniang a king whose name was Kyllong Raja. His manner was very peculiar, but he was at the same time both stern and courageous. He made up his mind to conquer the whole of the Syntengg country as well as the territory of the Siem of Shillong, in order to extend his own kingdom of Madur. This Kyllong did not require many followers when he went to war

* This stone bridge, situated on the Thera road about a mile below Cherra, existed up to the Earthquake of 1897, which demolished it. The large slab of stone which formed the roadway of the bridge, is, however, still to be seen lying in the bed of the stream.

III Class U-3 (no date)1576 AD? Khasi AD?

In these hills a few monuments on the binary type may even be found in which there are two equal upright slabs in the middle, and the other stones placed symmetrically on each side of them.

7. There are three kinds of rock employed by the Khasis for stone monuments, viz.:—

a. The Cherra sandstones.
b. The Shillong sandstones.
c. The granite.

Small stones are conveyed considerable distances from the place of manufacture before they are set up—large stones are not—hence the material of the monuments is determined everywhere geologically.

a. The Cherra sandstones are tertiary and continuous rocks spread along the southern edge of the plateau and producing the ledges which mark its abrupt termination. In the great thickness of these sandstones are many beds in which the rock occurs in large sheets with very few joints, and well-adapted for working out large slabs therefrom. The sandstone is generally very hard, but not so hard but that the Khasis can work it with their own native-made iron tools.

There is a quarry, now in full work, about half-a-mile out of the old Cherra cantonment, upon the Mawlai path, where slabs may be seen in preparation. The slabs made from the Cherra sandstones, admitting of being worked, are generally hewn pretty fairly to a shape and smoothed before being set up. The ancient monuments are, however, often made of very rough slabs.

All the well-known monuments near the old Cherra station are made of these sandstones, as also the large monuments at Mawlai, Mawmai, and Lirinow. These three monuments all stand on sheets of Cherra sandstone and the stones were cut out of the rock hard by where they now stand. The stones quarried now outside the Cherra cantonment, being for transport, are none of great size.

The Khasis also work gigantic slabs of stone for bridges. Where the span is anything under twenty feet a single slab four or five feet wide and two feet thick is thrown across; piers of enormous blocks of sandstone are raised on each side, on which the slab may rest, if there is the remotest fear that the water can, in any flood, reach the under surface of the slab. As compared with such a bridge the Khasis regard the best efforts of the English engineers as mere makeshifts. The arch at Amwee figured by Dr. Hooker is Bengali work.

b. The Shillong sandstones extend over a large area of the northern portion of the plateau: they are often more argillaceous

vation is impossible because of the cold climate. In the past, Khasi economy must have remained at a very primitive stage.

Potato cultivation has been much encouraged along with the development of Shillong and the opening of the motor road to Gauhati from Shillong after the Independence of India when Shillong became the seat of the Assam Government, as well as the capital of the Khasi-Jaintia Hills. Shillong has become an important trading centre, where big merchants collect the harvests of potatoes in exchange for rice, clothes and various other goods from the Assam valley. These changes have introduced the Khasis into an active commercial economy which again has brought about various changes in their social life. Recently coal excavations have started in the upland Khasi Hills, and many Khasi become miners.

Thus the history of the Khasi Hills during the last hundred years has changed a great deal the picture of the Hills. However, dark corners still remain in Bhoi, War and in the area bordering on the Garo Hills. These have been kept in a vacuum between the Hindu civilisation of the bordering plain and the modernisation of the uplands centred in Shillong. In these areas, the people are still practising primitive jhum cultivation. I have chosen two villages in War borderd in one of these area as subjects of my major field-work.

[P. 100 is blank]

[illegible] Measures on the [illegible]—From [illegible], there has been constant [illegible] from border people for relief and rehabilitation. Government [illegible] various measures to alleviate their difficulties. Government's attention to border problems has however, not been adequate. The common feeling of border people was that whenever the border problem developed due to some adverse measure adopted by Ceylon Indian authorities more attention was attracted, on the other hand, when the situation eased comparatively the Government's vigilance also slackened.

The various measures so far adopted by Government in border area, have been fully discussed and considered upon by the Border Rehabilitation Committee. These need no repetition here. But a few points emerging from the grievances put forward by the villagers during our investigation are noted below.

On the question of the villages linked up with the issue of disembarkation of agriculture in border area, a large section of the border people skilled in the maintenance and operation of orchards are opposed to the idea of a complete switch over from cash crops to food crops in the cultivation of which they have no adequate experience. Moreover, there is the problem of getting adequate land in the vicinity for such public cultivation. Indeed, having lost the market for some of the cash crops, some agriculturists are trying to increase cultivation of paddy and other suitable crops on their own initiative whenever suitable land is available. But the problem of getting adequate lands for cultivation and improvement of land has tried to a prime handicap to them. Financial assistance to the needy and willing cultivators for reclamation works and taking up of more minor irrigation projects is very necessary.

As regards Government loans granted to cultivators, people complained that 'spade loan being inadequate they are often unfairly. As a result the people, rarely as they are, utilize the amount for purposes other than due to the corruption aspects.

There have been complaints that cultivation improved seeds supplied to Government are of very inferior quality leading to waste of time and money of the poor people. The Department of Agriculture should not only check the quality of the seeds before issue but should also see that the seed are properly used by inexperienced cultivators who are newly taking up cultivation of these crops.

With the opening up of a few vital P. M. D. Roads transport of border products to Galle and other places has greatly been facilitated but the problem of transporting from farm areas to the various local points on P. M. D. roads still remains unsolved. While during winter months these places may be negotiated by a man on foot up and down the steep gradients, during rainy seasons these roads become slippery, the streams and rivulets are overflooded and it becomes impossible for a man to cross them, thus isolating the villages from each other leading to loss of trade and all other activities between villages. Properly planned rural relief schemes for construction of feeder roads and bridges linking up these villages, will, apart from giving some work to the people alleviate much of the difficulties of transportation of agricultural produce.

4.1 - **Natural calamities.**—The villages are free from severe natural calamities like flood, erosion, earthquake and the like. Excessive rain has endured the higher lands lacking near Chengnajen, Mawnenam, [illegible] pts. During the monsoon after heavy rains, the small streams and streams rise in spate causing communication from village to village which cause much inconvenience to the people in carrying on trade, marketing and other day to day activities.

[illegible] 142

[illegible] Educational facilities.—The following table shows the [illegible] 272

TABLE 8.6

No. of villages having the nearest school

Distance school within a radius of (in miles)	L. P.	M. S.	H. S.	Basic	Educational school
(1)	(2)	(3)	(4)	(5)	(6)
0	10	3	0	2	0
2	3	1	0	2	0
5	6	0	0	1	0
10	0	10	2	0	0
20	0	0	0	0	0
more than 20	0	0	0	0	10

The above table reveals that out of a total of 20 villages, 10 villages have got a Lower Primary school located within the village, 3 have got within a radius of 2 miles and 6 within a radius of 5 miles. One of the 10 villages under general area selected at random from the district, only 6 villages have got a Lower Primary school within the village, and 2 villages within 5 miles of the village. In respect of secondary education the position is far from being satisfactory as the above table will reveal.

The number of pupils on the roll of the 21 Lower Primary and Basic schools located in the 21 villages was 1,112. Thus the average number of pupils on roll per village was 56 while the average number of families per village was 42. The poverty of the villagers is the main reason for this low enrolment. Many parents would rather like their children to do gainful work or social chores at their homes, than to allow them to indulge in the non-productive enterprise of going to school.

6.7 Communication facilities.—In there are no railways, [illegible] 491 •

[illegible] the only communication facilities available to the people of the district is by road. Some of [illegible] are all-weather metalled roads where even heavy [illegible] can ply throughout the year.

[illegible]	[illegible]	G-5	[illegible]	[illegible]	[illegible]	Khasi	[illegible]

The following table summarise the situation of the sample villages, viz., communications facilities available.

TABLE [illegible]

Villages classified according to distance from the Subdivisional headquarters and from the nearest metalled road.

Distance from	0 miles	1 mile	2—[illegible] miles	11—20 miles	21—30 miles	Above 30 miles	Total

Porter	—	4	6	11	—	6	1	29
Others	—	—	—	—	1	—	—	1
Total	—	—	6	12	—	6	4	33

There is no data that porter is the only means of transport of goods in 29 villages, out of the total of 33 villages covered by the survey.

20: Hunter G-4 (no date) 1997 AB? Khasi AB?

(2) Sub-pat-byung, literally "The Navel of the Sky." This is supposed by the Khasis to be the centre of the world, and to be the highest peak in the hills. Its real altitude, however, is only about 4000 feet. (3) Syrwa—height, 6030 feet. (4) Shillong—height, 6449 feet. (5) Dongsi—height, 6400 feet. (6) Kyi-lang-rath, one huge mass of rock, about 300 feet high, and of a rounded form—height above sea level, 5884 feet. (7) Lait-lith—height, 5800 feet. (8) Lait-dorb—height, 6000 feet. (9) Thang-nith—height, 4208 feet. (10) Nong-jong—height, 4225 feet. (11) U Shin—height, 6200 feet. (12) Shin-long—height, 5150 feet. (13) Shin-lai-long—height, 5300 feet. (14) Shin-ga-mait—height, 5800 feet. (15) Sym-par—height, 5700 feet. (16) Shin-ongi—height, 5800 feet. (17) Lait-mir-kim—height, 5313 feet. (18) Nong-ram-nin—height, 5583 feet. (19) Mis-kryn—height, 5398 feet. (20) Nong-thong—height, 5808 feet. (21) Kaith-long-napin—height, 5108. (22) Shin-lai-bah—height, 4152 feet. (23) Pator-kyi-long—height, 5133 feet.

The mountain peaks are of various forms and shapes, but generally conical, and capped by sacred groves. No roads exist to permit the ascent of carriages, but most of the hills can be ascended by beasts of burden, even without much trouble. In the eastern portion of the District the hills are covered with forest.

RIVERS.—No navigable rivers flow through the hills, the streams being all mountain torrents. On some of the large streams, however, near the point where they debouch upon the plains, small canoes are used for short distances below the rapids. The principal streams flowing south to the Surma river in Sylhet are the following:—(1) The Kyn-shi-ang, named Jaintiahi by the Bengalis in the plains; (2) the Tengli, called Mahdi in the plains; (3) the Bograh, called Bagjhdri in the plains; (4) the Sub-myng-kaw, called Dhalai in the plains; (5) the Mongli, called Pain in the plains; (6) the Mis-syb-du, called Hari in the plains; and (7) the Lukai or Lubi. The principal tributaries to the Brahmaputra are:—(1) The Kapili; (2) the Um-khan, called Bangdai in the plains; (3) the Um-iém; (4) the Um-ru, called Digru in the plains; and (5) the Ka-khri, called Kalai in the plains. All the foregoing streams have numerous feeders of their own, but none of them are of any importance.

The Khasi and Jaintia Hills are, like all mountainous countries, intricately watered, and the streams run over rocky beds, some passing through cultivated lands. As they approach the plains,

20: Hunter G-4 (no date) 1877 AR? Khasi AR?

dishonest from the practice. Adults will chew as many as four or five betel-nuts a day, with the usual accompaniment of pân leaves. The estimated cost of maintaining an average family of the labouring class is about Rs. 8 or 10s. a month. [276] [434]

Towns: Stations.—There are no towns in the usual acceptance of the word; but the chief places in the Hills, looked upon by the inhabitants as cities, are Shillong, Jowai, Cherrá Pinjí, and Shella. According to the Census of 1872, Shillong had only 1,363 inhabitants, Cherrá Pinjí 223, and Jowai 1,500. Jowai, however, is a collection of rural hamlets, and the population of Shillong has entirely altered since the date of the Census. The latter place has become the Civil Station in 1874, in substitution for Cherrá Pinjí; and when Assam was created into an Independent Province in 1874, it was selected as the permanent seat of the Local Government. The Chief Commissioner resides there, and also the heads of all departments in the Administration. The area of the Station is 3 miles in length by 1½ to 1¾ miles in breadth. A considerable native population is already settled, and is increasing from day to day. One of the largest weekly markets is held in the Station; and with a view to facilitate access to the Station, which is the metropolis for the Province of Assam, a cart road has recently been completed to Gauhati on the Brahmaputra, which will tend to make the place more and more important. An excellent water supply is introduced into Shillong through an aqueduct which has its source in the neighbouring hill streams, and sanitary measures are carefully enforced. Large sums of money have actually been expended on the erection of the public buildings necessary for the offices of the administration. A printing-press has been established, from which issue all the official documents and reports of the Province. The climate is excellent, the temperature being more equable than that of any other hill station in India, and therefore admirably suited to the constitution of Europeans. There is a church at Shillong, and a chaplain on the Bengal establishment officiates both there and at Gauhati. The cantonments were occupied in 1875 by the 43d Regiment of Assam Light Infantry, with three outposts. The strength was 9 European officers, 16 native commissioned officers, 80 non-commissioned officers, 771 fighting men, and 38 paid camp followers and non-combatants; grand total, 935. The total cost, including contingencies, was Rs. 189,190, or £18,919. [632] [672] [648] [44] [47] [491] [365] [367] [344] [213] [182] [344] [312]

supply. As the District depends so largely for its supply of rice upon Sylhet and Kamrup, the rates of the markets in those places exercise a greater influence on the rates in the Hills than any failure of the local harvest. In the year 1898 the price of common rice is said to have risen as high as 6 rs. for the rupee, or 16s. 8d. per cwt., in consequence of the failure of the crops in the plains.

Roads and Means of Communication.—The following are the eight principal lines of road in the Khasi and Jaintia Hills:—(1) Road from Shillong to Cherrapunji, in Khasi. This road has recently (1899) been opened for wheeled traffic throughout its entire length. The Deputy-Commissioner's Report for 1898-99 states that the number of passengers passing up and down may be estimated at about five or seven every month, and the number of carts already used at about 50. The steps dak brings travellers up to Shillong from Cherrapunji in two days by a comfortable and easy carriage service, while for natives a cheaper conveyance by bullock cart is available. At Cherrapunji there is a good dak bungalow in charge of a khansamah, where the usual accommodation provided in a hotel is to be found. The stages to Shillong are as follows:—(a) Cherrapunji to Sohra, 11 miles. The road is good throughout. There is a dak bungalow in charge of a chaukidar at Sohra, where grain and rice are procurable. (b) Sohra to Nongpoh, 14½ miles. The road is hilly throughout, but good. At Nongpoh, which is at an elevation of 1300 feet, there is a dak bungalow in charge of a khansamah, from whom tea, liquors, and biscuits, etc. can be obtained. The dak bungalow is furnished with bedding, linen, etc. Grain and rice can be purchased in the bazar. (c) Nongpoh to Umsning, 16½ miles. At Umsning, elevation 1700 feet, there is a dak bungalow in charge of a chaukidar. Supplies or coolies are not procurable, but sometimes grain and rice can be purchased. (d) Umsning to Umjan, 9½ miles. At Umjan there is a Public Works Department rest-house in charge of a chaukidar. Supplies or coolies are not procurable. (e) Umjan to Shillong, 9½ miles, of which 6½ are a continuous ascent. At Shillong there are dak bungalows in the Artillery Lines, containing four separate rooms. A khansamah is in attendance, and the rooms are completely furnished with bedding, linen, etc. This entire road, which has a total length of 61 miles, is as perfect a hill road as could be seen in any country, and a model of engineering skill. (2) Road running from Cherrapunji across the Hills, via Nongkhlaw, Mawkhrong, Chaurai

• 491 Pinji, and Thenjilah, to Shillong, in Sylhet; length, about 130 miles. Repairs to this road are effected partly by the inhabitants of the Native States, and partly by Government. (3) Cart road from Shillong to Nongkrem, 14 miles. This road has been opened for cart traffic throughout. (4) Road from Shillong, via Jowai and Thalitajan, to Jaintiapur in Sylhet; length, about 70 miles. This road is being improved from year to year, and when finished the cost may amount to £50 per mile. (5) Road to connect Shillong with the Garo Hills, opened out from Mawkhar, via Sohiong, Kyrwin, Nongkhlaw, and Nongpoh, to within 10 miles of the boundary between the two Districts; length, about 70 miles. This road is at present only a fair-weather road. It was made in 1870-71, and when completed may cost £50 a mile. (6) Road to connect Shillong with the Cachahari State of Sheld, bordering on Sylhet, from Lyngkyrwing-rah via Pomsan-ngit to Syngkhar; length, about 18 miles. This road, when completed, will be about 60 miles in length. (7) Road leading via Lait-ryngkat to Sohkrim and Chorai Pinji; length, about 10 miles. This is at present a bridle path, but may eventually be the line for a cart road to Chorai Pinji. (8) Road from Jowai, in the Jaintia Hills, to Nongkrong; length, about 12 miles. This road, when extended, will connect Jowai with the District of Nowgong in the Brahmaputra valley, and the estimated total length will be about 90 miles. Besides the above-mentioned eight roads, there are other bridle paths which facilitate access to remote places.

135 COAL MINES.—Coal exists in the Khasi and Jaintia Hills in connection with the limestone formation. As a rule the carboniferous strata are not extensive, and they are for the most part found in localities more or less inaccessible. In the Khasi Hills coal has been discovered at the eleven following places:—(1) Ryngong, altitude about 1242 feet above sea level; (2) Chorai, 4118 feet; (3) Lait-ryngkew, 4800 feet; (4) Mawlong, 600 feet; (5) Mawsmai, 1500 feet; (6) Mawryngkan, 4000 feet; (7) Mawdon, 400 feet; (8) Mawsaichand, 300 feet; (9) Mawbah-lyngkir, 5000 feet; (10) Sheld, 800 feet; (11) Thinjindih, 4400 feet. In the Jaintia Hills at the five following localities:—(1) Amwi, altitude about 3800 feet above sea level; (2) Lakadong, 2000 feet; (3) Narpuh, 500 feet; (4) Sah-ryngpih, 3500 feet; (5) Bhawmang, 4000 feet. The most extensive of the coal beds are those situated at Chorai Pinji in the Khasi Hills, and at Lakadong in the Jaintia Hills.

children, but Christian influence has moderated or drive underground the consumption by women and children. **Industrial arts.** The only industrial arts traditionally practiced in all households were a rudimentary carpentry and a simple utilitarian basketry. Other arts were few, and were practiced as village specialties: the washing and smelting of iron ore and the forging of hoes, dars, knives, swords, and cooking pots (upland Khasis); the spinning of cotton thread (Mynsi village, Jaintia); the dyeing of cotton thread and the weaving of cloth (Jaintias, Bhoys, Longngams, Wars); the spinning and weaving of Eri silk (Khyrwang and Nongtung villages, Bhoy and Jaintia); and the hand manufacture, without wheel, of painted earthenware pots (Lamai village, Jaintia). Ironworking and the production of cotton goods have nearly died out through the competition of machine-made goods. Carpentry has greatly improved. An innovation of major importance is the sewing and tailoring, on sewing machines, of ready-made garments for both sexes. [Cf. Dutrah 1936; C., W. 1932.] **Trade.** Khasi villages normally contain a number of household shops operated by women. Every Khasi also lives within walking distance of several village markets that are held on successive days of the eight-day week. The limits of market intercourse for the members of any particular village can be roughly distinguished by their naming the days of their week, which are called after the active markets. The exception is the huge market at Shillong, much of which is active daily, and which serves as a magnet for Khasis from all over the hills. The traditional barter has given way to currency in all markets. The small ones contain at least some local farm produce, plus other essentials like betel nut, and the food and tea stalls which serve as centers of social intercourse. The big markets contain not only regional produce and manufactures but also products from distant parts of the hills, brought for sale by traveling middlemen. There is also substantial trade, from the hills to the valleys, in potatoes, pears, hides, lac, cotton, cane-chairs, the wood of the sal tree, Eri silk thread, limestone, coal, ivory, bay leaf, betel nut, pan leaves, bananas, sugar cane, oranges, oil, turmeric, and chillies. From the plains to the hills, there is trade in dried fish, paddy rice, salt, cooking oil, kerosene, matches, tea, sugar, wheat flour, machine-made cloth, shoes, metal pots, crockery, porcelain objects, coral beads, silver, and gold. Markets are important not only as economic institutions but also as centers for recreation (including archery competitions), courtship, reaffirmation of kinship ties with distant relatives, and the dissemination of information of all kinds. [Cf. Stoughton 1924a.] **Division of labor.** Men do the heavy work, such as clearing and burning the swidden fields, caring for cattle and goats and driving them to market, butchering and selling large cuts of beef and pork, carpentry and mining, and driving and laboring on motor vehicles. They also tailor men's

supply. As the District depends so largely for its supply of rice upon Sylhet and Kámrúp, the state of the markets in those places exercises a greater influence on the rates in the Hills than any failure of the local harvest. In the year 1878 the price of common rice is said to have risen as high as 6 *seers* for the rupee, or 18s. 8d. per cwt., in consequence of the failure of the crops in the plains.

ROADS AND MEANS OF COMMUNICATION.—The following are the eight principal lines of road in the Khási and Jaintia Hills:—(1) Road from Shillong to Goakhili, in Kámrúp. This road has recently (1877) been opened for wheeled traffic throughout its entire length. The Deputy-Commissioner's Report for 1876-77 states that the number of passengers passing up and down may be estimated at about 800 or 1000 every month, and the number of carts already used at about 30. The *dogs dák* brings travellers up to Shillong from Goakhili in two days by a comfortable and easy carriage service, while for natives a cheaper conveyance by bullock cart is available. At Goakhili there is a good *dák* bungalow in charge of a *khánsámá*, where the usual accommodation provided in a hotel is to be found. The stages to Shillong are as follow:—(*a*) Goakhili to Borsihdi, 17 miles. The road is good throughout. There is a *dák* bungalow in charge of a *chaukidár* at Borsihdi, where grain and rice are procurable. (*b*) Borsihdi to Nongpoh, 14½ miles. The road is hilly throughout, but good. At Nongpoh, which is at an elevation of 1300 feet, there is a *dák* bungalow in charge of a *khánsámá*, from whom tea, liquors, and biscuits, etc. can be obtained. The *dák* bungalow is furnished with bedding, linen, etc. Grain and rice can be purchased in the *bázár*. (*c*) Nongpoh to Um-ening, 18½ miles. At Um-ening, elevation 2700 feet, there is a *dák* bungalow in charge of a *chaukidár*. Supplies or coolies are not procurable, but sometimes grain and rice can be purchased. (*d*) Um-ening to Um-jam, 9½ miles. At Um-jam there is a Public Works Department rest-house in charge of a *chaukidár*. Supplies or coolies are not procurable. (*e*) Um-jam to Shillong, 9½ miles, of which 6½ are a continuous ascent. At Shillong there are *dák* bungalows in the Artillery Lines, containing four separate rooms. A *khánsámá* is in attendance, and the rooms are completely furnished with bedding, linen, etc. This entire road, which has a total length of 67 miles, is as perfect a hill road as could be seen in any country, and a model of engineering skill. (2) Road running from Goakhili across the Hills, *via* Nongkhlaw, Mawsang, Cherra

178 like the Zemi-Naga, the Cacharee and the Kuki. But after the period of
563 economic prosperity as I shall describe in the next section, the Jatinga people
621 reached a rather high level of education, while most of the neighbouring tribes
[871] remained illiterate. Their standard of living likewise improved. Fashionable girls of Jatinga who have studied at the Convent school in Shillong, and speak English and Hindi, cannot marry half-naked tribesmen who work in the jungle. They prefer to intermarry with Moslem, Panjabee or Assamese who belong to amore sophisticated community, and through whom they can enjoy urban life. Thus the orientation of the intermarriage of the people of Jatinga has changed, along with the growth of Jatinga.

It should be noted that intermarriages came mostly through the contacts at Haflong, where people used to go once a week for the bazaar, rather than through direct contacts with neighbouring villages.

Economy of Jatinga and its Relation to Neighbouring Tribes.

178 It is very interesting to find two different kinds of economy in the same
171 ecological background: Jatinga Khasi practise pan-leaf and orange cultivation
245 and depend mainly on a trading economy, while the other neighbouring tribal peoples practise jhum cultivation, almost a subsistence economy. This situation has remained unchanged for the last fifty years since the establishment of Jatinga village.

The first Jatinga immigrants occupied one ridge of the mountain where the
101 present Jatinga is situated. Formerly, this land belonged to the Zemi-Naga,
245 one of the old inhabitants of the Cachar Hills, who possessed a vast jungle area for jhum cultivation. It seems that there was no objection to the Khasi occupying this small spot: it was apparently too small an area for the jhum cultivator —pan-leaf cultivation of the Khasi requires less than one twentieth of the land of the usual jhum cultivation. The Khasi who started pan-leaf cultivation were able to accumulate some capital, and after several years they started orange gardens. They had had experience of orange cultivation in their homeland, but this was the first time they had operated commercially.

245 The success of this orange cultivation was beyond their dreams. Hearing
434 of good oranges at Jatinga, many Bengalee merchants from Dacca, Sylhet,
439 Silchar and Gauhati began to come to buy them. Moreover, the village had the great advantage of being situated near the railway station. Oranges were sold by cafloads. Unimaginable wealth came to the Jatinga people. Especi-
[496] ally the founder's family, including his brother's and sister's, became extraor-
[871] dinarily wealthy; their income used to be Rs. 20,000 a year. The children were sent to the school which was established in the village and some were educated at colleges in Dacca, Sylhet and Shillong. The villagers had
[362] beautiful houses built by Manipuri and Bengalee carpenters. Actually the houses of Jatinga were known as some of the best construction in Assam.

Like the Shella people, they were managers of gardens and employed workers.
245 Wealthy households used to engage several labourers annually, most of them
46 from Jaintia where the Jatinga people had originated. These workers were provided with shelter in the servant quarters of their employer's house, but they had to provide meals for themselves. They were paid daily according to the work done. They were available to other households, when their employer had no work. Some labourers were also engaged locally among the Zemi-Naga, the Cacharee and the Kuki, though not as many as among the Jaintia.
245 These local tribes were fairly well occupied by their jhum cultivation, and not
464 used to being employed as workers. Therefore, most of them were not regular

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

headquarters of the Administration. The manufacture of country spirit gives employment to a considerable number of persons, most of whom are females. At a recent census of the country stills in the district, undertaken by the district officials, the number of stills has been found to be 1,530. There must be at least one person employed at each still, so that the number of distillers is probably not less than 2,000, possibly more. The spirit is distilled both for home consumption and for purposes of sale, in some villages almost entirely for sale. In the Jaintia Hills stock-breeding and dealing in cattle provides occupation for 1,295 people, according to the last census. The cattle are reared in the Jaintia Hills and are driven down to the plains when they reach the age of maturity, where they find a ready market amongst the Sylhetis. Cattle are also driven into Shillong for sale from the Jaintia Hills. Another place for rearing cattle is the Siemship of Nongkhlaw, where there is good pasturage in the neighbourhood of Mairang. These cattle are either sold in Shillong or find their way to the Kamrup district by the old Nongkhlaw road. Cattle-breeding is an industry which is capable of expansion in these hills. There are a few carpenters to be found in Shillong and its neighbourhood. The Khasis are said by Col. Waddell to be unacquainted with the art of weaving; but the fact that a considerable weaving industry exists amongst the Khyrwang villages of the Syntengs, and at Mynso and Suhtnga, has been overlooked by him. The Khyrwangs weave a special pattern of cotton and silk cloth, striped red and white. In Mynso and Suhtnga similar cloths are woven, also the sleeveless coat. In former days this industry is said to have been considerable, but it has been displaced to a large extent of late years by Manchester piece goods. The number of weavers returned at the last census in the district was 533. The Khasis and Mikirs of the low country, or Bhois as they are called, weave cotton cloths which they dye with the leaves of a plant called *u noli*. This is perhaps the wild indigo, or *ram*, of the Shan settlers in the Assam Valley. The weavers are almost always females. An important means of subsistence is road and building work; a considerable number of coolies, both male and female, are employed under Government, practically throughout the year, in

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[499] this manner, the males earning on an average 8 annas and the
463 females 6 annas a day. Col. Bivar writes that in 1875 the
465 wages for ordinary male labourers were 4 to 8 annas a day, and for females 2½ to 4 annas, so that the wages rates have almost doubled in the last thirty years. Contractors, however, often manage to obtain daily labour at lower rates than those paid by Government. Stonemasons and skilled labourers are able to
482 get higher rates. It is easier to obtain coolies in the Khasi
241 than in the Jaintia Hills, where a large proportion of the popu-
461 lation is employed in cultivation. The Khasis are excellent labourers, and cheerful and willing, but they at once resent bad treatment, and are then intractable and hard to manage. Khasis are averse to working in the plains in the hot-weather months.

APICULTURE.

231 I am indebted to Mr. Rita for the following remarks on apiculture in the Khasi and Jaintia Hills.

There are two kinds of indigenous bees in the Khasi Hills, one domesticated, called *u ngap* (*apis Indica*), and the other *u lywai*, which is never domesticated, and is very pugnacious; its hives are difficult of access, being always located in very high cliffs. A few hives of a third class of bee are now-a-days to be found in and around the station of Shillong, i.e. the Italian.
[177] This bee was imported into the hills by Messrs. Dobbie and Rita, and the species became propagated in the following manner. The bees had been just established in a hive, where they had constructed a brood comb, when the hive was robbed by some Khasis for the sake of the *larvæ* it contained, which they wished to consume as food; but the queen bee escaped and established other colonies, one of which was afterwards captured by Mr. Rita, the others establishing themselves at places in the neighbourhood. The hive used by the Khasis is of a very primitive description. It is usually a hollow piece of wood, about 2½ to 3 ft. in length and 10 or 12 in. in diameter. A small door is placed at each end of the log, one for the bees to go in and out, and the other for the removal of the honey when wanted. The honey-combs are broken and the honey is

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

there are none of their descendants in Jatinga. Summing up, the first party who settled at Jatinga was composed of people of the following five clans: 166 551

1. Suchiang — Lakhanbang, his sister, Laptho, and her daughter, Kloribon, his brother, Pryntah. 614
2. Suchen — Munik and his younger brother, Sain. 621
3. Phanwar — Misibon and her younger sister, Diasibon.
4. Rupsi — Sintu, the wife of Pryntah. 175
5. Suiam — Tahin, the wife of Sain.

Among them, Suchen had no female member. Phanwar had no successor: Misibon had no issue and Diasibon did not marry. Therefore, Suchiang, Rupsi and Suiam are the oldest clans in present Jatinga. Suchiang and Rupsi especially are the dominant and richest groups among the present population.

This was the time when the railway from Gauhati to Silchar was being constructed. Some Khasi labourers were working at Haflong on the construction of the railway. After the foundation of Jatinga, these Khasi workers established marriage relations with the Khasi of Jatinga, and finally, upon completion of the railway, many of them became the inhabitants of Jatinga. The present members of the Dome and Siangshai clans are the descendants of these people, and they form a considerable number of the present inhabitants of Jatinga. Besides them, there were a few other Khasi at Haflong who were engaged in trading business. In the course of time, they also had marital relations with Jatinga people and came to Jatinga. 166 175 458 621 [499] [464]

After five years had elapsed they found that in spite of their hard work the land was not favourable to them. Many of them left Jatinga. This was the hardest period of Jatinga history.

The second migration (1919-1925).

The railway which once had been blocked was reopened in 1919. The people who had left Jatinga came back to settle there. This time the circumstances seemed to them quite favourable. The pan trees which they had planted earlier were growing and they could gather considerable produce. The village grew bigger around 1920 as a result of new immigrants from Jaintia; most of them were people from Bataw, the village of the founder. In this period, many immigrants came from Jaintia not only to Jatinga but also to Sylhet, Borkhala and other places outside the Khasi-Jaintia Hills. It seems that by this time the over-populated Jaintia realised that these areas were favourable for their new home. However, the successive waves of Jaintia immigrants to Jatinga ceased by 1925, its population having reached saturation point. [499] [245]

Orange production brought economic prosperity to the people of Jatinga. Wealthy villagers employed temporary labourers from the Jaintia Hills every year. Some of these labourers came with their families and others came individually. During their stay at Jatinga, some of them married and settled there. Hence, there are also descendants of such labourers among the present inhabitants of Jatinga. [245] [464]

Some Aspects of Descent Groups.

Throughout the history of Jatinga, immigrations have always been undertaken by a family (elementary family, siblings) or by an individual, but never by a group of clan members. Therefore, the present population is grouped in small descent groups according to each migration. Though some of them happened to have the same clan name, their history of migration and their 621 [175] [614] [166]

and even the well to do ones do not feel anything to work as labourers in other's farms. It is almost customary among the agriculturists to work in other's farms on wage basis, when agricultural operation in one's own farm are over. This is probably an outcome of the difficult transport situation. Among the non-agriculturists and those who follow agriculture as subsidiary occupation, a large number are porters and labourers engaged in jobs like transporting of goods from place to place, collection of limestone, sand, fuel, Collieries and forests of the district also offer employment to a good number of people. Since the taking up of road programme under the plan, a large number of people are getting employment in construction of roads, etc. It is heartening to note that for construction of roads, nay for all kinds of works demanding unskilled labourers, the district locally supplies the whole labour force. People in the various local points of the district, particularly those living in higher hills are mainly engaged in trade. The Khasis are indefatigable traders and have been able to keep almost the whole of the small trade in the district in their own hands. A small proportion of the people are engaged in cottage industries such as stone cutting, brick making, bee keeping, blacksmithy, cane and bamboo works, etc.

The number of persons returned in the 1951 census under each of the eight main livelihood classes for the rural tract of the district was as follows.

TABLE 1

Number of Persons (Source 1951 Census)

Head	Male	Female	Total	P.C.
(1)	(2)	(3)	(4)	(5)
A. Agricultural class:—				
1. Cultivators of land wholly or mainly owned and their dependents.	90,603	92,107	1,82,710	59·89
2. Cultivators of land wholly or mainly unowned and their dependents.	16,014	16,109	32,123	10·53
3. Cultivating labourers and their dependents.	14,053	14,941	28,994	9·50
4. Non-cultivating owners of land, agricultural rent receivers and their dependents.	344	562	906	·30
Sub-total	1,21,014	1,23,719	2,44,733	80·22
B. Non-agricultural class:—				
5. Production other than cultivation.	11,794	10,309	22,103	7·24
6. Commerce	3,237	4,069	7,306	2·39
7. Transport	355	264	619	·20
8. Other services and miscellaneous sources.	17,462	12,864	30,326	9.95

The mountain peaks are of various forms and shapes, but generally conical, and capped by sacred groves. No roads exist to permit the ascent of carriages, but most of the hills can be ascended by beasts of burden, even without made tracks. In the eastern portion of the District the hills are covered with forest. 491 137

RIVERS.—No navigable rivers flow through the hills, the streams being all mountain torrents. On some of the large streams, however, near the point where they debouch upon the plains, small canoes are used for short distances below the rapids. The principal streams flowing south to the Surmá river in Sylhet are the following:—(1) The Kyn-chi-ong, named Jádukátá by the Bengális in the plains; (2) the Tanglá, called Mukái in the plains; (3) the Bograh, called Bogápání in the plains; (4) the Soh-ryng-kew, called Dhulái in the plains; (5) the Mungát, called Pein in the plains; (6) the Mán-tyh-du, called Hári in the plains; and (7) the Luká or Lubá. The principal tributaries to the Brahmaputra are:—(1) The Kapilí; (2) the Um-khen, called Barpání in the plains; (3) the Um-iám; (4) the Um-tru, called Digru in the plains; and (5) the Ka-khri, called Kulsí in the plains. All the foregoing streams have numerous feeders of their own, but none of them are of any importance. 133 [501]

The Khásí and Jáintiá Hills are, like all mountainous countries, intricately watered, and the streams run over rocky beds, some passing through cultivated lands. As they approach the plains,

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

at Rs. 480,000, or £48,000, and the revenue derived by Government from the quarries was Rs. 67,266, or £6726. In addition, the Khási Chiefs receive a revenue from this source of more than £2000. 648 651 317

IRON.—The smelting of iron was once the chief industry in the Khási Hills, and a considerable quantity of the metal used to be exported into Sylhet, both in the crude and the manufactured state. Recently, however, this industry has almost died out, in the face of the competition of the superior article imported from England and sold in the plains at a cheaper rate. The indigenous methods of extracting, washing, and smelting the ore have been minutely described by Professor Oldham. The following description is taken from Mr. Allen's Report, dated 1858, at which date the annual export of smelted iron was estimated at 45,000 *maunds*, valued at Rs. 67,500, or £6750, at the rate of Rs. 1. 8 per *maund*: —'The ore is said to be most abundant and of the best quality in the State of Khyrim, especially at the villages of Nongkrím and Noyandri. A few iron articles, such as *dáos* or hill knives, *koddlis* or mattocks, spear and arrow-heads, are manufactured by the Khási smiths in the Hills; but the greater bulk of the smelted iron is sent to the plains for sale in circular lumps weighing about 4 or 5 *sers*. These lumps, called *birú*, sell at Chhaták for from Rs. 1. 4 to Rs. 1. 6 per *maund*. The best iron, however, which is beaten into bars called *peti*, sells for from Rs. 1. 10 to Rs. 1. 12 per *maund*. Khási iron is preferred to English, in consequence of its greater malleability. It is much used by the native boat-builders of Sylhet and the neighbouring Districts to make fastenings for the timbers of their boats. When brought into the market, it is more than half dross, and it is this circumstance which renders the iron trade unprofitable. The cost of carriage from the Hills to the plains is about 6 *ánnás* per *maund*; and the traders, who are all Khásiás themselves, affirm that they get an average profit of only 2 *ánnás* per *maund*.' The tables of trade for 1876-77 return no smelted iron as exported from the Hills, but Rs. 7000 of iron implements exported, against nails and ironmongery imported to the value of Rs. 18,000. 178 325 439 [326] [435] [501]

THE MANUFACTURES of the District, besides iron, consist of coarse cotton and *randia* cloth, plain silver work, rude implements of husbandry, netted bags made of the fibre of the pine-apple, common pottery, and mats and baskets. With the exception of the 28 433

9.4 Considering non-agricultural families it is seen that average gross annual income per family in Border area, Project area and General area are respectively Rs.1,161·91, Rs. 1,644·36 and Rs.873·98 respectively. The main contributor to this income in Border area is Trade followed by Service, Profession, Labour and Agriculture and Animal husbandry, those in Project area are Labour-Service-Profession followed by Trade, small scale manufacture and agriculture and Animal husbandry. The comparatively higher average income from small scale manufacture and handicraft is due to existence of quite a good number of liquor distillers with quite a large amount of annual income. Main contributors to gross annual income of non-agricultural families in General area in order of importance are agriculture and animal husbandry, service-profession and labour. It is significant that among the non-agricultural families also agriculture and animal husbandry emerge to be the biggest contributor. This is due to the fact that in General area villages there are a large number of Nepali families whose principal occupation is cattle rearing and earned enough by selling milk, ghee, and livestock. These families were classed as non-agricultural families. 434 592 [563]

9.5 Of the gross income, agriculturists spend a portion in their farms on items such as purchase of seed, manure, etc., cost of maintenance of livestock, wages and salaries for labourers, and transport of produce while other spend a portion on running their household enterprises such as purchase of merchandise for trading purchase of plants and machinery and raw materials for household enterprises, wages and salaries for employees, etc. The net annual income per family, as will be evident from table G-4, comes to Rs. 852·86 in Border area, Rs. 988·84 in Project area and Rs.749·51 in General area. The corresponding figures for agricultural families being Rs. 889·80, Rs. 930·70 Rs. 758·42 and for non-agricultural families Rs. 776·14, Rs.1,168·80 and Rs. 672·16 respectively. 511

The following table shows the annual expenditure of families in running their enterprises.

TABLE G-5

9.5 The following table analyses the changes occurring in the structure and volume of capital assets of the predominantly agricultural families as a result of the purchase and sale of the assets and liabilities during the period of a year—

TABLE G-6

	Gross investment			Disinvestment			Capital formation (+) or reduction (−)	
	Assets	Repayment of debt	Total	Assets	Borrowing	Total	—	Average per family
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
1. Border area	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
2. Project area	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
3. Control area	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

Gross investment made by the families stands at Rs.40,[illegible], *i. e.*, Rs.40·0 per family in Border area, Rs.43,180, *i. e.*, Rs.64·7 per family in Project area and Rs.8,558, *i. e.*, Rs.46·5 per family in General area. It will be seen that in all the three areas, the major portion of this investment is from acquiring of assets. 511 426

Dis-investment consisting of borrowing and liquidation of assets amounts to Rs.61,444, *i. e.*, Rs.61·4 per family in Border areas, Rs.66,045., *i. e.*, Rs.102·1 per family in Project area and Rs.12,637, *i. e.*, Rs.68·6 per family in General area.

Thus in all the three dis-investment far outweights investment with the result that a family in Border, Project and General areas, on an average disinvests a sum of Rs.23·0, Rs.35·4 and Rs.22·1 respectively. This net dis-investment arises largely, as it clear from table above, from the heavy rise in indebtedness among the families. Actually considering changes in assets alone there is a net increase of Rs.18.1 per family in Border area, Rs.30·9 in Project area and Rs.10.0 in General area. But these increases are more than multiplied by average per family increase in indebtedness of Rs.41·1, Rs.66·2 and Rs.32·1 respectively in the three areas.

9·6 Investment in assets by various items are shown in the following table.

454
511
542

TABLE G-7

Investment in Assets

Items	Border area			Project area			General area		
	No. of families acquiring assets	Average value of assets acquired		No of families acquiring assets	Average value of assets acquired		No. of families acquiring assets	Average value of asset acquired	
		per reporting family (Rs.)	per family (Rs.)		per reporting family (Rs.)	per family (Rs.)		per reporting family (Rs.)	per family (Rs.)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1. Land	30	167·33	4.99	18	377·33	10·39	3	223·33	3·64
2. Agricultural assets :—									
(a) Livestock	86	34·51	2·51	70	55·07	5·96	21	54·29	6·20
(b) Implements and equipments	76	7·66	·58	45	11·51	·80	15	10·60	·86
(c) Others—									
3. Building	38	582·00	21·98	26	956·73	38·45	7	805·71	30·65
4. Furniture & fitters	19	35·79	·64	1	21·00	·03		..	..
5. Plants & machineries tools, etc. for household enterprises.	18	84·11	1·50	7	295·86	3·20	..	..	..
6. Others	12	492·00	5·87	2	37·50	1·16	..	..	..

Thus it is seen that proportion of families purchasing livestock is highest in all the three areas, followed by that purchasing agricultural tools, implements. Considering investment by items, building is conspicuous in all the three areas, contributing largely towards a net investment in assets in all the three areas. Others of importance are land and agricultural assets.

9.7. **Consumption expenditure of the family.**— The follwing tables show the broad pattern of the average family consumption expenditure in the three village-groups. The component of annual expenditure on food, clothing and other items of consumption which determine the standard of living of the rural families are depicted separately.

Size of average family—In Border area 3.7 members,
Project area 4.6 members and
General area 4.9 members.

511
512

511 It is seen that the per family average annual expenditure is Rs.909·00 nP. in Border areas, Rs.1008·00 nP. in Project area and Rs.828·00 nP. in General area. The per family annual net income in the respective area being Rs.852·86 nP., Rs.988·84 nP, and Rs.949·51 nP. it follows that the budget of the average family is deficit in all the areas. [426] This deficit is usually made up either by restricting the consumption expenditure during the lean months of the agricultural year or by taking loans.

221 511 The field work of the survey was started during the month of February, *i.e.*, hardly after two months, of harvesting of winter paddy and during the harvesting period of cash crops like orange, betelnut, potatoes, etc. During this period people get money through the sale proceeds and naturally they [114] were tempted to spend comparatively higher amount on food. In fact, it was made clear during investigation that as lean months are approaching when people did not have money to purchase food articles, they used to lead a very austere life. This period is particularly very hard for the Border people because unlike people of other two areas they do not have even paddy in store. As the above figures of annual expenditure of a [128] family were calculated on the basis of information collected for one month [125] preceeding the date of investigation, in respect of food and non-food articles, and for one year in respect of miscellaneous items, there is every likelihood of the average per family expenditure on food and non-food articles being over-estimated.

128 511 As in the case of income, consumption of articles produced at home or at farm as well as those received out of the goods, services and gift and loan were valued in money terms on the basis of the local average retail prices in respect of the commodities concerned. Thus even firewood and other wild vegetables and fishes obtained by fishing were valued in terms of money. Of the total average expenditure on food, the food articles obtained in kind and consumed at home account for about 18 per cent in Border area, 53 per cent in Project area and 57 per cent in General area. Thus the share of food articles obtained in kind and consumed at home to the annual expenditure of a family is very low in Border area. This is natural because they depend almost exclusively on cash crop cultivation.

511 Out of the total expenditure, food account for about 68 per cent in Border area, 67 per cent in Project area and 73 per cent in General area. In all the areas cereals alone took the bulk of the expenditure on food, *i.e.*, 66 per cent, 75 per cent and 81 per cent in the respective areas

It is seen that expenditure on pulses, vegetables and milk are very low. In fact only a few of the Tribal villagers take pulses, milk and vegetables. Rice and fish or meat are the only items of the dishes of most of the villages.

Among non-food articles fuel and light accounted for 6 per cent in Border area, 5 per cent in Project area, and 5 per cent in General area. Khasis are heavy chewers of betelnut and this accounted for 5 per cent of total annual expenditure in border area, 4 per cent in Project area and about 3 per cent in General area while tobacco and tea in tea-stall accounted for about 5 per cent, 4 per cent and 4 per cent respectively of the total annual expenditure in the three areas. Expenditure on liquor

varied between 1·06 per cent to 2·00 per cent in the three areas. It is very likely that this figure will be an under-estimate due to the fact that people addicted to it do not like to admit so. The existence of a large number of liscentiate liquor distilleries—numbering upto 5 in a single village, and the brisk trade in these distilleries bear testimony to the fact that a large share of family income is drained out through liquor. 511

Among miscellaneous items clothing and foot-wear accounted for nearly 4 per cent in Border area, 6 per cent in Project area and 5 per cent in General area. Next to it in importance is medicine and doctor which accounted for about 3 per cent of the total annual expenditure in all the three areas.

Generally speaking, the comparatively high percentage of expenditure on food and low percentages on other items like clothing, houses and its repair, education, etc., indicates a low standard of living of the rural families in general.

9.8. It may be of some interest to know how the families belonging to typical economic groups divide their incomes between their current living expenses and other outlays on goods and services. The picture of the family expenditure pattern is summarised in the following table. 434 592 511

19: Assam G-5 (1958) 1963 AR7 Khasi AR7

It is noticed that food is the largest single item of expenditure a every income level demanding about two-thirds or more of the average over all expenditure. It is significant to note that money outlays on food increase markedly at successive income level. This wide range of expenditure is the result of very low standard of food consumption in the low income groups and also possibly of increasing number of members per family in the higher income groups.

One striking feature revealed by the summary table of family income and expenditure given above is the average net deficit shown by the families of almost each income-group, except perhaps marginal surplus in respect of a few income-groups in the higher level. Thus for majority of the families the entire family income was not adequate on the average to meet current outlays on food and other necessities and comforts of daily living. Even the advantage of comparatively large average income was more than balanced by the larger differential increase in the family expenditure due either to their larger family size or comparatively higher standard of living or both.

In all the three areas investment in fixed capital was more than balanced by di-investment with the result that a family in Border area, Project area and General area on an average respectively disinvested a sum of Rs. 64, Rs. 142 and Rs. 70 during the year under reference. 511

10.11 The average annual expenditure per family worked out at Rs. 909 for Border area, Rs. 1,008 in Project area and Rs. 828 in General area. All the three areas thus have a deficit family budget.

Out of the total expenditure of the Border villages nearly 67.6 per cent was incurred on food, 3.7 in clothing, 5.7 per cent on fuel and lighting, 6.0 per cent on tea, tobacco and drugs and 2.8 per cent on medical expenses. The corresponding proportions for project area being respectively 67.0 per cent, 5.5 per cent, 4.8 per cent, 5.3 per cent, and 3.0 per cent and for General area respectively 72.9 per cent, 5.2 per cent, 4.9 per cent, 5.9 per cent and 2.9 per cent of the total average expenditure, articles obtained in kind and consumed at home accounted for 19 per cent in Border area, 19 per cent in Project area and 45 per cent in General area.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

352 blackened with the smoke of years, upon which are spread the
417 faggots of resinous fir-wood used for kindling the fire. Above this again is a wooden framework fixed on to the beams of the house, upon which all sorts of odds and ends are kept. Around
352 the fire are to be seen small wooden stools, upon which the members of the household sit. Up-to-date Khasis have cane chairs, but the women of the family, true to the conservative
415 instincts of the sex, prefer the humble stool to sit upon. Well-to-do Khasis nowadays have, in addition to the ordinary cooking vessels made of iron and earthenware, a number of brass utensils. The writer has seen in a Khasi house in Mawkhar brass drinking vessels of the pattern used in Orissa, of the description used in Manipur, and of the kind which is in vogue in Sylhet. The ordinary cultivator, however, uses a waterpot made from a gourd hollowed out for keeping water and liquor in, and drinks from a bamboo cylinder. Plates, or more properly speaking dishes, are of several kinds in the houses of the rich, the two larger ones being styled *ka pliang kynthei* (female) and *ka pliang shynrang* (male). Needless to say, the first mentioned is a larger utensil than the latter. The ordinary waterpots, *u khiew phiang kynthei* and *u khiew phiang shynrang*, are made of brass, the former being a size larger and having a wider mouth than the latter. The pot for cooking vegetables is made of iron. Another utensil is made of earthenware; this is the ordinary cooking pot used in the houses of the poor. Brass spoons of different sizes are used for stirring the contents of the different cooking utensils, also a wooden spoon.

352 In the sleeping-rooms of the well-to-do there are wooden
513 beds with mattresses and sheets and pillows, clothes being
285 hung upon clothes-racks, which in one house visited were of the same pattern as the English "towel horse." The ordinary cultivator and his wife sleep on mats made of plaited bamboo, which are spread on the bare boards of the house. There are various kinds of mats to be met with in the Khasi houses made of plaited cane, of a kind of reed, and of plaited bamboo.
293 The best kind of mat is prepared from cane. In all Khasi
352 houses are to be seen *ki knup*, or rain shields, of different sizes and sometimes of somewhat different shapes. The large

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

415 like a pendulum. An explanation of this method of divination
787 will be found in the paragraph dealing with divination.

There is also a pair of squeezers used by the old and
412 toothless for breaking up betel-nut. In the houses of the
415 well-to-do is to be seen the ordinary hubble-bubble of
322 India. Outside the houses of cultivators are wooden troughs hollowed out of the trunks of trees, which are used either as drinking troughs for cattle or for feeding pigs. A special set of utensils is used for manufacturing liquor. The Synteng and Wár articles of furniture and utensils are the same as those of the Khasis, with different names, a remark which applies
415 also to those of the Bhois and Lynngams. Both the latter,
824 however, use leaves as plates, the Bhoi using the wild plantain and the Lynngam a large leaf called *ka 'la mariong*. The leaves are thrown away after eating, fresh leaves being gathered for each meal. The Lynngams use a quilt (*ka syllar*) made out of
513 the bark of a tree of the same name as a bed covering. This
824 tree is perhaps the same as the Garo *simpak*. In the Bhoi and Lynngam houses the swinging shelf for keeping firewood is not
417 to be seen, nor is the latter to be found amongst the sub-montane Bodo tribes in Assam.

MUSICAL INSTRUMENTS.

534 The Khasis have not many musical instruments, and those that they possess, with one or two exceptions, are of very much the same description as those of the Assamese. There are several kinds of drums, viz. *ka nákrá*, which is a large kettle-drum made of wood having the head covered with deer-skin; *ka ksing*, which is a cylindrically-shaped drum rather smaller than the Assamese *dhol* (*ka ksing kynthei* takes its name from the fact that this drum is beaten when women, *kynthei*, dance), *ka padiah*, a small drum with a handle made of wood; *katasa*, a small circular drum. Khasi drums are nearly always made of wood, not of metal, like the drums to be seen in the monasteries of Upper Assam, or of earthenware, as in Lower Assam.

Ka duitara is a guitar with *muga* silk strings, which is

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

241 custom of their own from cultivating the *landoo*, in which
231 case they plant certain other trees favourable to the growth of
784 the lac insect. The villages are situated near their patches of cultivation in the forest. The villages are constantly shifting,
361 owing to the necessity of burning fresh tracts of forest every
241 two years. The houses are entirely built of bamboo, and, for such temporary structures, are very well built. In front, the
342 houses are raised some 3 or 4 ft. from the ground on platforms, being generally built on the side of a fairly steep hill, one end of the house resting on the ground, and the other on bamboo posts. The back end of the house is sometimes some 8 or 9 ft. from the ground. At the end of the house farthest away from the village path is a platform used for sitting out in the evening, and for spreading chillies and
342 other articles to dry. Some Lynngam houses have only one
354 room in which men, women, and children are all huddled together, the hearth being in the centre, and, underneath the
231 platform, the pigs. Well-to-do people, however, possess a retiring room, where husband and wife sleep. A house I
342 measured at Nongsohbar village was of the following dimensions:—Length, 42 ft.; breadth, 16 ft.; height of house from the ground to the eaves, front, 9 ft.; back 18 ft. Houses are built with a portion of the thatch hanging over the eaves in front. No explanation could be given me for this. It is probably a Garo custom. In some Lynngam villages there are houses in the centre of the village where the young unmarried men sleep, where male guests are accommodated, and where the
[171] village festivities go on. These are similar to the *dekachang* or bachelors' club-houses of the Mikirs, Garos, and Lalungs, and to the *morang* of the Nagas. This is a custom of the Thibeto-Burman tribes in Assam, and is not a Khasi institution. There
[577] are also high platforms, some 12 ft. or 15 ft. in height, in Lynngam villages, where the elders sit of an evening in the hot
[356] weather and take the air. Lynngam houses and villages are usually much cleaner than the ordinary Khasi villages, and although the Lynngams keep pigs, they do not seem to be so
352 much *en évidence* as in the Khasi village. There is little
● 513 or no furniture in a Lynngam house. The Lynngam sleeps on
287 a mat on the floor, and in cold weather covers himself with a

1[of the Lynngams --- (m)(y.t)

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

quilt, made out of the bark of a tree, which is beaten 352
out and then carefully woven, several layers of flattened 513
bark being used before the right thickness is attained. 287
This quilt is called by the Lyngams "*Ka syllar*" (Garo *simpak*).
Food is cooked in earthen pots, but no plates are used, the broad 252
leaves of the *mariang* tree taking their place. The leaves are 415
thrown away after use, a fresh supply being required for each meal.

The Lyngams brew rice beer, they do not distil spirit; the 274
beer is brewed according to the Khasi method. Games they have 526
none, and there are no jovial archery meetings like those of the Khasis. The Lyngam methods of hunting are setting spring 221
guns and digging pitfalls for game. The people say that now the Government and the Siem of Nongstoin have prohibited both of these methods of destroying game, they no longer employ them. But I came across a pitfall for deer not long ago in the neighbourhood of a village in the Lyngam country. The people declared it to be a very old one; but this I very much doubt, and I fear that these objectionable methods of hunting are still used. The Lyngams fish to a 226
small extent with nets, but their idea of fishing, *par excellence*, is poisoning the streams, an account of which has already been given in this monograph. The Lyngams are omnivorous 262
feeders, they may be said to eat everything except dogs, snakes, the *hulak* monkey, and lizards. They like rice, when they can get it; for sometimes the out-turn of their fields does not last them more than a few months. They then have to fall back on Jobstears and millet. They eat arums largely, and for vegetables they cook wild plantains and the young shoots of bamboos and cane plants. The Lyngams are divided up into 614
exogamous clans in the same manner as the Khasis. The clans 773
are overgrown families. The Lyngams have some stories regarding the founders of these clans, of which the following is a specimen:—"A woman was asleep under a *sohbar* tree in the jungle, a flower from which fell on her, and she conceived and bore a female child who was the ancestress of the Nongsohbar clan." Some of the stories of the origins of other clans do not bear repeating. There do not appear to be any 582
hypergamous groups. As with the Khasis, it is a deadly sin to 614

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

577 plains, jealous of their power, brave in action, and have an aversion to falsehood."

797 Khasis of the interior who have adopted Christianity are
177 generally cleaner in their persons than the non-Christians,
515 and their women dress better than the latter and have an air
342 of self-respect about them. The houses in a Christian village are also far superior, especially where there are resident European missionaries. Khasis who have become Christians often
771 take to religion with much earnestness (witness the recent
797 religious revival in these hills, which is estimated by the Welsh
794 missionaries to have added between 4,000 and 5,000 converts to Christianity), and are model Sabbatarians, it being a pleasing sight to see men, women, and children trooping to church on a Sunday dressed in their best, and with quite the Sunday expression on their faces one sees in England. It is a pleasure to hear the sound of the distant church bell on the hill-side on a Sunday evening, soon to be succeeded by the beautiful Welsh hymn tunes which, when wafted across the valleys, carry one's thoughts far away. The Welsh missionaries have done, and continue to do, an immense amount of good amongst these people. It would be an evil day for the Khasis if anything should occur to arrest the progress of the mission work in the Khasi Hills.

GEOGRAPHICAL DISTRIBUTION.

162 The Khasis inhabit the Khasi and Jaintia Hills, although
101 there are a few Khasi settlers in the neighbouring plains districts. The Census Report of 1901 gives the following figures of Khasi residents in the plains:—

Cachar	333
Sylhet	3,083
Goalpara	4
Kamrup	191
Darrang	10
Nowgong	29
Sibsagar	62
Lakhimpur	22
Lushai Hills	77
North Cachar	32
Naga Hills	62

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

231 Shillong is excellent, the flavour being quite as good as that
263 of English honey. Under "Miscellaneous Customs connected with Death" will be found a reference to the statement that the
[764] dead bodies of Siems used to be embalmed in honey. The existence of the custom is generally denied by Khasis, but its former prevalence is probable, as several trustworthy authors have quoted it.

HOUSES.

342 The houses of the people are cleaner than might be supposed
515 after taking into consideration the dirtiness of the clothes and persons of those who inhabit them. They are as a rule substantial thatched cottages with plank or stone walls, and raised on a plinth some 2 to 3 ft. from the ground. The only
354 window is a small opening on one side of the house, which admits but a dim light into the smoke-begrimed interior. The beams are so low that it is impossible for a person of ordinary stature to stand erect within. The fire is always burning on an earthen or stone hearth in the centre. There is no chimney, the smoke finding its exit as best it can. The firewood is placed to dry on a swinging frame above the hearth. In the
343 porch are stacked fuel and odds and ends. The pigs and calves
342 are generally kept in little houses just outside the main building. The Khasi house is oval-shaped, and is divided into three rooms, a porch, a centre room, and a retiring-room.

354 In olden days the Khasis considered nails *sang*, or taboo, and
784 only used a certain kind of timber for the fender which surrounds the hearth; but they are not so particular now-a-days. In Mawkhar, Cherrapunji, and other large villages, the walls of
342 houses are generally of stone. In Cherrapunji the houses are frequently large, but the largest house I have seen in the hills is that of the Doloi of Suhtnga in the Jaintia Hills, which measures 74 ft. in length. The house of the Siem Priestess at Smit in the Khasi Hills is another large one, being 61 ft. long by 30 ft. broad. In front of the Khasi house is a little space fenced in on two sides, but open towards the village street. The

1:Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

142 young are comely, of a buxom type, and, like the men, with highly-developed calves, the latter always being considered a beauty. The children are frequently remarkably pretty. Khasis carry very heavy burdens, it being the custom for the 482 cooly of the country to carry a maund, or 82 lbs. weight, or even more occasionally, on his back, the load being fixed by means of a cane band which is worn across the forehead; women carry almost as heavy loads as the men. The coolies, both male and female, commonly do the journey between Cherrapunji and Shillong, or between Shillong and Jowai, in one day, carrying the heavy loads above mentioned. Each of the above journeys is some thirty miles. They carry their great loads of rice and salt from Therria to Cherrapunji, an ascent of about 4,000 feet in some three to four miles, in the day. The Khasis are probably the best porters in the north of India, and have frequently been requisitioned for transport purposes on military expeditions.

157 The people are cheerful in disposition, and are light-522 hearted by nature, and, unlike the plains people, seem to thoroughly appreciate a joke. It is pleasant to hear on the road down to Theriaghat from Cherrapunji, in the early morning the whole hillside resounding with the scraps of song and peals of laughter of the coolies, as they run nimbly down the short cuts on their way to market. The women are specially cheerful, and pass the time of day and bandy jokes with passers-[461] by with quite an absence of reserve. The Khasis are certainly more industrious than the Assamese, are generally good-tempered, but are occasionally prone to sudden outbursts of [533] anger, accompanied by violence. They are fond of music, and [797] rapidly learn the hymn tunes which are taught them by the Welsh missionaries. Khasis are devoted to their offspring, 593 and the women make excellent nurses for European children, 463 frequently becoming much attached to their little charges. The people, like the Japanese, are fond of nature. A Khasi 517 loves a day out in the woods, where he thoroughly enjoys 824 himself. If he does not go out shooting or fishing, he is con-825 tent to sit still and contemplate nature. He has a separate name for each of the commoner birds and flowers. He also has names for many butterflies and moths. These are traits which are not found usually in the people of India.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

241 custom of their own from cultivating the *landoo*, in which
231 case they plant certain other trees favourable to the growth of
784 the lac insect. The villages are situated near their patches of cultivation in the forest. The villages are constantly shifting,
361 owing to the necessity of burning fresh tracts of forest every
241 two years. The houses are entirely built of bamboo, and, for such temporary structures, are very well built. In front, the
342 houses are raised some 3 or 4 ft. from the ground on platforms, being generally built on the side of a fairly steep hill, one end of the house resting on the ground, and the other on bamboo posts. The back end of the house is sometimes some 8 or 9 ft. from the ground. At the end of the house farthest away from the village path is a platform used for sitting out in the evening, and for spreading chillies and
342 other articles to dry. Some Lynngam houses have only one
354 room in which men, women, and children are all huddled
231 together, the hearth being in the centre, and, underneath the platform, the pigs. Well-to-do people, however, possess a retiring room, where husband and wife sleep. A house I
342 measured at Nongsohbar village was of the following dimensions:—Length, 42 ft.; breadth, 16 ft.; height of house from the ground to the eaves, front, 9 ft.; back 18 ft. Houses are built with a portion of the thatch hanging over the eaves in front. No explanation could be given me for this. It is probably a Garo custom. In some Lynngam villages there are houses in the centre of the village where the young unmarried men sleep, where male guests are accommodated, and where the village festivities go on. These are similar to the *dekachang* or
[171] bachelors' club-houses of the Mikirs, Garos, and Lalungs, and to the *morang* of the Nagas. This is a custom of the Thibeto-Burman tribes in Assam, and is not a Khasi institution. There
[577] are also high platforms, some 12 ft. or 15 ft. in height, in Lynngam villages, where the elders sit of an evening in the hot
[356] weather and take the air. Lynngam houses and villages are usually much cleaner than the ordinary Khasi villages, and although the Lynngams keep pigs, they do not seem to be so
352 much *en évidence* as in the Khasi village. There is little
513 or no furniture in a Lynngam house. The Lynngam sleeps on
287 a mat on the floor, and in cold weather covers himself with a

The women are specially cheerful, and pass the time of day and bandy jokes with passers-
[461] by with quite an absence of reserve. The Khasis are certainly more industrious than the Assamese, are generally good-tempered, but are occasionally prone to sudden outbursts of
[533] anger, accompanied by violence. They are fond of music, and
[191] rapidly learn the hymn tunes which are taught them by the Welsh missionaries. Khasis are devoted to their offspring,
593 and the women make excellent nurses for European children,
463 frequently becoming much attached to their little charges. The people, like the Japanese, are fond of nature. A Khasi
517 loves a day out in the woods, where he thoroughly enjoys
824 himself. If he does not go out shooting or fishing, he is con-
825 tent to sit still and contemplate nature. He has a separate name for each of the commoner birds and flowers. He also has names for many butterflies and moths. These are traits which are not found usually in the people of India.

526 hours. Meanwhile all the archers and many people have arrived. The judge gets up and turns to the archers, talking eagerly and spurring them on to do their best, so that they may emerge as victors in the contest. Shrieking loudly and making a noise, the archers take their places by the string lying on the ground and each pays one anna (about 10 pfennigs, peace evaluation) as a contribution. It is customary in many places to charge a larger amount. The money is collected by the judge (u-nong-khang-khnam) and kept until the end of the year. After the last contest it is spent for the "festival after the archery contest."

When the money has been paid and some liquor (ka-kiad-um) is poured on the ground, the contest begins. The archers bend their bows and each one aims and shoots as he wishes. If an arrow hits the mark, a loud cry comes from the spectators. The men jump in the air and utter cries of joy. The archer himself gets up, turns around in a circle a couple of times, jumps in the air and swings his bow, uttering
526 cries of joy continuously. Now, since first
• 522 this one and then that one hits the mark, whether it is someone in one's own faction or one of the opponents, cries of joy and rejoicings may be heard almost without interruption. The people of one's own team try to spur on each archer during his round by shouts. For example, if an archer has a black (marked) arrow, they shout: "to, to be iong be iong! i.e., hit, hit black one, black one!" In this case the opponent has the white arrows. If such an arrow goes crooked and flies past the target, they shout at it: "Phui, phui kymdat shiliang, rakaid me, u rakaid! i.e. fie, fie you fly to one side, you bungler, you

bungler!" (27) When the opponent aims and 526 522.

27. P.C. Bohnheim, "Das Pfeilshiessen der Khasi" [Arrow Shooting Among the Khasi], Salvatoranische Milleilungen [Salvatorian Communications], 1910, No. 2.

shoots they shout at him: "Bam khyndeu, bam shisp! i.e., eat earth, eat sand!" (The opponent's arrow is supposed to fly into the earth or sand). There is ample opportunity here for talking extemporaneously as the Khasi so love to do. Following the examples mentioned above they shout at the archers of their own team or of the opponents' team. At the same time I have never noticed that [578] anybody felt insulted or that quarrels and fights ever arose. If somebody feels affected by the remarks, he or one of his team tries to overtrump his opponent by a really potent remark. If that is successful everybody rejoices in the comment and the round 526 of shooting continues peacefully. When a round of ten or more archers who have each shot three or more arrows is finished, the judge enters the closed-off place and counts out loud the arrows sticking in the target. With a great hullabaloo the crowd confirms the number of hits; the opponents do the same and then the contest begins again with all the [617] action described above. When this process has been repeated often, a longer pause occurs. During this, and often during the shorter recess after each round, the women and girls hand out refreshments. The water pipe makes the rounds and no one spares praises. Thus it continues till

526 meaning are placed next to each other usually
533 a nominative before the objective case (accusative--dative). These words form the frame for the words contained in the second (even lines) sayings.

The poem can be reproduced in the following way to make sense (only the even lines):

2. Let us stamp mightily so that the earth groans.
   So that it is known for certain that we have conquered.
4. Set up the bows, you brave youths!

6. Set up the bows so that the mighty victory shows.
8. Whoever dares to battle us, we will fix his comb.
10. May your mockery be sharp, the opponent must weep.
12. He must weep, his eyes weep, his nose runs.
14. Do not be sorry, comrades, it was so determined!

•[522] [619] Singing in this way with mocking songs
526 to the defeated opponent, shouting and rejoicing, the crowd moves across the place of the
273 festival. Liquor is brought and drunk zealously, only too zealously, so that the crowd, lighted by the torches, aroused by the frenzy, and excited by the shooting competition, takes a wild impression. The raw, wild joy breaks forth in a deafening racket. Finally tired of the rushing around they return slowly but still shouting to their village, and scatter to their huts, still disputing violently about the happenings.

F26 The cost of an archery contest varies

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

526 certain incantations freely referring to the many faults of the opposite side, and pours water at intervals from the bamboo in front of the target. This business lasts about two hours. Then they exhort the competitors of their respective sides, and the match commences amidst loud shouts. Every time there is a hit there are loud cheers, the competitors leaping high into the air, the umpires muttering their incantations all the while. At the end of each turn the number of hits are counted by representatives of both sides. At the close of the day the side with the greatest number of hits wins the match, the successful party returning home, dancing and shouting. The young women admirers of both sides assemble, and dispense refreshments to the competitors, taking a keen interest in the proceedings withal. Frequently large wagers
525 are made on either side. In the *Khadar Blang* portion of the
526 Nongkrem State as much as Rs. 500 are occasionally wagered on either side. In Jowai the practice is also to bet a lump sum, the amount being raised by subscription from amongst the competitors. More usual bets are, however, about one anna a head. The *song khang* khasis and the men who prepare the targets receive presents from their respective sides. The Khasi bow carries a considerable distance, an arrow shot over 180 yards being within the personal knowledge of the writer. It is believed that Khasi bows wielded by experts carry up to 200 yards. The average range may be said, however, to be 150 to 180 yards.

521 Yule mentions peg-top spinning amongst Khasi children as
197 being indigenous and not an importation, but Bivar thinks that the game is of foreign introduction. I am, however, inclined to agree with Yule that peg-top spinning is indigenous, inasmuch as this game could not have been copied from the Syllhetis or the Assamese of the plains, who do not indulge in it. As the British had only recently established themselves in the hills when Yule wrote, they would scarcely have had time or opportunity to introduce an English children's game. Khasi
524 children also play a kind of "hop Scotch" (*khyndat sada shite* and *ka tiet lib*), and Yule writes, "Another of their recreations is an old acquaintance also, which we are surprised to meet with in the Far East. A very tall, thick bamboo is planted in

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

the ground, and well oiled. A silver ornament, or a few rupees, placed at the top, reward the successful climber." A leg of mutton, or a piece of pork fixed at the top of this pole would render the pastime identical with the "greasy-pole" climbing of English villages. The following are some other Khasi games:— 524

Wrestling; two persons grasping each other's hands with the fingers interlocked, and then trying to push one another down; tug-of-war with a piece of stick, the two combatants placing their feet one against the other; butting at one another like bulls, and trying to upset each other (*ia tur masi*); long jump; high jump; blind-man's buff; flying kites; pitching cowries into a hole in the ground; a game like marbles, only played with round pebbles, and others. 526 527

MANUFACTURES.

The manufactures of the Khasis are few in number, and do not seem to show any tendency to increase. On the contrary, two of the most important industries, the smelting of iron ore and the forging of iron implements therefrom, and the cotton-spinning industries at Mynso and Suhtnga, show signs of dying out. Ploughshares and hoes and bill-hooks can now be obtained more cheaply from the plains than from the forges in the hills, and Manchester piece goods are largely taking the place of cloths of local manufacture. The iron industry in former days was an important one, and there is abundant evidence that the workings were on a considerable scale, e.g. at Nongkrem and Laitlyngkot, in the shape of large granite boulders which have fallen to the ground from the sides of the hills owing to the softer rock which filled the interstices between the boulders having been worked out by the iron-workers, their process being to dig out the softer ferruginous rock, and then extract the iron ore from it by means of washing. The softer rock having been removed, the heavier portions fell by their own weight, and rolled down to the bottom of the slopes, the result being the great number of boulders to be seen near the sites of these workings. 327 288 412 327 316

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

—the *Shyngkup*, or porch, being flush with the ground. The *nengpei*, or 342
centre room, is approached by a flight of steps. There are no windows, except one, which is bored on one side to admit light and air,—this is called the *pongshai*. Both Khasis and Syntengs, like other Indo-Chinese 524
races, are much addicted to gambling, and drinking to excess is a 273
national vice. Christianity has, through the agency of the Welsh Cal- 197
vinistic Mission, gained a very striking extension, and may be said in- 177
deed to be leavening the whole nation. Schools are numerous, and are pretty well attended by girls as well as boys. The Christians, and those who have come under the influence of Christianity, have adopted a high standard of comfort, and their houses resemble English cottages more nearly than the huts with which one is familiar in India.

Agriculture.—The Khasis do not use the plough; they cultivate their 241
fields with a peculiar-shaped hoe, or *mokkhiew*. They cultivate rice in the valleys, the rice being sown broadcast and the fields irrigated often after considerable labour. They also cultivate hill rice on the uplands, which they sow broadcast. The potato, which was introduced into the [177]
Khasi Hills by Mr. David Scott about the [439]
year 1830,[1] is extensively cultivated and forms one of the principal articles of export. Job's-tears (*Coix lachryma*), several kinds of millet, Indian-corn, the *Sohphlang* (*Flemingia vestita*), are also largely cultivated. The valleys on the 245
southern slopes of the hills have extensive orange groves, the oranges, especially those grown in the neighbourhood of Shella, being famous for their quality. The betel, vine, and areca nut are also largely grown on the southern side of the hills and in the low valleys, these plantations being irrigated by elaborate systems of aqueducts. The leaf of the bay tree (*Tatyrpad*) is collected, and is exported to the Sylhet plains. The [439]
Syntengs differ from the Khasis, in that they make use of the plough. Both Khasis and Syntengs are industrious cultivators, and they possess a certain rough and ready knowledge of the uses of manure. A more detailed description of agriculture in these hills will be given in the monograph.

[1] Khasi and Jaintia Hills Administration Report for 1875-76 by Colonel Bivar.

2. *Matriarchal customs and law of inheritance of property.*—The 611
mother is the head of the house, and is both owner and the custodian of 428
the family property as long as she lives. Males can own no property amongst either Khasis or Syntengs except self-acquired property. On the death of the mother, in the case of the Khasis, the family property passes to the youngest daughter. According to some authorities, however, the property would in practice be divided amongst all the surviving daughters. Failing daughters, the property passes to the youngest niece, and failing a niece, to the youngest female cousin. The same

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

000 which are not found usually in the people of India. He is
461 not above manual labour, and even the Khasi clerk in the
333 Government offices is quite ready to take his turn at the hoe
335 in his potato garden. The men make excellent stonemasons and carpenters, and are ready to learn fancy carpentry and
276 mechanical work. They are inveterate chewers of *supari* and
804 the pan leaf (when they can get the latter), both men, women, and children; distances in the interior being often measured by the number of betel-nuts that are usually chewed on a
273 journey. They are not addicted usually to the use of opium or other intoxicating drugs. They are, however, hard drinkers, and consume large quantities of spirit distilled from rice or millet. Rice beer is also manufactured; this is used not only as a beverage, but also for ceremonial purposes. Spirit drinking is confined more to the inhabitants of the high plateaux and to the people of the Wár country, the Bhois and Lynngams
276 being content to partake of rice beer. The Mikirs who inhabit
751 what is known as the "Bhoi" country, lying to the north of the district, consume a good deal of opium, but it must be remembered that they reside in a malarious *terai* country, and that the use of opium, or some other prophylactic, is probably
525 beneficial as a preventive of fever. The Khasis, like other people of Indo-Chinese origin, are much addicted to gambling.
577 The people, and especially those who inhabit the Wár country, are fond of litigation. Col. Bivar remarks, "As regards truthfulness the people do not excel, for they rarely speak the truth unless to suit their own interests." Col. Bivar might have confined this observation to the people who live in the larger centres of population, or who have been much in contact with the denizens of the plains. The inhabitants of the far interior are, as a rule, simple and straightforward people, and are quite as truthful and honest as peasants one meets in other countries. My impression is that the Khasis are not less truthful certainly than other Indian communities. McCosh, writing in 1837, speaks well of the Khasis. The following is his opinion of them:—"They are a powerful, athletic
[147] race of men, rather below the middle size, with a manliness of gait and demeanour. They are fond of their mountains, and look down with contempt upon the degenerate race of the

526 certain incantations freely referring to the many faults of the opposite side, and pours water at intervals from the bamboo in front of the target. This business lasts about two hours. Then they exhort the competitors of their respective sides, and the match commences amidst loud shouts. Every time there is a hit there are loud cheers, the competitors leaping high into the air, the umpires muttering their incantations all the while. At the end of each turn the number of hits are counted by representatives of both sides. At the close of the day the side with the greatest number of hits wins the match, the successful party returning home, dancing and shouting. The young women admirers of both sides assemble, and dispense refreshments to the competitors, taking a keen interest in the proceedings withal. Frequently large wagers
525 are made on either side. In the *Khadar Blang* portion of the
526 Nongkrem State as much as Rs. 500 are occasionally wagered on either side. In Jowai the practice is also to bet a lump sum, the amount being raised by subscription from amongst the competitors. More usual bets are, however, about one anna a head. The *nong khang khnam* and the men who prepare the targets receive presents from their respective sides. The Khasi bow carries a considerable distance, an arrow shot over 180 yards being within the personal knowledge of the writer. It is believed that Khasi bows wielded by experts carry up to 200 yards. The average range may be said, however, to be 150 to 180 yards.

524 Yule mentions peg-top spinning amongst Khasi children as
177 being indigenous and not an importation, but Bivar thinks that the game is of foreign introduction. I am, however, inclined to agree with Yule that peg-top spinning is indigenous, inasmuch as this game could not have been copied from the Sylhetis or the Assamese of the plains, who do not indulge in it. As the British had only recently established themselves in the hills when Yule wrote, they would scarcely have had time or opportunity to introduce an English children's game. Khasi
524 children also play a kind of "hop Scotch" (*khyndat mala shito* and *ia tiet hile*), and Yule writes, "Another of their recreations is an old acquaintance also, which we are surprised to meet with in the Far East. A very tall, thick bamboo is planted in

The cost of an archery contest varies [435]
considerably. In general it can be said that 526
a shooter pays one anna (about 10 pfennigs, 525
peace evaluation) for each shot. All the
various competitions together produce a tidy
little sum, especially when the attendance is
good. I have come across figures as high
as 50 to 70 rupees which were got together
in this way during the course of a year and
were then spent at the end of the year to-
gether at a great feast after the main com-
petition.

It is frequently the custom among the
Synteng, not to collect this contribution,
anna by anna; rather, a large sum, which is
raised by collecting signatures, is bet
with the opponent at the main shooting (the
final game). This also occurs occasionally
among the Khasi. (31)

31. Gurdon, The Khasis, reports on page 56 that a sum of 500 rupees was bet in the Nongkrem state in Khadar Blang at a shooting competition.

3. The Feast after the Archery Contest 527

A general feast is arranged with the
money bet or saved. Everything is just as
wild during this feast as during the archery
competition. Several strong men go forth to
fetch the pigs bought for this occasion. The
living animals are tied to bamboo poles by
their feet. Four men, two and two alternately,
carry each a burden on their shoulders to
the place of the festival. There is lively
activity at that place. The men stand around
huge fires and chat. Others busily arrange
dishes and pots of brass --everything polished

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

411 of anything except iron or steel, the result being that the sword
314 is most awkward to hold, and could never have been of much use as a weapon of offence.

The same spear is used for thrusting and casting. The spear is not decorated with wool or hair like the spears of the Naga tribes, but it is nevertheless a serviceable weapon, and would be formidable in the hand of a resolute man at close quarters. The length of the spear is about 6½ feet. The shaft is generally of bamboo, although sometimes of ordinary wood. The spear heads are forged in the local smithies.

The Khasi weapon *par excellence* is the bow. Although no 'Robin Hoods," the Khasis are very fair archers, and they use the bow largely for hunting. The Khasi bow (*ka ryntieh*) is of bamboo, and is about 5 feet in height. The longest bow in use
[141] is said to be about the height of a man, the average height amongst the Khasis being about about 5 feet 2 inches to 5 feet 4 inches. The bowstring is of split bamboo, the bamboos that are used being *u spit*, *u shken*, and *u siej-lieh*.

The arrows (*ki khnam*) are of two kinds: (*a*) the barbed-headed (*ki pliang*), and (*b*) the plain-headed (*sop*). Both are made out of bamboo. The first kind is used for hunting,
[526] the latter for archery matches only. Archery may be styled the Khasi national game. A description of Khasi archery will be found under the heading "Games." The feathers
[825] of the following birds are used for arrows:—Vultures, geese, cranes, cormorants, and hornbills. Arrow-heads are made of iron or steel, and are forged locally. The distance a Khasi arrow will carry, shot from the ordinary bow by a man of medium strength, is 150 to 180 yards. The Khasi
[237] shield is circular in shape, of hide, and studded with brass or silver. In former days shields of rhinoceros hide are said to have been used, but nowadays buffalo skin is used. The shields would stop an arrow or turn aside a spear or sword thrust. The present-day shield is used merely for purposes of display.

389 Before the advent of the British into the hills the Khasis are said to have been acquainted with the art of manufacturing gunpowder, which was prepared in the neighbourhood of Mawsanram, Kynchi, and Cherra. The gunpowder used to be

274 Nongwar, thirty-one stills; and Rangthang, thirty-seven
438 stills.

From what has been stated above some idea may be gathered
274 how very large the number of stills in the Khasi and Jaintia Hills is. I am not in a position to state with any degree of accuracy what is the amount of spirit manufactured or consumed in the year, but it is very considerable. The out-turn of a Khasi still has been reckoned at from four to eight bottles per day. From this estimate, and the fact that there are 1,530 stills in the district, it may be roughly calculated what is the consumption annually. Practically the whole of the spirit is consumed within the district. The liquor which is manufactured is far stronger than the spirit distilled in the ordinary out-stills in the plains.
273 It has been stated by an expert analyst that the Khasi spirit
135 contains 60 to 80 per cent. of proof spirit, and that it possesses "an exceptionally nice flavour and taste." The usual price at which it is sold is 4 to 6 annas a quart bottle, a second quality being sometimes sold for 3 annas. It will be seen that the
[465] liquor is exceedingly cheap. A Khasi in the villages of the interior can get drunk for 2 annas,* or a quarter of an ordinary coolie's daily wage. Drunkenness prevails on every market day at Cherrapunji, Jowai, and other large hats, and on occasions when there are gatherings of the people for various purposes. This cheap but strong spirit is demoralizing the people, and some restriction of its use would be welcomed by
273 many. In the Khasi Welsh Methodist Church abstention from
797 liquor is made a condition of Church membership, but the vast number of stills and the facilities with which liquor can be obtained are a constant source of temptation to the Christian community, and cause many defections.

GAMES.

526 The Khasis have many games, but their principal game is archery, this may be said to be the national game, and is a very popular form of recreation amongst them, the sport being indulged in from about the beginning of January to the end of

* About threepence.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

May each year. The following is a description of a Khasi archery meeting, for the details of which I am largely indebted to U Job Solomon. By way of introduction it should be stated that the Khasis opine that arrow-shooting originated at the beginning of creation. The Khasi Eve (*Ka-mei-ka-nong-hukum*) had two sons to whom she taught the toxophilite art, at the same time she warned them never to lose their tempers over the game. At the present day villages have regular archery meetings, the men of one village challenging those of another. There are men on both sides called *nong khan khnam* (lit., he who stops the arrow). This man, by uttering spells, and reciting the shortcomings of the opposite side, is supposed to possess the power of preventing the arrows of the opposing party hitting the mark. These men also, to some extent, may be said to perform the duties of umpires. They may be styled umpires for the sake of convenience in this account. Before the match commences conditions are laid down by the umpires of both sides, such as (*a*) the day on which the contest is to take place; (*b*) the place of the meeting; (*c*) the number of arrows to be shot by each archer; (*d*) the distinguishing marks to be given to the arrows of either side; (*e*) the amounts of the stakes on each side; (*f*) the number of times the competitors are to shoot on the day of the archery meeting, and many other conditions too numerous to mention here. The targets are generally small bundles of grass called "*u skum*," about 1 ft. long by 4 in. in diameter, fastened on a small pole. Sometimes targets are made from the root of a plant called *ka soh pdung*. The distances from the point where the marksmen stand to the targets are some 40 to 50 yards. Each side has its own target, the different targets being placed in a line, and the competitors taking up their positions in a straight line at right angles to the line of fire, and facing the targets; each side in turn then shoots at its own target. Early in the morning of the day fixed for the contest the umpire of each side sits in front of his target with a hollow bamboo full of water in his hand, the bows and arrows being laid on the ground alongside the targets. The umpire then repeats all the conditions of the contest, invokes the aid of the primeval woman (*ka mei ka nong hukum*) aforesaid, goes through

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

526 certain incantations freely referring to the many faults of the opposite side, and pours water at intervals from the bamboo in front of the target. This business lasts about two hours. Then they exhort the competitors of their respective sides, and the match commences amidst loud shouts. Every time there is a hit there are loud cheers, the competitors leaping high into the air, the umpires muttering their incantations all the while. At the end of each turn the number of hits are counted by representatives of both sides. At the close of the day the side with the greatest number of hits wins the match, the successful party returning home, dancing and shouting. The young women admirers of both sides assemble, and dispense refreshments to the competitors, taking a keen interest in the proceedings withal. Frequently large wagers
525 are made on either side. In the *Khadar Blang* portion of the
526 Nongkrem State as much as Rs. 500 are occasionally wagered on either side. In Jowai the practice is also to bet a lump sum, the amount being raised by subscription from amongst the competitors. More usual bets are, however, about one anna a head. The *nong khang khnam* and the men who prepare the targets receive presents from their respective sides. The Khasi bow carries a considerable distance, an arrow shot over 180 yards being within the personal knowledge of the writer. It is believed that Khasi bows wielded by experts carry up to 200 yards. The average range may be said, however, to be 150 to 180 yards.

524 Yule mentions peg-top spinning amongst Khasi children as
177 being indigenous and not an importation, but Bivar thinks that the game is of foreign introduction. I am, however, inclined to agree with Yule that peg-top spinning is indigenous, inasmuch as this game could not have been copied from the Sylhetis or the Assamese of the plains, who do not indulge in it. As the British had only recently established themselves in the hills when Yule wrote, they would scarcely have had time or opportunity to introduce an English children's game. Khasi
524 children also play a kind of "hop Scotch" (*khyndat mala shito* and *ia tiet hile*), and Yule writes, "Another of their recreations is an old acquaintance also, which we are surprised to meet with in the Far East. A very tall, thick bamboo is planted in

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

the ground, and well oiled. A silver ornament, or a few rupees, 524
placed at the top, reward the successful climber." A leg of mutton, or a piece of pork fixed at the top of this pole would render the pastime identical with the "greasy-pole" climbing of English villages. The following are some other Khasi games:— 526

Wrestling; two persons grasping each other's hands with the 521
fingers interlocked, and then trying to push one another down; tug-of-war with a piece of stick, the two combatants placing their feet one against the other; butting at one another like bulls, and trying to upset each other (*ia tur masi*); long jump; high jump; blind-man's buff; flying kites; pitching cowries into a hole in the ground; a game like marbles, only played with round pebbles, and others.

MANUFACTURES.

The manufactures of the Khasis are few in number, and do 321
not seem to show any tendency to increase. On the contrary, 288
two of the most important industries, the smelting of iron ore 412
and the forging of iron implements therefrom, and the cotton-spinning industries at Mynso and Suhtnga, show signs of dying out. Ploughshares and hoes and bill-hooks can now be obtained more cheaply from the plains than from the forges in the hills, and Manchester piece goods are largely taking the place of cloths of local manufacture. The iron industry in 327
former days was an important one, and there is abundant 316
evidence that the workings were on a considerable scale, e.g. at Nongkrem and Laitlyngkot, in the shape of large granite boulders which have fallen to the ground from the sides of the hills owing to the softer rock which filled the interstices between the boulders having been worked out by the iron-workers, their process being to dig out the softer ferruginous rock, and then extract the iron ore from it by means of washing. The softer rock having been removed, the heavier portions fell by their own weight, and rolled down to the bottom of the slopes, the result being the great number of boulders to be seen near the sites of these workings.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

535 women from the Wár country, wearing their picturesque dress, amongst whom was the wife of the Siem of Bohwal with her little daughter. The dance was a pretty sight, and I have [152] seldom seen such evidence of unaffected happiness as was exhibited by the people on this occasion. Dancing may be described as one of the characteristic features of Khasi life.

746 The Synteng *Beh-dieng-khlam* festival takes place annually 789 at Jowai and elsewhere in the Jaintia Hills in the deep water moon month (u *Jyllieu*, or June). *Khlam* is the Khasi word for plague or pestilence, and *beh-dieng* signifies to drive away with sticks. The festival may be described as follows:—The males rise betimes on the day fixed and beat the roof with sticks, calling upon the plague-demon to leave the house. Having done this, later on in the day they go down to the stream where the goddess "Aitan" dwells. Then poles of great length, which have been newly cut, are held across the stream. The people jump on the poles and try to break them; when they succeed in doing so, a great shout is given. After all these poles have been broken, a very large pole is fixed across the stream. The people then divide themselves into two parties, and contend for the possession of the tree. The contest, however, is a good-humoured one, and although many buffets are given and received, these are not regarded seriously, and there [291] are seldom any fights. Col. Bivar says the contending villagers, in their excitement, sometimes relapse into a state of almost complete nudity. The party which succeeds in obtaining possession of this post is supposed to gain health and prosperity [746] during the coming year. Col. Bivar remarks that the origin of this so-called ceremony is said to be that the god of thunder, "u'*lei pyrthat*," and Ka Aitan, the goddess of the stream, enjoined its performance. Many innovations, however, have crept in. People disguise themselves as giants and wild beasts, they also parade images of serpents, elephants, tigers, peacocks, [535] &c. Dancing is carried on with enthusiasm by the males, the [526] girls, clad in their best attire, remaining on-lookers. Before the meeting breaks up the males play a sort of game of hockey with wooden balls.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

quilt, made out of the bark of a tree, which is beaten out and then carefully woven, several layers of flattened bark being used before the right thickness is attained. This quilt is called by the Lyngngams "*Ka sylliar*" (Garo *simpak*). Food is cooked in earthen pots, but no plates are used, the broad leaves of the *maciong* tree taking their place. The leaves are thrown away after use, a fresh supply being required for each meal.

The Lyngngams brew rice beer, they do not distil spirit; the beer is brewed according to the Khasi method. Games they have none, and there are no jovial archery meetings like those of the Khasis. The Lyngngam methods of hunting are setting spring guns and digging pitfalls for game. The people say that now the Government and the Siem of Nongstoin have prohibited both of these methods of destroying game, they no longer employ them. But I came across a pitfall for deer not long ago in the neighbourhood of a village in the Lyngngam country. The people declared it to be a very old one; but this I very much doubt, and I fear that these objectionable methods of hunting are still used. The Lyngngams fish to a small extent with nets, but their idea of fishing, *par excellence*, is poisoning the streams, an account of which has already been given in this monograph. The Lyngngams are omnivorous feeders, they may be said to eat everything except dogs, snakes, the *hulok* monkey, and lizards. They like rice, when they can get it; for sometimes the out-turn of their fields does not last them more than a few months. They then have to fall back on Job's tears and millet. They eat arums largely, and for vegetables they cook wild plantains and the young shoots of bamboos and cane plants. The Lyngngams are divided up into exogamous clans in the same manner as the Khasis. The clans are overgrown families. The Lyngngams have some stories regarding the founders of these clans, of which the following is a specimen:—"A woman was asleep under a *sohbar* tree in the jungle, a flower from which fell on her, and she conceived and bore a female child who was the ancestress of the Nongsohbar clan." Some of the stories of the origin of other clans do not bear repeating. There do not appear to be any hyperizamous groups. As with the Khasis, it is a deadly sin to

411
284

arc height since the strings are as long as the bows.

411
•524

The Khasi make the following kinds of arrows:

1. Feathered arrows ('nam-pur).
2. Unfeathered arrows ('nam).

Feathered or unfeathered ones are: a) hunting arrows, b) arrows for sport. Always feathered are c) children's arrows.

Ad a) Hunting arrows (u 'nam-pliang) are about 70 centimeters long, and have tips like a spear with barbs. (8) The weight of the hunting

8. Illustration II, figs. 2a, 2b.

arrows is about 25 grams. These arrows are still poisoned nowadays.

Ad b) Arrows for sport (u 'nam-sop) are about 60 centimeters long and have round, conical iron tips. (9) Weight of the arrow for

9. Illustration II, fig. 1.

sport is about 8 grams.

Ad c) Children's arrows (u 'nam-phiah) are about 50 centimeters long, and have round points or none at all. The feathering is different from that of the other arrows (cf. the latter).

411

Shafts of the Arrows

All the arrows are made of a very thin bamboo (u 'nam-long or igrâ) and smoked. When possible bamboo free of knots is used. The arrow is about 6 to 7 millimeters thick. The length of the arrow varies greatly. For the arrow and the bow must complement each other inwardly just as they belong together externally.

Fig. 2

10. Dr. R. Karutz, Die afrikanischen Bogen, Pfeile und Köcher im Lubecker Museum für Völkerkunde [African Bows, Arrows and Quivers in the Lübeck Ethnological Museum] (Lübeck, 1900) p. 219.

There is no doubt that the length of the arrow depends on the length of the bow. A large, but less flexible bow does not need so long [611] [Illustration II. Khasi Arrows. Figs. 1, 2a, 2b, 3a, 3b, 4, 5a, 5b, 6a, 6b, 7a, 7b, 8a, 8b.] [612] an arrow as a smaller more flexible one. The absolute length of the bow conditions the length of the arrow to the extent that usually a longer bow requires a longer arrow. (11) Arrows for sport will [526].

11. Bruno Adler, op. cit. p. 13.

float horizontally on water. (12)

12. "Veniaminoff relates (Sepiski ob ostrovah Unalaschkinskago otdela [Notes on the Island of the Unalaska Territory], vol. v, St. Petersburg, 1840) of the Aleutians that the tips of their arrows, especially the ones used in hunting beaver, have such a weight distribution that the arrow does not sink in the water in spite of the heavy shaft nor does it lie on the water, but floats upright, so that a piece almost a foot long sticks up above the surface of the water."

Arrow Tips

911 The arrow tips are made of iron in the
§26 village smithies. The tips of the hunting arrow ('nam-pling) are flat, raised a little towards the middle and have smooth or toothed edges and two or more barbs (shaped like a spear). Length of the tip is about 9 to 15
[§31] centimeters. Beautiful wrought iron arrow tips with pierced designs are also made. (13)

13. Illustration II, figs. 3a, 3b.

• [§26] The tips of the arrows used for sport ('nam-sop) are round and conical. Length is about 5 to 6 centimeters.

The spear-shaped arrow tips are poisoned with 'ka kih' poison which the Khasi obtain from the tuber of a plant (aconitum ferox Wallich, aconite).

Attaching the Arrow Tips.

911 The arrow tips are attached in two ways:

1. either the shaft of the arrow is pointed in front and the arrow tip, which is hollow inside, is placed on it-both are joined with sealing wax;

2. or there is a separate shell of copper which connects the arrow tip with the shaft. Sealing wax is not used, since the shell acts as a clamp. Length of the shell is about 3.5 centimeters.

The Notch of the Arrow

At the tip of the opposite end a notch is put in every arrow. The arrow is taken from a bamboo 'nam-long or ligâ (kind of bamboo) in

such a way that the notch can be cut directly after a knot. The purpose of the notch is to be able to set the arrow easily on the string. There are two kinds of notches: 411

1. Notches which resemble the curve of a Moorish bow. (14)

14. Illustration II, figs. 5a, 5b.

2. Notches which have an even flatness at the bottom and a point on the left and the right. (15)

15. Illustration II, figs. 6a, 6b.

Relationship of the Cut Surface to the Notch.

The large spear-shaped tips of the hunting arrows ('nam-pling) are made with the wide flat part at right angles to the notch and thus to the string of the bow. (16)

16. Bruno Adler, op. cit., p. 607.

Markings on the Arrows.

Many arrows (arrows for sport 'nam-sep) are marked with black lacquer from the end of the base of the feathering to the notch, so that the arrows of the teams can be told apart in shooting competitions. (17) [506]

17. Illustration II, fig. 6a.

Feathering the Arrows 411 AS7

The Khasi have two ways of feathering:
1. Radial even feathering.
2. Tangential tied feathering.

lightly. The stitches are made exactly and evenly throughout. Figures 7b and 8b of illustration II, though greatly enlarged show how the silken threads are put on. With a base 5 centimeters long the number of stitches is 22 to 24, with bases of 7.5 the number of stitches is 29 to 31. 411. 237 531

The feathers are at right angles to the split quill on the shaft and are sewn on five together, more rarely three together.

On the underside of the base (towards the tip of the arrow) black colored pitch is smeared, to unite the cut off feather ends to the shaft of the arrow. (21)

21. Illustration II, figs. 7a, 8a.

[614] Ad. 2. Tied tangential feathering is only used still on children's arrows ('nam-phiah). A completely uncut feather is fastened lengthwise on the end of the arrow by silk or bast and the join is smeared with pitch. 411 237

Hunting arrows and arrows for sport are also used unfeathered (hunting arrows especially in the neighborhood of Lamin) and are then simply called 'nam, but if they are feathered they are called 'nam-pur. 411 526

The target is made of the soft wood of a root and is called ka soh pdung by the Khasi. A piece of wood about 8 to 10 centimeters wide and 50 centimeters long is cut from the root, smoothed on the front side and pointed somewhat towards the ground, so that the whole thing resembles a relatively wide but short lath. This target is set up by putting the somewhat pointed end into the earth and placing two bamboo sticks behind as braces, so that the target cannot be tipped

411 over backwards by th impact of the arrows.
526 Bunches of grass of straw, u skum, are taken and fastened to a pole. The distance between the shooters and the target is quite varied, 50 to 100 meters being the usual distance. The Khasi bows can shoot an arrow a great distance with accuracy. Good shots hit the target even at a distance of 200 meters. The average shot can stand at a distance of 130 to 170 meters. Consideration is taken of younger archers, but if the distance has been established, it must be very carefully adhered to. A string is stretched along the ground which indicates exactly where the shooter must stand.

411

Ways of Bending the Bow

It takes a lot of practice and especially a great deal of strength to hit a definite mark. The archer usually gets down on his right knee and grasps the bow, with his left arm stretched out, somewhat below the middle of the ribbed band and braces his thumb against the bow. He places the arrow with his right hand. The arrows shoot out on the left side of the bow. Some release the arrow between the middle finger and the index finger which is held somewhat bent. The right hand braces the end of the arrow in the notch on the string and holds it firm with the thumb and bent index finger. With the head bent a little to the left and aiming with the right eye, string and arrow are pulled at the same time and after the bow has been pulled to the correct tension, the arrow is released. (22) Only the best shots

22. Hans von Stüsei, Mit Pfeil und Bogen (With Bow and Arrow).

411

2 centimeters. On the two sticks on each of the same sides is a bamboo strip covered around with palm reed which is tied with palm reed at intervals of 3 to 5 centimeters. Weight of the quiver 220 grams.

2. Archery Contests

526 Arrows are shot on every big market day which occurs every eight days. The men and youths of a village gather together, go to the place chosen for the contest and practise industriously, because everyone wants to win in the big contest. These usually take place from January to May. Large factions develop then: village against village. The number of participants must be equally large. Each faction has its own shooting place with its own target, each next to one another. The archers by tens are placed in a line and are the same distance from the target as the string stretched on the ground indicates. Each receives three arrows for a round. The watchers and the judges are placed near the target at right angles to the archers. Both factions name their judges themselves. The latter select a fortunate day by egg throwing; (24) they choose the

24. Becker, "Das Eierwerfen der Khasi", /Egg Throwing Among the Khasi/ Anthropos, 1917-1918, pp. 494 ff.

place of the contest as well as the number of participants and the arrows to be shot. They also measure the exact distance from the target, place the string on the ground, examine the

arrows for their markings and arrange the whole contest. 526

Early in the morning on the day of the contest, each judge, accompanied by the archers and several curious people, goes to the place of the festivity. There he stands before the target, which was set up the day before. The bows and arrows are placed beside the target. The judge now proclaims aloud again 526 all the conditions of the contest. He calls 782 upon the Khasi Eve (ka-mei-ka-nong-hukum (25)

> 25. The Khasi believe that arrow shooting began with the creation of the world. For the Khasi Eve had two sons. She taught them the art of arrow shooting but warned them at the same time never to lose their tempers while playing. Gurdon, The Khasis, p.55. [772]

for her help and in a rambling speech recites all the errors of the opponents (26). While

> 26. The Khasi believe that the opponents' arrows will be kept from hitting the target by invoking the Khasi Eve and by the utterances of the judge. Gurdon, p. 55.

he is speaking thus, he pours water [616] from time to time out of a bamboo tube that was brought along in front of the target. Because of the talkativeness of the Khasi and their peculiarity of talking extemporaneously and their slowness this lasts about two hours.

526 hours. Meanwhile all the archers and many people have arrived. The judge gets up and turns to the archers, talking eagerly and spurring them on to do their best, so that they may emerge as victors in the contest. Shrieking lowaly and making a noise, the archers take their places by the string lying on the ground and each pays one anna (about 10 pfennigs, peace evaluation) as a contribution. It is customary in many places to charge a larger amount. The money is collected by the judge (u-nong-khang-khnam) and kept until the end of the year. After the last contest it is spent for the "festival after the archery contest."

When the money has been paid and some liquor (ka-kiad-um) is poured on the ground, the contest begins. The archers bend their bows and each one aims and shoots as he wishes. If an arrow hits the mark, a loud cry comes from the spectators. The men jump in the air and utter cries of joy. The archer himself gets up, turns around in a circle a couple of times, jumps in the air and swings his bow, uttering
526 cries of joy continuously. Now, since first
522 this one and then that one hits the mark, whether it is someone in one's own faction or one of the opponents, cries of joy and rejoicings may be heard almost without interruption. The people of one's own team try to spur on each archer during his round by shouts. For example, if an archer has a black (marked) arrow, they shout: "to, to ba iong ba iong! i.e., hit, hit black one, black one!" In this case the opponent has the white arrows. If such an arrow goes crooked and flies past the target, they shout at it: "Phui, phui kyndat shiliang, rakaid me, u rakaid! i.e. fie, fie you fly to one side, you bungler, yo

bungler!" (27) When the opponent aims and 526 522

27. P.C. Bohnheim, "Das Pfeilshiessen der Khasi" [Arrow Shooting Among the Khasi], Salvatoranische Milleilungen [Salvatorian Communications], 1910, No. 2.

shoots they shout at him: "Bam khyndeu, bam shiap! i.e., eat earth, eat sand!" (The opponent's arrow is supposed to fly into the earth or sand). There is ample opportunity here for talking extemporaneously as the Khasi so love to do. Following the examples mentioned above they shout at the archers of their own team or of the opponents' team. At the same time I have never noticed that [578] anybody felt insulted or that quarrels and fights ever arose. If somebody feels affected by the remarks, he or one of his team tries to overtrump his opponent by a really potent remark. If that is successful everybody rejoices in the comment and the round 526 of shooting continues peacefully. When a round of ten or more archers who have each shot three or more arrows is finished, the judge enters the closed-off place and counts out loud the arrows sticking in the target. With a great hullabaloo the crowd confirms the number of hits; the opponents do the same and then the contest begins again with all the [617] action described above. When this process has been repeated often, a longer pause occurs. During this, and often during the shorter recess after each round, the women and girls hand out refreshments. The water pipe makes the rounds and no one spares praises. Thus it continues till

•526 sunset. (28)

28. The two large photographs were taken at this late hour. One picture (Plate I) during the sunset. Notice the long shadows. The other picture (Plate II) just after sunset.

When the target is no longer easily visible because of the twilight, the shooting is stopped. The judges now announce the final result out loud, which provokes stormy applause. After the judges are remembered with presents by their own factions, the archers come together in a group. They stand one behind another in a row, each row with about four to six archers. The battling factions stand opposite each other. Waving their bows longways up and down --the men on the outside swing theirs--they march up and down on the festival place, stamping their feet in a quick rhythm. Singing and shouting they go back and forth. First one team then the other goes backwards. This kind of joyful utterance cannot actually be called singing; it is rather a quick uniformly modulated recitative uttered in an excited tone, interrupted again and again by "ha, ha, hoi, hoi" (kynha, kynhoi is the same as ha, hoi, i.e. shouting, calling). Someone or other of the victorious team makes a verse on the spur of the moment, which is about the contest, and the dancing, marching crowd repeats it noisily. Or rather after each verse they burst out with cries of joy and pleasure (ha, ha, hoi, hoi).

533 To give an example how these verses sound approximately, I will give an original text with a literal and a free translation. (29)

29. For the German translation and

the added explanations I am 533
indebted to the Khasi missionary
R.P. Dominikus Daunderer, S.D.S.,
who has been here many years and
knows the language and who very
kindly placed his experiences
in this field at my disposal.

It should be noticed in general that the [771]
content of such extemporaneous verses has a
religious slant and the language adheres to
the mysterious method of expression of magic
formulae and other formulae usual in the reli-
gious customs of the Khasi. Nevertheless, we
may not seek for either secrets or magic in
the following chant (jingphawar) just as the
Khasi do not. The solo singer (u nongphawar) 526
goes in front of the victorious team and begins: 533

1. U dieng-duh u kyndeh
The placing, the rice.
U sohbyrthit ia u pathaw.
The bur, the gourd.

2. To ngin khynniuh tyngeh.
Let us shake mightily.
Ban shon shit la ka daw.
May our matter be in easy circumstances.

Then the rest shout, swinging their bows
and stamping the earth: "ha, ha, hoi, hoi-hui!"
[618]

3. Ka syrdeng u jasieh
The fence, the meadow.
Shi kynda ka kyndad.
Four moles.

4. To pynieng ka dieng ryntieh.
Let us place upright the wood
of the bow.

• 526 Ko samila kynrad
533 Youths, o lords.

All: "ha, ha, hoi, hoi-hui!"

5. Ka syrdeng u jasieh,
The fence, the meadow.
U thylliej ka shohtkah.
The tongue, the little red
throat.

6. To pynieng ka dieng ryntieh.
Place upright the wood of the
bow.
Ban ieit ka daw bah,
So that the affair be loved,
the big one.

All: "ha, ha, hoi, hoi-hui!"

7. U narsuh, shibidi.
Iron, wire, four pieces.
U bisin ia ka syrdeng.
The snake, the fence.

8. La kynduh bad ngi.
When one battles with us.
Ngin pynkhein ia ka reng.
Then we break the horn.

All: "ha, ha, hoi, hoi-hui!"

9. U kyndeh ia u bisong.
The rice, the weasel.
Ka lengsangem halor dieng.
The hawk on the tree.

10. To lyngngeh la ka jingong.
Make your word hard,

Ba un jem ka jabieng
That the forehead may become
soft.

All: "ha, ha, hoi, hoi-hui!"

11. Ka liengsangem halor dieng.
The hawk on the tree.
U pathau u jalimut.
The gourd, the chrysanthemum.

12. Ba un jem ka jabieng.
That the forehead may become soft.
Ba un jaw ka eit mut.
That the mucous discharge from
the nose become soft.

All: "ha, ha, hoi, hoi-hui!"

13. U synret u kyndok.
The nettle, the brimstone.
U sohryngkham shi hynda.
Wild plums, four pieces.

14. Wat iam rem ko lok.
Do not weep defeated, friend.
Ba la bam hi ka pasa.
For the Pasa itself has consumed it. (30)

30. Ka pasa is probably a demoness, guardian spirit of the shooters and hunters (-hsau?). Sanskrit: pasa--string, snare (Lust).

As may be seen, such a song (jingpdiaar) is not easily understood. In the first odd lines, words that are (seemingly) without

526 meaning are placed next to each other usually
533 a nominative before the objective case (accusative--dative). These words form the frame for the words contained in the second (even lines) sayings.

The poem can be reproduced in the following way to make sense (only the even lines):

2. Let us stamp mightily so that the earth groans.
   So that it is known for certain that we have conquered.
4. Set up the bows, you brave youths!

6. Set up the bows so that the mighty victory shows.
8. Whoever dares to battle us, we will fix his comb.
10. May your mockery be sharp, the opponent must weep.
12. He must weep, his eyes weep, his nose runs.
14. Do not be sorry, comrades, it was so determined!

[522] [p.197] Singing in this way with mocking songs
526 to the defeated opponent, shouting and rejoicing, the crowd moves across the place of the
273 festival. Liquor is brought and drunk zealously, only too zealously, so that the crowd, lighted by the torches, aroused by the brandy, and excited by the shooting competition, makes a wild impression. The raw, wild joy breaks forth in a deafening racket. Finally tired of the rushing around they return slowly but still shouting to their village, and scatter to their huts, still disputing violently about the happenings.

526 The cost of an archery contest varies

The cost of an archery contest varies considerably. In general it can be said that a shooter pays one anna (about 10 pfennigs, peace evaluation) for each shot. All the various competitions together produce a tidy little sum, especially when the attendance is good. I have come across figures as high as 50 to 70 rupees which were got together in this way during the course of a year and were then spent at the end of the year together at a great feast after the main competition.

It is frequently the custom among the Synteng, not to collect this contribution, anna by anna; rather, a large sum, which is raised by collecting signatures, is bet with the opponent at the main shooting (the final game). This also occurs occasionally among the Khasi. (31)

31. Gurdon, The Khasis, reports on page 56 that a sum of 500 rupees was bet in the Nongkrem state in Khadar Blang at a shooting competition.

5. The Feast after the Archery Contest

A general feast is arranged with the money bet or saved. Everything is just as wild during this feast as during the archery competition. Several strong men go forth to fetch the pigs bought for this occasion. The living animals are tied to bamboo poles by their feet. Four men, two and two alternately, carry each a burden on their shoulders to the place of the festival. There is lively activity at that place. The men stand around huge fires and chat. Others busily arrange dishes and pots of brass --everything polished

764 When the body has been burnt, the ashes and the unskilled bones are collected by the relatives of the deceased and washed. They are then placed in a dish (*ka pliang*) which is taken to a stone repository for the bones (*mawshing*); here a further sacrifice takes place. For three days after the burning, the maternal relatives frequent the *mawshing*, where they offer articles of food for the spirit of the departed to eat, and then three eggs are broken (called *shat long lait ia*) in order to ascertain what is the cause of death. Until this egg-breaking has taken place the family is taboo. The ashes and the unskilled bones are subsequently removed from the *mawshing*, and are placed in the family *mawsiaw*, or *marbah*. On this occasion a special ceremony takes place.

767 9. *Divination by breaking eggs.*—As this is a very peculiar custom, it deserves some description. Bladwell describes it as follows:—

[168] Each case of sickness or other calamity is attributed to the influence of some evil spirit, and the first step is to ascertain what particular spirit has been at work, and for this the great institution of egg-boiling is brought into play. An expert (but not a professional) sits down before a board, in the centre of which he places an egg on a few grains of rice; after invoking the egg to speak the truth, he sweeps the rice off the board, sweeping one grain left on any spot fancy dictates. Then naming a particular spirit, he asks that if he be the cause of evil, a part of the shell of the egg may be deposited near the grain of rice; he then strikes the egg sharply on the centre of the board. This process is repeated, if necessary, till the required information is obtained. The next thing is to discover what sort of offering will be acceptable to the spirit. This is ascertained in a precisely similar way, but the desired result is often not arrived at till much time and many eggs have been expended.

I have personally witnessed this egg-breaking and can vouch for the correctness of Mr. Bladwell's description. The Khasis do nothing of what they consider to be of the least importance without breaking eggs. When a Khasi builds a new house, or before he proceeds on a journey, he always breaks eggs to see whether the building or the journey will be lucky or not. I have quoted the description of egg-breaking at length, as I am informed that there is some similar custom extant in the Assamese Hill Tracts. I hope that it will be possible to ascertain whether or not there is any similar custom in Burma.

524 10. *Khasi archery.*—Archery is a regular institution amongst the Khasis, who are very fond of it. Archery may be described as the Khasi national game. There are regular archery contests between the people of different villages, one village challenging another to shoot off a match. Certain conditions are fixed, such as the date and place of the match, the number of arrows to be shot by the archers, the distinguishing marks to be given to arrows of the two different sides, etc.,

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

etc. The targets are of two kinds, i.e., *u skum*, which is made of a bundle of grass about 1 foot long and 4 inches in diameter, the target being fastened on to a pole; and from the root of a plant called *sohpdung*. The distance for the shooting is about 30 to 40 yards. 526

Before the shooting begins, a *nongkuia*, or sacrificer, performs a *puja* and then the shooting commences. Each archer subscribes from half to one anna, the total amount so obtained is pooled and then wagered against a similar sum subscribed by the other side. Whilst the shooting is going on the men of both sides dance and sing, and when there is a hit a great shout, or *kynkoi*, is raised. The side that wins the match, after rewarding the *nongkuia* and the man who makes the targets, buys a pig, and some liquor, which articles are partaken of by the people of the village which has won the match. In the War villages, and amongst the Syntengs, sometimes wagers of considerable sums are made in lump sums in these contests.

11. It is not intended to describe at great length the Khasi religious system, but only to note briefly regarding it at present, a full account being reserved for the monograph for the preparation of which I am collecting further information. Khasi religion is animism, or spirit worship. It may be divided into (*a*) the worship of spirits, (*b*) ancestor worship. 771

(*a*) *Spirit worship.*—The principal god amongst the Khasis is God the Creator (*U'lei Nongthaw*), who is sometimes masculine and sometimes feminine, the use of the feminine gender being no doubt due to matriarchal influence. A yearly sacrifice should be offered to this god of a cock and a goat. The cock is sacrificed as a substitute for man, it being thought that the cock, when killed, bears the sins of the man, and that by its sacrifice man will obtain redemption. How the cock came to occupy this important position in Khasi religion is not at present quite clear. Perhaps there were originally human sacrifices amongst the Khasis, and the cock nowadays takes the place of the human victim. Other gods which are worshipped are *Ka'lei long kur* (the goddess of the clan), *Ka'lei longpah* (the goddess of wealth), *U'lei um tong* (god of water). An important fact to be noted is that the Khasi gods or goddesses are never worshipped in the shape of idols in any form whatsoever. 776 782

(*b*) *Ancestor worship.*—I am inclined to think that this form of worship largely underlies the Khasi religious system. The following are some of the ancestors or ancestresses who are regularly worshipped:— 769

(1) *Ka Iawbei tymmen*,—the primeval ancestress of the family. A pig is sacrificed to her. 782

children, but Christian influence has weakened so drastically the consumption by women and children. Industrial arts. The only industrial arts traditionally practiced in all households were a male mortar; carpentry and a simple utilitarian basketry. Other arts were few, and were practiced in village specialties: the washing and smelting of iron ore and the forging of bows, darts, harrows, swords and cooking pots (upland Khasi); the spinning of cotton thread (Mawlai village, Jaintia); the dyeing of cotton thread and the weaving of cloth (Jaintia Hills, Lyngngam, War); the spinning and weaving of Eri silk (Khyrwang and Nongtrong villages, War and Jaintia); and the hand manufacture, without wheel, of painted earthenware pots (Lawai village, Jaintia). Ironworking and the production of cotton goods have nearly died out through the competition of machine-made goods. Carpentry has greatly improved, the innovation of major importance is the sewing and tailoring, on sewing machines, of ready-made garments for both sexes. [illegible] Trade. Khasi villages normally contain a number of household shops operated by women. Every Khasi also lives within walking distance of several village markets that are held on successive days of the eight-day week. The limits of market attendance for the members of any particular village can be roughly distinguished by their naming the days of their week, which are called after the active markets. The exception is the huge market at Shillong, much of which is active daily, and which serves as a magnet for Khasi from all over the hills. The traditional barter has given way to currency in all markets. The small ones contain at least some local farm produce, plus other essentials like betel nut, and the food and tea stalls which serve as centers of social intercourse. The big markets contain not only regional produce and manufactures but also products from distant parts of the hills, brought for sale by traveling middlemen. There is also substantial trade, from the hills to the valleys, in potatoes, pears, bulbs, lac, cotton, cane, chrome, the wood of the sal tree, Eri silk thread, limestone, coal, bears, bay leaf, betel nut, pan leaves, bamboo, sugar cane, oranges, tj, turmeric, and chillies. From the plains to the hills, there is trade in dried fish, paddy rice, salt, cooking oil, kerosene, matches, thread, pots, crockery, portable objects, cloth, shoes, silver, and gold. Markets are important not only as economic institutions but also as centers for recreation (including archery competitions), courting, reaffirmation of kinship ties with distant relatives, and the dissemination of information of all kinds. [illegible] Division of labor. Men do the heavy work, such as clearing and burning the swidden fields, caring for cattle and goats and driving them to market, butchering and selling large cuts of beef and pork, carpentry and mining, and driving and laboring on motor vehicles. They also take men's

Ic Gordon E-4, 9 (no date) 1937 ABT Khasi ABT

close to the wall which is farthest away from the door, the bones of the males being deposited in a pot inside the tomb nearest the door. Some close by the pot containing the bones of the males on the right, and the vessel containing those of the females on the left hand. Then offerings of food and libations of liquor are offered to the ancestors on a stone in front of the tomb. The males then perform a ceremonial dance with swords and shields, three times, and the door of the sepulchre is closed, a flag being fixed to the tomb. All the classifik then depart except three men. One of these sacrifices a cock (jaw-binding) in front of the tomb, a second sits behind the sacrifices, holding three firebrands, and a third sits behind the tomb. The man with the firebrands shakes them about, and then moves like a cock three times. The man behind the tomb listens attentively for any funeral noise within it, the superstition being that if the ceremonies detailed above have not been properly performed, the whole tomb will quake. If the three watchers are satisfied that there is no commotion within the tomb, then all is well, and they return and report the result to the classmeyple. This ceremony is called *tmeling*, or the fire test. Next morning the woman who is the head of the *lingmeny*, or pigs-house, distributes to all those who have taken part in these sacrifices the hinder portions of the sacrificial animals. She then blesses one by one the assembled classifik. The latter are not permitted by custom to go to work until after three days from the time of the ceremony, the third day being called *ka ingi lad ia*. The ceremony described above is a symbolical one. The massive stone sepulchre is regarded as a symbol of a secure place of rest for the departed spirits. If the spirits of the dead are not, however, appeased by the due performance of the ceremonies attending the burial of the deceased in the due sequence, it is believed that they roam about and leave their sepulchre on earth, and plague them with various misfortunes. It may be interesting to note here, that Mr. Mehedy, the Superintendent of Ethnography in Bengal, reports that the ashes of deceased Hos, after being sprinkled with water by means of pengal branches, are collected, dried, and placed in a new earthen pot, and kept in the house until the day of burial, which may take place, as with

The cost of an archery contest varies considerably. In general it can be said that a shooter pays one anna (about 10 pfennigs, peace evaluation) for each shot. All the various competitions together produce a tidy little sum, especially when the attendance is good. I have come across figures as high as 50 to 70 rupees which were got together in this way during the course of a year and were then spent at the end of the year together at a great feast after the main competition.

It is frequently the custom among the Syntengs, not to collect this contribution, anna by anna; rather, a large sum, which is raised by collecting signatures, is bet with the opponent at the main shooting (the final game). This also occurs occasionally among the Khasi. (31)

31. Gurdon, The Khasis, reports on page 56 that a sum of 500 rupees was bet in the Nongkrem state in Khadar Siang at a shooting competition.

3. The Feast after the Archery Contest

A general feast is arranged with the money bet or saved. Everything is just as wild during this feast as during the archery competition. Several strong men go forth to fetch the pigs bought for this occasion. The living animals are tied to bamboo poles by [illegible] carry each a burden on their shoulders to the place of the festival. There is lively activity at that place. The men stand around huge fires and chat. Others busily arrange dishes and pots of brass --everything polished

527 clean. Others break off palm leaves and twigs from trees to decorate themselves and the place. A music ban takes care of the necessary noise. The three pigs and goats are received with shouts. Without much ceremony the animals are slain and now the actual festival begins: the cooking, the dancing and the eating.

527 252

The people divide into various groups. Some divide the slaughtered animals by the light of a great fire. The pieces of meat are put in one pile, the fat in another. About ten men sit around in a circle and begin to cut the meat into small cubes. These are then placed on little three-sided bamboo sticks. All the rest of the meat, such as lungs, heart, kidneys, and brains are put together in a cooking pot. 520 The girls and women sit at a third fire. They hold the fat and lard on long bamboo sticks over the fire to roast it on all sides by constant turning. The rest of the men dance to the peculiar music. Each person dances alone. They hold long bamboo sticks in their right hands, and in their left hands they hold a bunch of branches from a tree or large leaves. Some make huge turbans for themselves out of rice straw. Decorated thus they hop from one foot to another, make deep bows now to the left, now to the right and alternately swing their bamboo sticks or their bunches of leaves. Others turn around in circles, beating time with their palm leaves. When the dancers are tired they take over the job of cutting the meat and cooking and the others decorate themselves for the dance. In reply to my question, what this all means, I received the following answer: "We are happy and for once we want to have a thoroughly good time. We

527

527.

wom the money in the archery contest and now we should have a big feast. It is full moon now and much more beautiful during the night than the day. Oh, we are just having a good time." At once he swung his bunches of leaves and hopped away. The women take care of stirring the cooking pots. They are not thinking about the moon. A bamboo, which perhaps dancer might have just thrown away, is quite adequate for this purpose. When everything is ready, the people sit down in groups and eat the meat. Rice brandy is handed around. When the archers and other guests at the festival are more than satiated and exhausted from all the dancing, they leave the place towards morning.

It should be pointed out that contrary to their usual customs the Khasi eat no rice at the great feast after the archery competition but only meat, with which brandy is drunk. There is a good deal of overindulgence in food and drink on this occasion. (32)

b. Hunting Customs

Although there are still numerous wild animals in the Khasi hills and Jaintia hills that can be hunted -- flying foxes which visit the orange gardens during the night, jackals, which annoy the villages with their howling, antelopes, does, deer and wild pigs which damage the rice fields, wild dogs, wolves,

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

301 This stone is apparently some rough gem which may be picked up by the Lyngams in the river beds. A rich man amongst
556 them, however, is one who possesses a number of metal gongs,
534 which they call *wiang*. For these they pay very high prices,
414 Rs. 100 being quite a moderate sum for one of them. Being curious to see one of these gongs, I asked a *sirdar*, or head-man, to show me one. He replied that he would do so, but it would take time, as he always buried his gongs in the jungle for fear of thieves. Next morning
[534] he brought me a gong of bell metal, with carvings of animals engraved thereon. The gong when struck gave out a rich deep note like that of Burmese or Thibetan gongs. These gongs have a regular currency in this part of the hills, and represent to the Lyngams "Bank of England" notes. It would be interesting to try to ascertain what is their history, for no one in the Lyngam country makes them in these days. Is it possible that the Garos brought them with them when
534 they migrated from Thibet? The gongs are well known in the
633 Garo Hills, and I hear that when a *sokma*, or head-man, there
778 dies his corpse is laid out upon them. They thus possess also an element of sanctity, besides being valuable for what they will fetch to the Garos or Lyngams. We may hope to hear more about them in Captain Playfair's account of the Garos.

309 The Lyngams do not tattoo. Their weapons are the large-
411 headed Garo spear, the *dao*, and the shield. They do not usually
243 carry bows and arrows, although there are some who possess them. They are by occupation cultivators. They use two kinds of hill rice, red and white, on the hill-sides. They have no wet paddy cultivation, and they do not cultivate in terraces like the Naga. They burn the jungle about February, after cutting down some of the trees and clearing away some of the debris, and then sow the paddy broadcast, without cultivating the ground in any way. They also cultivate millet and *Job's tears* in the same way. With the paddy millet are sown the
241 first year. The egg plant, brinjal, ginger, turmeric, and sweet
231 potatoes of several varieties are grown by them in a similar
219 manner. Those that wear the lac insect plant *lendoo* tree (Hindi *sakal dal*) in the forest clearings, and wear the insect thereon. Some of these people, however, are prohibited by a

Fig. 2

Arrow Tips

411
326 The arrow tips are made of iron in the village smithies. The tips of the hunting arrows ('nam-pliang) are flat, raised a little towards the middle and have smooth or toothed edges and two or more barbs (shaped like a spear). Length of the tip is about 9 to 15 [531] centimeters. Beautiful wrought iron arrow tips with pierced designs are also made. (13)

13. Illustration II, figs. 3a, 3b.

[526] The tips of the arrows used for sport ('nam-sop) are round and conical. Length is about 5 to 6 centimeters.

The spear-shaped arrow tips are poisoned with (ka bih) poison which the Khasi obtain from the tuber of a plant (aconitum ferox Wallich, aconite).

Attaching the Arrow Tips.

411

The arrow tips are attached in two ways:

1. either the shaft of the arrow is pointed in front and the arrow tip, which is hollow inside, is placed on it-both are joined with sealing wax;

2. or there is a separate shell of copper which connects the arrow tip with the shaft. Sealing wax is not used, since the shell acts as a clamp. Length of the shell is about 1.5 centimeters.

The Notch of the Arrow

At the tip of the opposite end a notch is cut in every arrow. The arrow is taken from a whole man-long or igrâ (kind of bamboo) in

411 Adl. Radial sewn feathering is the common
237 method. Feathers are taken from geese, cranes, cormorans, Buluwar vultures and the horn bird. The feathers of the carrion vultures are used less often as they are brittle. The feathers are split along the quill (shaft), cut on the top and on the bottom and sewn onto the base. At one end the feathers are 4 millimeters wide, on the other end (towards the notch) 8 millimeters wide. The split quill is 5 centimeters, the outer flags of the feathers 7 to 8 centimeters.

411 The base consists of tinfoil and is divi-
237 ded variously. A strip of tinfoil (not colored)
•531 alternate with a strip of tinfoil colored red. Thus thebases have a red tinfoil strip in the middle ad two red ones at each end. Or there are three in the middle and at the ends two or three re strips of tinfoil. The space in between isfilled out with uncolored tinfoil (silver) The red strips of tinfoil are two millimetrs wide. (18)

18. Illustration II, fig. 6a.

There are also bases of leather which is cut veryfine and gilded. As in the examples just mentioned red strips of tinfoil alternate with thebase that is not colored; similarly, uncolore strips of leather alternate with the gilded bae.. The uncolored strips of leather are 7 millimeters wide. (19)

19. Illustration II, fig. 7a.

The feathers which have been cut properly are now sewn onto the bases with uncolored natural silk, in a spiral form, (20), although

20. Illustration II, fig. 4

4:Stegmiller-14 M-4,5(no date)1925 AR7 Khasi AR7

lightly. The stitches are made exactly and evenly throughout. Figures 7b and 8b of illustration II, though greatly enlarged show how the silken threads are put on. With a base 5 centimeters long the number of stitches is 22 to 24, with bases of 7.5 the number of stitches is 29 to 31. 411 237 531

The feathers are at right angles to the split quill on the shaft and are sewn on five together, more rarely three together.

On the underside of the base (towards the tip of the arrow) black colored pitch is smeared, to unite the cut off feather ends to the shaft of the arrow. (21)

21. Illustration II, figs. 7a, 8a.

[614] Ad. 2. Tied tangential feathering is only used still on children's arrows ('nam-phiah). A completely uncut feather is fastened lengthwise on the end of the arrow by silk or bast and the join is smeared with pitch. 411 237

Hunting arrows and arrows for sport are also used unfeathered (hunting arrows especially in the neighborhood of Lamin) and are then simply called 'nam, but if they are feathered they are called 'nam-pur. 411 526

The target is made of the soft wood of a root and is called ka sah pdung by the Khasi. A piece of wood about 8 to 10 centimeters wide and 50 centimeters long is cut from the root, smoothed on the front side and pointed somewhat towards the ground, so that the whole thing resembles a relatively wide but short lath. This target is set up by putting the somewhat pointed end into the earth and placing two bamboo sticks behind as braces, so that the target cannot be tipped

10:Clarke U-3 (no date)1874 AR7 Khasi AR7

316 were all found within 200 yards of where they now stand, as may be inferred from the stray stone at about that distance from Stonehenge and not made use of: the small stones were probably brought a considerable distance from the greensand area in the north of the county.

316 8. In the setting up of these monuments the Khasis at the 473 present day use only the simplest and most direct mechanical means. For transporting a big stone wooden rollers are placed beneath it and the stone is then drawn by a large number of men harnessed to it by rattan ropes. To set one of the slabs upright, one end is slipped into a hole dug 1-3 feet in the ground, while the other end is tugged by similar ropes. For putting one stone upon another, as in a horizontal slab monument, it is drawn up a sloping stage of bamboo, but if the slab be of great weight, a slope of earth must be constructed, up which it may be pulled. These are the present Khasi methods, and it is, of course, highly probable that similar resources were employed in ancient times. I add a more particular account of some of the larger monuments.

281 9. The monument on the Government main road, about six miles north of Cherra, not far from the village of Lirinow, stands on sheets of Cherra sandstone, out of which the slabs were cut. The tallest stones were about fifteen feet out of the ground. The five stones on the left-hand side (west) of the road were erected when I first visited the hills. The five stones on the right-hand side were erected about four years ago, the family to whom the monument belongs having determined on such an addition. The two portions form one indivisible monument, and exactly correspond, the stones being accurately worked and rounded. The two top-knots are seen in several other monuments, but must, I think, be held proof always of a very late date for their erection. At the Mawmai monument a large rosette is carved on the face of the middle of the big central upright slab, which is also I presume modern work.

10. The monument at Mawlee village. This is, perhaps, the monument in all the hills which exhibits the largest slabs of Cherra sandstone. It stands on sheets of the same rock and there can be little doubt that the slabs were cut on the spot. It is of the (less usual) binary type.

11. The monuments at Rambrai in the west of Khasi-land. These consist of numerous horizontal and vertical slabs of no great size, the upright slabs being 4-8 feet out of the ground, but remarkable for their arrangement on a long open slope outside the village. The monuments stand all close together, reflected as in a chambered, so that it is not easy to separate

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

young are comely, of a buxom type, and, like the men, with highly-developed calves, the latter always being considered a beauty. The children are frequently remarkably pretty. Khasis carry very heavy burdens, it being the custom for the cooly of the country to carry a maund, or 82 lbs. weight, or even more occasionally, on his back, the load being fixed by means of a cane band which is worn across the forehead; women carry almost as heavy loads as the men. The coolies, both male and female, commonly do the journey between Cherrapunji and Shillong, or between Shillong and Jowai, in one day, carrying the heavy loads above mentioned. Each of the above journeys is some thirty miles. They carry their great loads of rice and salt from Therria to Cherrapunji, an ascent of about 4,000 feet in some three to four miles, in the day. The Khasis are probably the best porters in the north of India, and have frequently been requisitioned for transport purposes on military expeditions.

The people are cheerful in disposition, and are light-hearted by nature, and, unlike the plains people, seem to thoroughly appreciate a joke. It is pleasant to hear on the road down to Theriaghat from Cherrapunji, in the early morning the whole hillside resounding with the scraps of song and peals of laughter of the coolies, as they run nimbly down the short cuts on their way to market. The women are specially cheerful, and pass the time of day and handy jokes with passers-by with quite an absence of reserve. The Khasis are certainly more industrious than the Assamese, are generally good-tempered, but are occasionally prone to sudden outbursts of anger, accompanied by violence. They are fond of music, and rapidly learn the hymn tunes which are taught them by the Welsh missionaries. Khasis are devoted to their offspring, and the women make excellent nurses for European children, frequently becoming much attached to their little charges. The people, like the Japanese, are fond of nature. A Khasi loves a day out in the woods, where he thoroughly enjoys himself. If he does not go out shooting or fishing, he is content to sit still and contemplate nature. He has a separate name for each of the commoner birds and flowers. He also has names for many butterflies and moths. These are traits which are not found usually in the people of India.

526 sunset. (28)

28. The two large photographs were taken at this late hour. One picture (Plate I) during the sunset. Notice the long shadows. The other picture (Plate II) just after sunset.

When the target is no longer easily visible because of the twilight, the shooting is stopped. The judges now announce the final result out loud, which provokes stormy applause. After the judges are remembered with presents by their own factions, the archers come together in a group. They stand one behind another in a row, each row with about four to six archers. The battling factions stand opposite each other. Having their bows long days up and down --the men on the outside swing theirs--they march up and down on the festival place, stamping their feet in a quick rhythm singing and shouting they go back and forth. First one team then the other goes backwards. This kind of joyful utterance cannot actually be called singing; it is rather a quick uniformly modulated recitative uttered in an excited tone, interrupted again and again by "ha, ha, hoi, hoi" (kyshu, kyshoi is the same as ha, hoi i.e. shouting, calling). Someone or other of the victorious team makes a verse on the spur of the moment, which is about the contest, and the dancing, marching crowd repeats it noisily. Or rather after each verse they burst out with cries of joy and pleasure (ha, ha, hoi, hoi).

•528 To give an example how these verses sound approximately, I will give an original text with a literal and a free translation. (29)

29. For the German translation and

the added explanations I am indebted to the Khasi missionary R.P. Dominikus Deunderer, S.D.S., who has been here many years and knows the language and who very kindly placed his experiences in this field at my disposal. 583 •

It should be noticed in general that the content of such extemporaneous verses has a religious slant and the language adheres to the mysterious method of expression of magic formulae and other formulae usual in the religious customs of the Khasi. Nevertheless, we may not seek for either secrets or magic in the following chant (jingphawar) just as the Khasi do not. The solo singer (u nongphawar) goes in front of the victorious team and begins: [771] 526 538

1. U dieng-duh u kyndeh
The placing, the rice.
U sohkyrthit ia u pathaw.
The bar, the gourd.

2. To ngin khynniuh tyngeh.
Let us shang nightly.
Ban shon shit ia ka daw.
May our matter be in easy circumstances.

Then the rest shout, swinging their bows and stamping the earth: "ha, ha, hai, hai-hui!" [518]

3. Ka syrdeng u jasieh
The fence, the meadow.
Shi kynda ka kyndad.
Four moles.

4. To synieng ka dieng ryntieh.
Let us place upright the wood of the bow.

526 Ka samila kynrad
•533 Toutha, o lords.

All: "ha, ha, hoi, hoi-duil!"

5. Ka syrdeng u jasieh.
The fence, the meadow.
U thylliej ka shubthah.
The tongue, the little red
throat.

6. To pynieng ka dieng ryntieh.
Place upright the wood of the
bow.
Ban leit ka daw bah.
So that the affair be loved,
the big one.

All: "ha, ha, hoi, hoi-duil!"

7. U marsuh, ahibidi.
Iron, wire, four pieces.
U blein ia ka syrdeng.
The snake, the fence.

8. La kyndah bad ngi.
When one battles with us.
Ngin pynkhein ia ka reng.
Then we break the horn.

All: "ha, ha, hoi, hoi-duil!"

9. U kyndah ia u biaong.
The rice, the weasel.
Ka lengsangma halor dieng.
The hawk on the tree.

10. To lynngneh ia ka jingong.
Make your word hard.

Ba un jan ka jabieng
That the forehead may become
soft.

All: "ha, ha, hoi, hoi-hoi!"

11.Ka liengrongem halor dieng.
The hawk on the tree.
U pathau u jaliaut.
The gourd, the chrysanthemum.

12.Ba un jan ka jabieng.
That the forehead may become soft.
Ba un jaw ka eit mut.
That the mucous discharge from
the nose become soft.

All: "ha, ha, hoi, hoi-hoi!"

13.U sporem u kynduk.
The nettle, the brimstone.
U sohryngkham shi kynda.
Wild plume, four pieces.

14. Mut iam rem ka iak.
Do not weep defeated, friend.
Ba la ban ki ka pase.
For the Pase itself has consumed it. (50)

50. Ka pase is probably a deamoness, guardian spirit of the shooters and hunters (-hoou?). Sanskrit pasa--string, snare (lasso).

As may be seen, such a song (jingpiaar) is not easily understood. In the first two lines, words that are (seemingly) without

526 meaning are placed next to each other usually
535 a nominative before the objective case (accusative--dative). These words form the frame for the words contained in the second (even lines) sayings.

The poem can be reproduced in the following way to make sense (only the even lines):

2. Let us stamp mightily so that the earth groans.
   So that it is known for certain that we have conquered.
4. Set up the bows, you brave youths!

8. Set up the bows so that the mighty victory shows.
6. Whoever dares to battle us, we will fix his comb.
10. May your mockery be sharp, the opponent must weep.
12. He must weep, his eyes weep, his nose runs.
14. Do not be sorry, comrades, it was so determined!

[522] 526 Singing in this way with mocking songs
273 to the defeated opponent, shouting and rejoicing, the crowd moves across the place of the festival. Liquor is brought and drunk zealously, only too zealously, so that the crowd, lighted by the torches, aroused by the brandy, and excited by the shooting competition, makes a wild impression. The raw, wild joy breaks forth in a deafening racket. Finally tired of the rushing around they return slowly but still shouting to their village, and scatter to their huts, still disputing violently about the happenings.

526 The cost of an archery contest varies

224 have gathered and go either behind the bier or sit down on the edge of the road to be spectators. There is not much difference because the parade goes so slowly that it is hard to see if it is moving at all. The triumphal parade takes a full four hours to go a distance of about 800 to 900 meters. [622] Although the Khasi are never in a hurry, in this case they are the 221 slowest ever. But there is something ceremonial 33 in this and when the solo singer (the nongphawar) raises his voice in extemporaneous song, to celebrate the dead animal when the crowd answers rejoicing and shouting, assuring the singer again and again that he is doing it well and thus spurring him on to new verses, when blank cartridges are shot off and the spectators are lit up brightly by torchlight, milling around in their colorful costumes, when the rice brandy has done its share, then the climax is reached!

The solo singer goes in front of the bier, 1 but with his face always turned towards it. Gesticulating violently with his hands, he bows now to the left, now to the right; he bends his upper body now forwards, now backwards. Jumping in the air from time to time, he only shows signs of joy and praise. According to his whim and invention he sings about the animal. The crowd joins in the improvised refrain, which is sometimes a repetition of the solo song, sometimes a shout of applause.

223 The solo singer sings approximately: (34)

34. P.D. Daunderer, "Khasi-Sitten" [Khasi Customs], Missionar [Missionary] 1905, pp. 179 ff.

Solo singer: "Hey! strong mother of bears, hungrilly thou eatest thine own children!"

7 [carrying the hunters' prey-- Analyst]

All: "Ha, ha, ho, huh!"
S : "Hey! Beautiful she-bear! Truly beautiful mother, most exalted in the circle of thirty animals!"
All: "Ha, ha, ho, ha, huh!"
S : "Now thou hast been brought to the marketplace, o mistress! To the marketplace! Hey!"
All: "Ha, ha, ho, huh!"
S : "Thou has written thy death sentence thyself, when thou tookest booty from the house of the poor!"
All: "Ha, ha, ho, ha, huh!"
S : "The pack of hounds, however, the wonderfully raging hounds and the man, the clever one, brought luck on their side!"
All: "Ha, ha, ho, huh!"
S : "The hunting demon, the spirit of the field, the household spirit! Therefore we rejoice mightily and celebrate and exult!"
All: "Ha, ha, ho, huh!" etc.

One man sang about as follows at such a triumphal procession in Laitkynsew, when an antelope was brought home:

S : "From the mountains, from the cold land thou has come to us into this land, into the kingdom of Laitkynsew!"
All: "Ha, ha, ho, huh!"
S : "Thou wast free and rejoiced in the forest, thou didst thyself well by the green grass for a goodly long time!"
All: "Ha, ha, ho, huh!"
S : "The hunters saw thee young and powerful — beautiful — in the circle of thirty animals. They went forth with arrow and bow, with gun, lead and powder!"
All: "Ha, ha, ho, huh!"

533 S. : "Thou fledest into the thicket! Did that help thee?
Shyly thou retreated before the brave crowd of hunters!"
All: "He, he, he, huh!"
S. : "Quickly indeed thou retreated; quickly the pursuers passed after thee and arrow and bow brought thee low!"
All: "He, he, he, huh!"
S. : "O mistress! Why didst thou come hither? Thou gavest thyself over to death and destruction — but we rejoice and celebrate and exult!"

Thus it continues for a long time. When one person has sung until he is hoarse, another takes his place and continues the song.

524 Exhausted from the exertions of the hunt, exhausted from the activity of the parade home, hoarse from shouting and screaming, heated from the enjoyment of brandy, the crowd drags itself to the house of the hunter who placed the first arrow or shot in the wild animal. Sacrifice is made there to the village god and the slain animal is divided up. The first shooter (a sungelot) receives the hind quarters, the second shooter (a sunghan) the front quarters of the animal.

In the Jaintia Hills the Syntengs go to a hill in the neighborhood of the village when they have hunted and killed a tiger or a leopard. An altar is set up there under an oak tree and the head of the animal, which has been severed from its body, is placed on it and sacrificed to the u'let lynghah (the god of the Dalim district).

Arrow and bow are not only necessary weapons to the Ewes for hunting or pleasant sporting equipment for archery contests; Arrow and bow are also holy to him in a certain

However, carefully paid, as is done when cutting the stones for the funeral platform; while this work is in progress numerous [illegible] are entertained, and a continual beating of tom-toms (hand-drums) is kept up while the work is in progress.

That many of these monuments, and by far the larger number, are of great age, may be inferred from the fact that their history is quite lost.

As to their distribution, they are to be found over all the higher part of the range; the front, certainly, in the central portion and in the vicinity of the larger villages, such as Cherra Pungin, Jowai, Nartiang, etc.

In Nongstoin, on the west, they gradually die out, and a few, not exceeding three or four feet in height, are to be found in the Khasia villages towards the Garo tribes, but at this limit the Lyngngam come in, and their customs assimilate more with the Garo-named people. It is the same on the east and south-east of Jaintia; the stones set up are smaller and of rougher form, and by no means so numerous, yet they are to be seen in all kinds of out-of-the-way places quite overgrown with grass and jungle, where villages have not existed for years. Indications were not wanting, showing that the country had been formerly much more populous, especially on the northern slopes of the Khasi and Jaintia Hills. I have, on the other hand, never come across structures of the kind anywhere beyond the limits of Khasi-speaking people, that is, between longitude 91 deg. and 92 deg. 30 min., which includes the Jaintia Hills, the people of which part are called "Sutonga", differing in some minor points from the Khasis; the dialect is distinct, and there is a strong a type-form of likeness and expression, the two can be generally separated without inquiry. The same remarks hold good for the western side; a Khasi of the border Nongstoin villages can be told off at a glance—so strong are the great clan likenesses.

I have traversed the whole country on the east, viz., the North Cachar Hills, inhabited by tribes of Kachis and Nagas, and had the Khasi ever occupied permanently a larger area either on the east or west, particularly the former comprising as they are supposed to have done, from that side, I think we might have expected to find occasionally remains of their imperishable monuments. The only exception that I know of occurs on the road from Rongkhi to Hangrung, in the North Cachar Hills district, beyond Asilla, a part of the country now in the occupation of Nagas, and formerly entirely in that of Kachari, who are Bodos or Bodiks. The road lies through forest, keeping along the high spur; at about two miles from the peak of Hamon are to be seen several large slabs of stone easily level with the ground, one ten feet by six, covering some sort of receptacle, for the ends of the

[illegible] chairs are placed while that of the wife (Sunrise Wang) was placed [illegible] for sacrificial goods. There is a very big circular courtyard in front of the building where the members of the royal family as also other lions and ignoble hold a royal dance. The function is always held during the seventh period of Ming or June and the actual dance are held in connection with the Chief priest (Ashiko) in such a way that the first day (Sunrise) always coincides with the market day of Ikolong (Dove Range). The dance of the festival is then announced by the exchange of different cuts of the territory, through a wooden rack 'Sunrise' having a five leaves of cowskinds as a form of numbers for attending. We trained for five days or then along with subjects under their jurisdiction.

[illegible] Ceremony

The responsibility of performing this ritual rests on the High priestess (Ex Alex Gall) who is succeeded by her elder daughter. Different ritual objects are presented to her, and in advance and a is obligatory on her part to join the ceremonial dancing, in which her daughter may also participate on her behalf. 12 Shillong is contributed by the chief priest while the other ceremony are involved to lesser priests. The musicians (Alabiki Vaddie) their sacred duties, take part in the dancing of the ceremony and they are presented with with uniform, jackets, cloth, by the ruling family for the services rendered during the festival. The Gore has an especial role except to supervise and render 1 Shillong for the welfare of the community. He is required to perform certain sacrifices, failing which his last appearance (Gore Kuwaiti) does the same. He along with the Gore (High priestess) abstain from taking sex during the period of celebration principally to observe the sanctity of the festival as also to ensure the successful conclusion of the function.

Ritual Sacrifices

The festival derives its name from the sacrifice of a large number of goats some of which were supplied from the Gore fund and from different units of the territory. Formerly at least fifty goats were required and each unit had a specific allotment but owing to the economic difficulty that the Ethnic are undergoing, the number of goats sacrificed hardly exceeds twenty-five. The goats contributed from the different units are presented to the Chief on the eve[illegible] of the ritual day. Kola-Nuts, dried fish, frankincense, lead leaves together with rum are also important ritual objects in the celebrations.

Commencement of the Festival

The commencement of the festival was marked by the distribution of meat, fish and palm wine to the persons assembled on the occasion, in the evening of Thursday(12th June, 1977). This was followed by the dropping of kola-nuts by the Chief priest and the first phase of sacred ball lasted for the whole day

The pigs were sacrificed by his sister's eldest son (Ilowi-Ilyawah) and in charge of religious rites at the open courtyard. The priests evoked the spirits and ancestors and called upon them by name praying "Oh God and Goddess, I offer this sacrifice in our ancestors dish. Bless the Dove, his family and the people of his state. I shall beseech you again on this day after one year. Give us favourable weather by virtue of your power, bring clouds and rains to yield bumper crops and ensure a happy and prosperous life."

On the last day (Ilowiyawa), a man of Ilyawah clan sacrificed a pig, involving an iron spike in its left armpit. Nine pieces of meat from different parts of the pig's body were again offered to their five ancestors. The Dove as the ancestor of his Kurfor performed the last rank of Ilowiyah by praying to U Shilong, while the Chief of Ryngah clan also followed in the same way for seeking the blessings of their Chief deity.

This brought the ritual to an end performed at the residence of Dove. The five pieces of goat's and pig's meat offered to their five ancestors, were then handed over to the in-charge of the five units considered as somewhat higher in their Dove organization. They distributed them as a suitable share to their units, making a feast as a sort of public declaration of the completion of their grievous feasts for the year.

Dances

Besides the ritual described above, dance with the commencement of ceremony [illegible] of the Festival. A dance known as [illegible] Ilyawah and Ilyawah [illegible] for the five recently dead and 50 in due. This dance [illegible] Suwerjo. It has to be performed in pairs. The first pair was considered to Chief priest and the Chief musician. Beyond to fifth [illegible] of the night and in all the other days along with [illegible] of the second consecutive day and year. The subsequent pairs were [illegible] from the [illegible]. They danced only after having [illegible] on the fifth day. This passing [illegible] of the last rite of the festival.

A dance form of dance (Ka) and recently was also performed in the courtyard [illegible] the [illegible] dance (Ilong-Ilong) dress with [illegible] and [illegible] dancers, who danced their [illegible] were consisting of silk native (Ilongkiang) [illegible] with feathers, coloured [illegible] wear (Ilongkiang) other shoes and [illegible]. Later on the [illegible] the ceremony, this was to the adjacent hill where after the completion of the ceremony of goat killing, a group dance was performed, crossing to the residence of Dove ultimately.

[illegible] was performed by the Dove family. It was held early in the morning of the fourth day in the central hall (Ilkhar) and also in the courtyard. The men and women dance alternate the women [illegible] with pots and other [illegible] (passengers) numerous other occasions and different coloured [illegible]. They danced and treated the [illegible] as a feast and as the [illegible]. The High Priestess who also danced with the member of the Dove family, stood in the middle of the line and chief musician stood at one end. They held each other in hand and danced round the [illegible] of the second hall (Ilkhar) in anti-clock wise direction in [illegible] movement of music. The people assembled there, gave rest to their feeling in their customary way every time, before they resumed to make a deep [illegible]. Similar performances of music were also held in the courtyard.

IgGordon E-4, 5 (no date) 1907 ART Khasi ART

like a pendulum. An explanation of this method of divination will be found in the paragraph dealing with divination.

There is also a pair of spectacles used by the old and sensible for breaking up betel-nut. In the houses of the well-to-do is to be seen the ordinary bubble-bubble of India. Outside the houses of cultivators are wooden troughs hollowed out of the trunks of trees, which are used either as drinking troughs for cattle or for feeding pigs. A special set of utensils is used for manufacturing liquor. The Syntengs and War articles of furniture and utensils are the same as those of the Khasis, with different names, a remark which applies also to those of the Bhoi and Lyngngam. Both the latter, however, use leaves as plates, the Bhoi using the wild plantain and the Lyngngam a large leaf called *ka la maniang*. The leaves are thrown away after eating, fresh leaves being gathered for each meal. The Lyngngam use a quilt (*ka ejilar*) made out of the bark of a tree of the same name as a bed covering. This tree is perhaps the same as the Garo *sinapali*. In the Bhoi and Lyngngam houses the swinging shelf for keeping firewood is not to be seen, nor is the latter to be found amongst the submontane Bodo tribes in Assam.

MUSICAL INSTRUMENTS.

The Khasis have not many musical instruments, and those that they possess, with one or two exceptions, are of very much the same description as those of the Assamese. There are several kinds of drums, viz. *ka nakhi*, which is a large bottle-drum made of wood having the head covered with deer-skin; *ka kaing*, which is a cylindrically-shaped drum rather smaller than the Assamese *dhol*; *ka kaing kyrdhi* takes its name from the fact that this drum is beaten when written, *kyrdhi*, drawn; *ka pudiah*, a small drum with a handle made of wood; *kathan*, a small circular drum. Khasi drums are nearly always made of wood, not of metal, like the drums to be seen in the monasteries of Upper Assam, or of earthenware, as in Lower Assam.

I: Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

played with a little wooden key held in the hand. *Ka marjong* is an instrument much the same as the last, but is played with a bow like a violin. *Ka marpatheng* is a kind of guitar with one string, played with the finger.

Ka thingpeni is a wooden pipe, which is played like a flageolet. *Ka lyndoh*, or *shibowar*, are cymbals made of bell metal; *ka shiwiti*, or *ka shingwiang*, is a kind of flute made of bamboo. This instrument is played at cremation ceremonies, and when the bones and ashes of a clan are collected and placed in the family tomb, or *mawbah*. This flute is not played on ordinary occasions. In the folk-lore portion of the Monograph will be found a tale regarding it. There are other kinds of flutes which are played on ordinary occasions. The Wars of the twenty-five villages in the Khyrim State make a sort of harp out of reed, which is called *ka 'ding diny phang*. The Khasis also play a Jews' harp (*ka mang*), which is made of bamboo.

AGRICULTURE.

The Khasis are industrious cultivators, although they are behindhand in some of their methods of cultivation, (e.g. their failure to adopt the use of the plough in the greater portion of the district); they are thoroughly aware of the uses of manures. Their system of burning the soils, allowing them to dry, then burning them, and raking the ashes over the soil, is much in advance of any system of natural manuring to be seen elsewhere in the Province. The Khasis use the following agricultural implements:—A large hoe (*maikhie hok*), an axe for felling trees (*ka sifai*), a large *da* for felling trees (*ka ward kynsum*), two kinds of bill-hooks (*ka wiid grad* and *ka wiid khmat*), a sickle (*ka sibdi*), a plough in parts of the Jaintia Hills (*ka lynghoi*), also a harrow (*ka tah mai*). In dealing with agriculture, the lands of the Khasi and Jaintia Hills may be divided into the following classes:—(*a*) Forest land, (*b*) wet paddy land called *hali* or *pynthor*, (*c*) high grass land or *ka ri kiew* or *ka ri pilieng*, (*d*) homestead land (*ka 'diw kyppi*). Forest lands are cleared by the process known as *jhuming*, the trees being felled early in the winter and allowed to lie till January or February.

1:Garden E-4, 5 (no date) 1907 AR7 Khasi AR7

"ioo, short for *bioo* (grandmother), and *bo*, mother. *Ka Iewbei* is the primeval ancestress of the clan. She is to the Khasis what the "tribal mother" was to old Celtic and Teutonic genealogists, and we have an interesting parallel to the reverence of the Khasis for *Ka Iewbei* in the Celtic goddess Brigit, the tribal mother of the Brigantes. Later on, like Ka Iewbei, she was canonized, and became St. Bridget.*

The greater number of the flat table-stones we see in front of the standing monoliths in these hills are erected in honour of *Ka Iewbei*. In former times, it was the custom to offer food to her on these stones. In cases of family quarrels, or dissensions amongst the members of the same clan, which is in danger to bring to a peaceful settlement, it is customary to perform a sacrifice to the first mother, "*Ka Iewbei*." They first of all take an augury by breaking eggs, and if it appears from the broken egg-shells that *Ka Iewbei* is offended, they offer to her a cotton cloth, and sacrifice a hen. On these occasions invocations are muttered, and a small drum, called, "*Ka 'ding ding ding*," is beaten. It is not unlikely that the Khasi household deities, *Ka lei ding* and *Ka lawa la jingpon*, to whom pujas are offered for the welfare of the house, are also *Ka Iewbei* in disguise. Notwithstanding the strong influence of the missionaries, we find that *U Thawlang*, the first father and the husband of *Ka Iewbei*, is also revered. To him on occasions of domestic trouble a cock is sacrificed, and a *jymphong*, or shovelnose cat is offered. This puja is called *bala tap Thawlang*, i.e. covering the grandfather. The following invocation to *U Thawlang* is then chanted:—"Oh, father Thawlang, who hast enabled me to be born, who hast given me my stature and my life, I have brought thee, oh father, be not offended, for I have given thee a pledge and a sign, i.e. a red and white shovelnose cat. Do not deliver me into the power of (the goddess of) illness, I have offered thee the propitiatory—ok that thou mayest carry me in thine arms, and that I may be aware of thee, my father Thawlang."

We see clearly from the above prayer that the Khasi idea is that the spirit of the deceased male ancestor is capable of

* Rhys Powell's essay on "earliest age civilization."

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

receptacle. A small basket (*ka shong*) is hung up over the head of the corpse, the basket containing pieces (*dykhot*) of the sacrificed animals. A dish containing eatables, and betel-nut, and a jar of water are placed near the head of the corpse by way of offering refreshment to the spirit of the departed. The food is given each morning and evening that the corpse remains in the house; this is called *ki ja saiet ja slap*. Each night the corpse remains in the house guns are fired, drums are beaten and fetes (*shdwiet*) are played. It is a noteworthy custom that the body is not retained in the house for an even number of nights, the usual time being three nights. If it is intended to burn the body on a masonry pyre (*jingkhawy*), a bull (*u sumi lyursh*) is sacrificed. If the body is placed in a coffin (*ka shyngwiet*), a pig named *u'slang shyngwiet* is sacrificed, and if it is intended to adorn the pyre with flags, a fowl called *u'lur hail* is sacrificed. On the day of the funeral procession pigs are sacrificed by the relatives and friends of the deceased; those who cannot afford pigs bring liquor (*ka'iad slang*), a small portion of which they pour on the funeral pyre. The coffin is laid on a bamboo bier (*ka lewng*), money being placed close to the corpse, so that the spirit of the deceased may possess the wherewithal to buy food on its journey. Cotton, or, in the case of the rich, silk cloths are tied cross-ways over the bier, if the deceased is a male, and in the form of a parallelogram, if it is a female. Before lifting the bier a handful of rice and water from a jar are thrown outside, and a goat (*u'lang said kwiid*) is sacrificed. These are preliminary ceremonies. The funeral procession then forms up and slowly passes along the way to the plaintive music of fetes (*shawit*) and the beating of drums. At intervals, in the case of the rich, salutes from guns are fired. Copper coins are also scattered along the route. On nearing the pyre the dead body is exposed to view and the pieces of flesh of the sacrificial animals, which are with the corpse, are thrown away. They make ready three baked leaves (*ki lipu*), an egg, the lower jaw-bone of the animals which have been sacrificed, the left leg of the fowl (*u'lur kwad lipuh*), a jar of water, eatables in a dish, and a bow and three arrows. A goat is then sacrificed, *u'lang sakhjiet*. The corpse is laid on the pyre, inside the coffin, if one is used, with the head to the west and the feet to the east. Logs of

1:Gordon E-4, 5 (no date) 1907 ART Khasi ART

plate. The hair is worn tied in a knot behind the head, but with a long tail hanging down the back. Rich silk clothes are worn by the girls, who present the appearance of being, if anything, over-clothed, or, as Tylor aptly puts it, of "perfect parallelograms." They wear a profusion of gold and coral head-necklaces, silver and gold chains, bracelets, ear-rings of gold, and any other jewellery they can lay hands on. Not only is the whole of the family jewellery requisitioned by the fair dilettanti (it is only the unmarried girls who dance), but she borrows from her friends. The men dance round the outside of the circle, waving fly-flaps and prancing (often nowadays wearing hats hence) with majestic strides. The music accompany for the dance consists of tongpuri (pipes), drums, and cymbals. This is *ka shad kynthei*, or the dance of the women. Then there is *ka shad mantiah*, or the dance of the men, who are gaily dressed, wearing plumes of black and white cock's feathers (or fly-pipe) and hold swords and shields. After grouping for some time, two men at a time rapidly approach one another and clash their swords together in mock combat. They then retire, and, after again resuming for a period, repeat the process; then other couples follow and take their place. This goes on until the dancers get tired or are told to stop.

The above description may be taken as applicable to all the Khasi dances. Dancing forms part of the ceremony of placing the ashes in the sepulchre of the clan. Dancing also forms a part of certain ceremonies performed at markets for the prosperity of the State and for the good of trade.

When I was at Mawsynram, at the time of the appointment of a Siem, I witnessed a very pretty dance called *ka shad lyoweh*, performed by men who hold the leafy branches of trees in their hands. This is most effective. Then followed a dance of some forty young girls, very well dressed, covered with the usual gold and coral beads and silver chains, and wearing the silver crown, or pansiyiet. The young women danced with great spirit, and with an element of all rhythm, but still with the greatest decorum. Many of the women, spectators as well as dancers, were observed to be without the usual *tap* and *thlli*, or head-cloth, the absence of which is always a sign amongst the Khasi women of merry-making. There were

i.e. the Siem of Mylriang, is supposed to have been a very powerful monarch amongst the Khasis. The story of Manick Raitong is interesting, in that it explains the origin of the use of the shewati, a bamboo flute of special make which is played only at funerals. The pool of water, which was formed after U Manick and the erring queen were buried, may be connected with the Dudai, or tank, which is dug to choose the souls of those who have died violent deaths. The idea of the bamboo, which here bores that grew upside-down, springing up from the buried flute, is also to be found in the Syntong tale regarding U Lah Byndi's fishing-rod. Owing to considerations of space, I have had to curtail largely the folk-lore section. I have, however, kept the materials by me, and if at any future time there is reason to believe that the reproduction of more Khasi folk-lore is called for, I shall be glad to try to arrange that some of the other folk-tales be printed.

The Water-fall of Ka Likai.

The water-fall of Ka Likai is one of the most beautiful water-falls in the Khasi Hills. Its stream flows from a certain river from the village of Rangjirah and passes by the village of Nongriat. The fall can be seen distinctly from the village of Laitkynsew. What a beautiful fall it is when viewed in the morning. It is also a very high fall. There was in olden days in the village of Rangjirah a woman called Ka Likai. She was a poor woman who had a husband. When she had given birth to a child, the husband died. Whilst the child was yet a baby, she experienced much trouble in taking care of it on account of her poverty. After the child was able to walk, what a pleasure it was to her to see it growing, and able to play with other children. Then that woman married

This stone is apparently some rough gem which may be picked up by the Lyngngam in the river beds. A rich man amongst them, however, is one who possesses a number of metal gongs, which they call *ching*. For these they pay very high prices, Rs. 100 being quite a moderate sum for one of them. Being curious to see one of these gongs, I asked a *sikdar*, or headman, to show me one. He replied that he would do so, but it would take time, as he always buried his gongs in the jungle for fear of thieves. Next morning he brought me a gong of bell metal, with carvings of animals engraved thereon. The gong when struck gave out a rich deep note like that of Burmese or Thibetan gongs. These gongs have a regular currency in this part of the hills, and represent to the Lyngngam "Bank of England" notes. It would be interesting to try to ascertain what is their history, for no one in the Lyngngam country makes them in these days. Is it possible that the Garos brought them with them when they migrated from Thibet? The gongs are well known in the Garo Hills, and I hear that when a *nokma*, or head-man, dies his corpse is laid out upon them. They thus possess also an element of sanctity, besides being valuable for what they will fetch to the Garos or Lyngngam. We may hope to hear more about them in Captain Playfair's account of the Garos.

The Lyngngam do not tattoo. Their weapons are the large-headed Garo spear, the dao, and the shield. They do not usually carry bows and arrows, although there are some who possess them. They are by occupation cultivators. They use two kinds of hill rice, red and white, on the hill-sides. They have no wet paddy cultivation, and they do not cultivate in terraces like the Naga. They burn the jungle about February, after cutting down some of the trees and clearing away some of the debris, and then sow the paddy broadcast, without cultivating the ground in any way. They also cultivate millet and *Job's tears* in the same way. With the paddy *thillim* are sown the first year. The *ngi* plant, arum, ginger, turmeric, and sweet potatoes of several varieties are grown by them in a similar manner. Those that sow the lac insect plant *kendu* trees (Hindi *ankal dal*) in the forest clearings, and rear the insect thereon. Some of these people, however, are prohibited by a

and such are bought with these contributions, the balance, as with other money, is handed over to the S'iem dkl for management.

Until the approach of the actual festival, the fish sacrifice (nuid-ikhdhuk) takes places on the day called jno pendhah, on which all who appear are fed with dried fish and brandy. This is supposed to be a further announcement to the u Blei Shillong, u Sundia long Shem and ka Blei long S'iem of the imminent Poja. Twelve different kinds of drums (bong) are beaten.

Then the drum, kong thai ryngkoh, is beaten three times, and the first sacrificial priest (bah Blei) and a flute player dance. The dance, ryngkoh, will be described in more detail below. After it is finished, the kong kynthei (women drums) have a turn, to the sound of which the S'iem and the flute player (bhalia) dance three times. Usually only women dance to this drum. About the method of dancing it is sufficient to remark that in a Khasi dance the dancing persons do not touch each other, and each carries out the motions independent of the others. After the women drums are beaten, then the sword dance drum (kong mastieh) and the large drum (nakra) are beaten. Torches are carried around and doses of joy uttered nine times. Various drums, flute music, and clashes of cymbals follow, while dancing takes place. /facing p. 596. (A) Fig. 1. Drums, flutes and cymbals of the Khasi. Fig. 2 Sacrificial knives and ka wait of the Khasi. Phot. P. From. Siegmüller S. D. S. Fig. 4. Sacrificial dress of the bah Blei (Khasi). Phot. P. From. Siegmüller, S. D. S. / /facing p. 596. (B) Fig. 3 (sic?). Khasi ornaments. Phot. P. Fro. Siegmüller, S. D. S. / /595/ At the end the S'iem dances alone, while the drums and flutes are not silent the whole night through. Fig. 1 shows several Khasi drums, a flute, and cymbals which are seen missing from a dance.

The day of the large market, on which the actual ceremony begins, approaches meanwhile. On the day before -- ka ingi ottei -- the roads are swept and the place for the sacrifice of the goat put in order. As a sign of joy as to what will happen, drums are beaten again and flutes (nangmuri) played. In front of the house of the S'iem dkl, the S'iem and other men perform a sword dance. Although interesting, this dance is not very artistic. Hopping and skipping from one foot to the other, the men, one behind the other, move slowly in a circle on the open place. (cf. Fig. 6). They hold a bunch of goat hair in one hand and a sword in the other. A shout of joy is uttered from time to time, then they stop again, jump at each other two by two, and hit each other with quick blows of their swords. Each one quickly drops back again and moves in a circle again as before. In this way the dance continues.

[See illustrations, see [illegible] pp. 44-6 -- [illegible]]

The spectators now go to the side. The S'iem and the Rangbah come down to the place of sacrifice, while the Sub Blei receives the vessels and the sacrificial gifts and spreads them out in order on the ground. Then he takes the meaner in both hands and calls on the god Shillong with these words: "O god Shillong, thou who hast been seated since time immemorial! (ka Blei Shillong hombe la bah u long dwai)". With a deep bow he then offers the sacrifice five times. Rooster and goat are sprinkled with water, rice, and the flour from lyu and rynti, and are then beheaded. Then the examination of the entrails (dylliu) takes place in order to see if the sacrifice was acceptable. The way of doing that will be given below.

After the end of the sacrifice the Sub Blei and a flute player lead the sword dance, after them the S'iem and the other dancers follow in turn. Various drums are beaten alternately and flutes are played through the whole night. When night falls the goats of the S'iem and those of the various dignitaries of the kingdom of Mawphlang are brought for the sacrifice of the next day.

The day following the great market is called ka ngi Lynghu. It is the center point and climax of the whole community. From early in the morning the crowds pour in from all sides of the Khasi Mountains.

Early in the morning an unmarried girl of the royal lineage (ka S'iem ka Jing Myrnaw) dances in the house of the S'iem ñdi before the ridun Blei. Usually a granddaughter or nearer relative of the S'iem ñdi is chosen for this. Two men then take the girl in their arms and carry her with a rocking motion to the large open place in front of the ring ñdi.

Then the great folk dance begins. In the middle of the place musicians squat on the ground and play the drums and flutes, and strike the cymbals. The music is quite without art, only a repetition of the same [illegible].

The women dancers move in a rather narrow circle around the musicians. Only the unmarried girls dance. The clothes they wear for it are very rich and frequently very valuable. Fine cloths, usually of red, yellow, or blue silk are draped over their bodies the upper body and arms are covered by a satin jacket. Their hair is bound together in a bun behind their heads, a rising bunge /facing p. 108. Fig. 5 Khasi Men Dancers in front of the ring ñdi. Phot. P. From, Dingwiller, S.D.S. Fig. 6. Sword Dance of the Khasi. Fig. 7. S'iem ñdi and S'iem of Mawphlaw. / /107/ down from the bun which usually ends in three tassels. The head is covered by a golden or silver crown of fine chased work, which is topped by a bunch of feathers or a bunch of artificial flowers. Around their necks they wear chains of gold or [illegible]

Then followed the dance of the girls (Ki shad i yadat) who were also wearing dress as described above. They kept their eyes down, keeping their arms on their sides taking such a short steps with the steps, that the movements of the feet were hardly perceptible. The boys were also in their dancing dress as were by, sangdad and [illegible] with Ba-Gnak round the girls making their steps with the beatings of the drums. The music stopped from the morning would be stopped only after completion of the dance which prolonged till evening. These functions served as a good source of amusement to the people, enabling them to have a good diversion from their monotonous life and an opportunity to meet their friends and relations who assembled there from different parts of the hill.

Conclusion

From the foregoing description, it is evident that the Khasi live in a democratic set up in which the senior Quian are accorded to the Elite. A different rule is followed in the case of religious festivals. Every Khasi family entrusts the secondary work of the house to the younger daughter. The Siem's sister (Siem Sad) being the recent creation of the mother's idea, is made responsible for the observance of these ceremonies which concerns the welfare of the subjects. The people attend the festival to seek blessings of their common deity U Blei Nongthaw and thus pay tribute to the Siem's traditional influence on their loyalty to him. The rituals of festivals, instead of being performed by her (High Priestess), were conducted by the Chief Priest (Bah Sad) for which he was allotted a very important position in the celebration. The musicians were given similar status owing to the belief in the sacredness of their music. It ought to be played in proper tune otherwise the displeasure of the deity would fall on them as leading any slight departure to sin respect. For this reason, the music is considered as important as the rituals and the role of musicians were consequently given due recognition at every stage of the festival. The tradition of dipping the corpse of Dingpong into the water into the pool at the top of the hill was followed and dancers of Bah Sad consumed having received not in order since the performance of pale-dance (body paint) to the Siem. Another people of Mawkyang who had also asked to carry the head of the sacrificial animal from the hill to the sacred dance of the Siem after the sacrifice, as his predecessors were said to accompany them during the period of his sacrifice in this Siem. Each ceremony has been explained in a symbolic way through their mythology.

The most important concern of the people was to maintain their social of living together with their property and other means of subsistence. Their monotheistic life is that to might thereof the and spirit from dying and have and may in addition grant them heavenly wealth. To the people of such a lesson, they approached their god U Blei Nongthaw with gifts and sacrifices. It is not now whether he is convinced or one of their gifted sacrifice, but the important doctrine in the Khasi problems evolved due to here some priority in their worship. The offering of animals together with a yellow goat, however, revealed his wrathful and benevolent nature of the religious cult yet representation invariably with Bah Sakhi. U Blei Nongthaw revolved consequently with other Khasi ceremonies, and this fact, that of the dances would meet their requirements, enough in fighting the evil spirits before the latter have chance to cause any harm to their crops or to relate in any way the fertility of their fields.

It would be interesting to offer here about the composition of the cheng of meat from various parts of the sacrificial animal. It shed light a sort of representation by serving him with what had for their needs to be according

1:Gordon E-4, 5 (no date) 1907 ART Khasi ART

lyngdoh to this god. As in the case of sacrifices to *Ka Ki Ring*, the services of a priestess are indispensable.

A *lyngdoh* is a *lyngdoh* for life. When a *lyngdoh* dies and his successor is appointed, certain rather elaborate ceremonies are observed in the Nongkrem *raj* of the Khyrim State. The funeral ceremonies of the old *lyngdoh* having been completed, the *lyngdoh* elect appoints his successor. The latter then, after performing his ablutions, proceeds, accompanied by the assembled members of the *lyngdoh* clan, to the top of the Shillong Peak. The *lyngdoh* and his clansmen advance along the road dancing, this dancing being carried on all the way from the *lyngdoh's* house to the Shillong Peak. All are clad in the distinctive Khasi dancing dress. Having reached the Peak, they pick the leaves of a tree called *ka la phiak*, which they spread on the ground. A goat and a cock are then sacrificed, the new *lyngdoh* acting as the sacrificer. There are the usual ceremonies, including branches of the Khasi *ming ar* oak. Nine portions (*dylliat*) are cut from different parts of the victim and are offered to the god of the Shillong Peak, *U bai Shillong*. The *lyngdoh* and his companions then perform libations three times to the god, and the *lyngdoh* walks backwards nine paces. The puja is then over, and they return dancing to the *lyngdoh's* house. On another day the *lyngdoh* performs a puja to *u ka Lyngdoh*, also a *Rangjah*. Undoubtedly the most interesting feature of the ceremonies on these occasions is the dancing. This dancing is carried out by the *lyngdoh* and his companions armed with sword and shield, a flying mode of goat's hair (*nyngkhiah*) being also sometimes held in one hand, a quiver of arrows being slung on the back, and a plume of black and white cock feathers (a *thrpe*) fixed to the turban. The dance is executed in a regular figure, the dancers advancing and retiring in an orderly and methodical manner, and finally clashing their swords together in mock combat. The dance of the present day is not unlikely the survival of a war dance of ancient times. The *lyngdohs* say they dance in honour of *U bai Lyngdoh*, to whom such dances are thought to be pleasing. The dance of the *lyngdohs* on these occasions may be compared with that of the Roman *salii*, who, in the month of March, performed a war dance in honour of Mars.

1:Gordon E-4, 9 (no date) 1907 AR7 Khasi AR7

a similar custom prevailed amongst the Khyrwangs. The Nongtengs, in the Jaintia Hills, keep dead bodies sometimes as long as a month, until the *plaw* or ceremonial dance has been performed. Hence they are called Nongtengs, or "stinkers." Amongst the Lyngngams the dead body is kept for sometimes three or four months, or up to the time when a bull can be purchased for a feast to the villagers. This feast is an essential, and cattle being scarce in the Lyngngam country, there is often great delay in disposing of the body. Lyngngam villages at each a time are first visited. The Lyngngams of Nongkhlaw keep the coffined bones of the deceased within the village, and in front of the house occupied by the deceased when alive, the bones being placed in a hole in the ground over which is laid a stone, a bamboo mat being spread over the stone. A bamboo fence three or four feet high is erected round the grave. Other Lyngngams keep the coffined bones and ashes in a guard in the jungle near the burning-place. On their way home, the members of the clan of the deceased who have come from other villages to witness the funeral ceremonies, put up a stone on the path by houses of the deceased, a turban being tied round the top of the stone. The Siaw or Diaw, who live at the foot of the Khasi or the Kumeng hills, and are called by the Assamese Maos (pigeon-men), erect memorial stones in honour of the deceased, the horns (or bones of sacrificial animals and other articles being hung on the stones. The stones are also ornamented in relief, and turbans are tied round the tops. The death customs of the Lyngngam, and indeed, other customs also, are partly Khasi and partly Garo, it being difficult to say that the Lyngngam are more Khasi than Garo, or more Garo than Khasi in this respect; their language, however, has been found by Dr. Stevenson to be a corruption of Khasi. In Nongtalon, Mawlih, and Mawlar villages, the inhabitants of which profess to be Khasis, the bones and ashes of the deceased are not collected and placed in repositories, as at Cherrapunji. At Mawlar and Nongtalon a large wooden coffin is used, painted white, with representations on the outside, and standing on four legs. This coffin is not burnt on the funeral pyre. In the family of the chief of Cherra, the body of a deceased Siem is disposed of in the following manner:—It is wrapped in a cloth

I: Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

the bones of males and females being kept in separate bundles wrapped in white cloth, two women of the clan reverently carrying them in their arms, holding the bundles of bones to their breasts. One female carries the bones of the males and the other those of the females. In front of these women walks an old man who scatters along the way leaves of the *diang-shit* tree and grains of rice, and when it is necessary to cross any stream or river, he ties a thread from one side of the bank to the other, this is for the spirit of the departed to cross the water. Sometimes u'mon *kshi-A*, a kind of long grass, is used instead of thread for the above purpose. On arrival at the clan puja-house, the bones of the males are laid on one bed and those of the females on another, the beds being bedecked with rich hangings. A cock, *u'iar kradlyati* (lit.: "the cock which scratches the way"), is sacrificed, this sacrifice being considered by the Khasis to be of peculiar significance. A pig, a cock, and a bull are then sacrificed, and portions of the above are offered to the spirits of the deceased. These offerings are known by the name of *ai-kam*, and are placed in a basket which is hung up in the house, together with the left thigh of the fowl and the lower jaw-bone of the bullock. A dance is performed that night, first in the house by two women, one belonging to the clan and the other an outsider, and afterwards in a specially prepared place outside the house called "*Iyngpaep*." The *shawati*, or flute, which is played at funerals is sounded, drums are beaten, and bombs are exploded. This dancing lasts from one to nine days, the limit being always an uneven number of days. At Cherra two effigies called *Ka Pieun* and *U Tyngplop* are prepared and dressed up: the former is intended to represent *Ka Iawbei*, the first ancestress, and the other *U Suidnia*, the first maternal uncle of the clan. These effigies are held in the hands of the dancers. In the meantime two lines of upright stones consisting of three each, with a table-stone in front of each line, have been set up. These are called *mawjiat* or *mawlynti*, and are intended to serve as resting-places for the spirits of the dead on their way to the tomb of the clan. These stones are generally not more than three feet in height, and must not be confounded with the larger stones or *mawbynna*. On the night before it is proposed to deposit the

764 764 742 [775] [535] [716] 764

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

close to the wall which is farthest away from the door, the 764
bones of the males being deposited in a pot inside the tomb nearest the door. Some clans keep the pot containing the bones of the males on the right, and the vessel containing those of the females on the left hand. Then offerings of food and libations of liquor are offered to the ancestors on a stone in front of the tomb. The males then perform a ceremonial [535]
dance with swords and shields, three times, and the door of the sepulchre is closed, a flag being fixed to the tomb. All the clansfolk then depart except three men. One of these sacrifices a cock (*ier-tanding*) in front of the tomb, a second sits behind the sacrificer, holding three firebrands, and a third sits behind the tomb. The man with the firebrands shakes them about, and then crows like a cock three times. The man behind the tomb listens attentively for any fancied noise within it, the superstition being that if the ceremonies detailed above have not been properly performed, the whole tomb will quake. If the three watchers are satisfied that there is no commotion within the tomb, then all is well, and they return and report the result to the clanspeople. This ceremony is called *tanding*, or the fire test. Next morning the woman who is the head of the *iing-eang*, or puja-house, distributes to all those who have taken part in these sacrifices the hinder portions of the sacrificial animals. She then blesses one by one the assembled clans-
folk. The latter are not permitted by custom to go to [527]
work until after three days from the time of the ceremony; the third day being called *ka ingi lait ia*. The ceremony described above is a symbolical one. The massive stone sepulchre is regarded as a symbol of a secure place of rest for the departed spirits. If the spirits of the dead are not, however, appeased by the due performance of the ceremonies attending the bestowal of the remains in the clan *cinerarium*, it is believed that they roam about and haunt their relations on earth, and plague them with various misfortunes. It may be interesting
to note here, that Mr. Moberly, the Superintendent of Ethno- 764
graphy in Bengal, reports that the ashes of deceased Hos, after 171
being sprinkled with water by means of peepul branches, are collected, dried, and placed in a new earthen pot, and kept in the house until the day of burial, which may take place, as with

1:Gurdon E-4, 5 (no date) 1907 AR? Khasi AR?

211 which a figure, evidently of a Hindu god, has been carved, without
171 doubt after the erection of the stone. Here we have a striking parallel case to the painted and carved menhir near Tregastel in Brittany, upon which has been carved the representation of a crucifix. There are also some carved stones near Nartiang (said to represent two women) called nowkhandar brisw.

211 The Khasis say that these great stones were brought
483 sometimes from considerable distances. After being hewn, the stones were laid on a large, wooden trolley and dragged
283 across country by means of ropes of cane, of which plenty can be had from the Wiar country on the northern side of the district, and then placed in position by means of ropes and levers. It seems little short of marvellous that these stones, which sometimes weighed many tons, were placed in position by such primitive means, especially when we consider the great trouble there was to re-erect one of the fallen stones at Standrange lately. Nowadays only comparatively small stones are erected, which are generally hewn and erected on the spot, so that there is no necessity for any conveyance.

000 In conclusion, it may be remarked that the subject of the Khasi menhirs is in reality a large one, on which a great deal could be written, but owing to considerations of space it has been found necessary to compress the account within its present limits.

FESTIVITIES, DOMESTIC AND TRIBAL.

535 Dancing forms the principal part of all the Khasi festivities,
776 and is an important adjunct of some of their religious
786 ceremonies. One of the greatest festivals in the Khasi Hills is
789 the Nongkrem dance; it may be said to be as important
782 an event to the Khasis as the *Ilch diang-khlam* festivities are to the Syntengs.

The Nongkrem dance is really part of what is known as the *pomdiang*, or goat-killing ceremony, performed by the Siem of Khyrim (or Nongkrem) with the aid of his *ash-blei* (high priest) and the various *lyngdohs* (or priests) to Ka Blei Synshar (the ruling goddess), that the crops may prosper and that there may

II Gordon E-6, 9 (no date) 1927 AR? Khasi AR?

be a successful era in store for the people of the State. The goddess on this occasion may be regarded as a Khasi Demeter, although no myst rise form part of her services as at the Grecian Elusis. The Nongkrem ceremony and dance (now held at Smit) take place in the late spring, generally in the month of May. A lucky day having been fixed, the Siem sends a ring of cane (*lipwsuk*) by way of a summons to the people of every village in the State, at the same time informing them of the date of the *puja*, and requesting them to attend with their offerings, consisting of goats and different articles of food. In the meantime various *pujas* have been taking place in the house of *Ka Siem Sad*, the Siem priestess, which it would be tedious to describe in detail. The more interesting points only will be mentioned. A fortnight before the *puja* and dance at Smit the *sob-blei*, or high priest, pours out libations of liquor in the *lyrew-blong*, or place where the sacrificial goats are kept, and in front of the great post (*ri diang ewing*, or Khasi oak), in the house of the Siem priestess. Dancing then takes place in front of the post. Later on the Siem, with the high priest and other attendant priests, walks with extremely slow gait to a small hill where a stone altar has been prepared, and sacrifices a cock in honour of *u'lei Shillong*, or the god of the Shillong Peak. A silver dish with powdered rice, liquor in a gourd (*ka'ind ww*), betel-nut, and some leaves of the Khasi oak (*diang ewing*), are also necessary adjuncts of the *puja*. A goat is then sacrificed, and the sacrifice is followed by a dance of twenty-two men armed with swords and shields and *ehowrion* (*ky-dapo*). Having danced before the altar, the party returns to the house of the Siem priestess and executes another dance in the great courtyard. The Siem and certain selected persons dance in front of the *rishot blei*, or holy post of Khasi oak inside the house of the Siem priestess, the dancers being entertained with dried fish and ginger. Then follows the great dance of girls and men in front of her house. The girls dance in the centre, taking such tiny steps, that the lifting of their feet from the ground is hardly perceptible, the arms held down to the sides and the eyes demurely downcast. It is on this occasion that they wear the peculiar silver (and sometimes gold) crowns illustrated in the

[FACING p. 150]

place. The hair is worn tied in a knot behind the head, but with a long tail hanging down the back. Rich silk cloths are worn by the girls, who present the appearance of being, if anything, overdressed, or, as Yule aptly puts it, of "perfect paradisegroms." They wear a profusion of gold and coral head ornaments, silver and gold chains, bracelets, ear-rings of gold and any other jewellery they can lay hands on. Not only is the whole of the family jewellery requisitioned by the fair *dilettanti* (it is only the unmarried girls who dance), but she borrows from her friends. The men dance round the outside of the circle, waving *fly-flaps* and prancing (often nowadays wearing huge boots) with majestic strides. The music accompanying the dance consists of *tangwawi* (pipes), drums, and cymbals. This is *ka shad kyndai*, or the dance of the women. Then there is *ka shad mantich*, or the dance of the men, who are gaily dressed, wearing plumes of black and white cock's feathers (*ka thiaphi*) and bold swords and shields. After prancing for some time, two men at a time rapidly approach one another and clash their swords together in mock combat. They then retire, and, after again revolving for a period, repeat the process; then other couples follow and take their place. This goes on until the dancers get tired or are told to stop.

The above description may be taken as applicable to all the Khasi dances. Dancing forms part of the ceremony of placing the ashes in the sepulchre of the clan. Dancing also forms a part of certain ceremonies performed at markets for the prosperity of the State and for the good of trade.

When I was at Mawryngaw, at the time of the appointment of a Siem, I witnessed a very pretty dance called *ka shad lyngnah*, performed by men who held the leafy branches of trees in their hands. This is most effective. Then followed a dance of some forty young girls, very well dressed, covered with the usual gold and coral beads and silver chains, and wearing the silver crown, or *paranpiat*. The young women danced with great spirit, and with an absence of all shyness, but still with the greatest decorum. Many of the women, spectators as well as dancers, were observed to be without the usual *tap nuh lilli*, or head-cloth, the absence of which is always a sign amongst the Khasi women of merry-making. There were

women from the War country, wearing their petticoats down, amongst whom was the wife of the Siem of Bokwai with her little daughter. The dance was a pretty sight, and I have seldom seen such evidence of unalloyed happiness as was exhibited by the people on this occasion. Dancing may be described as one of the characteristic features of Khasi life.

The Syntong *Ioh-dieng-khlieu* festival takes place annually at Jowai and elsewhere in the Jaintia Hills in the deep water moon month (*i.e. Jyllieu*, or June). *Khlieu* is the Khasi word for plague or pestilence, and *ioh-dieng* signifies to drive away with sticks. The festival may be described as follows:—The males rise betimes on the day fixed and beat the roof with sticks, calling upon the plague-demon to leave the house. Having done this, later on in the day they go down to the stream where the goddess "Aitan" dwells. Then poles of great length, which have been newly cut, are held across the stream. The people jump on the poles and try to break them; when they succeed in doing so, a great shout is given. After all these poles have been broken, a very large pole is fixed across the stream. The people then divide themselves into two parties, and contend for the possession of the tree. The contest, however, is a good-humoured one, and although many buffets are given and received, these are not regarded seriously, and there are seldom any fights. Col. Sivey says the contending villagers, in their excitement, sometimes relapse into a state of almost complete nudity. The party which succeeds in obtaining possession of this post is supposed to gain health and prosperity during the coming year. Col. Sivey remarks that the origin of this so-called ceremony is said to be that the god of thunder, "*Ulei pyrthat*," and Ka Aitan, the goddess of the stream, witnessed its performance. Many innovations, however, have crept in. People disguise themselves as giants and wild beasts, they also parade images of serpents, elephants, tigers, peacocks, &c. Dancing is carried on with enthusiasm by the males, the girls, clad in their best attire, remaining on-lookers. Before the meeting breaks up the males play a sort of game of hockey with wooden balls.

768 769	Search on Spreal to Singsong Singhtai-nuff	the chiefs of the family and the old family chiefs of the deceased from the tribal house?

If the grievers now continue it, then they gather the sacrificial gifts and the sacrificial money (which is often thousands of rupees) to use them for the festivities.

Two women then go to the various sacrificial places and reverently fetch the bones that were placed there. One woman carries the bones of the male dead, the other the female ones, and both bring them to the house of the group author, where they are ceremoniously placed and decorated with flowers and beautiful cloths. Now the spirits of the dead receive nourishment (at last), in that a pig, a rooster and a steer are sacrificed. The best pieces of these animals are kept in a basket in the house for a later division among the participants. The rest is sacrificed.

768 769 Then there is dancing. (35) This cere -

35. Cf. Table III, Picture 2: Ceremonial Dance in Honor of the Deceased.

monial dance in honor of the deceased lasts either three or five or nine days, whatever seems best (and how long the collected money lasts). A place in front of the house is festively arranged and used as the place for dancing (lyapung). Music is played and liquor distributed.

768 769 On the day on which they intend to transfer the bones, the drums (ka kaing) and the kettledrums (ka nakra) are beaten, [438] the flutes (ka sharati) are blown, guns (sulai) and cannons (ka man) are shot off. An ancestral

The man is the groom of the dead young girl, the old woman the bride of the dead youth. They have the two scrubbs for the spirits' rice (ki synlakhiah ban ka ja snalap) and have them jump over the rice mortar (khlong) and the rice pestle. Then arrows are thrown as far as possible, which the two people are supposed to seize. This game of catching means the driving out of demons who surround the man ban and wish to prevent the approach to the stones. Then one strews seed rice (u kur rawai) on the road from the house to the end of the village. The two little people must now run with attire (da ki dkhrghdh) and thrash or beat the rice. This happens three times, one after another.

When it has become bright day, a handful of rice is taken from each of the relatives, as well as the contribution for defraying the costs of the whole festivities. Then they fetch an "altar he-goat" (u' lang duwan), in order to cut off its head on the village altar (ka ka duwan ka shong ka mulah). Now they make merry with drums and flags (ka keing ka lima). The children and grandchildren sit down together and greet each other solemnly, especially the "cousin" (u kha pka). Then a shield dance (mastieh) (38) is held. They

38. Cf. Table IV, Picture 1: Khasi men, ready for the shield dance.

perform three rounds. Then a he-goat is slaughtered, and all dancers with the shields bow three times before the "cousin" (u kha pka). Each of the sons of the group house (Stammhaus) does the same thing.

Now everybody rises, and someone sacrifices the scapegoat u' lang sait kauid. A

946 A
(Sm) weapon dance is performed in which the sons follow one behind the other (according to age) (39) (shad wait, i.e. weapon dance).

39. Cf. Table 24, Picture 2: Weapon dance of the Khasi at the third burial.

946
948 (Sm) When the weapon dance has ended, they go in a procession (as above for the man shylang) to the mawkjet or mawlynti. Having arrived there, each of the sons slaughters a he-goat by separating the head of the animal from the body with one blow. The usual sacrifice takes place. But usually there are not a lot of he-goats slaughtered (since there is not enough money) but only one, which is then called u' long maw lynti. The retinue or escort of the sons ends here (hangne la kut ka jingleit on lynti ki khun sha).

The others continue on to the maw bah. Having arrived there, they open the door (the closure of the container for the bones). A man, who is paid for it, crows three times to represent the spirit rooster lar lap. This occurs in front of the stone. Then all the spirits who are in the cave room are awakened (kyrsiew) by someone saying:

to khle to khle la wan u khun la wan u kniwi	Stand up! Stand up! The children have come, the grandchildren have come!

Then they place the bones of the deceased inside, separated according to sex. In addition there are the sacrificial gifts: the bread and the cake, which they spread out (siang). Also morning and evening rice (i.e. cooked rice ready for eating) they place (thah —

Weapon Dance.

791 brought along and push the sacrificial gifts to
793 one side.

The new lyngdoh now gives the sign for the dance of joy. The men who are all in dancing clothes get up and seize the swords and dancing brushes they brought along. They place themselves one behind the other. The music begins and slowly the dancers move away from the place. Hopping and rocking from one leg to another, they move forward, forming a definite figure while doing it. Sometimes it is a circle, sometimes an eight, sometimes a spiral, which then slowly resolves itself. Now the dancers face each other in pairs. With loud cries each pair jumps at each other and they beat their swords together, uttering cries of joy which are seconded by the spectators. [Fig. 3. Egg throwing: placing rice]

792
794
795

Now they arrange themselves as at the beginning and the dance begins again. Thus the dance crosses the place several times, each time the peculiar dance (shad mastiah) ending with the striking together of the swords. The new lyngdoh, who has now performed his first ceremonial sacrifice which is concluded by the sword dance, declares his veneration for the god who has commanded the sacrifice. For this purpose all the men arrange themselves in order and with the lyngdoh at the head bow three times before the (invisible) god. While they are all standing, the lyngdoh takes several steps backwards and standing repeats his bow. With this the ceremony is over.

793
792

They arrange themselves in the order they came in. Dancing they go down the mountain to the hut of the lyngdoh. As soon as possible a new sacrifice [211] is offered to the u 'lei lyngdoh, the god of sacrificers. With this the new lyngdoh has officially begun his new office

[See category 16, p. 12 -- Analyst]

kingdom, thou hast given the sun and the moon, for reckoning the year, so that we may have Pujo once in the year, so that kings may arise, the children of the villages may increase and thrive, the children of the Khasi, the children of the Khoi, the children of the Nar, so that the sacrificial gifts may increase before the face of thine altar." (11)

11. F. Dr. Becker, S.J.S., loc. cit., p. 902 (Aarbrogue).

782 793 622 796 At these state and community sacrifices, the official lyngdohs are the chief one to appear, who together with the ruling king or chieftain and with other lyngdohs from the villages perform the sacrifices. These annual state sacrifices are introduced and performed with great ceremony. They take place in front of the house of the s' iew sad (high priestess) of the state involved. (Fig. 2) [Fig. 6. The village chief in his sacrificial coat and ornaments.]

782 796 In addition to the usual sacrificial gifts, which are grouped together on a small altar of earth and which consist of a banana leaf, betel nut leaves, pepper leaves, betel nuts, kyu and ryuni, fermented rice water in a gourd bottle, and oak leaves, there are chiefly hens and goats and at the end a pig. Goats are slaughtered in great numbers, so that the chief festival day of the state sacrifice is called pos blang (the goat heads) by the people.

782 825 796 Besides the slaughtering of the sacrificial animals, the dance plays a chief part. At these great sacrifices all the dances that are customary among the Khasi are performed: the dance [Fig] of the unmarried girls, the dance of the girls and men together, but both sexes are so placed that the men form an outer circle and the girls

[See category 16, p. 13 -- Analyst]

372 on inner circle; the dance of the men with
• 373 torches; the sword dance of the men; the shield
374 dance of the men; the dance of the men in couples; the solo dance of a girl and the solo dance of a man.

All the inhabitants of the kingdom combine for the state sacrifice. With the cheerfulness peculiar to the Khasi they watch the passage of the individual sacrifices and the dances for hours at a time. In the evening of the day of the chief festival a sacrificial meal is held, in which all the sacrificers, dancers, and spectators may participate.

b) Private Sacrifices.

372

In addition to the annual large state sacrifices, other sacrifices are also offered by the Khasi. These are the usual sacrifices which arise from the needs of daily life. The following can be mentioned as such:

1. The sacrifice for questioning spirits.
2. The sacrifice at the name giving.
3. The sacrifice before every important business, for example, before the market, before planting rice, before shooting arrows, before building a hut, before a journey, etc.
4. The sacrifice of thanks after recovering health.
5. The sacrifice in cases of sickness.
6. The sacrifice at the time of death.
7. Khein Kwid (the sacrifice for finding out which spirits must be propitiated. This is a matter of finding out past errors of those already dead).
8. The sacrifice at a cremation.
9. The sacrifice at the burial of bones:

achieve calm aiming and a calm posture.

Another method of bending the bow is also used a great deal. The archer takes the arrow in his right hand, places it to the left on the bow and pulls the string with his middle finger and ring finger while his thumb and index finger hold the arrow. [Illus.] (Table I, Khasi at an Archery Contest) [Illus.] (Table II. Khasi at an Archery Contest)

[Illus.]

The Quiver

The quiver (ka ryughap) is made of plaited bamboo which is covered on the outside with a very finely plaited cover of reed palm. Its shape resembles a closed umbrella. At the opening the plaited work is raised in front in the shape of an arc, and in the back it is raised in a more rounded form. On each side where the quiver curves down and around a strap is attached. Quivers are not used for shooting or hunting. The Khasi carry their arrows in their hands then. The use of quivers is restricted to dances and even this is very rare. (25) [Fig 16].

25. Ethnographic Museum, Munich, Quiver As, 106, is 57 centimeters long and 9 centimeters wide at the opening. The plaited part in front is 40 centimeters high behind 38 centimeters, and on the sides where it curves in 33.5 centimeters. The very finely plaited reed palm has 16 smooth inlays at distances of 1.3 to

and nail are bought with these contributions, the balance, or with other money, is handed over to the S'iem ski ka mawgynnow.

Until the approach of the actual festival, the fish sacrifice (mis-dohbha) takes place on the day called jns pomdiah, on which all who appear are fed with dried fish and brandy. This is supposed to be a further announcement to the o Blei Shillong, o Sushnia lang Ilem and ka Blei lang S'iem of the imminent Pain. Twelve different kinds of drums (being) are beaten.

Then the drum, being thud rynghoh, is beaten three times, and the first sacrificial piece (bah Blei) and a flute player dance. The dance, rynghoh, will be described in more detail below. After it is finished, the being kynthei (women drum) have a turn, to the sound of which the S'iem and the flute player (duhalia) dance three times. Usually only women dance to this drum. About the method of dancing it is sufficient to remark that in a Khasi dance the dancing persons do not touch each other, and each carries out the motions independent of the others. After the women drums are beaten, then the sword dance drum (being mashieh) and the large drum (nakra) are beaten. Torches are carried around and down of joy uttered nine times. Various drums, flute music, and clashes of cymbals follow, while dancing takes place. /facing p. 596. (A) Fig. 2 Drums, flutes and cymbals of the Khasi. Fig. 3 Sacrificial knives and ka wait of the Khasi. Phot. P. From. Stegmiller S. D. S. Fig. 4. Sacrificial dress of the bah Blei (Khasi). Phot. P. From. Stegmiller. S. D. S. / /facing p. 596. (B) Fig. 10 (sic?). Khasi ornaments. Phot. P. Fro. Stegmiller. S. D. S. / /595/ At the end the S'iem dances alone, while the drums and flutes are not silent the whole night through. Fig. 2 shows several Khasi drums, a flute, and cymbals which are never missing from a dance.

The day of the large market, on which the actual ceremony begins, approaches meanwhile. On the day before -- ka wgi omni -- the roads are swept and the place for the sacrifice of the goat put in order. As a sign of joy as to what will happen, drums are beaten again and flutes (tangmet) played. In front of the house of the S'iem ski, the S'iem and other men perform a sword dance. Although interesting, this dance is not very artistic. Hopping and skipping from one foot to the other, the men, one behind the other, move slowly in a circle on the open place. (cf. Fig. 6).[4] They hold a bunch of goat hair in one hand and a sword in the other. A shout of joy is uttered from time to time, then they stop again, jump at each other two by two, and hit each other with quick blows of their swords. Each one quickly draws back again and moves in a circle again as before. In this way the dance continues.

[4] [For illustrations see category 16, pp. 14-18 --- Analyst]

The spectators now go to the side, the S'iem and the Bah-Jhaba come down to the place of sacrifice, while the Ioh Blei receives the crossbill and the sacrificial gifts and spreads them out in order on the ground. Then he takes the rooster in both hands and calls on the god Shillong with these words: "O god Shillong, thou who hast been seated above time immemorial! (he Blei Shillong hunths in Ioh a long time!)" With a deep bow he then offers the sacrifice five times. Rooster and goat are sprinkled with water, rice, and the flour from eyes and rynti, and are then beheaded. Then the examination of the entrails (Khithor) takes place to today to see if the sacrifice was acceptable. The way of doing that will be given below.

After the end of the sacrifice the Ioh Blei and a flute player lead the sword dance. After them the S'iem and the other dancers follow in turn. Various drums are beaten alternately and flutes are played through the whole night. When night falls the guests of the S'iem and those of the various dancers of the kingdom of Nongkrem are brought for the sacrifice of the new day.

The day following the great mawbah is called ha ngi Lyngka. It is the center point and climax of the whole ceremony. From early in the morning the crowds pour in from all sides of the Khasi Mountains.

Early in the morning an unmarried girl of the royal lineage (ka S'iem ha-ding khynraw) dances in the house of the S'iem ïïd before the ribbed Blei. Usually a granddaughter or nearer relative of the S'iem ïïd is chosen for this. Two men then take the girl in their arms and carry her with a rocking motion to the large open place in front of the ïïng ïïd.

Then the great folk dance begins. In the middle of the place musicians squat on the ground and play the drums and flutes, and strike the cymbals. The music is quite without art, only a repetition of the same monotonous tunes.

The women dancers move in a rather narrow circle around the musicians. Only the unmarried girls dance. The clothes they wear on it are very rich and frequently very valuable. Fine cloths, usually of red, yellow, or blue silk are draped over their bodies; the upper body and arms are covered by a satin jacket. Their hair is bound together in a bun behind their heads; as string hangs /facing p. 296.

Fig. 5. Khasi Men Dancers in front of the ïïng ïïd. Phot. P. From. Rosmüller, S. D. S. Fig. 6. Sword Dance of the Khasi. Fig. 7. S'iem ïïd and S'iem of Nongkrem. / /297// down from the bun which usually ends in three tassels. The head is covered by a golden or silver crown of fine chased work, which is topped by a bunch of feathers or a bunch of artificial flowers. Around their necks they wear chains of gold or

[For illustrations, see category 16, pg 16 --- Anuj]

[illegible] silver and nickel in various sizes made of real metals. These [illegible] are decorated with heavy earrings, rings and necklaces [illegible]. Around their arms and wrists are massive silver rings or hoops, the latter being quite wide and in the same shape as rolls. Fig. 10 shows the ornaments in detail. The very grand [illegible] dancers usually have a servant carrying an opened umbrella behind them.

The Khasi dance does not have the exciting and lively motions that are characteristic of our dances. Each woman dancer with her arms hanging down at her sides and her eyes cast modestly to the ground could be considered a model of modesty. Each corpulent her motions slow and completely independent of the others. She continuously makes a circle around the musicians, moving sideways, forwards, or backwards. At the same time the feet are kept close together and are moved seemingly so little that the motion is scarcely visible. When a woman dancer is tired she withdraws in order to rest a bit, and then enters again into the rows of the other dancers.

Fig. 8 and [illegible] illustrate the above description of the Khasi women dancers. Fig. 8 shows the girls in the dance in front of the [illegible], of which only the front part may be seen above in the picture on the right.

At a proper distance from the girls the men dance in a wider circle around the place. They also have special clothing. Over the usual white cloth that covers the lower part of the body they wear a skirt, and over it a silk coat embroidered with many colors without sleeves which ends in a long fringe. Cf. Fig. 9 for this. A tail or [illegible] of original hair hangs down over the back. Crude metal chains decorate the breast. A bunch of artificial flower (?) about 12 inches long or of black and white rooster feathers is placed in the right [illegible], while the right hand holds a bunch of goat hair. Thousands [illegible] of packings which are now worn by many go very badly with the exquisite pretty costume.

The motions of the dancers are more lively than those of the dancing girls, but still quite reserved. In a dawdling manner they hop from one leg to another in a childish way, without lifting their legs very much. In this way they move forward, describing a circle; at the same time they wave the bunch of hair around in the air. From time to time they stop and as a group make a bow towards the middle of the circle with a loud resounding shout of pleasure, while they swing the bunch of hair downwards at the same time (cf. Fig. 8).

[illegible]

Then the dance continues for hours at a time inside the noise of the music. Thousands of spectators who do not seem to get tired dancing around the great place. In the afternoon, at about three o'clock /3:00/ the dance, which plays a large part in all the religious festivities is ended. 595

Then preparations are made for the large sacrifice. In front of the house of the S'iem ïïï

796 The goats were sacrificed by his sister's eldest son (*Siem-khynnah*) and in
182 charge of respective units at the open courtyard. The priests evoked the
ancestors and ancestress and called upon them by name praying 'Oh God and
769 Goddess, I offer this sacrifice as our ancestors did. Bless the *Siem*, his family
and the people of his state. I shall beseech you again on this day after one
231 year. You create favourable weather by virtue of your power, bring clouds
and rains to yield bumper crops and ensure a happy and prosperous life.'

On the last day (Nongkrem), a man of Mawroh clan sacrificed a pig introducing an iron spike in its left armpit. Nine pieces of meat from different parts of the pig's body were again offered to their five ancestors. The *Siem* in the presence of his *Durbar* performed the last item of festival by praying to U Shillong, when the Chief of Rynjah clan also followed in the same way for seeking the blessings of their Chief deity.

This brought the ritual to an end performed at the residence of *Siem*. The five pieces of goat's and pig's meat offered to their five ancestors, were then handed over to the in-charge of the five units considered as somewhat higher in their State organisation. They distributed them at a suitable place in their unit, making a feast as a sort of public declaration of the completion of their greatest festival for the year.

DANCING

535 Besides the ritual described above, dance with the accompaniment of music
796 formed an important aspect of this festival. A dance known as *sad-tyngkoh*
had been a regular feature for the first, second, third and fifth day. This dance
[533] has some interesting features. It has to be performed in pairs. The first
pair was constituted by Chief priest and the Chief musician. Second to fifth
pairs were between the Sardars of the eight units after which *Siem* along with an
otarial of his council constituted the sixth pair. The subsequent pairs were formed by any two persons from the gathering. They danced only after bowing first before the Oak pillar (Rishot), then to *Siem* on the fifth day. This pairing was then not adhered to on completion of the last rite of the festival.

A second type of dance (*Ka sad mastieh*) was then performed in the courtyard by the musicians as well as by the professional dancers (nong-shad) with sword and fly-brush in the afternoon of the third day. The dance was always
[291] held in pairs first by musicians, and then dancers, who donned their traditional
[301] dress consisting of silk turban (Jainspong) decorated with feathers, coloured sleeveless coat (Jymphong) silver chains and coral necklaces. Later on they joined the procession, that went to the adjacent hill where after the completion of the ceremony of goat killing, a group dance was performed returning to the residence of *Siem* ultimately.

This dance (*sad-nohkjat*) was performed by the Siems family. It was held early in the morning of the fourth day in the central hall (Shlur) and also
[291] in the courtyard. The men put on their normal dress whereas the women
[301] dressed themselves with gold and silver crown (pansngiat), numerous silver ornaments and different coloured blouse. They dressed and braided the hairs into a knot just at the nape. The High Priestess who also danced with
[302] the membes of the Siems' family, stood in the middle of the line and chief musician stood at one end. They hold each other in hand and danced round the fire-place of the central hall (Shlur) in anti-clock-wise direction in accompaniment of music. The people assembled there, gave vent to their feeling in their customary way every time, before they resumed to make it three times. Similar performance of dances were also held in the courtyard.

17: Banerjee E-5 (1955) 1962 AR7 Khasi AR7
Smit

Then followed the dance of the girls (*Ki shad kyathei*) who were also wearing dress as described above. They kept their eyes down, keeping their arms on their sides taking such a short steps with the music, that the movement of the feet were hardly perceptable. The boys were also in their dancing dress as worn by *nongshad* and danced with fly-brush round the girls making their steps with the beatings of the drums. The music started from the morning would be stopped only after completion of the dance which prolonged till evening. These functions served as a good source of amusement to the people, enabling them to have a good diversion from their monotonous life with an opportunity to meet their friends and relations who assembled there from different parts of the hill. 535 • [534]

DISCUSSION

From the fore-going description, it is evident that the Khasi live in a democratic set up in which the secular duties are entrusted to the *Siem*. A different rule is followed in the case of religious festivals. Every Khasi family entrusts the sacredotal work of the house to the youngest daughter. The *Siem's* sister (Siem Sad) being the nearest member of his mother's clan, is made responsible for the observance of those ceremonies which concerns the welfare of the subjects. The people attend the festival to seek blessings of their supreme deity U Shillong and their presence in the *Siem's* residence indicates their loyalty to him. The rituals of the festival, instead of being performed by her (High Priestess), were conducted by the Chief Priest (Soh blei) for which he was allotted a very imporatnt position in the celebration. The musicians were given similar status owing to the belief in the sacredness of their music. It ought to be played in proper tunes otherwise the displeasure of the deity would fall on them on finding any slight departure in this respect. For this reason, the music is considered as important as the rituals and the role of musicians were consequently given due recognition at every stage of the festival. The tradition of deputing one person of Nengnong clan to sacrifice the goat at the top of the hill was followed on account of their ancestors having carried out in olden times the profession of aide-de-camp (body guard) to the *Siem*. Another person of kharhamen clan was also asked to carry the head of the sacrificial animal from the hill to the residence of the *Siem* after the worship, as his predecessors were serfs in ancient times during the period of their captivity in this State. Such incidents were found expressed in a symbolic way through their ceremonies. 182 64 796 [593] [782]

The most important concern of the people was to maintain their mode of living together with their property and other means of subsistence. They worshipped him so that he might prevent the evil spirits from doing any harm and may in addition grant them bumper crops. To be recipient of such a favour, they appeased their god U Shillong with gifts and sacrifices. It is not sure whether he is considered as one of their deified ancestors but his important position in the Khasi pantheon enabled him to have some priority in their worship. The offering of red-cock together with a yellow goat, moreover, revealed his amiable and benevolent nature as the malignant ones get representation invariably with black colours. U Shillong was invoked simultaneously with other dead ancestors, with this hope, that all the deities would pool their supernatural strength in fighting the evil spirits before the latter were able to cause any harm to their crops or to reduce in any way the fertility of their fields. 796 769 782 776 182

It would be interesting to refer here about the presentation of nine pieces of meat from various parts of the sacrificial animal. It may be a case of appeasement by serving him with some food but there seems to be something

17: Banerjee E-5 (1955) 1962 AR7 Khasi AR7
Smit

796 magical in such gifts. The khasi deities being souls of departed members,
782 are anthropomorphic in nature, have all the qualities of an ordinary human
769 being. The worshippers believe that the deities may also loose their strength
776 in course of time which can be augmented only by offering suitable sacrifices.
182 They presented pieces of meat to transfer in them the supernatural 'power' which are concentrated or lodged in those regions of the sacrificial animal, from where they were taken out. It is a case of reciprocal help between the deity and the devotee so that on attaining their normal strength, they would fulfil their request.

796 The Khasi people while participating in the celebration gave vent to their
769 emotion through their traditional cries. It could not be definitely established
182 whether these were any indication of frightening the evil spirits but on the other hand, those were intended to cheer the *Siem*, musicians, and the respective units taking parts in the celebration. The musicians on another occassion, went round the altar three times on reaching the top of the hill. The
[644] members of the *Siem's* house similarly performed a sacred dance round the
[801] fire place of central hall (Shlur) to the same number of times. This odd number of three seemed to be an auspicious one. The exact cause for such a reverential attitude to this figure may be to pay respect to their primal ancestress (Ka Iawbei), her husband (U Thawlang) and her brother, *i.e.*, first maternal uncle (U Suidnia) who are considered highest amongst all the Khasi deities.

796 The dancing is generally taken as secular part of religious function, but the Khasi people considered them (except the last one) as sacred for the reason
535 that it is one of their methods of propitiating their deity. The people at times,
182 ascribe certain meanings to them to rationalise their thinking. The dancing invariably put the participants into ecstasy to enable them to be in communion with their supernatural beings, yet those are interpreted as a device to control the spirits inspite of its calm and quiet nature. The people even then enjoyed them with this hope that these would prevent the intruding spirits from spreading diseases. Owing to the fixation of the dates of the function at the time of sowing period, the dance of the unmarried girls may have some bearing on the promotion of fertility of the soil. The custom of allowing Khasi boys to dance round the spinsters with fly-flap in one of their hands may be to protect them from the influence of the evil spirits.

The heads of the various units adhered to the official precedence strictly before they allowed a common man to take part in the dancing. The custom of allowing two officials to dance, at a time, was in recognition to their equal status. It had become a practice to follow at every stage of their function. The presence of all the in-charge of this Siemship were essential to secure the blessings of their deity on behalf of his subjects whom they represent in official capacity in this festival. This is a suitable mechanism to foster unity and solidarity among the people of the different units which is the main aim of this celebration. This was found to be so when Khasi people from all parts of State were seem witnessing the dancing of the unmarried girls. The informant on being asked to state the reason of permitting the spinsters only in this dance, came out with an interesting fact about the ancient Khasi tradition. The dance used to offer at one time, an opportunity to the youngmen of the Royal families in selecting their brides. A betel leaf with a nut were usually thrown at a girl and the men going round them, remained as witness of this incident. This explanation received some support from the frequent utterances (*rong-rong*) by the public, expressing a desire to run away with a girl dancing with graceful style.

796 The celebration can be taken up as a solidarity rite. The performance is
182 all the more essential for the purpose of security without which the people

burning the dead in the immediate neighbourhood of the village of Jowái. Suspicions of insurrection arose during the months of October and November 1861. In the beginning of January 1862 alarming reports were received from various quarters, and the first serious outbreak occurred on the 17th of that month. This was occasioned by the interference of a *dárogá*, or native police official, with a religious ceremony that took place at the village of Jaiong. In such ceremonies dancing with arms is held essential; and the *dárogá* took upon himself to disarm the dancers. This was the signal for a general rising. The *thána* or police station at Jowái was burned to the ground; the garrison of sepoys was besieged, and all show of British authority was swept away throughout the Hills. The Syntengs fought bravely for their independence, and at first were successful in cutting off several small detachments of police and sepoys. Their weapons were bows and arrows. In common with the other hill tribes of the North-East Frontier, their chief defence consisted in a series of strong stockades, one behind another; and the paths leading to their villages were thickly planted with *pánjís*, or little bamboo spikes, stuck in the ground like caltrops. The battalion of sepoys stationed in the Hills was rendered inefficient by sickness. At last it was found necessary to move a regular army, including an elephant battery and two regiments of Sikhs, into the country in order to quell the revolt. Colonel Dunsford was in chief command. He was accompanied by Major Haughton, the Governor-General's Agent on the North-East Frontier, and Captain Morton, the Deputy-Commissioner of the Khásí and Jáintiá Hills, who acted in a political capacity. The operations were tedious and harassing. The rebel chiefs were captured one by one, and the District was declared to be finally pacified in March 1863, after the rebellion had lasted for fifteen months. The special Commission appointed under Act xi. of 1857, for the trial of offenders in the Jáintiá Hills, was dissolved in December 1863. The causes of the rebellion were thus summed up by Major Haughton in an official despatch to the Government of Bengal:—'Taxation was introduced without the supervision with which such a measure should have been accompanied. It was followed up by fresh taxation and rumours of other taxes, also by fiscal and other innovations, which tended to disturb the minds of the people, without any counterpoise such as might have resulted from the continued presence of a European officer.' The Syntengs, like the

I. Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

After the plants have attained the height of about 6 in., they are earthed up. When the leaves turn yellow, it is a sign that the potatoes are ripe. The different kinds of sweet potatoes grown and the yam and another kind of esculent root—*u sohphlang* (*flemingia vestita Benth.*) will be noticed under the head of "Crops." 244

The Khasis possess very few agricultural sayings and proverbs, but the following may be quoted as examples:— 241 538

(1) *Wat ju ai thung jingthung ne bet symbai ha uba sniew kti.*

Do not allow plants to be planted or seeds to be sown by one who has a bad hand. [777]

As elsewhere, there is a belief amongst the Khasis that some people's touch as regards agriculture is unlucky. [826]

(2) *Thung dieng ne bet symbai haba ngen bnai, ym haba shai u bnai.*

Plant trees or sow seeds not when the moon is waxing, but when it is on the wane.

(3) *Wei la saw bha ka bneng sepngi jan miet phin sa ioh jingrang lashai.*

A red sky in the west in the evening is the sign of fine weather to-morrow.

Cf. our English proverb "a red sky in the morning is a shepherd's warning, a red sky at night is a shepherd's delight."

CROPS.

The varieties of rice found in the Khasi Hills are divided into two main classes, one grown as a dry crop on high lands, and the other raised in valleys and hollows which are artificially irrigated from hill streams. The lowland rice is more productive than that grown on high lands, the average per acre of the former, according to the agricultural bulletin, as ascertained from the results of 817 experimental crop cuttings carried out during the fifteen years preceding the year 1898, being 11.7 maunds of paddy per acre, as against an average of 9.4 maunds per acre (resulting from 667 cuttings made during the 243 433

L: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

773 i.e. the Siem of Malyniang, is supposed to have been a very powerful monarch amongst the Khasis. The story of Manick [534] Raitong is interesting, in that it explains the origin of the use of the *sharati*, a bamboo flute of special make which is played only at funerals. The pool of water, which was formed after U [766] Manick and the erring queen were burnt, may be connected with the *Umkoi*, or tank, which is dug to cleanse the souls of those who have died violent deaths. The idea of the bamboo, which bore leaves that grew upside-down, springing up from the buried flute, is also to be found in the Synteng tale regarding U Loh Ryndi's fishing-rod. Owing to considerations of space, I have had to curtail largely the folk-lore section. I have, however, kept the materials by me, and if at any future time there is reason to believe that the reproduction of more Khasi folk-lore is called for, I shall be glad to try to arrange that some of the other folk-tales be printed.

The Water-fall of Ka Likai.

•539 [133] The water-fall of Ka Likai is one of the most beautiful water-falls in the Khasi Hills. Its stream flows from a certain river from the village of Rangjirteh and passes by the village of Nongriat. The fall can be seen distinctly from the village of Laitkynsew. What a beautiful fall it is when viewed in the autumn. It is also a very high fall. There was in olden days in the village of Rangjirteh a woman called Ka Likai. She was a poor woman who had a husband. When she had given birth to a child, the husband died. Whilst the child was yet a baby, she experienced much trouble in taking care of it on account of her poverty. After the child was able to walk, what a pleasure it was to her to see it growing, and able to play with other children. Then that woman married

another man; but he did not love the little child, and many a time he got angry because she could not take care of him more, on account of that child.

One day when she went to carry iron ore, her husband took the child and killed it. When he had cut up the body into pieces, he prepared curry with it, and placed the curry where the mother would come and eat it. When he had finished doing so, he threw the head and the bones of the child far away, but he forgot to throw away the fingers, which he had placed in a basket where the betel-nut was kept. When the mother returned from her journey, she inquired "Where is the child?" "She has just gone somewhere, I don't know where," he said. She remained silent awhile; then she said, "Is there any rice and curry?" He said "Yes, it is ready," and went out at the same time. When she ate, she found the curry very tasty, and she thought that he had got the flesh of a young pig from some one who had performed a sacrifice. When she had finished eating, she took up the betel-nut basket, but found the fingers of her child there. She shrieked and threw herself down, and then ran to the precipice and cast herself down it. All the villagers wondered, but no one ventured to prevent her as she held a *da* in her hand. From that time the waterfall was called the "Fall of Ka Likai."

539 [133] country, resembling in height and size the Shillong "Peak" which lies opposite and to the north of it. There are many villages on this hill belonging to the Shillong Siem. In olden days on the top of this hill grew a gigantic tree overshadowing the whole world, the name of that tree was "ka Dingiei." The Khasis came to a determination that if this tree were cut down (lit. destroyed) the world would become good and would have light, for as long as it (the tree) remained standing, the world remained dark and unfruitful. They accordingly came to an unanimous decision to fell it. When they cut (the tree) during the day and went back next morning, they found that the marks of cutting had been obliterated. Thus they cut each day, and next morning they found that the marks had disappeared. This was the case always. Then they marvelled why this thing was thus. They asked questions and they investigated; ka phreid (a very small bird) said "all this has happened because a tiger comes every night to (the foot of) the tree and licks the part of the tree which has been cut." Thereupon the men, having plied their axes and knives the whole day in cutting the tree (instead of carrying them away as usual), tied them to the incisions, with their edges pointing outwards. So when the tiger went as usual at night to lick the incisions, the sharp blades of the axes and knives cut his tongue. Thenceforth the tiger ceased to go to the tree; and as the tiger ceased

to lick the incisions, the mark was not obliterated as before. So their work went on progressing every day until ka Dingiei fell. Thus the world received light, and cultivation throve, and there was nothing more to stand in the way of the light of the sun and the moon. It was for that reason that the name of "U Lum Dingiei" was given to the hill. Nobody knows what became of the tree, for since the time it fell its species has died out and there is no seed of it (to be found) anywhere on the earth from which it can be grown.

Concerning the Origin of the Siems of Shillong.

The Siem of Shillong is a very great and powerful chief in the Khasi Hills. He is generally known throughout the Khasi Hills as the "god king." By the term "god king" is meant that God has been pleased to give over to him the largest portion of the Khasi country, i.e. the kingdom of Shillong, to rule. If you seek for the origin of these "god kings," you will find there is great uncertainty about it. At any rate there is a tradition amongst the Khasis to the following effect. In olden days a rumour got abroad that there was a woman in a cave called Marai, which is situated near the present village of Pomlakrai, at the source of the river Umiew or Umiam. She was a young and very

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

539 beautiful damsel. Of the reality of the damsel's existence there is no question. Many tried to catch her, but they could not, owing to the narrowness of the cave. There came, however, a certain very clever man who went to entice her by showing her a flower called "u tiew-jalyngkteng." The damsel then came (out) near to snatch the flower, but the man went on holding back his hand until she came out into a more open place, when he seized her. He then brought her to his house and carefully tended her, and afterwards he married her. That damsel was called "*Ka Pah Syntiew*, the flower-lured one," because that man caught her by coaxing and enticing her with a flower. That man, who came from the village of Nongjri in the Bhoi country, was called the Nongjri Kongor. After she had given birth to daughters and sons, she returned to the same place whence she had been captured, and from that time forth she never came out again, however much her husband and children called and implored her. Her children increased in stature and in wisdom, and the people hearing of the wonderful origin of their mother, came from all parts of the country to look at them. The children also were very clever at showing their humility and good manners in the presence of the elders. All the people (in return) loved them and considered them to be the children of the gods, and did homage to them. It occurred to the nobles and leaders of the Shillong Raj to appoint them Siems, because

U Loh Ryndi and Ka Lih Dohkha.

The Syntengs give the following explanation of the origin of the Siems of Suhtnga. There was a man from Wár Umwi named U Loh Ryndi. He went one day to fish in the Umwi stream. When he had caught only one fish, he returned home. He roasted the fish and placed it on the *tyngir* (a swinging shelf above the hearth). He forgot that it was there, and did not remember to eat it. The next morning he went out for a walk to the hill. When he returned home in the evening, he found his house had been swept and looked after, and that the rice had been cooked. He was much surprised at this. The next day the same thing happened. When this state of things continued to occur, he made a pretence of going for a walk to the hill and he called his dog. But he concealed himself the whole day outside the village, and when it was

● 539 time for cooking rice (evening), he returned home. When he saw that smoke was rising from the house, he crept up stealthily in order that he might suddenly enter the house. Finding a woman there, he said, "Who art thou?" She replied, "I am Ka Lih Dohkha. I am the fish whom thou didst catch and forget to eat." She forthwith added, "Thou must not let any one know. I have many relatives. Come, let us go and fetch them to come here." So U Loh Ryndi bade his mother take care of the house until his return from his journey. They went together and arrived at the place where he had caught her, and she jumped into the water and he remained on the dry land. After a while she returned, bringing with her her relatives, but how many of them there were is not known. They all went to the house of U Loh Ryndi. When Ka Lih Dohkha began to enter the house, and was about to cross the threshold, she saw a broom which his mother had placed on the threshold. She therefore abruptly turned back with all her relatives to the river. After that U Loh Ryndi saw in a dream that Ka Lih Dohkha had gone by the river Umwai Khyrwi to a village called Suhtnga. (Since that time all the fish have left the river up to the present day.) He accordingly went to angle for her in that stream, and when he had caught her, he found that she looked after him just the same as before. After that he married Ka Lih Dohkha and she bore him twelve daughters and a son. When the children tydem ding ha ieng u la syntiat bha biang ba un ioh rung kynsan bluit hapoh. Hynda kumta u la shem ia ka kynthei hangta. U la ong ia ka, "Phs kaei"? Ka la ong ia u, "nga long Ka Lih-dohkha, ma nga, nga long kata ka dohkha ba me la ngat bad me la klet ban bam." Kyllang and Symper.

Kyllang is a hill which is near the village of Mawnai in Khadsawphra, and Symper is a hill which is situated in the Siemship of Maharam. The old folks say that there are gods which inhabit these hills, which are called U Kyllang and U Symper. These gods had a quarrel for some reason that we mortals do not know. They fought by throwing mud at one another. After they had fought, once or twice, U Kyllang proved victorious. So U Symper, having been humiliated, sits quietly in his own place to this day, and U Kyllang sits very proudly because he was victorious in the fight. The holes which are like tanks in U Symper's sides remain to this day; it is said that U Kyllang made those holes during the battle.

* Another version is that it was U Kyrphei, another hill in Nongspung territory, who fought with U Symper.

L: Gordon E-4, 5 (no date) 1907 ART Khasi ART

539 [133] stands a hill; it is a very beautiful hill. From a distance it looks like the hump of a bull. It has big trees growing on it, as people are afraid to cut them because they believe that the god "Ryngkew" is there, who takes care of and protects the country. This hill has two names, U Mawlong Siem and U Lyngkrem. U Mawlong Siem is the smaller (peak) on the southern side, and U Lyngkrem the taller one, in which there is a cave. The 539 Mawsmai people sacrifice once 976 or twice a year according to 982 the god's demand. The Mawsmai people have, besides U Mawlong Siem, other village gods (called "Ryngkew"). The name of the one is "U Rangjadong," and the name of the other "U Ramsong." Sacri- 539 fices are offered to these two also. U Mawlong Siem is a very great and stern god. The other gods dare not engage in battle with him. He has a daughter called "Ka Khmat Kharai" (i.e. the mouth of the abyss). The god of the Umwai people fell in love with this daughter, but he was unable to obtain her in marriage, as U Mawlong Siem did not like him. It is not possible to know the exact reason why the name of U Mawlong Siem was given to him, but at any rate it appears that the name arose from the fact that in olden days before the death of a Siem there used to be heard at "Mawlong Siem" a great noise of beating of drums. The Mawsmai and the Mawmluh people used to hear it, and they attributed it to the god "Mawlong Siem," who beat the drum for his

Why there are Spots on the Moon.

In olden days there was a woman who had four children, three girls and one boy. Their names were these, Ka Sngi (sun), Ka Um (water), Ka Ding (fire), and U Bynái (moon). These four children belonged to rich gentle folk. The Moon was a wicked young man, for he began to make love to his elder sister, Ka Sngi. In the beginning the Moon was as bright as the Sun. When the Sun became aware of his bad intentions, she was very angry. She took some ashes in her hand and said to him, "do you harbour such an incestuous and wicked intention against me, your elder sister, who has taken care of you and held you in her arms, and carried you on her back like a mother does; now I will cover your brow with ashes, you wicked and shameless one; begone from the house." Then the Moon felt very much ashamed, and from that time he gave out a white light because the Sun had covered him with ashes. What we see like a cloud (on the Moon) when it is full, are the ashes which adhered from the time the Sun covered him with them. The three daughters, however, remained at home to take care of their mother, until she grew old and died.

"Sohpet Byneng" Hill.

539 In olden days, when the earth was very young, they say that heaven and earth were very near to one another, because the navel-string of heaven drew the earth very close to it. This navel-string of heaven, resembling flesh, linked a hill near Sumer with heaven. At that time all the subjects of the Siem of Mylliem throughout his kingdom came to one decision, i.e. to sever the navel-string from that hill. After they had cut it, the navel-string became short; and, as soon as it shortened, heaven then ascended high. It was since that time that heaven became so high, and it is for that reason that they call that hill which is near Sumer "U Sohpet Byneng."

How the Dog came to live with Man.

In olden days, when the world was young, all the beasts lived happily together, and they bought and sold together, and they jointly built markets. The largest market where all the beasts used to take their articles for sale was "Luri-Lura," in the Bhoi country. To that market the dog came to sell rotten peas. No animal would buy that stinking stuff. Whenever any beast passed by his stall, he used to say "Please buy this stuff." When they looked at it and smelt it, it gave out a bad odour. When many animals had collected together

near the stall of the dog, they took offence at him, and they said to him, "Why have you come to sell this evil-smelling, dirty stuff?" They then kicked his ware and trampled it under foot. The dog then complained to the principal beasts and also to the tiger, who was at that time the priest of the market. But they condemned him, saying, "You will be fined for coming to sell such dirty stuff in the market." So they acted despitefully towards him by kicking and trampling upon his wares. When the dog perceived that there was no one to give ear to his complaint, he went to man, who said, "Come and live with me, and I will arise with you to seek revenge on all the animals who have wronged you." The dog agreed and went to live with man from that time. Then man began to hunt with the assistance of the dog. The dog knows well also how to follow the tracks of the animals, because he can scent in their footprints the smell of the rotten pea stuff which they trod under foot at Luri-Lura market.

The "Thlen."

In olden days there was a market in the village of Langhiang Kongkhen, and there was a bridge sacred to the gods there. All the children of men used to frequent that heavenly market. They used to pass by shem ba ka long kumta, kaba sniew bad kaba íwtung ka jingdie jong u ksew. 539 Rangjirteh, where there is a cave which was tenanted by a gigantic "thlen." When they went to that market, as soon as they arrived at Rangjirteh they were swallowed up by the "thlen." The "thlen" did this in obedience to an order he had received. If ten people went there, five of them were swallowed up; half of them he devoured, and half of them he let go. But any one who went alone was not touched by the "thlen," for it was necessary for him to leave untouched half (of the number of those who went). When many people had been devoured, and when they saw that all the children of men would be destroyed, whether they were Khasis or plains people, they held a great durbar at Sunnai market to which both Khasis and plains people went. They considered together as to how to devise a means by which they could slay the "thlen" which had devoured the children of men. After they had deliberated for a long time they decided to adopt the following plan. In the grove that is close to Laitryngew, which is called "the grove of U Suidnoh," there was a man called "U Suidnoh." They counselled together to get "U Suidnoh" to make friends with the "thlen." This Suidnoh was a courageous man who did not care for any one. He used always to walk alone; so when he went to the "thlen," the latter did not eat him because there was no one else with him who could be let go. The people advised U Suidnoh that he should go and give the "thlen" flesh every iew blei tang shu poi ha Rangjirteh la ngúid noh u thlen. U leh kum ha kane ka rukom kat kum ka hukum ba u la ioh. Lada iáid shiphew ngut, san ngut la ngúid noh; shiteng shiteng la bám, shiteng shiteng la pyllait noh. Hinrei ia uba iáid wei briew ym bit ba'n bám. Ka dei ba'n da pyllait shiteng shiteng. 539

day, either goats, or pigs, or cattle. After he had done this for a long time, the "thlen" became tame, and was great friends with U Suidnoh. When both of them became very intimate thus, the children of men advised U Suidnoh to build a smelting house. So he built a smelting house and made the iron red-hot, and, holding it with a pair of tongs, took it to the "thlen." When he arrived he said to the "thlen," "Open your mouth, open your mouth, brother-in-law, here is some flesh." As soon as he opened his mouth, he threw the red-hot iron down his throat. The monster then struggled and wriggled so violently in its death agony that the earth shook as if there had been an earthquake. When U Suidnoh saw the death struggle of the "thlen," he fainted (from excitement). The quaking of the earth startled all the children of men, and they thought that something had happened. When U Suidnoh did not return home his family went to look for him, for they knew that he had gone to feed the "thlen" with red-hot iron. They found him there lying in a faint. When they had revived him, they asked him why he had fainted thus. He replied, "When I was feeding the 'thlen' with red-hot iron, he struggled and wriggled and I fainted. Come, let us go and see what has become of him." They then went and found that the "thlen" was dead. They then published abroad all over the world that the "thlen" was dead, and they convened a durbar to decide about eating dang sáw dang khluid bha u la leit lam ha U Thlen. Tang shu poi u ong "Ko kynum ang, ang, kane ka doh," bad tang u shu ang u la thep jluk ha u pydot. • 539

him. In the durbar they came to the following understanding, i.e. that the Khasis should eat half, and the plains people half (of the body). After they had come to this decision in the durbar, they then went to take him out of the cave, and they lifted him on to a rock. They there cut into pieces the "thlen's" carcase. The plains people from the East, being more numerous, ate up their share entirely, not leaving anything—for this reason there are no "thlens" in the plains; but the Khasis from the West, being fewer in numbers, could not eat up the whole of their share; they left a little of it. Thus, because they did not eat it all, the "thlen" has remained with them. U Suidnoh gained for himself fame and honour, which he enjoys up to the present day. The Khasis, therefore, when they find that the hair or the clothes of any one belonging to them have been cut, refer the matter to U Suidnoh, and they sacrifice to him. The Syntengs also have their "thlen," but he differs much from the Khasi "thlen." The Syntengs also believe he is a kind of serpent, and there are some families and clans who keep him and worship him like a god. They sacrifice to him a pig only; they do not propitiate him with human blood as the Khasis do.*

Dylhar. Hinrei ki Khasi, na sepngi namar ba ki kham duna briew ki'm shym lah ba'n bam lut ia la ka bynta, ki la pynsah katto katne. Kumta namar ba ki'm shym bám lut, U Thlen u dang sah. * For further details regarding the Khasi superstition of the "thlen," the reader is referred to the portion of the monograph dealing with human sacrifices. It may be mentioned that the "thlen's" cave is at a place called Pom Doloi in the territory of the Siem of Cherra, where there is also a rock called "Dain Thlen" (the cutting of the "thlen"). Another version of the story explaining why there are still "thlens" in the Khasi Hills is that there was an old woman who lived at a place called Mawphu, a village in a valley to the west of Cherrapunji. This old woman forgot to eat her share of the "thlen's" flesh, the result being that the species became repropagated.

539

About the river "Rupatylli" at Duwara.

In ancient times, when the world was still young, there were two river goddesses who lived on the Shillong Peak; perhaps really they were the daughters of the god of the Peak. These two wagered one against the other that each would be the first to arrive in the Sylhet plains by cutting a channel for herself. They agreed to start from Shillong Peak. One followed the channel of the Umngot, and the other that of Umiew or Umiam. The one that followed the channel of Umngot chose a soft and easy bed, and although the way was a longer one, she did not find it a trouble to go by a circuitous route. When she reached the Sylhet plains she was called "Shengurkhat," and she then flowed past Chhatak and so reached Duwara. She looked round to see where Umiam was, but she could not descry her anywhere. So out of playfulness she flowed slowly, and she formed a channel like a necklace (*rupatylli*) by way of waiting to see where Umiam was. Umiew was very proud, she felt strong enough to make the channel she chose, and although it was through the midst of hills and rocks, she cared not a bit; so she wasted time by digging through the hills and boulders. When she reached Shella, she thought she could easily beat Umngot, for the course she had taken was a very straight one. When she got a little below Shella she saw Umngot shouting for joy with foaming waves

* Both rivers, Umngot and Umiew, or Umiam, have their sources in or close to the Shillong Peak. The word "*Rupatylli*" signifies in Khasi a solid silver necklace of a peculiar shape. In order to appreciate this pretty tale thoroughly, the reader ought to view the river "Rupatylli" from the heights of Laitkynsew, or Mahadeo, whence it is to be seen glistening in the sun like a veritable *rupatylli* or silver necklace.

† These mountains are the high hills which lie to the east of the Jowai Sub-Division, and which form part of the boundary line between the Khasi and Jaintia Hills District and North Cachar.

‡ The word Hadem is possibly a corruption of "Hidimba," the old name for North Cachar.

[101]

they may all three feast together; this is in the case of one transgression only. But in the case of a man who has committed more than one, it is not possible to say how many goats and fowls must be sacrificed, because the river often demands offerings on account of a man's parents or relatives having crossed the river at some time or other.

From the time of the old Siem to that of U Ram Singh Siem, they used to sacrifice to this great goddess two persons during the months of November and December at the time of offering a sacrifice at Jaintiapur. After a ceremony performed by the Brahmins at Jaintiapur, the victims are led to the Mawshai (Shangpung) market, where they are allowed to take and eat anything they like. After that they conduct them to Sumer; but some say that the stone on which the victims are beheaded is situated below the village of Ka Iew Ksi, near a stream which falls into the Kopili, and where there is a *mawkynthei* (flat table-stone) close to that sacred river.

They place the victims on that stone, where the executioner beheads them with a terrible sword. After that they throw the dead bodies and their heads into the river. But in the days of U Markuhain (U Raj Indro Singh) "who was our contemporary," they have ceased to do so out of fear of the East India Company. The victims are known by the name of "Mugha Khara."

At that time all the people of the territory of the twelve dolois were in a great state of ngut shi khún shi kymie, kata ka long haba long tang kawei ka lait, hinrei haba ka'n long katba shong ka lait u briew lei-lei, ngam tip ka'n long katno blang katno siar namar haba dei ka'n wan pán ka jingkñia namar ba la klan ia ka na khlieh lane na kyjat da u kyñie u kypa kano-kano ka iing lane kano-kano ka kur. 782 terror. It is said that the victim-catchers, when they inquired about the clan (of their intended victims), conducted themselves as if they did not intend to do anything. When the people told their clan, then they caught them. When they heard that the people belonged to clans from which *kongngors* * were selected, they did not arrest them. When it was impossible to get hold of any one else, they sacrificed some of the (king's) slaves.

The Village of Maw-pun-ka-Rytiang (Mawpunkyrtiang).

539 There was in olden days a woman called Ka Rytiang of the Siem clan. Whilst she was still a spinster, she used to go to catch fish in a stream over which there is to the present day a bridge made of a single stone, called Mawpun ka Rytiang. Whilst she was catching fish in the midst of the stream, a fit of drowsiness overtook her. At that very moment there approached her a very handsome young man, who thus addressed her: "Take this drumful of money; do not marry, and thou shalt nevertheless bear children. Thou must throw a bridge built of a single stone across this stream, thou must build thy house entirely of stone, the beams must be all of stone. Thou must spend all the money I have given thee, and if it does not suffice for thy expenditure, I shall bring more. Thou wilt remember all that I say?" She replied "yes." As soon as he

had finished speaking to her, she awoke from her fit of drowsiness and found herself holding a drumful of money. On her way home she pondered over what he had said to her, and her heart was full of joy that she had met a god who had given her so much money, and who had spoken such words to her. She then constructed a bridge over that stream with a single stone, which remains till this day.* When she was about to build her house, it happened that she got married notwithstanding; she gave birth to a blind child, and died shortly afterwards. So the people called the village "Maw-pun-ka-Rytiang," or, when abbreviated, "Mawpunkyrtiang."

The Siem of Malyniang.

The Siem of Malyniang was one of those kings who, people said, was one of the "god-kings." He lived in the village of Madur, which is now in the Maskut doloiship. There arose from the royal family of Malyniang a king whose name was Kyllong Raja. His manner was very peculiar, but he was at the same time both stern and courageous. He made up his mind to conquer the whole of the Synteng country as well as the territory of the Siem of Shillong, in order to extend his own kingdom of Madur. This Kyllong did not require many followers when he went to war

539

because he was a very strong man and a man whom nobody could kill, for, if he was killed he came to life again immediately. The Synteng king once chopped him up into pieces and threw his hands and feet far away, and thought he would not come to life again. Nevertheless, next morning he came to life just the same, and he stalked along all the paths and by-ways to intercept his enemies. The Synteng king was in great trouble on his account, and was at a loss for a plan how to overcome him, because, having been killed once or twice, he came to life again.

When the Synteng king had thought well over the matter, he hit on a device which he thought a very good one, by which he could ascertain by what manner of means he came to life again after having once been killed. The Synteng king's stratagem was the following. He selected the most beautiful girl in the Synteng country, he put on her ornaments of gold and of silver and royal raiment of great price, and he said to her, "All these will I give thee, and more besides, if thou canst obtain for me the secret of Kyllong Raja, and canst inform me how he brings himself to life again after being killed. Now I will send thee to the market there, and if Kyllong Raja takes a fancy to thee, and if he is willing to take thee to wife, thou wilt go, and thou wilt pretend to love him as far as is in thy power. Afterwards thou wilt inquire regarding all his secrets and wisdom, i.e. how he comes to life again after he has been killed; and after thou hast by'm jiw don uba lah ba'n pyniap ia u. La ki pyniap ruh u im pat kumne-kumne. U Siem Synteng u la pom ia u tukra-tukra, u la bred ia ki kyjat ki kti sha jingngai, bad u la tharai ba u'n ym im shuh, pynban tang la mynstep u la im hi kumjuh, u la iaid ia ki lad ki dong ban sywait ia ki nongshun. U Siem Synteng u la shitom shibun ia u bad u la duh buit ruh da kumno yn leh ba'n jop ia u, haba shi sin ar sin la pyniap u shu im pat kumjuh pakumjuh. Te haba u Siem Synteng u la pyrkhat bha u la shem kawei ka buit kaba u tharai ba ka long kaba bha tam bad kaba u lah ban tip da kano ka rukom ne ka jingstad ba u im pat haba la pyniap ia u. Ka buit jong u Siem Synteng ka la long kumne. U la shim kawei ka samla kaba bhábriew tam na ka ri Synteng baroh, u pyndeng ki jingdeng ksiar ki jingdeng rupa, bad u pynkup ki jain Siem kiba kordor eh, bad u ong ha ka "ngan ai ia pha kine baroh, bad ngan ai shuh ruh nalor kine lada pha'n ioh ia ka buit u Kyllong Raja ban iathuh ha nga da kumno u lah ban pynim pat ia lade haba pom ia u. 539

found out all these things, thou wilt inform me, so that I may overcome him. Then, if thou art successful in thy mission, I will give thee a great reward." He then sent her to the market. Kyllong Raja saw her and fell in love with her, and he took her to wife and kept her at Madur. Then that damsel pretended to love him exceedingly, and she repeatedly asked him his secret, how he came to life again. Then Kyllong Raja, fancying that she really loved him, confessed all to her. He said, "My life depends upon these things. I must bathe every day and must wash my entrails" (hence the appellation of "the king who washes his inside" which they gave him), "after that I take my food, and there is no one on earth who can kill me unless he obtains possession of my entrails. Thus my life hangs only on my entrails."

When, therefore, that damsel who had become his wife had learnt all these things, she sent word to the Synteng king that he should send one of his elders, to whom she might reveal the secret of U Kyllong's existence. When the Synteng king heard this, he sent his elders to her. She then told all those things that U Kyllong had confessed to her. When the Synteng king had heard everything, he gave orders to the people to be on the watch so as to get hold of U Kyllong Raja. They found him one day bathing, with his entrails placed on one side of the bathing-place, so that afterwards he might wash them. Thereupon a man from Ralliang seized the entrails and iohih ia ka, bad u la i-bha shisha ia ka, bad u shim iaka ba'n long ka tynga jong u. U buh ia ka ha Madur. U Manik Raitong and his Flute.

In the northern portion of the Khasi Hills which borders on the Bhoi country there lived a man, by name U Manik. The people nicknamed him "U Manik Raitong," because he was an orphan, his parents, his brothers and sisters, and the whole of his clansfolk having died. He was very poor in addition. U Manik Raitong was filled with grief night and day. He used to weep and deeply groan on account of his orphanhood and state of beggary. He did not care about going out for a walk, or playing like his fellow youths. He used to smear himself with ashes and dust. He used to pass his days only in weeping and groaning, because he felt the strain of his misery to such an extent. He made a flute upon which to play a pathetic and mournful tune. By day he used to work as a ploughman, whenever he was called upon to do so. If nobody called him, he used to sit inactive at home, weeping and groaning and smearing his rags with dust

* The above story is said to have been taken down word for word from the mouth of an old woman of the Malyniang clan who lived at Mawlong.—P.R.G.

and ashes. At night he used to bathe and dress himself well, and, after having eaten his food, he used to take his flute and play on it till morning. This was always his practice. He was a very skilful player. He had twelve principal tunes. There lived in the same village a queen. Her husband, the Siem, used to be absent from home for long intervals in connection with his public duties. One night, when the queen heard the strains of U Raitong's flute, she listened to them with very great pleasure, and she felt so much compassion for him that she arose from her couch at midnight and went to visit him. When she reached his house, she asked him to open the door, so that she might pay him a call. U Raitong said, "I can't open the door, as this is not the time to pay visits," and he went on playing his flute and dancing to the music, with tears in his eyes. Then the queen peeped through one of the chinks of the wall and saw him, and she was beside herself, and breaking open the door she entered in. Then U Raitong, having stopped playing, was annoyed that, to add to his misfortunes, this woman had come to trouble him thus. When she tried to beguile him, U Raitong admonished her and sent her away. She departed just before daybreak. U Raitong then took off his fine clothes, and putting on his rags, sprinkled himself with dust and ashes, and went to plough as was his wont. The queen, however, ensnared him by another device, and whilst the king was still away in the

539 plains, she gave birth to a male child. When the Siem returned, he was much surprised to find that she had borne a child during his absence, and however much he asked her to confess, she would not do so. So the king called the elders and young men to judge the case, and when no proof was found concerning this business, the king appointed another day, when all the males (in the State) should appear, each man holding a plantain. On the appointed day, all the males of the State having appeared, the king told them all to sit in a circle and to show their plantains, and said, "We will place this child in the midst, and to whomsoever the child goes, he is his father, and the adulterer. We will beat him to death with clubs according to the law." Accordingly, when all the people sat in a circle, and the child was placed in the midst, he went to no one, and, although the king called and coaxed him much, he nevertheless refused to go. Then the king said, "Remember who is absent." All replied, "There is no one else except U Manik Raitong." The Siem replied, "Call, then, U Raitong." Some of the people said, "It is useless to call that unfortunate, who is like a dog or a cat; leave him alone, oh king." The king replied, "No, go and call him, for every man must come." So they called him, and when he arrived and the child saw him, the child laughed and followed "U Raitong." Then the people shouted that it was U Raitong who had committed adultery with the queen. The bad u la leit pynlur masi. Hinrei kane ka mahadei ka la riam ia u da kawei pat ka buit. king and his ministers then ordered that U Raitong should be put to death outside the village. U Raitong said, "Be pleased to prepare a funeral pyre, and I will burn myself thereon, wicked man that I am." They agreed to his request. U Raitong said to those who were preparing the funeral pyre, "When I arrive near the funeral pyre, set fire to it beforehand, and I will throw myself in, and you stand at a distance." Then U Raitong went and bathed, dressed himself well, and, taking his flute, played on it as he walked backwards to the funeral pyre; and when he arrived close to it, they lighted it as he had told them to do. He walked three times round the pyre, and then planted his flute in the earth and threw himself into the flames. The queen, too, ran quickly and threw herself on the pyre also. After U Raitong and the queen had been burned, a pool of water formed in the foundations of the pyre, and a bamboo sprang up whose leaves grew upside-down. From U Raitong's time it has become the practice to play the flute at funerals as a sign of mourning for the departed.

12 else that we do is instinct with a *plus*; and for the student of religion or of human culture in any of its forms, to account for that *plus* is the sum and substance of his task.....Whereas, then, there is likelihood that any *a posteriori* reason existed for believing that in-breeding makes for sterility, if indeed it be true in fact at all, there might well have been an *a priori* conviction to much the same effect based simply on a fear that to tamper with the fountain-head of human vitality would somehow cause it to dry up." The Khasi stands in the world as exogamous in his rule of life, and he says '*sang bad byrsieh*', that is, endogamy is forbidden and if it should ever be committed it will render life defiled and corrupt. He says this out of the fear of the knowledge that any act of carelessness in the prohibited area of the source of human life and vitality, which is in the Khasi phrase '*long briw*' (*long* is to be or become, *briew* is man, i.e., to be or become man), will make that source of human life to dry up. So he says, 'duh I jaid I khong' (*duh*=is exterminated; *jaid*= kind, species; *khong*=root).

156 829 582 [885]

In refutation of such aspersions as that the Khasi has no rules of marriage, I shall quote the most sacred pronouncement the Khasi when two persons, the man and the woman, are initiated into that state. Calling upon the name of God the Khasi says—"*U Lei thaw briew man briw, u' Lei ne ka 'Lei synshar'*, (God who creates man and is the source of human life, God who keeps, controls, preserves), "*Hei ko Blei na jreng, Ko*

582 585 [539]

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

Blei na thian, ko Lei Synshar, Ko Blei triw, man briw, kumba la hukum kumba bhu ma phi U Blei ka Blei ban long I Kha I man, kumba la pynhiar ka synjat mynta ka sgni, ba phin tip, ba phin sngew na jrong ho kyndiang ba ita I jaid bad ita I jaid ki la iapoi kha poi man ban iaroi ban ia man ban ia heh ka long kynthei ka long shynrang', Oh God from above, oh God from below, Thou God who controllest, who keepest and preservest, Thou God who createst man and the origin and source of human life,—as ordained by Thee, Oh God, U Blei (God in the male aspect), Ka Blei (God in the female aspect) that there should be *I Kha* (person to bear and give birth) *I man* (person with whom and through whom to give cause to life and to grow), as token has been brought down this day, [a ring is given], so that Thou mayest hear clearly from above, that such and such *jaid* (kind, clan) and such and such a *jaid* (kind, clan) have become joined in marriage in order to increase, in order to grow, so as to increase the state of being female and the state of being male (i. e. male and female population)." [This is said as a woman of a certain clan always marries a man of a different clan.] As I have said elsewhere, "There is no tradition among the Khasis that there was ever a time when the status of marriage did not exist among our ancestors. There is a belief among the Khasis that they were instructed in their religion and that their ceremonies and rites were delivered by God Himself to the

587 of the woman by her husband. No occasion arises either of
421 taking his place on death, by his brother or by sister's son; or of a sister of a deceased wife being made over to a man, as is the custom among Garos, where the husband of the heiress manages the property of his wife. Among the Khasis, the widow or widower cannot normally remarry before the end of a year after the death of the husband or wife. When a year is over, a payment is made to the Kur of the deceased to remove
587 the disability. If the man or woman want to remarry before
782 the year is out, a larger sum is paid. In Mawphlang, a sum of Rs. 5-4-0 is paid at the end of the year and Rs. 11-4-0 for untimely remarriage (within the year). The payment is made to the Ka Khadduh of the deceased in each case, and a ceremony severing the relation with the dead spouse is performed. A pig is purchased with the money and it is sacrificed in the house of the Ka Khadduh by a man—usually a neighbour. If the deceased was a man, the following invocation is made:
• [539] "Ha kane ka mied la shim nong sang bad knia nong sang ia phi. Ka tnga uta uta ban ia khuid."

Free translation :—

"On this night the tabooed person is sacrificing to you. The wife of so-and-so (naming the man) is hereby made pure."

The pig is then killed by thrusting an iron spike through the shoulder. It is then cooked and eaten by the people present. This mode of killing is known as "dung."

The myntri Orongsing, whose genealogy has been noted, remarried a year after the death of his first wife Ka Resimai. This woman died two years ago, and the ceremony for removing the bar on remarriage was performed only last year. The money was made over to an old man U Ru, who is well acquainted with the rites. He purchased a pig and killed it by the "dung" method in the compound of Ka Resimai's mother, Ka Sheribon. The spike might be of wood or iron, stated U Ichon. I was informed by the myntri U Subu Rai that the ceremony of

SECTION VI.

MISCELLANEOUS.

TERMINOLOGY.

551 The Khasis, like the Alfoors of Poso in Celebes, seem to be somewhat reluctant to utter the names of their own immediate relations, and of other people's also. Parents are very frequently called the mother of so and so (the child's name being mentioned), or the father of so and so, *cf. Ka kmi ka Wiei, U kpa u Philip.* The actual names of the parents, after falling into desuetude, are often entirely forgotten. The origin of the practice may be that the Khasis, like the Alfoors, were reluctant to mention their parents by name for fear of attracting the notice of evil spirits. The practice of *teknonymy*, however, is not confined to the Khasis or the Alfoors of Celebes (see footnote to page 412 of the "Golden Bough"). The custom is also believed to have been prevalent to some extent not long ago in some parts of Ireland.

797 179 551 The advent of the Welsh Missionaries and the partial dissemination of English education has in some cases produced rather peculiar names. I quote some instances:—

U Water Kingdom, Ka Mediterranean Sea, Ka Red Sea; U Stinkwell Boom, U Overland, Ka Brindisi, Ka Medina, Ka Mary Jane, U Mission, and Ka India.

KHASI METHOD OF CALCULATING TIME.

565 The Khasis adopt the lunar month, *u lynai*, twelve of which go to the year *ka snem*. They have no system of reckoning cycles, as is the custom with some of the Shan tribes. The following are the names of the months:—

566 *U lyllo-lynglot*, corresponding to January. This month in the Khasi Hills is the coldest in the year. The Khasis turn

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

U Iaiong,—the cloudy changeable-weather moon, corresponding with April. 805

U Jim-maug,—the flowering moon, corresponding with May.

U Jil-la,—the deep-water moon, corresponding with June.

U Noitueg,—the bad-smelling moon, corresponding with July.

N Noilar,—the moon when a plant called the *Jatalar*, which has a red flower flourishes. This is perhaps one of the *arums*. The plant is commonly known as the snake plant.

U Noilar,—the moon for ploughing, corresponding with September. This may be also the month for courting, the word *lur* also having the meaning to woo.

U Ry-sau,—the moon when nature fades (usually becomes red) corresponding with October.

U Noiring,—the earthen-pot moon, corresponding with November.

U Nohpuk,—the moon of the fall of the leaf, corresponding with December.

The Khasi week consists generally of eight days, although in some of the *War* villages on the southern side of the hills there is a week of four days only. The days of the week are named after the markets which are held in rotation on the different days.

Khasi.	*Synteng.*
1. Lynkah.	Ky-llao.
2. Nongkrem.	Pyn-sing.
3. Um-long.	Mao-long.
4. Rang-hep.	'Iao-siang.
5. Shillong.	Macshai.
6. Pomtih.	Pynkat.
7. Um-nih.	Thym-blein.
8. Yeo-duh.	Ka-hat.

16. *Tekwanomy.*—One more interesting custom that may be noticed is the Khasi and Synteng custom of *tekwanomy*, or of parents taking the names of their children, *e.g.*, ka Kmi Ka Nari (the mother of Ka Nari), U Kpa Nihon (the father of Nihon). The taking of names thus is almost universally practiced. The actual names of the parents after falling into desuetude are often completely forgotten by the villagers. Only the names of the children are used coupled with "father of" "mother of" as explained above. The advent of the Welsh Missionaries and the partial dissemination of English education has, in some cases, produced some rather peculiar names. I quote some instances:—U Water Kingdom, Ka Mediterranean Sea, Ka Red Sea, U Shakswell Roses, U Overland, Ka Brindisi. 551 [197]

13:Mukherjee E-5 (1954)1958 AR7 Khasi AR7

The primal father and the mother of the members of every clan are respectively known as *U-Parad* (*U-Thawlang*) and *Ka-Meyrad* (*Ka-Iawbei*). 614 192 773

There is a large number of clans among the Khasis and some of the clan names are those of animals and trees. *Shrieh* is monkey, *tham*, a crab, and *dingdoh*, a tree ; yet they do not constitute totemic clan organization. The clan names are not even the names of the ancestress. The clans are not ancestral but rather were territorial in nature when the clansmen (*shi-Kur*) used to live in a place having a common land (*ri-kur*) and a clan ossuary (*mawbah*) where the bones of the dead clansmen were deposited. 614 551

Unlike the clans, the sub-clans (*ka-k'poh*) are ancestral. As for example, in case of the *Siem* clan of the Chera state, it is found that Ka-Khiem was the primal ancestress. Her daughter Ka-Pet had three daughters, namely, Ka-Sngi, Ka-Lngen, and Ka-Kreh each of whom is regarded as the *Ka-K' poh* (*meaning* womb) of their respective descendants who are *shi-K'poh* (the members of the same womb). And their names are the names of the three sub-clans of the *siem* clan. 613

The names of the sub-clans of some of the clans as collected from the elderly Khasi women are given below. 613 614 551

CLAN	SUB-CLAN
1. Siem	— sngi ; lngen , kreh
2. Khongsit	— yin , phai ; bar ; jiram
3. Kharshiing	— iew ; mah ; sayngiar , iynean
4. Lyngdoh	— kaban ; summhir ; kamai
5. Nongrum	— tungan ; tungwi ; syngna , buhai
6. Khongrymai	— thania ; thani , barhai , lisi
7. Jaidkhar	— hazi ; haza , tuli ; tula
8. Simpilisa	— eli ; mayar ; josi , emi

Family (*ka-iing*) among the Khasis is the socio-economic and religious unit. Due to matrilocal residence, the structure of the Khasi families assumes a different form. The constituent members are the grandmother, her daughters and their children. But the parmanent[1] residents are the youngest daughter (*ka-khadduh*), her husband and daughters. It takes an 596

[1] [Should read: permanent.— Analyst]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

mother, for which unit the Khasi word *kpoh* is used. Such a group of matrilineal kin is usually confined to one domestic family or to a group of households, linked by direct extension of a main household. However, even this descent unit is not a single productive and consumer unit, though it may act as a religious unit, having common ancestral property. I shall take up this thread again at a later stage of my analysis. 613

Because of the lack of the functional lineage organization as a corporate unit, the village community becomes the significant unit as a higher level of organization than that of *kpoh*. This fact is supported by the high tendency to community endogamy which links every household of a village into a unit with considerable cohesion and solidarity. In fact the members of a village community are linked to each other in various ways by affinal or cognatic ties. 621 613 614 551 621

APPENDIX

SOME ADDITIONAL INFORMATION FROM SHELLA AND JATINGA

SHELLA

Shella is situated on the lowest of the southern slopes of the Khasi Hills, bordering on the Sylhet plain of East Pakistan. For centuries the people of Shella maintained close trading connections with the people of the plain, so that they have been much influenced by the Hindu. They have been to some extent divorced economically and culturally from their own people who live in the uplands and on higher part of the slopes. Actually, this is a natural result of their geographical location. From Cherrapunjee, the southern edge of the upland Khasi Hills, only a narrow footpath goes down to Shella. The altitude of Cherrapunjee is about 5,000 feet and of Shella from 500 to 1,000 feet, and the distance between them is 8 miles. The path descends very steeply and is full of hard stones. This difficulty of communication is also why the Hindu influence did not penetrate the upland Khasi, as in the case of the Jaintia Hills.[1]

This area has a unique political organization which differs from the majority of Khasi states who are traditionally ruled by the members of the Siem clan. Shella is organized as a confederation, called 'Shella Confederacy,' and consists of four local villages. The head of the village is called *wadadhar*, and is elected by the villagers every three years. The number of households of the Shella Confederacy was about 900 in January 1956. The names of the four villages and their *wadadhar* in 1956 were:

Name of village	*Name of wadadhar*
1. Shella	Devish Mohan Roy
2. Mushtoh	Ditojou Roy
3. Nongtrai	Orju Roy
4. Tyngnger	Jabuni Roy

Each village is divided into sections. For instance, Shella village has nine sections: (1) Jasir, (2) Disong, (3) Duba, (4) Jamau, (5) Nongrum, (6) Nongnong,

1. However, Shella was the only way out and the main gateway from the Khasi Hills to the plain; it was here that the British first entered the Khasi Hills. They proceeded from Shella to Cherrapunjee and made the latter headquarters of the Khasi Hills in 1833.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

621 [Jatinga]

[175] This village was founded in 1905 by Khasi immigrants from the Jaintia Hills. [101] At the entrance of the village, a bust of the founder, Lakhanbang Suchiang, [211] stands facing towards the east; it was erected on the occasion of the celebration of their Golden jubilee, in November 1955. Houses are scattered along the [346] ridge of the moutain to the east and to the west; in the centre is the church. [771] All the inhabitants are Christians. Before the Partition this was one of the most modern and prosperous villages in Assam.

101 Jatinga provides a very interesting instance of the Khasi 'colonial' village. It is surrounded by villages of the Kuki, of the Zemi-Naga, and of the Cacharee, 121 who constitute the main population of the North Cachar Hills, and who are tribes entirely different from the Khasi, in economy, social organization, language 621 and culture. Therefore, Jatinga is like an island of Khasi community. I took this village as one of my fields, because I was particularly interested to discover how far the Khasi matrilineal organization is kept up in a community thus situated, surrounded by patrilineal tribes, and considerably modernized by Christianization and economic prosperity; and I was also interested in the process of formation of a new village, in comparison with Rinsibara and Joshipara in the Garo Hills.

Formation of the Present Population of Jatinga.

The first immigrants to Jatinga.

101 The main population of Jatinga, including the founder, originated in Bataw village in the Jaintia Hills, twelve miles away from Jaintiapur, the capital of 166 the then Jaintia Rajas. This village is situated on the border of the Jaintia 175 Hills and the East Bengal plain, the location being very similar to that of Shella, as are their culture and economy. In the later part of the nineteenth 621 century, some members of Bataw village moved to Borkhala, ten miles from Silchar, one of the biggest villages of the then Cacharee king.

These immigrants who came to Borkhala stayed there about fifteen years before they came to Jatinga. Kloribon, the first daughter of the founder's sister was born there. In November 1905, some Christian Khasi left Borkhala for Jatinga, acting on information gathered from a Welsh Mission at Haflong, that the land of present Jatinga was fertile and fit for their cultivation. They 166 were the first immigrants to Jatinga. The Government record names the following three persons as the first immigrants to Jatinga: Suchiang Lakhanbang, • 551 Tariang, and Suchen Munik. In fact, according to the data which I collected at Jatinga, Suchiang Lakhanbang was accompanied by the following persons 614 (the names in brackets indicate the clans):

621 his wife, Misibon (Phanwar),[1]
175 his brother, Pryntah, and Pryntah's wife, Sintu (Rupsi),
his sister, Laptho, and Laptho's husband, Munik (Suchen) with their daughter, Kloribon, and Munik's younger brother, Sain.
his friend, Tariang.

Soon after their settlement, Sain, the brother of Munik, brought his wife Tahin (Suiam) from Jaintia. Misibon brought her younger sister, Diasibon. Tariang who came with Lakhanbang afterwards called his wife, Palong. But having spent some time there, they left eventually for another place, so that

1. Misibon was a native of the Cherrapunjee area of the Khasi Hills (not of Jaintia like the others). She was a school teacher at Cherrapunjee, and later became a teacher at a school near Jaintiapur, where she married Lakhanbang.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

there are none of their descendants in Jatinga. Summing up, the first party who settled at Jatinga was composed of people of the following five clans: 166

551

1. Suchiang — Lakhanbang, his sister, Laptho, and her daughter, Kloribon, his brother, Pryntah. 614
2. Suchen — Munik and his younger brother, Sain. 621
3. Phanwar — Misibon and her younger sister, Diasibon. 175
4. Rupsi — Sintu, the wife of Pryntah.
5. Suiam — Tahin, the wife of Sain.

Among them, Suchen had no female member. Phanwar had no successor: Misibon had no issue and Diasibon did not marry. Therefore, Suchiang, Rupsi and Suiam are the oldest clans in present Jatinga. Suchiang and Rupsi especially are the dominant and richest groups among the present population.

This was the time when the railway from Gauhati to Silchar was being constructed. Some Khasi labourers were working at Haflong on the construction of the railway. After the foundation of Jatinga, these Khasi workers established marriage relations with the Khasi of Jatinga, and finally, upon completion of the railway, many of them became the inhabitants of Jatinga. The present members of the Dome and Siangshai clans are the descendants of these people, and they form a considerable number of the present inhabitants of Jatinga. Besides them, there were a few other Khasi at Haflong who were engaged in trading business. In the course of time, they also had marital relations with Jatinga people and came to Jatinga. 166 175 458 621 [499] [464]

After five years had elapsed they found that in spite of their hard work the land was not favourable to them. Many of them left Jatinga. This was the hardest period of Jatinga history.

The second migration (1919-1925).

The railway which once had been blocked was reopened in 1919. The people who had left Jatinga came back to settle there. This time the circumstances seemed to them quite favourable. The pan trees which they had planted earlier were growing and they could gather considerable produce. The village grew bigger around 1920 as a result of new immigrants from Jaintia; most of them were people from Bataw, the village of the founder. In this period, many immigrants came from Jaintia not only to Jatinga but also to Sylhet, Borkhala and other places outside the Khasi-Jaintia Hills. It seems that by this time the over-populated Jaintia realised that these areas were favourable for their new home. However, the successive waves of Jaintia immigrants to Jatinga ceased by 1925, its population having reached saturation point. [499] [245]

Orange production brought economic prosperity to the people of Jatinga. Wealthy villagers employed temporary labourers from the Jaintia Hills every year. Some of these labourers came with their families and others came individually. During their stay at Jatinga, some of them married and settled there. Hence, there are also descendants of such labourers among the present inhabitants of Jatinga. [245] [464]

Some Aspects of Descent Groups.

Throughout the history of Jatinga, immigrations have always been undertaken by a family (elementary family, siblings) or by an individual, but never by a group of clan members. Therefore, the present population is grouped in small descent groups according to each migration. Though some of them happened to have the same clan name, their history of migration and their 621 [175] [614] [166]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

000 credited, owing, no doubt, to the advance of Christianity and education.

CEREMONIES AND CUSTOMS ATTENDING BIRTH AND NAMING OF CHILDREN.

844 The Khasi birth ceremonies and customs are as follows:—
[784] When a child is born the umbilical cord is cut by a sharp
782 splinter of bamboo; no knife can be used on this occasion. The Mundas of Chota Nagpur similarly taboo a metal instrument for this purpose. The child is then bathed in hot water from a red earthen pot. The placenta is carefully preserved in an earthen vessel in the house till after the naming ceremony has taken place. When the umbilical cord, after being tied, falls off, a puja is performed with eggs to certain water deities (*ka blei sum-um* and *ka niangriang*),* also to a forest spirit
553 (*u'suid bri* or *u'suid khláw*). The naming ceremony of the child
386 is performed the next morning after the birth. Certain females are invited to come and pound rice in a mortar into flour. The flour when ready is placed on a bamboo winnower (*u prah*). Fermented rice is mixed with water and is placed in a gourd. Some powdered turmeric is also provided, and is kept ready in a plantain leaf, also five pieces of *'kha piah*, or dried fish. The earthen pot containing the placenta is then placed in the *nongpei*, or centre room of the house. If the child is a male, they place near him a bow and three arrows (the implements of a Khasi warrior); if a female, a *da* and *u star*, or cane
553 head-strap for carrying burdens. An elderly man, who knows
782 how to perform the naming puja, which is called by the Khasis "*kaba jer khun*," places a plantain-leaf on the floor and sprinkles some water on it. He takes the gourd in his hand and calls a god to witness. The people assembled then mention a number of names for the child, and ask the man who is performing the puja to repeat them. This he does, and at the same time pours a little liquor from the gourd on to the ground. As he goes on pouring, the liquor by degrees becomes exhausted, and finally only a few drops remain. The name at the repeat-

* A spirit which is supposed to have the power of causing a disease of the navel of a child.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

ing of which the last drop of liquor remains adhering to the spout of the gourd is the name selected for the child. Then the puja performer invokes the god to grant good luck to the child. The father takes the pot containing the placenta, after having previously placed rice flour and fermented rice therein, and waves it three times over the child, and then walks out with it through the main entrance of the house and hangs up the pot to a tree outside the village. When he returns from this duty, before he re-enters the house, another throws water over the father's feet. The father, being thus cleansed, enters, and holds the rice flour to his mouth three times. Two people then, holding the dried fish by their two ends, break them in two. The powdered turmeric mixed with rice flour and water is applied to the right foot of the father, the mother and the child receiving the same treatment. The friends and relations are then anointed, the turmeric being applied, however, to their left feet. The bow, arrows, *da*, and *u star* are carefully placed inside the inner surface of the thatch on the roof, and the ceremony is over. Rice flour is then distributed to all who are present, and the male adults are given liquor to drink. After two or three months the ears of the child are bored and ear-rings are inserted. These ear-rings are called *ki shashkor iawbei* (i.e. the ear-rings of the great-grandmother). Mr. Jenkins mentions that the naming ceremony amongst the Syntengs is performed by the "eldest aunt," presumably on the mother's side. A basket of eggs is placed in the centre of the room, and before the ceremony begins one egg has to be broken. Then the aunt of the child takes two sticks, and, raising them to her shoulder, lets them fall to the ground. Before they fall she shouts, "What name do you give the child?" The name is mentioned, and if, on falling upon the ground, one stick crosses the other, it is a proof that the name has won the approval of the spirit. If the sticks do not fall in this position, another egg is broken and another name is chosen, and the sticks are dropped as before until they fall in the required position, when it is understood by the performers that the name is a good one. Mr. Jenkins was informed by a young man "who had renounced heathenism" that some of the more cunning women cross the sticks before lifting them, and that

553 782

[386] [302]

553 304

553 [104]

1:Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

553 when they do this they invariably fall crossed to the ground. "They thus save their eggs, save time and trouble, get the
553 name they desire for the child. . . ." It is noteworthy that
844 the Khasis consider it necessary to preserve the placenta until the ceremony of naming the child is over, and that the pot containing the placenta is waved over the head of the child before it is removed and hung up in a tree.

844 Dr. Fraser, at page 53 *et seq.* of the "Golden Bough," when
171 dealing with the subject of sympathetic magic, refers to the navel string and the placenta as parts which are commonly believed amongst certain people to remain in sympathetic union with the body after the physical connection has been severed, and it is interesting to note that in the Babar Archipelago, between New Guinea and Celebes, the placenta is mixed with ashes and put in a small basket, which seven women, each of them armed with a sword, hang up on a tree of a peculiar kind (*citrus hystrix*). The women carry the swords for the purpose of frightening the evil spirits, otherwise the latter might get hold of the placenta and make the child sick. Mr. C. M. Pleyte, Lecturer on Indonesian Ethnology, at the Gymnasium William III. at Batavia, who has most courteously furnished me with some interesting information on this subject, states that it is especially in the Southern Moluccas that the placenta is mixed with ashes and hung in a tree. Wider spread is the custom of placing the after-birth on a small bamboo raft in a river "in order that it may be caught by crocodiles, incarnations of the ancestors, who will guard it till the person to whom it has belonged dies. Then the soul of the placenta is once more united with that of the dead man, and together they go to the realms of the dead. During lifetime the connection between men and their placentas is never withdrawn." The Khasis, although they cannot explain the meaning of the presence of the placenta at the naming ceremony, and the care with which they remove it and hang it up in a tree, are probably really actuated by the same sentiments as the inhabitants of the Southern Moluccas, i.e. they believe that there is, as Dr. Frazer puts it, a sympathetic union with the body after the physical
846 connection with the child has been severed. There is no fixed
784 period of *sang*, or taboo, after a birth, but the parents of the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

582 marry any one belonging to your own *kur*, or clan. Unlike the
614 Khasis, however, a Lynngam can marry two sisters at a time.
595 The Lynngam marriages are arranged by *ksiangs*, or go-betweens,
584 much in the same way as Khasi marriages; but the ritual
582 observed is less elaborate, and shows a mixture of Khasi and Garo customs (see Section III.). The Lynngams intermarry
583 with the Garos. It appears that sometimes the parents of girls exact bride-money, and marriages by capture have been heard of. Both of these customs are more characteristic of the Bodo
847 tribes of the plains than of the Khasis. There are no special birth
782 customs, as with the Khasis, except that when the umbilical cord
553 falls a fowl is sacrificed, and the child is brought outside the house. Children are named without any special ceremony.
764 The death customs of the Lynngams have been described in Section III. A peculiar characteristic is the keeping of the dead body in the house for days, sometimes even for several months, before it is burnt. The putrefying corpse inside the house seems to cause these people no inconvenience, for whilst it remains there, they eat, carry on their ordinary avocations, and sleep there, regardless of what would be
771 considered by others an intolerable nuisance. The religion of these people consists of a mixture of ancestor-worship and the propitiation of the spirits of fell and fall, which are, most of them, believed to be of evil influence, as is the case with other savage
716 races. As with the people of Nongstoin, the primaeval ancestress, "*ka Law bei*," is worshipped for the welfare of the
782 clan, a sow being sacrificed to her, with a gourd of rice-beer, and leaves of the oak, or *dieng-sning* tree. The leaves of the oak are afterwards hung up inside the house, together with the jaw-bone of the pig. Sacrifices are offered to a forest demon, *U Bangjang* (a god who brings illness), by the roadside; also to *Ka Miang Bylli U Majymma*, the god of cultivation, at seed time, on the path to the forest clearing where the seed is sown. Models of paddy store-houses, baskets and agricultural implements are made, sand being used to indicate the grain. These are placed by the roadside, the skulls of the sacrificial animals and the feathers of fowls being hung up on bamboos about the place
793 where the sacrifice has been performed. There are no priests or
796 *lyngdohs*, the fathers of the hamlet performing the various ceremonies.

782

today, but await with patience the cause and the way! So much, is it not so! --

II. Religion in Various Aspects of Life.

●553 P44 782 1. Giving a Name (tap lubri tap kyrteng).

By tap lubri tap kyrteng one means the ceremony of the giving of a name to a child. In the section on sang I have already indicated the various taboos of a pregnant mother in regard to her husband.

At the birth of a child now, so the Khasi say, there are not as many ceremonies as at the death of a relative. For birth is anyhow in and of itself a feast of joy, since one is more joyful when a person enters life than when he departs from life.

[426] When a child is born, sacrifices are made on the next day (if it was born in the evening or in the night, on the following morning) and the ceremony of giving the name is performed. The sacrificer must be a relative of the child's. Among the Synteng, aunts of the child are called on by preference as executors of the sacrifice. The umbilical chord is cut off with a sharp-edged piece of bamboo and the child is bathed in warm water. The afterbirth (ka shynnai) is carefully kept in an earthern pot in the house (nongpei). Instruments are then placed at the child's side as symbols of later occupations, near a girl a knife (i wait) and a woven bamboo carrier (i star); but near a boy a bow (ka tyntieh) and three arrows (ki 'nam). The sacrificer fetches a little plate, on which he sprinkles rice meal and fills a gourd bottle (u klong) with rice brandy, which he previously mixes with water. He

553 844 782 arranges all this on a bamboo swing (u prah) and then begins the sacrifice with the following words:

Te ha sngew ko blei trai kynrad ko thaw-bynriew ko buhbynriew te ba long ka jer ba long ka thoh ban neh ka nam ban neh ka kyrteng ban long u lubri ban long ka kyrteng wei la suk la sngewbha phi ka blei ban khot da kata ka kyrteng to kein ba un long tymmen un long san un sain la ka kur la ka jaid un bad la ka khein ka bishar ha kpoh la iing mo.

Te sngew sa ka jong me u thawlang babha bamiat te wei ym don ka sang ka kyndiah te la long kynthei la long shynrang te a un long rangbah man rangbah yn sah ka nam yn sah ka kyrteng mo!

And so hear, o god and lord, o creator and maker of men! for now the name-giving and the noting-down shall occur, so that the fame may last and the name be kept, after it has pleased thee, o goddess, to name with this name. Now may it (the child) live to an old age and become great and strong in his descendants and races, and may he keep and observe the commands and justice of his family.

And so hear thou also, o thou good and beautiful Thaulang, since now for once no taboo and no difficultty exist and little woman and little man are (and a child was born), so may he become big and become a strong man and may the fame remain and the name remain preserved. Is it no so!

Meanwhile the sacrificer slowly sprinkles the brandy on the rice meal so that a dough is made. Now one seeks for the name of the child.

553
844 While he pronounces several names, he very slow-
782 ly pours the rice liquor out on the ground. The name, then, that coincides with the drop that takes the longest to free itself from the neck of the gourd bottle, is given the child. When the name is found by this method, the sacrificer makes a mark on each foot of the child with the dough mentioned above, thus giving him the name.

553 [427] But if somebody comes into the hut
844 by chance while the liquor is being poured out and says something, then a name formed from these words is given the child. Then the parents and relatives of the child must eat three times from this dough. When this is all over, the father takes the placenta, sprinkles rice meal on it and swings it three times over the head of the child. Thereupon he leaves the house and fastens the jar including the contents to a tree near the hut. Today this ceremony is seldom done exactly. Usually the father only goes in the yard and buries the placenta somewhere.

553 When the father returns, his feet are sprinkled with water ban khuid ban jhiah krat i khunlung, i.e. so that the child may stay healthy. A rice cake (u purew) which was prepared earlier is now eaten by everybody. Thereupon all the relatives sit down, the relatives of the wife on the left and the relatives of the husband on the right. A piece of the rice cake (purew) is dipped in water and the toes of all the guests are wiped with it. After the end of these ceremonies the utensils which were placed at the side of the child, the bow, the three arrows, the knife and the carrying straps, are taken away and carefully fastened to the inside of the roof of the hut.

● 553 Here are several examples of heathen Khasi names:

u Kisorai	ka Nobitri
u Rasmoni	ka Derisi
u Jaweng	ka Nimai
u Syer	ka Elimai
u Sniang	ka Korimai

The names with the article u are for the masculine sex, those with the article ka for the feminine sex.

The customs of the name giving are not the same everywhere. It is reported (23) that on

23. Gurdon, The Khasis, pp. 124-127.

such occasions a banana leaf with a pounded yellow root and five dried fish should be placed in readiness. An older man, who understands name giving (kaba jer khun), places a banana leaf on the ground and sprinkles it with water. He takes the gourd bottle in his hand and calls on god as a witness. The people gathered there then mention a lot of names, which the one offering the sacrifice must repeat. While he is saying the names, he pours rice brandy out of the gourd bottle onto the ground. The name that is said with the last drop from the gourd bottle is the name of the child.

"Or one lets two little bamboo sticks (igrñ) fall to the ground. If these remain in the formation of a cross, the name that has been spoken meanwhile is the one kept. Otherwise this is done until the desired position of the sticks occurs. But this way takes a lot of time and trouble, since it is sometimes a long time before the little bamboo sticks lie in a crossed position. Mr. Jenkins reports

553 that a Khasi told him, [428] that all kinds of nuisance and deceptions occur with this method of name giving since one likes to save time and trouble."

"The dried fish are held by each end and cut into two pieces. Finally one wipes the yellow root that has been mixed with water on the right foot of the father, the mother, and the child."

244 782 553 Among the Synteng the following items are offered in sacrifice immediately after the birth of a child: some rice meal, eggs, roots and leaves. After the child is a month old (one often waits two months) the ceremony of the name giving is performed. This is done, if not by the sister of the mother, then by the oldest man of the sib. Sacrifices are brought again at this celebration, specifically two hens and a goat.

844 The parents of a newborn child are not allowed to cross a river, nor may they wash their clothes as long as the umbilical cord is not healed, since otherwise the mountain or river devil would harm the child.

845 Twins are considered a punishment, which has been incurred by somebody in the sib for violating a taboo. If the twins are of different sex, their bones may not later be placed in the common family grave.

782 755 2. Sacrifices during the Illness of a Member of the Family.

[753] Usually sacrifices are made only for internal illnesses. Because the Khasi cannot explain the origin of these illnesses, they are of the opinion that a devil has caused them. He must be angry with the person concerned

613
[762]

connection of transaction of money (khaiuba) during the period, compulsory social participation in marriage, household worship, and funeral ritual, and the pride for the privilege in succession to *siem-ship* (chiefhood) *shipi* hold together the inner structure of the society in fulfilling its function.

Family (Ka-iing)—The functions of family centre round the :

1. performance of basic religious rites,
2. [illegible] property,
3. maintenance of social relations with the kin of *ka-Kjak* and *ka-bor*,
4. protection of familial kin.

From the above discussions it may be inferred that the social groupings of the Khasis function in different dimensions and make the individuals aware of their duties, and obligations towards each other. In the process of socialisation and enculturation of the individual they learn that the individuals, the different social groups and the community at large are inseparable.

Even from infancy a boy is infused with the idea that family comes first in regard, sub-clan second, and clan third. The kin of the family are primary relatives, and those of the sub-clan and the clan are secondary and tertiary respectively. One bow and three arrows given by a father to his son in his naming ceremony (*jerkhaw*) symbolise their relationships with the three social groups. With the first arrow man has to fight for *ski-iing* (members of the same family) and *ski-Kjak* (members of the same sub-clan), with the second for his *ski-bor* and with the third for the state.

14:Boy 1-5 (no date) 1938 AR7 Khasi AR7

59; [71] *Hynniew Trep Hynniew Skaw* (the seven roots, seven roots). These seven roots or roots were seven pairs of virgin women and men created by God to marry and they formed seven houses (families) and from these the country was filled and the rites and ceremonies were obtained. Thus the Khasi takes pride in the fact that God Himself delivered their religion and the rites and ceremonies unto them. ... The Khasi matrilineal system [illegible] idea of the union of one man with one woman. This is significant for those who consider that marriage is and has always been common to the whole human race, and it raises the question as to whether the Khasi idea is the survival of a period when the nature of paternity was not understood".

[95] [601] [559] In the sacral rites of baptism of this simple folk we find that a Khasi grandmother will not officiate in the name-giving ceremony unless in the marriage of her son with the woman to whom the child is born there has been the regular ceremony of marriage.

16: McCormack E-4,5 (1956-1958) 1964
[P. III B] AR7 Khasi AR7

household deities, and ancestor and smallpox deities. 776
Deities of the first two categories are simply aspects 771
of the high God or Creator. • The earth is peopled with two great orders of land demons and water demons who cause all undesirable, unnatural, and otherwise inexplicable events, acting either on their own or as instruments in the hands of sorcerers. Apart from omens, both in nature and in dreams, 787
Khasis attach supernatural significance also to mystic 812
numbers, and to the colors white, black, and red. They hold especially important folk beliefs regarding 824
betel nut, paddy rice, gold and silver, and clothing.
Practitioners. The two classes of religious practitioners are the village or state priests and the sacrificers. 781
Both are male. They use the same divinatory tech- 783
niques of reading broken eggshells and the entrails 754
of cocks, and they both sacrifice cocks, hens, goats, pigs, and cattle. Their skills are not taught to them so much as picked up by observation and confirmed by demonstrations of efficacy. A priest is elected from among the sons of his sib to direct his skills to [illegible] and his rewards are institutionalized and come from the village or the state. A sacrificer acts for private persons or his group, on call, and is rewarded by them personally with gifts in cash or in kind. The sacrificer is called upon to explain and then to ritually remedy every variety of misfortune, especially illness, though his powers are nowadays regarded with ambivalence, and he is widely expected to become a sorcerer sooner or later. • There are two major types of sor- 754
cerer. One is the ritual specialist or sacrificer who secretly turns his skills from good to evil, manipulating demons to injure a person or his group, and acting always for himself alone out of considerations of jealousy or revenge. The other is normally a leading citizen, a woman who is so wealthy and successful that it is believed that she must keep a shiw, i.e. a creature which will bring her prosperity so long as she feeds it periodically with human blood. To provide this blood, the sons of her household, or other males whom she bewitches with a special whisky, will indiscriminately murder anyone except a member of her matrilineage. The Jaintias have an sim- [184]
ilar belief in the shiw in their sorcerer, except that the ultimate result is death from illness rather than murder. Minor witchcraft can be perpetrated by persons hungry or persons with an evil eye, who are often women. Ceremonies. The important traditional 805
ceremonies were the life-crisis rituals relating to 806
pregnancy and childbirth, the naming of a child, and 809
death. Lesser ceremonies related to marriage and 816
divorce, and to house-building. All these rituals were 817
addressed primarily to the ancestors, and they are 818
still performed in modified form by many Khasis. 819
Other rituals, which were performed by groups such 820
as villages, sibs, local descent groups, or households, 178
were addressed to the ancestral aspects of the high 782

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

105 It will here be recalled that the Khasi are a matrilineal agricultural
[175] people, pre-litterate until the advent of the British in the sixth decade of
[197] the 19th century, organized under democratically ruling *siem*, or Khasi princes and chieftains and speaking an Austro-Asiatic language [14]. Their
144 physical affinities are unmistakably mongoloid and quite distinct from the Assamese speaking plains-Indians, — but not from the other mountaineers of Assam, Nepal and even Burmah or China, with whom they feel to be more closely related, as with the Indian plainspeople, as some of the tribal designations in the following lists of terms for Non-Khasi testifies (comp. No. 41 as against No. 42, 43 and 43/*a-e*).

114 In the collection of the material, I was hampered by my inability to
122 pick up the Khasi language sufficiently quickly, for conversation without the help of an interpreter, but on the other hand greatly eased by generous and voluntary assistance on the part of several Khasi friends, especially U Ekiman Singh, the President, Unitarian Union, Khasi- and Jaintai Hills and his (Khasi) wife, Ka Austria [15], who offered me hospitality in their house at Maw Syn Jri, during my stay there. Dr. H. LYNGDOH, Shillong, the author of detailed accounts on Khasi religious ceremonial and institutions [16], U Jeeban Roy, a leading Pnár gentleman of Jowei in the Jaintia Hills, Ka Ellen Giri, Principal, Govt. Basic Education Training Centre, Malki, Shillong, Ka Kongmen, Shillong, and U David Roy, Prime Minister (retd.), and a number of hospitable Wár Khasi and Wár-Jaintia pan-leaf cultivators in the southern slopes of the Khasi- and Jaintia Hills, especially from the villages Mawlat and Padu, also helped me greatly in my task. My thanks are due to all of them.

101 The data, submitted and briefly described in this paper were thus
114 collected in four different areas.

1. The South-eastern corner of the Khasi-Hills (plateau-area),
2. the southern slopes of the Khasi Hills, the "Wár-Khasi country" between the Khasi plateau proper and the northern boundary of East Pakistan,
3. the central plateau of the Jaintia Hills, round its capital market Jowei, and
4. the southern slopes of the Jaintia Hills, the "Wár-Jaintia country" between these and a section of the northern boundary of East Pakistan, further to the East than area 2.

197 Slightly different Khasi dialects are spoken in these four regions, Jaintia (Pnár or "Synteng") and Wár-Jaintia being more akin to each other, similarly as Plateau-Khasi and Wár-Khasi are.

101 The Pnár or Jaintias ("Synteng" is a slightly opprobious designation,
175 used by the Plateau-Khasi for these, their eastern neighbours) look back

[14] SCHMIDT (1906).

[553] [15] So named, because Austria was much in the news at the time of her birth, during the first world war: — a fact which illustrates the Khasi peculiarity to use either ad hoc inventions as names for children, or to adopt such, from the Khasi point of view, outlandish words like: "Ka Austria" or "Ka Mediterranean Sea" as names for their children.

[16] LYNGDOH (1937).

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

291 The Wár men dress very much the same as the neighbouring Sylheti Hindus. The Wár women, especially the Sheila women, wear very pretty yellow and red checked and striped cloths. The cloak is not so frequently worn as amongst Khasis, except in cold weather. The Lynngam dress is very similar to that of the neighbouring Garos. The males wear the sleeveless coat, or *phong marong*, of cotton striped red and blue, red and white, or blue and white, fastened in the same manner as the Khasi coat and with tassels. A small cloth, generally red or blue, is tied between the legs, one end of it being allowed to hang down, as with the Khasis, like an apron in front. A round [554] cap is commonly worn; but the elderly men and people of importance wear turbans. The females wear short cloths of cotton striped red and blue, the cloth reaching just above the knee, like the Garos; married women wear no upper clothing, except in winter, when a red or blue cotton cloth is thrown loosely across the shoulders. The women wear a profusion of blue bead necklaces and brass earrings like the Garos. Unmarried girls wear a cloth tightly tied round the figure, similar to that worn by the Kacharis. A bag of cloth for odds and ends is carried by the men slung across the shoulder. It should be [554] mentioned that even in ancient times great people amongst the Khasis, like Siems, wore waist-cloths, and people of less consequence on great occasions, such as dances. The use of waist-cloths among the Khasis is on the increase, especially among those who live in Shillong and the neighbouring villages, and in Jowai and Cherrapunji.

TATTOOING.

304 None of the Khasis tattoo; the only people in the hills who tattoo are certain tribes of the Bhoi country which are really Mikir. These tattoo females on the forehead when they attain the age of puberty, a straight horizontal line being drawn from the parting of the hair down the forehead and nose. The line is one-eighth to one-quarter of an inch broad. The Lynngams occasionally tattoo a ring round the wrist of females.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Silver chains are worn by men as well as by women. The 301
men wear them round the waist like a belt, and the women hang them round their necks, the chains being allowed to depend as low as the waist. Bracelets are worn by women; these are either of gold or of silver. The Lynngam [321]
males wear bead necklaces, the beads being sometimes of cornelian gathered from the beds of the local hill streams, and sometimes of glass obtained from the plains markets of Damra and Moiskhola. The cornelian necklaces are much prized by the Lynngams, and are called by them *'pieng blei*, or gods' necklaces. Like the Garos, the Lynngams wear as many brass earrings as possible, the lobes of the ears of the females being frequently greatly distended by their weight. These earrings are made out of brass wire obtained from the plains markets. The Lynngams wear silver armlets above the elbow and also on the wrists. It is only a [554]
man who has given a great feast who can wear silver armlets above the elbows. These armlets are taken off as a sign of [765]
mourning, but never on ordinary occasions. The Lynngams do not wear Khasi jewellery, but jewellery of a pattern to be seen in the Garo Hills. A distinctive feature of the Lynngam women is the very large number of blue bead necklaces they wear. They put on such a large number as to give them almost the appearance of wearing horse collars. These beads are obtained from the plains markets, and are of glass. Further detailed information regarding this subject can be obtained from Mr. Henniker's monograph, which contains a good plate illustrating the different articles of jewellery.

WEAPONS.

The weapons of the Khasis are swords, spears, bows and arrows, 411
and a circular shield which was used formerly for purposes of 314
defence. The swords are usually of wrought iron, occasionally of [326]
steel, and are forged in the local smithies. The Khasi sword is of considerable length, and possesses the peculiarity of not having a handle of different material from that which is used for the blade. In the Khasi sword the handle is never made of wood or bone, or

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

764 211 The tall upright stones are called "Mao bynna", from "mao", a stone; "bynna", to make known, to be informed, literally a monument. They are also known by the term, "Mao shinran", the male stone, while the flat seat-like slab in front is called "Mao Kynthai", the female stone, representative of all life, being in pairs. My informant explained this by saying the monument would be imperfect without the flat stone or its female adjunct.

769 764 211 The ashes of the dead are never deposited under the horizontal slabs always to be seen in front of the upright sets, the monument having no connection with funeral obsequies whatever. The monument is purely one to perpetuate the memory of a person long deceased, who, as a spirit, has watched over or brought good fortune to a descendant, his family, or clan. Wealth or [554] renown of the deceased has no connection with the size of the monument, which may be of any dimensions, from stones a foot or two and upward, but depends on the wealth of those who erect such mementos, and on the benefits the deceased has conferred aftar passing into the world of spirits and demons, for, according to Khāsi belief, the spirits of the dead and demons are the cause of all joy or woe—they give riches or strike with disease and death.

These monuments are not set up facing any particular point of the compass; the front is generally selected, having reference to the site and its surroundings: thus a number set up together on a hill-top will be found facing outwards, those by the wayside facing the road; however, single sets, standing on a hill-top or rising ground, as a rule, face to the southward.

The history connected with the erection of some large slabs near Cherra Poonjee will exemplify this curious custom. One of the clans, "Kūr" in Cherra, is known as the "Nongtariang"; and many years ago died an old lady of the clan, not famous for anything in particular during her lifetime, but whose virtues appear to have been great after her demise, for after this the Nongtariang clan, from being a poor one, rose gradually to considerable wealth; she, when propitiated and called on for aid, never failed her race, and in return, after some sixty years or more, they raised to her memory five well-cut stones, which are to be seen on the west side of the road between Cherra Poonjee and Surarun, the central monolith adorned with a kind of rose cut in relief on the front face, and an ornamental disc on the apex. It would appear that she still remained the guardian spirit of her clan; they continued to prosper, and as a further token to her memory, they added in 1869 five more stones on the other side of the road, and in a line with the first set.

It may very naturally be asked how descendants possibly dis-

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

(8) Cotton is grown on high lands and
248 slopes; it is sown in April, and becomes fit for picking by January.

311 AREA AND OUT-TURN OF CROPS.—According to the Assam Administration Report for 1875-76, the area of the British portion of
241 the Khásí and Jáintiá Hills District amounts to 2160 square miles,
648 of which only 110 are under cultivation; of the remainder, 1337 square miles are set down as cultivable, and 713 as uncultivable. The total area of the semi-independent Khásí States is given as 3997 square miles, of which 176 are under cultivation, 2561 are cultivable, and 1260 uncultivable. In another portion of the same Report, the area under various crops throughout the entire District is thus approximately estimated:—Rice, 59,880 acres; other food grains, 57,820 acres; cotton, 1076 acres; potatoes, 33,880 acres. The average out-turn of rice per acre is returned at 8 *maunds*, or nearly 6 cwt.; of other food grains, 3 *maunds*, or over 2 cwt.; of cotton, 2 *maunds*, or 1½ cwt.; of
[435] potatoes, 55 *maunds*, or nearly 40 cwt. The price of rice in 1875-76 was Rs. 4 8 per *maund*, or 12s. 8d. a cwt., which gives Rs. 36 or £3. 12s. as the value of the rice crop obtained from one acre.

241 CONDITION OF THE PEASANTRY.—The Khásiás can scarcely be considered an agricultural people, as they do not grow sufficient
423 grain for their own subsistence, and are dependent to a great
433 extent on imports of rice from the neighbouring Districts. Ten acres is generally considered a comfortable holding for a husbandman in the position of an ordinary Bengal peasant, but scarcely any man in the Hills depends entirely upon the produce of his land for
[231] his support. In the Jáintiá Hills a cultivator's position is con-
[554] sidered to be very low if he possesses no cattle, but performs all the operations of agriculture with his own hands. In that portion of the District, five acres is all that can be cultivated with a single
[465] pair of oxen, the average being four acres. A husbandman with a holding of five acres would not be so well off as a retail shopkeeper, nor would it enable him to live as comfortably as he could on a money wage of Rs. 8 or 16s. a month. The peasantry, however, as a class are not in debt. The land is owned chiefly by small proprietors, who occupy and cultivate their hereditary fields. The relations of landlord and tenant do not exist in the Hills, and no rent is payable to any one; consequently the principle of Act x. of 1859 (the Rent Law of Bengal) has no application.

231 THE ANIMALS used in agriculture are oxen; goats and pigs are
435

782 Gurdon (5) believes that his ka lyngdoh is with-
596
793

5. Gurdon, The Khasi, loc. cit.

out doubt a holdover from that time of the matriarchy in which a priestess also performed the sacrifices herself.

b) The Public and Ceremonial Introduction as a Lyngdoh.

793 How does a person become a lyngdoh?[1] This
782 question can also not be answered so easily.
555 This is very different in the different districts. In general it may be assumed that the lyngdoh arise from the practice of household (private) sacrifices. Since it is the duty of the woman to watch over the sacrificial ceremonies, she will introduce one of her sons to the rite of performing sacrifices that is peculiar to the family, so that he will be able to occasionally offer the sacrifice in the prescribed manner or in case of need (sickness, death, misfortune). But because the maternal uncle is usually called upon for the sacrifices, the son who has learned to offer sacrifices will have little chance to practise this art in his own family, but rather among his maternal relatives. And the other way around, people from there who know how to offer sacrifices will be called into this household. In this way the man who offers sacrifices becomes known in the neighborhood. If he has luck with his arrangements and if success crowns his efforts, the news will spread that he is an experienced sacrificer whom the spirits obey and that he knows how to seek them out, to drive them away, or to propitiate them, as the case requires. Thus it happens that such a man is called upon again and again to offer sacrifices,

7 [i.e. sacrificer--Analyst]

793 especially in touchy cases. Thus of his own ac-
782 cord he becomes a lyngdoh and the people recogniz
●555 him as such on the basis of his successes. Who-
ever is once esteemed a lyngdoh remains one for the rest of his life. Just as in our country ordinary people call a dental technician "Doctor" and a high school teacher "Professor." so the Khasi call a man who is well known for his good sacrifices their "lyngdoh," although this person would not be able to prove his right to the title officially. This way of becoming a lyngdoh is probably the usual practice in most of the cases.

793 But it is not the way everywhere. There is
782 a report from Lamin (6) that a group mother

6. Salvatorianische Mitteilungen /Salvatorian communications/, 1906 No. 6, p. 84.

/Stammesmutter/ of the lyngdohs is there. Gurdon (7) also writes about a lyngdoh tribe, from which

7. Gurdon, loc. cit.

the lyngdohs are drawn. I have never found this to happen and I have never heard of a lyngdoh group /Stamm/, or a lyngdoh sib (jaid). It could certainly happen that several sons of one and the same mother could by chance learn how to sacrifice and that they all excel in it and that they all have good luck so that these brothers are all called in as lyngdohs.

But the mother concerned has by no means become a lyngdoh group mother /Stammesmutter/ just because of that, and the sib involved has no claims to the title: Lyngdohjaid (lyngdoh group /Stamm/). Naturally the correct art of sacrificing, which is often very involved and difficult

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

301 This stone is apparently some rough gem which may be picked up by the Lynngams in the river beds. A rich man amongst
● 556 them, however, is one who possesses a number of metal gongs,
534 which they call *wiang*. For these they pay very high prices,
436 Rs. 100 being quite a moderate sum for one of them. Being curious to see one of these gongs, I asked a *sirdar*, or head-man, to show me one. He replied that he would do so, but it would take time, as he always buried his gongs in the jungle for fear of thieves. Next morning
[531] he brought me a gong of bell metal, with carvings of animals engraved thereon. The gong when struck gave out a rich deep note like that of Burmese or Thibetan gongs. These gongs have a regular currency in this part of the hills, and represent to the Lynngams "Bank of England" notes. It would be interesting to try to ascertain what is their history, for no one in the Lynngam country makes them in these days. Is it possible that the Garos brought them with them when
534 they migrated from Thibet? The gongs are well known in the
622 Garo Hills, and I hear that when a *nokma*, or head-man, there
778 dies his corpse is laid out upon them. They thus possess also an element of sanctity, besides being valuable for what they will fetch to the Garos or Lynngams. We may hope to hear more about them in Captain Playfair's account of the Garos.

304 The Lynngams do not tattoo. Their weapons are the large-
411 headed Garo spear, the dao, and the shield. They do not usually
243 carry bows and arrows, although there are some who possess them. They are by occupation cultivators. They sow two kinds of hill rice, red and white, on the hill-sides. They have no wet paddy cultivation, and they do not cultivate in terraces like the Nagas. They burn the jungle about February, after cutting down some of the trees and clearing away some of the debris, and then sow the paddy broadcast, without cultivating the ground in any way. They also cultivate millet and Job's-tears in the same way. With the paddy chillies are sown the
241 first year. The egg plant, arum, ginger, turmeric, and sweet
231 potatoes of several varieties are grown by them in a similar
784 manner. Those that rear the lac insect plant *landoo* trees (Hindi *arhal dal*) in the forest clearings, and rear the insect thereon. Some of these people, however, are prohibited by a

000 that they may also get smallpox.

776 Every Khasi is desirous of wealth. There-
556 fore they sacrifice to the demoness of wealth, ka shur, whom they fear just as much as the Synteng fear the demoness ka taro, who likewise only allows the desired wealth to come to those who revere her.

776 But all evil taken together can be caused
782 by the demoness ka ron. She is the worst of all devils in the opinion of the Synteng. The Khasi sacrifice only to her and the devil u mahet inside the hut, and not as is otherwise customary out of doors (in the courtyard of the hut).

But the Khasi have the greatest fear of the
[925] devil u thlen. He can be kept in the house by people in the form of a snake. Since he is only propitiated by human blood, it is necessary to find human sacrifices (ka 'langthoklieh). One cuts off the toenails and fingernails of the victims and these are brought with the blood of the murdered one during the night in a closed house as a sacrifice to the devil with prayers and exhortations. To get these human sacrifices, the thlen possessor must look for them with cunning or violence. Usually hired murderers are sent out, to whom one previously hands a quite special liquor 'iad-tang-snem (literally: lasts for a year). The Khasi believe that anyone who drinks this liquor is so influenced (enchanted) that he will really carry out the planned murder. When these murderers (nong-shoh-noh) are on their way or waiting in ambush to catch their victim for the thlen, they may not use any iron, because the thlen near the cave of Pomdalai near Cherrapunji was killed by a brave man named u suidnoh, when the thlen appeared there in the form of an enormous snake in order to swallow up people and animals. The victim is struck down with a stick which usually has a silver knob.

428 613 no girls, only sons, the inheritance passes to the youngest daughter of the sister of the deceased clan mother. If there are no such sisters or if they have no daughters, the nearest, youngest female relative is next in line. If she has not lived in the family clan of the deceased up to now, she must first spend at least 3 months in the hut of the clan mother in order to be able to enter into her rights and duties. In such cases usually the successor to the office is taken into the hut previously by the clan mother and prepared for the later activity. It can happen that the successor is not even 13 years old and therefore is not of age and capable of marrying. In this case the mother or a sister of the deceased clan mother manages the rule and the household until the majority of the inheritress. But even as a child the latter has the honored name mother; she is called kmie or kmie san.

The great principle, which determines all conditions of inheritance, is that the sons and husbands are excluded from all family property, which is always passed on to the girls, the female world. But what if a fellow or a man creates or acquires property? The case is possible and also occurs.

428 556 /304/ As mentioned, each person must help with the work in his own family clan in order to have a claim on care from the common property. Between sowing the rice and the harvest and other possible common labors there are still many days and weeks. Instead of [464] spending these with archery, hunting or the popular shong kai, or loafing around, a young man can earn money by cutting wood for others and carrying loads for native traders or also for Europeans, since in the mountains nearly everything has to be carried on the back. He can also do work in the fields or gardens for pay for others outside his clan or carry on a small trade by buying wares at the market such as dried fish, betel nuts, pepper leaves and such, and carrying them a few days' journey away to the markets in the interior of the mountains where these items are not otherwise available and selling them there for a profit. What the man earns in this fashion is his property and is not counted as part of the clan property. An industrious man can thus gradually earn enough money to rent a rice field. Through sale of the surplus crop, he will finally have enough so that he is able to buy a rice field himself, which is also 428 his property. If such a man dies unmarried, the inheritance passes to his mother. If he is married then he can, if he wishes, found a clan property for his family who may be poor and without property. The property will then pass to the youngest daughter and be passed on then in the usual manner of inheritance. Thus everything finally

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

necessary. The chances of acquiring a piece of land nowadays are small, except for very successful men, and usually the size of the plot is only just enough to maintain one household. When this land is passed on to the next generation, the youngest daughter will hold the title to it. This fact tends to exclude married elder sisters from the right to use the land, since it is not sufficient for more than one household. Thus the ultimogeniture succession rule seems to have developed more sharply and to have encouraged limited inheritance in conjunction with the shortage of land. 178 423 428

This tendency creates unbalance in the economy of the households within a community. It is a usual picture in Khasi villages, for the bigger and well-built houses to be occupied by the youngest daughter's family, while the elder sisters reside in poor huts. Youngest daughters are usually landowners, while their elder sisters have often to become day-labourers after their marriage, unless their husbands are capable men, or their fathers wealthy enough to give them some share of their acquired property. On the whole, the variations at present between rich and poor are considerable in a Khasi community, in comparison with that of the Garo, where the economic condition of each household in a village is more or less similar. These differences are not only a matter of economic organization but arise from the nature of each social structure. 178 184 423 428 556 [171]

The economic and social patterns of Sohkynduh and Kongton are very similar, but their dialects are slightly different: my interpreter, who came from Cherrapunje, could work quite well at Sohkynduh, but at Kongton he found some difficulty, especially with the speech of the old men, and with their religious expressions. The head man of Kongton, who was quite accustomed to the Cherra dialect, acted as an interpreter for us. Such differences in dialect in the Khasi Hills are common phenomena; it is said that every valley has its own dialect. Differences are found not only in speaking, but also, to a certain extent, in culture and in social usages. 197 [124]

II. Village Endogamy

One of the outstanding features of Khasi social organization is the predominant tendency of endogamy on the level of the village, which contrasts with the structural orientation of the Garo village exogamy. This is closely connected with the distributions of clans and the nature of the descent groups. 582 621 [171]

The Khasi population consists of a number of *kur*, matrilineal clans, whose members consider themselves to be descended from a common ancestress. The members of the same *kur* have a common 614 [765] [769]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

INHERITANCE.

608 The Khasi and Synteng laws of inheritance are practically the same, although in some of the doloiships in the Jaintia Hills there are some slight differences. The Wár law of inheritance differs greatly from that of the Khasis, and the customs of the Bhois or Mikirs, who inhabit the Bhoi doloiship of the Jaintia Hills, are totally different from those of the Khasis, thereby supplying another link in the chain of evidence in support of the conclusion that the Bhois, or, more correctly speaking, the Mikirs, are of Bodo origin, and not Khasi or Mon-Anam. The Lyngams follow the Khasi law of inheritance. It will be convenient to describe the Khasi law first, and then to pass on to the special customs in vogue in the different doloiships in the Jaintia Hills, and, finally, to describe the Wár, Bhoi and Lyngam customs.

611 The Khasi saying is, "*long jaid na ka kyntheí*" (from the
562 woman sprang the clan). The Khasis, when reckoning descent count from the mother only; they speak of a family of brothers and sisters, who are the great grandchildren of one great grandmother, as *shi kpah*, which, being literally translated, is one womb, *i.e.* the issue of one womb. The man is *pokedy*. If he is a brother, *u kur*, a brother being taken to mean an uterine brother, or a cousin-german, he will be lost to the family or clan directly he marries. If he be a husband, he is looked upon merely as *u shong kha*, a begetter. In some of the Wár villages a newly married man is spoken of by the
593 bride's family as, "*u khun ki heiew*," some one else's son. It is,
764 perhaps, somewhat of a paradox under the circumstances that
641 wives should address their husbands as "*kyrwad*," or lord. There is, however, no gainsaying the fact that the husband, at least in theory, is a stranger in his wife's home, and it is certain that he can take no part in the rites and ceremonies of his wife's family, and that his ashes after death can find no place within the wife's family tomb, except, in certain cases, amongst
796 the Syntengs. Further, the ceremonial religion amongst Khasis,
562 especially that of the house, is in the hands of the women. It is, therefore, perhaps not to be wondered at, considering the
928 important status assigned to women by the Khasis, that women

more than a thousand of them who have been converted to the Hindu religion. 162 (397)

This group of people possesses the possibility of expansion, since they have at their disposal within the area of the Khasi and Jaintia Mountains a territory of 6,022 English square miles, with only 40 persons per square mile. Although wide areas are not built up and the system of shifting fields prevents the full utilization of the land, it is still true that with this small population figure by far the largest part of the whole population (200,781) is dependent on agriculture; trade and manufacturing only play a subordinate part. [311]

With regard to the division of the sexes, the two large religions of Assam, Hinduism and Mohammedanism, show the same proportion as in the rest of India, a lower number of women than men. But among the Khasi the women are more numerous than the men. In the Brahmaputra valley with its greater Hindu population there are only 898 women for every 1,000 men; in the Surma valley, with a greater Moslem element, there are 937. But the situation is reversed among the Khasi, where there is a surplus of 74 women for every thousand men. The position of the women is basically different among this people. It is based on the customs and usages of maternal rights that prevail among them, which are predominantly based on possession and which find honorable expression in possession. 562 162

1. Property Rights in the Family Property.

The great principle which governs property among the Khasi, is that all family property rests in the hands /120: A/ /Fig. 1. Khasi Girls and Women with their Carrying Baskets. Fig. 2. An Old Clan Mother in the Village Laitumkhra. / /120: B/ /Fig. 3. At the Oracle of Egg Throwing/. Fig. 5. Khasi Girls and Men in Festive Dance Clothing. / /120: C/ /Fig. 4. A Group of Synoeng/ /120: D/ Fig. 6. A Holy Grove and Part of the Village Raliang/ /120/ of the women and not of the man. The man can never be the owner of family property, and it can never be transferred to him. He may perhaps acquire some property through his own industry and work, but even that will pass into feminine hands by the path of inheritance. The concept of family is not as narrowly drawn here as in our country. This is a question of the clan-family, the clan. The head of it is always the youngest daughter, who, even when she has become old, bears the honorable name ka haiit in the Jaintia Mountains, and in the Khasi Mountains ka khadduh, the last, the youngest. Around her gather her nearest blood relatives, brothers and sisters, and children. For example let 421 613 592 613 592

613 bahla); and as long as the expiatory sacrifice, in the form of pigs and
613 goats, determined by the elders of the family and by the sacrificial
612 priest (lyngdoh) has not been offered, the sinning member is considered excluded from the family and the family sacrifices. But even after being accepted again a certain stain still clings to him.

But it is also the duty of the clan mother to care for the needs of
613 the members of her family clan with regard to food, clothing, and the like. She divides the fruits of the harvests according to the needs of the individual. She goes or sends to market to trade, to buy, or to sell. She takes care of the common purse and even the masculine members of the clan have to ask her for money when they wish to drink rice liquor or buy clothing. There the clan mother is generous
• [612] rather than niggardly. This dependent relationship of the men is not considered unworthy at all or shameful. It is the matriarchal form and ancient custom. Nevertheless, the position of the men in the family clan is an esteemed one. Even the name they are called by has an important sound: Rangbah, Basan (oldest ones, advisers). On them falls often the work in the field and wood or the protection of the family; bow and arrow are handed to them as cradle gifts. In the more important family matters the clan mother consults with them. At the giving of the name, during a wedding, a funeral, or cremation the clan mother steps almost completely into the background, also during quarrels and court hearings before the chief (Doloi) or king (S'iem). She is still always influential with her advice, but the actual appearance, activity and judgments is the business of the men. The smaller,
[612] everyday sacrifices she performs in the clan hut; but she can also let these /135/ be performed by her sons. At larger sacrificial ceremonies which are offered by several family clans at the same time, by whole
[779] villages or even by one of the Khasi states, only the men are active as sacrificial priests.

With regard to the husbands of the clan mother and of the feminine
613 members, they are not considered members of the family clan of the
596 women at all. They are only considered the begetters. They work and live in their own clan, participate in their sacrifices and burial places. The father has no further influence in the raising of the children, who belong entirely to the clan of the mother. But usually they have no obligation, unless the wife and children are impoverished. Even then their care comes in second place after that of members of their own
[613] clan. Nevertheless the husband is honored and is addressed by "Mr." (Syngrad) by his wife. She would consider it disgraceful to approach him impertinently. Where the property of a clan has been dissolved or Christian customs introduced, the husband lives and works together with his wife and children.

R: Garden G-3 (no date) 1904 ART Khasi ART

611 428 custom prevails amongst the Syntengs. Inheritance to the post of Siem (or chief) also passes through the female line, there being special instance of inheritance for each of the different chieftaincies.

3. The Khasis are divided into clans, or *kur*. These clans are
649 strictly exogamous. Some of these clans derive their names from animals, insects, trees or fish,—*e.g.*, the *thaw* clan, *thaw* meaning a crab; the *shrish* clan, *shrish* meaning a monkey; the *rani* clan, so called from a fish by name *rani*; the *diengdoh* clan, *diengdoh* meaning a certain tree. There are other instances also. In such instances, the clan is said to have sprung from the animal, fish, or tree, as the case may be. There thus appears to be a trace of totemism amongst the Khasis, although now-a-days their totems are not worshipped, nor do people abstain from killing, eating, or utilizing them. A man when he marries does not cease to belong to the *kur* or family of his mother, but his children belong to the *kur* of the man's wife. Frequently the husband merely visits his wife at her mother's house. It is seldom the case that a man takes his wife to his own house, certainly not until several children have been born.

As might be expected, owing to the influence of the matriarchate,
542 Khasi and Syteng women enjoy a much greater share of liberty than is usually the case with the sex. Although not wishing to make any general insinuations, there can be no doubt that Khasi women enjoy considerable freedom in their sexual relations. Women do all the trading, and like their Manipuri sisters make all the house purchases.

4. *Ancestor worship.*—The Khasis propitiate *Ka Jaiñsi*, the first
769 maternal ancestress of the clan, by sacrificing a pig; they also sacrifice yearly to *U Suidnia* (the departed maternal great-uncle). Also when a family is in trouble, *U Thaniang* (the departed great-grandfather) is propitiated. Ancestors are further worshipped by the erection of memorial stones. These memorial stones will be noticed separately.

5. *Birth customs.*—At the birth the navel of a child must not be
944 severed by any instrument made of iron or steel, but by a sharp splinter of bamboo. The placenta is placed in a pot and is kept inside the house till the ceremony of naming the child takes place. As long as the placenta remains in the house, the latter is *sang*, or taboo, to anyone except the members of the family. On the day of the ceremony of naming the child, the father removes the placenta and buries it outside the house. Having done this, the feet of the father are washed with water before he re-enters the house. When the ceremony takes place, parboiled rice is placed on a stone (*u pyrk*) and a small hoe and three arrows—[illegible] the child is a male, and a *ani* (or dao) and a star or (more usual) (which is put the forehead when marrying a lass) by the Khasis), if the child is a female.

(Received on 20th October, 1967)

Introduction

THE Khasis, who inhabit the United Khasi and Jaintia Hills district of Assam, are matrilineal. Like the Garos, they are matrilocal in residence. Exclusive ownership over family property is claimed by the Khasi women and the youngest daughter (*Ka-Khadduh*) who lives permanently in the house of her mother, is the custodian of the family property and the holder of religion (*Ka-lai-lasiem*)[1].

This paper deals with the social groupings, namely, the clan, sub-clan and family, of the Khasis. The materials were collected in 1966 from Mawphlang, Cherapunji and Mawlieh and Mawsmai villages further south of the Cherra Dara.

Clan-system

In the language of the Khasi, the prefix *Ka* is usually used before the name of a woman or any object belonging to a woman (or considered feminine). The use of *Ka* as a prefix before the name of each social group is suggested to have bearing on Khasi matriliny. *Kur* is not a very expressive and exact term for a clan. *Kabor*, which is supposed to have sprung from the women *Long jaid ne ka Kynthiah*[2] is more exact. Similarly, *Ka-Ki'juk* and *Ka-ting* denote the sub-clan and family respectively.

[2] Op. cit., page 66.

extended form more often when the children of the deceased sisters of *Ka-khadduh* reside there. This extension is on the mother's side and is affiliated through the extension of mother-child relationship.

Additional members like widower brothers or widowed sisters make the Khasi family a composite one.

In a Khasi family father, mother and her brother are very important. Father who is regarded as *Ryndar* (stranger) or *Ushong kha* (begotten), has also the position of *Ryawad* (master) of the house (set-up by him). He is the executive head and the mother is the *dajaw* owner of the household.

Modern conditions and spread of Christianity have greatly affected the Khasi society and changed the Khasi ways of life but have failed to alter the traditional mode of inheritance even among the Christian Khasis. Another important fact which is apparent in the Khasi families, is the change of the status of the mother's brother (*Ulbah*) in his sister's house. His influence has greatly been diminished due to clash with *Ka-Khadduh* (Sisters). He has almost lost his control over his sister's family. This has made the women exert their status to a danger point. Consequently, some amount of maladjustment in the relationship system, moral depravity and disintegration loom large in the family horizon.

Family is the core of Khasi social organisation and the closeness of familial kin with the members of the sub-clan is due more to the fact that sub-clan owes its development to the family. A *Sim-K'pah* (member of sub-clan) is a secondary relative and can easily be approached for any help.

The functions of the above mentioned social groupings are as follows:

Clan (*Ka-Kur*)—It regulates marriage. It being a larger non-residential kin group contact between its members is infrequent. The amount of social participation needed on certain level to intensify the relationship among its members falls far short of. But sometimes, there existed among the members

[illegible]

182 595 Because of the firm right of women over the residence, Khasi polygyny can never be a clearly distinguishable institution, and has no operational advantage in the social and economic fields; the situation is very similar with lovers' relations and illegal marriages. By polygyny the man achieves no additional economic advantage, nor does he increase his social status or prestige; rather the reverse, for I observed that the polygynyst was regarded as a somewhat ludicrous or tragic figure. As for the woman, she is placed slightly at a disadvantage since the husband's economic activities are not concentrated on her household. However, even many legally-married wives are separated or divorced, so that such disadvantages are not only experienced by the wives of polygynists. The social disadvantage of being secondary wife is not serious, firstly, because wives, whether first or secondary, have social and economic independence—they do not belong to the husband as in the case of patrilineal systems. Secondly, the significance attached to the legal marriage institution is not so great, so that the handicap of being the secondary wife is not severe. What is most important, furthermore, is that her slightly inferior status does in no way affect the next generation. Indeed such children, including [598] those of premarital or illegal relations, suffer no serious social dis- [951] advantage, though they are nominally distinguishable from legitimate children. From this it is clear that the effectiveness of legitimate marriage, and paternal recognition are rather limited among the Khasi.

Thus, Khasi polygyny differs greatly from the polygyny of other societies in terms of its operation and of its form. It also differs in the incentive to its practice. Among the Garo and many other societies, the practice of polygyny usually depends on a man's economic capability, but among the Khasi, it appears rather to depend on his whim. 182 Khasi husbands are notorious for their heavy drinking and 599 neglect of wife and children. Some of them told me that their earnings, 955 their children and everything they acquired go to their wife or sister, leaving them with nothing; therefore they should at least have freedom to enjoy their life. This freedom seemed to mean women and drink. I am not sure how far this explanation is true, but it seems to justify their behaviour to a certain extent. I do not mean that this is the general characteristic of the Khasi husbands, but some such tendency is to be observed. Actually I often heard wives complain of their husbands' drinking and running after women, and was asked "Are your Japanese husbands also like that?", "What is the good of having a husband?" then comes divorce . . .

182 On the contrary, women placed at an advantage by residence 562 and matrilineal inheritance, are required always to be on their best 555 behaviour. There are very strict rules governing the behaviour of Khasi women. They are supposed not to drink, smoke, or play with

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

 182

any man other than their husband. Women before marriage enjoy 562
a considerable freedom in love affairs, but once married these are no 593
longer tolerated. Women should be faithful wives. They should be 182
so in order to keep their husbands who have a strong tendency to 562
leave their wives. The husband of a woman who has an affair with 581
another man, will never come back to her. There is no attraction to
draw the husband, who has home at his sister's, to his wife's house 593
unless she is good and charming. Such Gurdon's remarks as "There 836
is no evidence to show that polyandry ever existed among the Khasis.
Unlike the Tibetans, the Khasi women seem to have contented them- 182
selves always with one husband, at any rate with one at a time" 562
(Gurdon, 1914, p. 77), is utterly nonsense: a Khasi woman is placed 595
in a situation which is not easy to monopolize even one husband.
Moreover, the Khasi social organization in general does not accord
to the practice of polyandry.

MARRIAGE AND FAMILY. Mode. According to the traditional courtship pattern, a group of young male relatives and friends made nightly visits to the house of some virgin girl in another village, appraising her through hearsay while she and her parents appraised them, and staying the night to avoid the dark walk home. Marriage was according to the wishes of the parents after negotiation by a go-between from the boy's side. Girls might be 15, and boys 17, years of age. Girls have now acquired freedom of movement through attending school, however. Premarital sexual play is common, and young people choose their own spouses when the girl is about 19 and the boy 21. The most common mode of marriage is elopement, for Christians and non-Christians alike, but some Christians marry in church, and some Khasis still marry according to the traditional ceremony or some variation on it. There are no preferred or prescribed marriage types, nor is there a bride price or dowry. Form. Monogamy is the ideal for all. Extension of incest taboos. Mores are exogamous. Other prohibited marriage partners are real and classificatory FaSi and FaBr, FaBrCh, FaMo, and FaMoMo. The MoBrWi is also prohibited. Rep

778 objects are stored while that of the west (kynram blang) was meant exclusively
796 for sacrificial goats. There is a very big circular courtyard in front of the building where the members of the royal family as also other boys and spinsters
[193] hold a ritual dance. The function is always held during the moonlit period of
[443] May or June and the actual dates are fixed in consultation with the Chief priest
[202] (*Sohhlei*) in such a way that the first day—*Pumtiah** always coincides with the market day of Shillong Chota Bazar. The dates of the festival is then communicated to the in-charge of different units of his territory, through a wooden stick '*kyrwoh*' having a few knots of cane-strips, as a form of summons for attending the festival for five days at Smit along with subjects under their jurisdiction.

IMPORTANT PARTICIPANT

796 The responsibility of performing this ritual rests on the High-priestess
793 (*Ka Siem Sad*) who is succeeded by her eldest daughter. Different ritual ob-
• 562 jects are procured by her, well in advance and it is obligatory on her part to
[764] join the ceremonial dancing, in which her daughter may also officiate on her
[533] behalf. U Shillong is worshipped by the chief priest while the other ancestors are invoked by lesser priests. The musicians (*Dhulia*) besides their normal duties, take part in the worship of the ancestors and they are presented with silk turban, jacket, cloth, by the ruling family for the services rendered during the festival. The *Siem* has no especial role except to supervise and evoke U Shillong for the welfare of the community. He is required to perform certain sacrifices, failing which his heir-apparent (*Siem kynsah*) does the same. He along with his sister (High priestess) abstain from taking rice during the period of celebration presumably to observe the sanctity of this festival as also to ensure the successful conclusion of the function.

RITUAL MATERIALS

796 The festival derives its name from the sacrifice of a large number of goats
782 some of which were supplied from the State fund and from different units of
831 the territory. Formerly at least fifty goats were required and each unit had a specific allotment but owing to the economic difficulty that the Khasi are experiencing, the number of goats sacrificed hardly exceeds twenty-five. The goats collected from the different units, are presented to the Chief at the midnight
[273] of the third day. Rice-beer, dried fish, fermented-rice, betel leaves together
[276] with eats are also important ritual objects in this celebration.

DESCRIPTION OF THE FESTIVAL

796 The commencement of the festival was marked by the distribution of dried
782 fish (suit dokha) to the persons assembled on the occasion, in the evening of *Pumtiah* (*i.e.* 21st June, 1957). This was followed by the dropping of rice-beer by the Chief priest over the fire place of central hall known as *Ka sub-ka ahar*

[305] *A week consists of eight days in Khasi. Calendar the names are according to the places where markets are held in Khasi Hills.

Name	Market
1. Pumtiah	Shillong Chota Bazar.
2. Umiam	Umiamgreah.
3. Tim-dah	Shillong Police Bazar.
4. Lyngdoh	Barapani.
5. Wangkhar	Wangkhar.
6. Mawlong	Laban (Shillong).
7. Rymbai	Umsyngkai Chota Bazar.
8. Shillong	Laitkyng Sub.

CHAPTER—X

Summary of main findings

125 10.1. Twenty-eight villages were selected for the purpose of the survey. Out of the 28 villages selected, 10 from Border area and 8 from Project area were selected purposively while the remaining 10 were selected at random from the entire district which is referred hereafter as general area.

166 Migration from big villages was rare but some migration was reported in respect of small villages.

164 Occurrence of Malaria, influenza and dysentery is a regular phenomenon in the area. Medical facilities were not found satisfactory and as much as 78 per cent of the villages have no dispensary within a radius of five miles. In regard to education, the facilities cannot also be said to be unsatisfactory for more than 60 per cent of the villages have a Lower Primary School. Transport facilities were not satisfactory and as much as 86 per cent of the villages still depend upon primitive mode of transport, namely head load. Correlated with outmoded form of transport, is the prevalence of unduly high cost of transport.

243
871
489
482

*162 10.2. The number of the families covered by the survey was 1006 in the Border area, and 647 in the Project area and 184 in the General area. The average size of a village in the respective area is 100·6, 80·9 and 18·4 families. In the Border and Project areas females out number males being respectively 1076 and 1092 females per 1,000 males as against 940 females per 1,000 males in the general area. Literacy is as high as 34 per cent in the border area and 31 per cent in the Project area but as low as 17 per cent in the general area. In all the areas literacy among females is very low.

161

212

[562]

*162 The working population (earners and earning dependents) is as high as 55 per cent in the Border area, 54 per cent in the Project area and 63 per cent in the general area. While there were no cases of unemployment in the Project and General areas, 53 persons were reported unemployed from border area.

464

241 10.3. 51 per cent of the families in Border area are wholly agricultural, 35 per cent partly agricultural and 14 per cent independent of agriculture. The corresponding figures for the Project area are 61, 31 and 8 per cent respectively while for the General area they are 70 per cent, 29 per cent, 1 per cent respectively.

*162

463

Predominantly agricultural families constitute 67, 76 and 90 per cent of the families in Border, Project and General areas respectively.

*162 10.4. 31 per cent of the families in Border area, 29 per cent in Project area and 10 per cent in General area were absolutely without any land while 25 per cent, 39 per cent and 24 per cent of the families in the respective areas possessed small holding ranging from 0·24 to 2·50 acres representing 11, 24 and 26 per cent of the total holding area in the respective areas. 34 per cent of the families in Border and Project areas and 41 in General area possessed medium sized holding (3 to less than 50 acres)

423

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

697 In addition, a total of Rs. 899 (£89, 18s.) was expended on jail buildings. The manufacturing account shows cash receipts amounting to Rs. 60, against an expenditure of Rs. 29, or a net profit of Rs. 31 (£3, 2s).

797 EDUCATIONAL STATISTICS.—The management of education in the
871 Khási and Jáintiá Hills is entirely in the hands of the Welsh Cal-
648 vinistic Mission, who first established themselves in the District about the year 1844. Though the Khásiás are naturally dull, and children are taken away from school before they have obtained more than a smattering of instruction, yet the perseverance of the missionaries has been rewarded by most satisfactory results. It is stated, in the Report of the Inspector of Schools for Assam for 1874-75, that 'a much larger proportion of the Khásiás know a little of reading, writing, and arithmetic than is the case, probably, in any other District of either Assam or Bengal.' Female education, owing to the interest taken in this work by the wives of the missionaries, is also in a comparatively advanced condition. The missionary schools are largely subsidised by grants in aid from Government. The teaching is conducted in English and in Khási, the Roman character being used in both cases.

[562]

[212]

The following paragraphs are compiled from the Education Report for 1874-75, above referred to. In that year the total number of schools open in the District was 73, attended by 1666 pupils. As compared with the area and the population, these figures show one school to every 84·34 square miles, and one pupil to every 85 inhabitants. As compared with the total number of males under ten years of age, the number of boys only attending school (1322) shows one scholar to every 13·1. The total expenditure on education in the same year was Rs. 17,722. 11. 3, or £1772, 5s. 5d.; towards which Government contributed Rs. 10,443. 1, fees and fines produced Rs. 228. 5. 3, while the remainder (Rs. 7051. 4) was expended by the Missionary Society from its own funds. The average cost of educating each pupil was Rs. 10. 10. 4, or £1, 1s. 3½d.

648 PRIMARY SCHOOLS.—With the exception of the schools at Cherrá
797 Punji, Jowai, Shillong, and Sheillá, all the schools in the Hills may
872 properly be classed as primary, though several are returned as middle vernacular schools. On this principle the total number of primary schools is 64, in 45 of which a little English is taught. These 64 schools had 1216 pupils on their rolls at the close of the year 1874-75, and an average daily attendance of 819, comparing

20: Hunter G-4 (no date) 1897 AR 7 Khasi AR 7

648 favourably with an average attendance of 694 in the preceding year. Of the pupils on the rolls, 132 were professed Christians, 36 Hindus, 797 and 1058 Khásiás. The total cost was Rs. 7127. 11. 6, or £712, 872 15s. 5d., towards which Government contributed Rs. 3246. The [658] average cost of each pupil was Rs. 8. 7. 7, or 17s., of which Rs. 3. 14. 7 represents the share paid by Government. The chief failure among the Khásiás is stated by the Inspector to be in arithmetic. Four primary scholarships were awarded during the year by the Deputy-Commissioner, on the recommendation of the secretary to the Mission. These scholarships are of the value of Rs. 3 a month, or £3, 12s. a year, and are tenable for two years.

MIDDLE ENGLISH SCHOOLS.—There were four schools of this 873 class during the year under report, with 397 pupils on the rolls, and an average daily attendance of 243. The total expenditure was [658] Rs. 4581. 15. 9, or £458, 4s., towards which Government contributed Rs. 1478. 8; the average cost of each pupil was Rs. 18. 13. 7, or £1, 17s. 8d.

FEMALE INSTRUCTION.—The Khási and Jáintiá Hills is the only 171 District of Assam, and one of the very few throughout all India, in 562 which female instruction can be said to exist. During 1874-75 the number of girls attending the schools increased from 242 to 344, 871 or by more than 42 per cent., showing 4·7 girls at school to every thousand of the female population, as opposed to ·4 in the Province generally. Of this number 24 were taught by Mrs. Hugh Roberts of Cherrá Pinjí, and 18 by Mrs. John Roberts of Shillá. During the year five of the girls were sent out as teachers, of whom one was placed in charge of the Shillong girls' school, which has 29 pupils.

NORMAL SCHOOL.—According to the classification adopted by the 871 Education Department, the institution at Cherrá Pinjí, under the management of the Rev. Hugh Roberts, is described as partly 648 'Government normal' and partly 'aided English.' In 1874-75 the 797 number of pupils on the rolls was 43, and the average attendance 39. There is a class of 10 girls, and of the 16 teachers turned out during the year, 5 were girls. The total cost was Rs. 4232. 6. 6, [658] almost the whole being paid by Government. The average cost of each pupil was Rs. 109. 0. 7, or £10, 19s., of which Rs. 107. 2. 11 represents the share of Government. The following paragraph, quoted from Mr. Roberts' Report, illustrates what the missionaries have effected, and also the difficulties with which they have to contend:—'Cases have been brought to my notice during the past year

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

of father in Russia (for the *tzar*, etc.), (secondly) the youngest, not the oldest, daughter performs the family rites and inherits the family-property [24]. Even in cases when here is no woman to inherit, the youngest, not the oldest son inherits [25]. Among the conservatively matrilineal Pnár (Jaintia) this term of diminution , however, carries at times a somewhat contemptuous meaning, though the minorate is strongly in force also among them. The ambivalent position of this honorific term of diminution is thus significant (comp. term 9/*e* among Pnár and infra.) 601 [428] [196]

Term 7 — mcher : (*i mei*) — The prefix *i* used among Khasi and War Khasi signifies particular reverence (supra : term 6). The classificatory character of the tem has been discussed by CHATTOPADHYAY [26]. [193]

Term 9/*f* — *ho* for all younger siblings, cousins and even other young folk does not indicte the consideration which the terms 9/*d* — *hong* for older sisters and feale cousins, or 9/*e* — *hah* for their male equivalents indicate. The term *ao* (9/*e* among Pnár) stands here, as generally, for elder and implies a honoific meaning (comp. term 6 supra and term 13/*a* infra).

Terms 10/*a* an *b* show that husband and wife address each other by equal terms and doin no way indicate anything like an inferior position of either wives or hubands of which I did also not find any indications otherwise. It may here bementioned that property rights even in newly established estates, vest in worn and are inherited by women, — not generally men. 601 562

Term 11*d* — *h khun khadduh* — the youngest daughter whose important position in Khai religious ritual, social organization and inheritance law has already been refered to sub term 6 and described in detail elsewhere [27]. The affectionate characte of this term finds vivid expression in the abbreviation *ha duh*, which I herd from sisters and the father of a youngest daughter. 601 [593]

Term 13/*a* —*mei sau* (mother's older sister). The word *sau* (older) here has a definitel honorific character, although the *mei-khynnah* — the mother's younger sister (term 13/*b*) may be the heir of Ego's ancestral property. This constellation corresponds to the peculiar significance of terms 6, 9/*d* and especially 11/*d* (supra).

Terms 13, 14,15/*a*, 18, 18/*a*, 19/*b*, and the terms for cousins 19, 20, 21/*a*, 21/*b*, 22 show like term 7 — mother (supra), classificatory character. The restriction on cous-cousin marriage is of different nature, according as to whether they belog to different hourseholds, or not, as has been discussed by CHATTOPADHYAY [28]. [582]

Term 16/*a* —*dia* (mother's brother's wife) is basically the same as term 15 — *dia kha* (father's sister) [29] though the latter is qualified by the additional term *kha* (begetting, birth) which signifies paternal relationship (see : term No. 1).

THE KHASIS

SECTION I.

HABITAT.

101 162 THE Khasis reside in the Khasi and Jaintia Hills district of Assam. They number 176,614 souls, which total is made up of:—

Khasis	107,515
Syntengs	47,883
Christian Khasis	17,125
Khasis inhabiting other districts	4,091
	176,614

131 162 563 The Khasi and Jaintia Hills district is situated between 25° 1′ and 26° 5′ North Latitude, and between 90° 47′ and 92° 52′ East Longitude. It contains an area of 6,157 square miles, with a total population at the Census of 1901 of 202,250 souls. In addition to the Khasis there are some members of Bodo tribes inhabiting parts of the district.

The Lyungam tribe appears to have been reckoned in 1901 as Khasi, there being no separate record at the last Census of these people.

101 131 [133] 563 The district is split up into two divisions, the Khasi Hills proper and the Jaintia Hills. The Khasi Hills form the western portion of the district and the Jaintia Hills the eastern. The Khasis inhabit the Khasi Hills proper, and the Syntengs, or Pnars, the Jaintia Hills. The latter hills take their name from the Rajas of Jaintia, the former rulers of this part of the country, who had as their capital Jaintiapur, a place situated at the foot of the Jaintia Hills on the southern side, which now falls within the boundaries of the Sylhet

[P.]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

101 district. The Lynngams inhabit the western portion of the
131 Khasi Hills proper. A line drawn north and south through
563 the village of Nongstoin may be said to form their eastern boundary, and the Kamrup and Sylhet districts their northern and southern boundaries, respectively. The people known as *Bhois* in these hills, who are many of them really Mikirs, live in the low hills to the north and north-east of the district, the term "Bhoi" being a territorial name rather than tribal. The eastern boundary of the Lynngam country may be said to form their north-western boundary. The Wárs inhabit the precipitous slopes and deep valleys to the south of the district. Their country extends along the entire southern boundary of the district to the Jadukata, or Kenchi-iong, river where the Lynngam territory may be said to commence towards the south. There are some Hadem colonies in the extreme eastern portions of the Jaintia Hills. It is these colonies which are sometimes referred to by other writers as "Kuki Colonies." They are settlers from the North Cachar Sub-division of the Cachar district within recent years. It is possible that the title Hadem may have some connection with *Hidimba*, the ancient name for the North Cachar Hills.

APPEARANCE.

142 The colour of the Khasi skin may be described as being usually brown, varying from dark to a light yellowish brown, according to locality. The complexion of the people who inhabit the uplands is of a somewhat lighter shade, and many of the
[361] women, especially those who live at Nongkrem, Laitlyngkot, Mawphlang, and other villages of the surrounding high plateaux, possess that pretty gipsy complexion that is seen in the South of Europe amongst the peasants. The people of Cherrapunji village are specially fair. The Syntengs of the Jaintia Hills are darker than the Khasi uplanders. The Wárs who live in the low valleys are frequently more swarthy than the Khasis. The Bhois have the flabby-looking yellow skin of the Mikirs, and the Lynngams are darker than the Khasis. The Lynngams are probably the darkest complexioned people in the

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

377 people remained non-Hindu in their basic beliefs and social customs. Hindu
648 influences are nevertheless predominant in their culture, especially in their way
of living which shows a practical adaptability, somewhat similar to the Japanese
771 acceptance of modern western culture without becoming Christian. In my
795 census of Shella village, the people calling themselves 'Hindu' amount to 40 per
[797] cent of the total, but they are the recent converts to the Ramakrishna School
which established a missionary station at Shella after the Partition. The
[162] Christians constitute 30 per cent of the total, most of them having been converted during the last ten years, as in the case of the Ramachrishna School.[1]
The rest remain as they were, of Khasi belief. These conversions to either
[458] Ramachrishna or Christianity seem to have been encouraged by the unstable situation of the people resulting from the recent economic depression in this area.

The Partition of India and Pakistan in August 1947, which drew the bor-
439 derline a few miles south of Shella village, considerably upset village economy
458 by stopping all trade with Bengal, though a limited amount of trade is allowed
with local people at the border. Because of this political change, all the produce
648 of Shella gardens is rotting away for lack of markets, while all of the rice fields were taken by Pakistan. Goods now come to Shella only from the uplands, carried upon men's shoulders over the most difficult pass, which makes everything very expensive. Many families have sold their gold and other treasures, and some families are facing starvation.[2]

182 Concerning the conversion to a new religion, an interesting phenomenon
is to be observed. The conversion to Christianity or to Ramakrishna is mostly
171 by individual: I found in my census that the wife and husband often belong to
592 different religions. This is a very different picture from the Garo, among whom
I always found that the husband and wife belonged to the same religion: the
613 conversion of the husband to Christianity was always followed by that of the
771 wife. I think this reflects the structural differences which influence the actual
relationship between the husband and wife. Among these Khasi, instead of
795 the husband and wife, the maternal uncle and his nephews and nieces are mostly of the same religion. The function of the *iing*, the most important social and religious unit, thus appears also in the conversion to a new religion, stronger than that of a domestic unit.

Intermarriage.

648 The close economic and cultural contact of the Shella people and the Bengalee
is not matched by social contact. The essential barrier between the two peoples
771 is the difference of religion which dominates the entire social order in each
society. Though these Khasi were important traders, richer than the neigh-
563 bouring Hindu peasants, they were considered by the Hindu as outcasts with whom they never shared social activities. Intermarriages were therefore very rare. In Shella village, only two exceptional cases were found in my census:

1. A Khasi woman married to a Gurka (cattle-keeper); they live at Shella Bazaar (Sholap).
2. A Khasi woman has marital relation with a Bengalee medical doctor who has resided at Dinong in Shella for six years. He already has a Bengalee

1. These two entirely different missionary activities are competing with each other, and are somewhat related to the political powers within this area.
2. The state government is doing its best to provide them with additional facilities: for example, providing air transport for the transportation of oranges from Shella to Gauhati and Calcutta. However, such arrangements cannot cover the great economic loss suffered by the Shella people.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

[Shella]

wife who lives with him. The Khasi woman lives with her mother. Some say the Khasi woman is his second wife, other say their marriage is not recognized by the public. 563

Actually, owing to the bad climate, very few non-Khasi live in this area. Besides the two non-Khasi just mentioned, there were a Bengalee tax collector and an Assamese Forest Officer, both of whom lived at Shella Bazaar. Bengalee villages are situated about five miles south of Shella. Except in the bazaar, Bengalee and Khasi have no social contact with each other, and intermarriages have been rare.

However, it is obvious that in the past the Khasi must have had many cases of intermarriage with Bengalee. Among the Khasi, there is a clan called 'Dkhar.' The term 'Dkhar' is also used for the peoples of the plains: Bengalee are called 'Dkhar' by the Khasi. They say that the Dkhar clan originated in Bengalee girls who married Khasi men and who went to live in the Hills. It is said that in older days, the Khasi often raided the Sylhet plain and kidnapped Bengalee girls as well as goods. In Bengalee records of Sylhet, Khasi appear as 'bloody Khasi.' Khasi old men say that in order to increase their population they did sometimes kidnap Bengalee girls, but that they treated these girls very nicely and kindly, no differently from their own people. Since they follow the matrilineal system, they decided to name their descendants 'Dkhar.' It is said that all the present Dkhar people are descendants of such marriages. The Dkhar are found more on the southern slopes of the Khasi Hills i.e. among the Wars. 101 563

It seems there were many reasons for the descendants by marriage between the Khasi and the Bengalee to become Khasi. First of all, it is said that in the olden days the Khasi wanted to increase the population by such marriages. At the same time, a Bengalee who married a Khasi became an outcast from his or her own society owing to the caste system, and this inevitably made them Khasi. Secondly, the Khasi were primarily grouped into the *siang*, and they considered the marriage relation as of secondary importance. Hence it was rather difficult to remove by marriage a Khasi man or woman from their native place. Thirdly, Khasi could hardly live in the plain where no betel-nut or pan-leaf gardens were available; they could not engage in rice cultivation in the plain, as the technique is entirely diferent from the cultivation of betel-nut or pan-leaf. Moreover, they said they could not stand the heat in the plain. Therefore, the orientation of intermarriages was always towards the Khasi community: the Khasi brought outsiders to their own land; they did not themselves leave.

Such a marked tendency on the part of the Khasi to remain attached to their own homeland, is in no way contradictory with the phenomena of their migration to places outside the Khasi Hill, owing to the exploitation of their homeland and to the increase in population. The formation of Jatinga represents such an instance; there are also the cases of modern Khasi women from sophisticated urban areas, who easily leave their homeland, after marriage with a non-Khasi; this also appears in the following data on Jatinga. 161 167 [563]

Jatinga

Jatinga is a Khasi village situated in the North Cachar Hills, three miles west from Haflong, the headquarters of the North Cachar Hills. The number of households was about sixty in February 1956. Their economy depends on the pan-leaf, orange and pineapple gardens, similar to that of the Shella people. 181 621 433

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

621 descent grouping are often different. This is a very similar pattern to the
[184] mobility which I discussed in Sohkynduh and Kongton (see p. 111).

One of the outstanding features in this community is the strong paternal
178 authority, established especially in the first generation, because the father's
599 (husband's) contribution was very important in such circumstances: their
domestic units were completely independent from the *sing* either of husband
61 or wife. Some of them came with their wives, and many younger ones and
their sons brought their wives from their homeland afterwards, thus practising
621 virilocal marriage.

They have an interesting social usage which reflects the importance of the husband of the first generation. This is the addition of the name of the husband of the first generation to the matrilineal clan name in order to differentiate each particular descent group established at Jetinga within the same clan. For instance, Rupsi-Tah, Rupsi-Loh, Rupsi-Khla and Rupsi-Lati are found in the Rupsi clan. Rupsi-Tah is one of the lines of the first immigrants to Jetinga, which I have mentioned as Rupsi: Tah was taken from Pryntah, the husband of Sintu (Rupsi) (see p. 171). Thus the present inhabitants of Jetinga are very conscious of their father or grandfather, though they strictly follow the matrilineal descent rule. From such a usage of naming a clan, the Indian officer, who gave me some information about Jetinga before I went there, made the mistaken deduction that they had changed from matrilineal to patrilineal, assuming this to have come about as a result of the influence of patrilineal tribes around Jetinga. But this is simply due to the fact, firstly, that they hold in high regard the man of the first generation, because of his great contribution; secondly, that they distinguish themselves from members of the same clan according to the descent group established at each immigration; in other words, it indicates each *sing* grouping in the village.

178 The fundamental Khasi social organization based on the matrilineal system
184 did not change at all. I could observe in Jetinga exactly the same principle
in action as I had found in Sohkynduh and Kongton. The village endogamy
582 has also been well established in the present generation: there are about 20 different clans which can intermarry, and taking a spouse from an outside com-
61 munity has become very rare nowadays. Marriage patterns in relation to the
sing structure and all its related aspects are surprisingly similar to that of the
621 communities in the Khasi Hills. The solidarity of the *sing* is even greater in Jetinga, particularly among the rich, because of the greater accumulation of wealth and greater economic activity, which also increases the authority of the *sing* as manager of considerable property—this was also the case with the Shella people. Jetinga demonstrates that in spite of colonization and of a significant change in economic activities, Khasi social organization has maintained itself intact. This situation is in contrast with the considerable social changes observed among the Garo community in colonial areas like Rissalbara and Jaldapara.

621 *Intermarriage*

178 From the earliest period of the establishment of Jetinga up to the present,
582 some changing aspects of marriage patterns relating to intermarriages are to be observed.

• 563 As I stated before, in the earlier period, the people used to bring their spouses from their homeland, but they also married neighbouring tribal peoples, namely,
563 the *Zemi-Naga*, the Kuki and the Cachareo of villages close to Jetinga, and
621 also the Lushei, the Bengalee, the Moslem and the Anglo-Indian who lived in Haflong, the biggest political and commercial centre in the Hills, situated

[Jatinga]

three miles away from Jatinga. As one may expect in such a situation, quite a number of intermarriages with these peoples appear in my census of Jatinga. The resultant of these intermarriages was that when the couple and their children lived in Jatinga, they were considered to have become Khasi, otherwise they were held to be non-Khasi, whether the spouse was man or woman. This orientation of social recognition of the result of intermarriage was generally seen among Khasi in such situations, not only in the case of Jatinga. 569 621

The following are extracts of intermarriages from my genealogical table of Jatinga people. 569 591 621

A. Cases of intermarriages in which the descendants became Khasi.

1. A woman of the Dome clan married a Kuki man. All members of the present Dome clan at Jatinga are their descendants.
2. A woman of the Rymbai clan married a Kuki man as her second marriage. Their descendants are Rymbai.
3. A man of the Sutbiang clan married a Mikir woman, and lived in Jatinga. They had one daughter who married a man of the Hun clan of Jatinga. They named this woman's line 'Shadap' as one of the Khasi clans. Later this Mikir woman's sister's daughter married a man of Rupsi-Lati, and their descendants were also named 'Shadap' by the villagers. Thus Shadap clan was created by a Mikir woman who married a Khasi man of Jatinga.
4. A Khasi man married a Lushai woman and lived at Aijal, the headquarters of the Lushai Hills. They said he became Lushai. Later a man of the Pajet clan of Jatinga married his daughter from Aijal. This couple lives at Jatinga and has several children. The villagers said they have to give them a new clan name. It is under consideration.

B. Cases of intermarriages leading to the emigration of Jatinga inhabitants.

5. A man of Jatinga married a woman of Zemi-Naga as his second marriage and lives at his wife's village.
6. A woman (the daughter of the woman of Rymbai, who married a Kuki A-1) married a Moslem man and lives at Haflong.
7. A woman of Rymbai married a Panjabee and lives at Shillong. This woman is (B-6)'s mother's sister's daughter.
8. A woman of Sutgubai clan married an Assamese and lives at Gauhati.
9. A woman of Rupsi-Tah married an Anglo-Indian and has gone to the United Provinces.
10. A woman of Jatinga married a man of Zemi-Naga and went to his village.
11. A woman of Jatinga married a man of Cachareee and lived at his village some time, but she came back to Jatinga after divorcing him.

A cases belong to the earlier period when Jatinga had a shortage of population, while *B* cases, except 10 and 11, are found among the present younger generation. The population, which had increased rapidly in the last twenty years with economic prosperity, is suffering from the recent economic depression caused by the Partition as well as from the great damages done to their orange gardens and paddy gardens by tree diseases. Moreover they have an unbalanced rate of birth according to sex: females are more numerous than males. Therefore, many daughters marry out as shown in the cases of *B*. The above-cited cases are only concerned with intermarriages with non-Khasi, but there are still other women who married Khasi men and who reside outside Jatinga, as for example, at Haflong and Shillong. [161]

In the village there are still many unmarried girls without suitable spouses. In the olden days, it was less difficult to marry neighbouring tribal people, 569 621

15: Nakane E-5 (1955-1956) 1967 AR? Khasi AR?

like the Zemi-Naga, the Cachares and the Riaks. But after the period of economic prosperity as I shall describe in the next section, the Jaitinga people reached a rather high level of education, while most of the neighbouring tribes remained illiterate. Their standard of living likewise improved. Fashionable girls of Jaitinga who have studied at the Convent school in Shillong, and speak English and Hindi, cannot marry half-naked tribesmen who work in the jungle. They prefer to intermarry with Bodom, Purjabee or Assamese who belong to more sophisticated community, and through whom they can enjoy urban life. Thus the orientation of the intermarriage of the people of Jaitinga has changed, along with the growth of Jaitinga.

It should be noted that intermarriages come mostly through the contacts at Hafiong, where people used to go once a week for the bazaar, rather than through direct contacts with neighbouring villages.

Economy of Jaitinga and its Relation to Neighbouring Tribes.

It is very interesting to find two different kinds of economy in the same ecological background. Jaitinga Khasi practise pan-leaf and orange cultivation and depend mainly on a trading economy, while the other neighbouring tribal peoples practise jhum cultivation, almost a subsistence economy. This situation has remained unchanged for the last fifty years since the establishment of Jaitinga village.

The first Jaitinga immigrants occupied one edge of the mountain where the present Jaitinga is situated. Formerly, this land belonged to the Zemi-Naga, one of the old inhabitants of the Cachar Hills, who possessed a vast jungle area for jhum cultivation. It seems that there was no objection to the Khasi occupying this small spot; it was apparently too small an area for the jhum cultivator —pan-leaf cultivation of the Khasi requires less than one twentieth of the land of the usual jhum cultivation. The Khasi, who started pan-leaf cultivation were able to accumulate some capital, and after several years they started orange gardens. They had had experience of orange cultivation in their homeland, but this was the first time they had operated commercially.

The success of this orange cultivation was beyond their dreams. Hearing of good oranges at Jaitinga, many Bengalee merchants from Dacca, Sylhet, Silchar and Gauhati began to come to buy them. Moreover, the village had the great advantage of being situated near the railway station. Oranges were sold by carloads. Unimaginable wealth came to the Jaitinga people. Especially the founder's family, including his brother's and sister's, became extraordinarily wealthy; their income used to be Rs. 20,000 a year. The children were sent to the school which was established in the village and some were educated at colleges in Delhi, Sylhet and Shillong. The villagers had beautiful houses built by Bhutiyas and Bengalee carpenters. Actually the houses of Jaitinga were known as some of the best construction in Assam.

Like the Sheila people, they were managers of gardens and employed workers. Wealthy households used to engage several labourers annually, most of them from Jaintia where the Jaitinga people had originated. These workers were provided with shelter in the servant quarters of their employer's house, but they had to provide meals for themselves. They were paid daily according to the work done. They were available to other households, when their employer had no work. Some labourers were also engaged locally among the Zemi-Naga, the Cachares and the Riaks, though not as many as among the Jaintia. These local tribes were fairly well occupied by their jhum cultivation, and not used to being employed as workers. Therefore, most of them were not regular

group of matrilineal and War-Khasi-speaking people who claim as their ancestral homeland the present-day United Khasi-Jaintia Hills District (within approximately 90° 6' and 92° 52' E. and 25° 7' and 26° 5' N.). This group includes the Jaintias (also Pnar or Syntengi) in the southeast, who differ from the Khasis primarily in their dualistic residence patterns and less virulent forms of sorcery. (The Shadens in eastern Jaintia are a Kuki people.) It also includes the Lyngngams (also spelled Lyngngam) in the west, who practice migratory swidden agriculture and construct peculiar funerary sites, and are said by Elwin (1935) to be culturally intermediate between Khasis and Garos. Finally, it includes Bhoiis, Wars, and upland Khasis, which terms are primarily territorial. Bhoi country is the north-central part of the District, and is culturally complicated by the presence of Nikins, Lalungs, and Nepalis. War country spans the entire southern length of the District, so that Wars divide into Jaintia Wars and Khasi Wars, of these, the Khasi Wars have traditionally transmitted property to sons as well as to daughters. The upland center of the District is the country of the Khasis proper, those whose culture provides the most useful model for interpreting the variations found elsewhere. [For general reference on all categories of Khasi culture, cf. Costa 1908 and 1927, also Gordon 1947, especially for data on regional variations.] Geography. The District is 5,356 square miles of hilly tableland, irregularly dissected by numerous rivers, and marked by significant ecological variation over very short distances. The tablelands step gently downward north from Shillong Peak, which at 6,445 feet is the highest point in the District, and over about 35 miles near into the Brahmaputra valley where this is some 300 feet above sea level. To the south, the land slopes more steeply downward for about 20 miles, and then drops abruptly, in cliff and steep-slope formations, to the Ganges-marked delta that begins at its south with Sylhet. The annual southwest monsoon drop torrential rain around Cherrapunji and Nongwanah villages (for Cherrapunji, a record 905 inches in 1861), but then, reaching Shillong 35 miles to the northeast, provide only about 100 inches per year. Rainfall is again greater in Bhoi, which shares the Brahmaputra valley climate. Climate is temperate on the high Shillong plateau, where it seldom freezes and never snows. To the north, climate becomes subtropical, forest is tangly, and burns abound. The climate to the south is also subtropical. [2 Bhadra 1901, chap. XXIX.] Linguistic affiliation. Khasi is one of the major War-Khasi languages, related to War, Khasi, Synteng-Sohai, Nongbaroh, and Pnar-Wa. The major Khasi dialects are Khasi, Jaintia, and Lyngngam, to which Greenwood adds War. Further minor variations occur from village to village. The Khasis had no script until 1841, when the roman alphabet was successfully applied to the Cherrapunji dialect of Khasi proper. [2 Sohai 1901, Greenwood 1903-10; 7 Shrath 1902.]

AR7 Khasi AR7
[P. 106 B]

1965-26. 2. Barth 1962.] **Demography.** According to the 1951 census of India, the United Khasi–Jaintia Hills District contained 221,982 Khasis and 67,532 Syntengs, Pnars, and Jaintias (India [Republic] 1952-57). These figures, together with those for Khasis enumerated in Cachar (4,005), Mikir and North Cachar Hills (467), Lakhimpur (287), Sibsagar (276), and Darrang (211) districts, and those for Syntengs enumerated in Mikir and North Cachar District (464), yield a total of 295,224 Khasis. **History and cultural relations.** Khasis believe that they had supernatural origin in Khasi Hills (see Gait 1938: 280 for historical evidence, and Rafy 1960: 8-9 for myth, but see also Costa 1959, 1960; Gordon 1907: 10-11, and Chatterji 1951: 12). Khasi tradition also states that in early times they moved gradually from east to west, from Jaintia toward Khasi Hills, in the practice of swidden agriculture (Gotphoh 1947: 97-98). The salient fact of known Khasi history, which begins generally in the mid-sixteenth century A.D. when there already existed the present-day 25 native Khasi chiefdoms, is the distinctive line of development followed by the separate kingdom of Jaintia. To the north, Jaintia was successively tributary, in part or in whole, to the Kachari kingdom (ca. 1520 A.D.), the Koch kingdom (strongest ca. 1560 A.D.), and the Ahom kingdom (strongest ca. 1700 A.D.) (Shakespear 1914: Map I). To the south, about 1500 A.D., Jaintia extended its rule over a tract of Sylhet, which was populated by Hindus and Muslims, and saw its kings fall thereafter under Brahman influence. In the early 1800s, Jaintia became involved in the fratricidal strife then prevalent in the ruling family of Manipur. In 1835, after the Jaintia king ignored British warnings not to seize British subjects for human sacrifice, Jaintia was punished by the British annexation of the Jaintia pargana in Sylhet. The Jaintia king then voluntarily turned over to the British the hills area of his domain, so that the whole of Jaintia became part of British India and, in 1860, came to be taxed as such, although the Jaintias were otherwise allowed to maintain their traditional system of village government. • By contrast, the remaining Khasi states had few formal external relations until British times. Khasis resided and traded in both the Brahmaputra and Sylhet valleys, but were basically turned inward on their own hills, where warfare between villages and between the states was apparently common. Khasis came into indirect relation with the British in 1765, when Sylhet and its markets became part of British India. In the 1790s, stepped-up Khasi raids into Sylhet caused the British to throw up a deterring line of forts along the foothills. Later, it became necessary to place an embargo on Khasi products in the Sylhet markets. In 1827, the British penetrated into western Khasi Hills by negotiating with the Khasi chief of Nongkhlaw State to build a road through his territory, linking the recently annexed Brahmaputra valley with Calcutta. For three decades

formation, the British negotiated treaties with all the Khasi states, the last treaty being signed in 1881. It was contracted that the chiefs would be subject to the authority of a resident political agent, whose duties would involve maintaining law and order, judging cases of between citizens, approving the popular selection of any new chief, and exercising control over certain categories of natural resources. Khasis were guaranteed nonconformance to their customary way of life, and they were not then, nor are they now, taxed. Most Khasis, as opposed to Jaintias, were never an integral part of British India, but they did undergo social change as a result of British presence. To summarize Mills (n.d.): (1) The British introduced the potato, which the Khasis rapidly took up as a cash crop for marketing as far as Calcutta. The intensive speculation exhausted the soil and made for poor potato crops. (2) Christian missionaries made large numbers of converts, and there arose the difficult question of whether a Christian should inherit property that traditionally was earmarked for his predecessor of non-Christian religious rituals. (3) Since 1864 the British transferred their headquarters from Cherrapunji to Shillong. When they made Shillong the capital of the native state of Assam, non-Khasis flocked to it, land values soared, and the concept of private property became increasingly important. Khasis began to marry with members of other ethnic groups, which introduced confusion into traditional social patterns. These problems were exacerbated during World War II, when Shillong and its environs enjoyed enormous economic prosperity. One notable aftermath of this affluence has been the accelerated enrollments in schools and colleges. Hundreds of Khasis now have the B.A., M.A., and even the Ph.D. degree. • With the independence of India in 1947 and under the Sixth Schedule of the Constitution of India (which was drafted by a Khasi), the United Khasi-Jaintia Hills District became a Part B, or autonomous, Tribal Area, to be governed by a District Council composed largely of Khasis and Jaintias, and responsible not to the Legislature of Assam, but to the Governor of Assam as agent of the President of India. The native-state system and the chiefs and court, and the District Council finds it difficult to effect [illegible] legislation. The more political whom at this time is between Jaintias, who are accustomed to central authority and taxation, and Khasis, who resist the notion of taxation to support the work of a central District Council. (Cf. Cole 1956; Mathews 1951; Sharma 1960; Morris 1958.)

SETTLEMENT PATTERN AND HOUSING. Settlement pattern. Khasis live ordinarily in named, nucleated, and unplanned villages which are situated not below hill summits to avoid strong winds but still be defensible, and which usually include a de-

[illegible] from October to December. The cultivator the seed is sown in April-May and reaped about six months later. Maize is usually sown in [illegible] and ripens in August-September. For potato, generally three crops are raised in the District: the first is sown in December-January and harvested in April-May, the second is sown in February-March and is gathered in June-July and the third is sown in July-August and is harvested in November-December.

[illegible] For ginger and turmeric the rhizomes are stored of seed-value a year. Harvesting of ginger takes place from October to January. Seedlings ripen at the beginning of the year and are collected towards February and May.

[illegible] 3.6.3 Agricultural implements.—The usual agricultural implements are a hoe, a sickle, three or four kinds of plough, a harrow, a wooden sickle is used for the construction of irrigation channels, 'dawas' and whipping baskets. Bullock drawn plough is used in rice paddy cultivation in parts of Jaintia subdivision and in Khasi area and sometimes the use is not in the plains of the Jaintia.

[illegible] 3.6.4. General cultural properties.—The cultivators mostly adhere to their indigenous practices of agriculture. Number of crops is not usually only. Cultivation of rice is mostly done by broadcasting the seed though transplanting is also in vogue in some areas. Wheat cultivation is widely practised. Cultivation by cutting remains in the hill tracts is growing popularity in the district.

[illegible] 3.7 Cottage Industries.—Cottage Industries, in reality, have not found very good favour among the people of the district. In the [illegible] and there manufacture iron implements, earthenware, baskets, mats and pottery. In striking contrast with other districts cutting of cotton clothes is not among the Khasis. The Khasis in Shillong area and in some adjoining Garo Hills and Khasi Hills practise it only for their domestic consumption. In general, the development in cutting is practised among in the district and the [illegible] have adopted to the Khasis. Among other cottage industries production of tat canes is the northern part of the district adjoining Kamrup district and bee keeping throughout the district are mostly neglecting.

[illegible] 3.8 The People.—The Khasis and Jaintias are a distinct mostly [illegible] 1.25 million. In terms they are [illegible] Jaintias side by side with the Khasis live the Nepalis. Garos and Nepalis who have especially in the present, 3.00 percent and 3.6 per cent of the total count of population. Nepalis there are plains people who are mostly concentrated in the town of Shillong. In the neighbouring towns of the border area there are a large number of Bengali Hindus who dominate the life of the town in the border area.

[illegible] 3.8 Occupations.—The greater portion of the population of the district subsists on agriculture. More than 70 percent of the total [illegible] are predominantly agricultural. The indigenous Khasi [illegible] males and females have a high regard for hard labour

[illegible] 5.5. The following table shows the classification of population by age and sex in the three areas :—

Age and Sex Composition of Population

Age Group (y)	Border area			Project area			General area		
	Male	Female	Total	Male	Female	Total	Male	Female	Total

Total	[illegible]	[illegible]	[illegible] (100.0%)	[illegible]	[illegible]	[illegible] (100.0%)	[illegible]	[illegible]	[illegible] (100.0%)
Sex ratio (no. of females per 1,000 males)	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

It is seen that the population under 10 years of age in the border area, project area and general area were respectively 21 per cent, 21 per cent and 20 per cent of the total population in these areas, while that under age group 'between 10 to 60 years' constituted respectively 52 per cent, 52 per cent 52 per cent of the population in the three areas.

It is evident that proportion of females was on a whole greater than that of male in border area and project area and much less in general area. The number of females per 1,000 males in border area, project area and general area were respectively 1,024, 1,018 and 988 against the 1971 census figure of 983 females per 1,000 males in the rural areas of the district of Uttar Pradesh India.

5.6. The following table shows the classification of population by religion.

TABLE 5.6

Classification of Population by Religion

Area	Tribal religion	Hindu faith	Muslim	Other religion	Total
1. Border area	[illegible] ([illegible]%)	[illegible] (38.7%)	[illegible] (11.1%)	[illegible] (0.4%)	[illegible] (100.0%)
2. Project area	[illegible] (27.1%)	[illegible] (38.8%)	[illegible]	[illegible]	[illegible] (100.0%)
3. General area	[illegible] ([illegible]%)	[illegible] (37.6%)	[illegible] (0.9%)	[illegible]	[illegible] (100.0%)

Population following Hinduism and other religions is in a further growing proportion mostly of displaced persons from East Pakistan following Hindu and Muslim in their means of livelihood, while those in the general and project area are mostly the Tribals who are generally engaged in cattle rearing and agriculture.

A perusal of the table shows that proportion of families following non-agricultural labour as principal occupation is higher in border areas. Majority of these families were formerly engaged in agriculture but due to adverse circumstances arising out of Partition, they found it safer to take to other occupations. Tea stall vendor and normal E.W.S. units pave employment to a large section of these people. Other sources of employment are collection and carriage of bamboos, woodcutting, and carrying of merchandise, etc. Traders in customary articles and grocers who formed the bulk of the traders in the border area are largely the displaced persons and the Bengali people concentrated in Mohgaon and Balai. Others are petty traders dealing in jute, vegetables, fish, clothes and other foodstuff. Under craftsmen manufacturers, etc., come the tailors, blacksmiths, carpenters, etc., Commission agents, Educators, Doctors, etc., are shown as others.

8.19 In the following table the families in the three village groups are classified according to their subsidiary occupation.

19: Assam G.S. (1958) 296.5 A87 Gaus A87

9.8 Considering non-agricultural families it is seen that average gross annual income per family in Border area, Project area and General area are respectively Rs.[illegible], Rs. [illegible] and Rs. [illegible] respectively. The main contributor to this income in Border area is Trade followed by Service, Production, Labour and Agriculture and Animal husbandry, those in Project area are Labour-Service-Profession followed by Trade, small scale manufacture and agriculture and Animal husbandry. The comparatively higher average income from small scale manufacture and handicraft is due to existence of quite a good number of liquor distillers with quite a large amount of annual income. These contributors to gross annual income of non-agricultural families in General area in order of importance are agriculture and animal husbandry, service-profession and labour. It is significant that among the non-agricultural families also agriculture and animal husbandry emerge to be the biggest contributor. This is due to the fact that in General area villages there are a large number of Nepali families whose principal occupation is cattle rearing and earned enough by selling milk, ghee, and livestock. These families were classed as non-agricultural families.

9.9 Of the gross income, agriculturists spend a portion in their farms on items such as purchase of seed, manure, etc., cost of maintenance of livestock, wages and salaries for labourers, and transport of produce while other spend a portion on running their household activities such as purchase of merchandise for trading, purchase of plants and machinery and raw materials for household enterprises, wages and salaries for employees, etc. The net annual income per family, as will be seen from table G.8, comes to Rs. [illegible] in Border area, Rs. [illegible] in Project area and Rs. [illegible] in General area. The corresponding figures for agricultural families being Rs. [illegible], Rs. [illegible] and Rs. [illegible] and for non-agricultural families Rs. [illegible], Rs. [illegible] and Rs. [illegible] respectively.

The following table shows the annual expenditure of families in running their enterprises.

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

193 they form rapids, the waters precipitating themselves down deep, rocky gorges and chasms, choked with huge boulders. Some of these gorges are very beautiful; the streams, being borne in between stupendous mountains and rocks covered with primeval forest, run in narrow but very deep channels swarming with fish. No islands or lakes are formed by any of the rivers, although several of them have large, deep pools. They are all unfordable during the rains.

192 Utilization of the Water Supply.—Some of the rivers are utilized as a motive power for turning machinery, although the streams on the higher plateaus might be easily turned to such as streams. Their waters, however, are extensively used for the purposes of irrigation, and the hill people display great ingenuity in cutting channels or aqueducts for leading the water on to their fields. It is in this manner that the Civil Station of Shillong receives its water supply. Aqueducts convey water to the houses of all the European residents; and branch channels from the main aqueducts flow through the bazar, and along the streets occupied by the native inhabitants. No fishing towns exist in the hills; but near where the rivers debouch upon the plain are some valuable fisheries, which are usually let in farm, the leases being generally longlife. These fisheries yield an annual Government revenue of about £ [illegible]. Embankments in order to protect the land against floods are not rare. A few embankments, or rather dams, are thrown across narrow valleys between hills, so as to create reservoirs for water. At Shillong there are a few tanks thus formed, which are both useful and ornamental.

195 Minerals, etc.—Coal and limestone, both of excellent quality, are found in abundance. Lower Bengal obtains nearly the whole of its lime supply from the Khasi and Jaintia Hills. The lime is known as "Sylhet lime," and is obtained by quarrying from the beds of stone which line the base of the mountains along the whole length of the Sylhet boundary. The supply is literally inexhaustible. Coal outcrops at Chorai Pinji, Lakadong, Shella, Mawsynram, and at several other places; but as a rule it is scattered, and found in places difficult of access. The coal, however, is of excellent quality, and leaves very little ash. Stone, well adapted for building purposes, is also found. Ironstone exists almost everywhere throughout the Hills, but principally in the dependent States of Khyrim, Nongpoh, Chorai, and Mylliem. In former years the Khasis ex-

[illegible]

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

public auction. The Assam rules, as revised in 1873-76, reserve to Government the right of pre-emption at the price of Rs. 600 (£60) in the case of every elephant captured between 6 feet and 7½ feet in height. For every elephant caught that is not purchased by Government, a royalty of Rs. 100 (£10) is payable within one month after capture. Certain methods of hunting are prohibited. 224 648 651

POPULATION.—Prior to 1872 no attempt had been made at a Census of the Khasi and Jaintia Hills, but in 1872 the Deputy-Commissioner approximately estimated the population at 108,403 souls. In 1872, at the time of the Bengal Census, operations were not so fast in these Hills, but on a less elaborate system than in Regulation Districts. In the Khasi Hills, the Census of the various petty States was effected through the chiefs; in British territory in the Jaintia Hills, the *dolloi* conducted the enumeration; while at Shillong and other places under direct administration, the work was done by officers attached to the Deputy-Commissioner's office. The results are thus returned:—Adults—males, 39,882; and females, 24,198: total adults, 64,080. Children under twelve years of age—males, 18,600; and females, 18,227: total children, 36,828. Total males, 58,522; total females, 42,425. Grand total, 101,847; proportion of males, 48·36 per cent. The total area of the District, according to the latest returns, is 6,133 square miles, which gives an average density of 16 persons per square mile. The number of villages is 1004; the number of houses, 21,555, of which 350 are returned as of the better class. 648 659 161 161 162

ETHNICAL DIVISIONS OF THE PEOPLE.—The population consists almost exclusively of aboriginal tribes and races, viz. Khasis and Syntengs (who form the bulk of the inhabitants of the Khasi and Jaintia Hills respectively), Bhoys, Garos, and Kukis. The only other dwellers in the Hills are the European officials and military officers at Shillong and Cherra Punji, with their native servants and followers, a few Bengali officials, and the sepoys of a regiment of native infantry. The classification of the inhabitants according to religion shows:—101,183 aboriginals; 364 Hindus; 60 Mahommedans; and 108 Christians, including 22 Europeans, 9 Eurasians, and 83 native converts. 168 162 [648] [779]

THE KHASIAS.—The following sketch of the physical characteristics and customs of the Khasis has been kindly furnished to me by the Deputy-Commissioner, Colonel Rice; it is reproduced almost verbatim from his report and on his authority:— 144

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

361 In the interior of the Hills the largest villages are mere clusters of
463 huts. The great majority of the inhabitants are employed in agriculture, but there are no data upon which a proportion of agriculturists to non-agriculturists could be based.

167 There is no immigration into the District. Both the Khásás and
198 the Synteng have been successful in preserving to the present day their primitive isolation, free from the interference of Hinduism. They still maintain their aboriginal forms of belief and religious worship, and repudiate alike the authority of Brâhmans and
(77) the entire system of caste. To some extent, however, they have
(262) given way to Hindu prejudices in the matter of purity of food. The
• (563) few Hindus to be found in the Hills are temporary residents, employed in civil and military employ, who always contemplate returning to their own homes. The traders are for the most part natives of the
(941) Hills; for the Mârwâri merchants, who penetrate into every other corner of Assam, have been able to obtain no footing in the face of Khásí competition. There is likewise no emigration from the District. The Biffmen are a well-to-do and contented race, and either produce themselves or obtain by trade sufficient to satisfy
(164) their scanty wants. A certain number of both Khásás and Syntengs proceed southwards every year to work on the tea gardens of Cáchár and Sylhet, but such absence from home is only temporary.

243 AGRICULTURE: RICE.—Thirteen different varieties of rice are cultivated in the District, of which the following is a list, giving the Khásí name as well as the description of the grain:—(1) *U-Kyhe-Mynsiew* (*u*, the masculine article, meaning 'the,' and *kyhe*, rice; *mynsiew*, meaning 'paddy'), brown rice with long grain; (2) *u-Kyhe-Mynsiew-ka-dâk*, a white rice with long grain; (3) *u-Kyhe-la-ruí*, round-grained rice; (4) *u-Kyhe-thar*, hundred, hundred; (5) *u-Kyhe-dew-la-ring*, black hooked rice (literally *u* = 'the,' *kyhe* = 'paddy,' *dew* = 'earth,' *la* = 'that,' *ring* = 'black'); (6) *u-Kyhe-la-dâk*, white rice; (7) *u-Kyhe-sim*, scented rice (literally *u* = 'the,' *kyhe* = 'paddy,' *sim* = 'myrtle'); (8) *u-Kyhe-la-dwak*, large-grained rice; (9) *u-Kyhe-la-ring*, small-grained rice; (10) *u-Kyhe-ar-tim*, early rice; (11) *u-Kyhe-ra-dum*, late rice; (12) *u-Kyhe-ring-ch*, rice grown along with beans; (13) *u-Kyhe-la-dâk*, small rice.

Rice is cultivated in marshy fields situated near running water as well as in high lands. The first seven of the above thirteen species of rice are sown in marshy lands during the months of April and May,

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

work is done. In order to ascend to a Bhoi house, you have to climb up a notched pole. The Bhois sacrifice a he-goat and a fowl to *Rih-ingkong* (Khasi, *Ramiew ding*), the household god, when they build a new house.

VILLAGES.

Unlike the Nagas and Kukis, the Khasis do not build their villages on the extreme summits of hills, but a little below the top, generally in small depressions, in order to obtain some protection from the strong winds and storms which prevail in these hills at certain times of the year. According to the late U Jowlon Roy, it is *sang*, or taboo, to the Khasis to build a house on the last eminence of a range of hills, this custom having perhaps arisen owing to the necessity of locating villages with reference to their defence against an enemy. Khasis build their houses fairly close together, but not as close as houses in the Bhoi and Lyngngam villages. Khasis seldom change the sites of their villages, to which they are very much attached, where, as a rule, the family tombs are standing and the *mawbynna* or memorial stones. In many villages stone cromlechs and memorial stones are to be seen which from their appearance show that the villages have been there for many generations. During the Jaintia rebellion the village of Jowai was almost entirely destroyed, but as soon as the rebellion was over the people returned to the old site and rebuilt their village. Similarly, after the earthquake, the ancient village sites were not abandoned in many cases, but the people rebuilt their houses in their former positions, although in Shillong and Cherrapunji they rebuilt the walls of the houses of wooden materials instead of stone. There is no such thing as a specially reserved area in the village *i.e.* the Siem and the nobility, all the people, rich or poor, living together in one village, their houses being scattered about indiscriminately. To the democratic Khasi the idea of the Siem living apart from his people would be repugnant. In the vicinity of the Khasi village, often just below the brow of the hill on the leeward side, are to be seen dark woods of oak

AR7 Khasi AR7
[P 110 B]

action. In other words, a state is not a fixed territorial entity. In the early twentieth century, the most populous of the 25 chiefdoms, Khyrim, contained 7633 persons occupying 7,800 houses in 272 villages, and the least populous, Nongkhrah, contained 2 persons occupying 33 houses in 3 villages. Fifty of the chiefdoms were headed by a *sparkar* (*raja*), three by a *lyngdoh* (*priest*), six by a *siemlieh*, or one by a *wahadadar*. These leaders all had executive and judicial functions, but a chief's authority was limited in that he had to obtain the approval of his executive council before acting. The other leaders were subject to a similar limitation. A chief maintained a small police force. His main sources of revenue were market tolls, fines, and more recently, some from licenses to distill rice whisky. Succession to a ruling role in the larger states traditionally involved election by members of a lineage that had a hereditary right to chief, from among members of a lineage that had the hereditary right to rule. In British times, the electoral basis was broadened, differentially in the various states, even to the point of popular suffrage. (Cf. Ardhanari 1955, Lyngdoh 1962.) Social stratification. The three classes of lineage are the nobles, the commoners, and the slaves or servants. To stratification applies only to the recruitment to roles in the native-state system, for there is no hereditary and in a village assembly everyone has equal voice. The noble lineages have the hereditary right (if) from among their male members, who such as sage or state priest, counsellor to a chief, or electors to chief. The few lineages which today are considered as slave or servant lineages had the inherited obligation to render special services to a chief's household. There is no Khasi term for "commoner." Every lineage other than a noble or a slave lineage is a commoner lineage, and the commoner lineages are in the majority. Warfare. Warfare was opposed by the British, and little is known for certain about its traditional forms. The tribes which occupied the British were the nobleth and the people said. Traditional goals included taking heads (to other Khasis and capturing women from the Shan.

ELGIN. Home and subsequent religious. A Welsh Calvinistic Methodist missionary penetrated into Cherrapunji in 1832, and the work that he began continues to this day. His society, which has since become the Welsh Presbyterian Foreign Mission, introduced writing, village primary schools, a high school, a theological seminary, and a hospital. Competing missionaries followed, and by 1924 some 80,000 Khasis were pouring over the hearth and cult of traditional Hinduism and Islam but also of the Buddhism, Brahmo Samaj, Arya Samaj, and Theosophy. Dec. 1924. In the 1920s, missionaries of the Church of God and the Seventh Day Adventists were

could not prevent individuals from becoming needy through misfortune or laziness and their trying to rent a part of their property for an annual payment or for a sum needed once. This is called ban die pan, literally: begging to buy. The sense of relinquishing by lending /133/ is contained in this. For example, a field is worth 300 reichsmarks. Fifty or 100 reichsmarks are accepted for it and the creditor remains the owner of the field until the money is repaid. This type of purchase occurs frequently. There are frequently traders (songhsii) who try to use such purchases to their own advantage. They turn over the field to the debtor for further cultivation in return for payment in produce of 50 to 70 per cent of the harvest. After several years the whole field is their property. Aside from this method, it also happens that instead of being able to repay the money the people need still further sums. In that case then the entire price of 300 reichsmarks is paid and the actual purchase is considered completed; that is called ban die lot, literally: totally, completely sold. A family-clan which gradually loses its property in this manner descends into poverty and need. There is nothing else for it to do than to look for work elsewhere, to rent land or to sell the children as a kind of slaves to better situated people. If 40 reichsmarks are paid for a child of about 10 years, he remains in the bondage of the buyer until the money can be repaid. That happens only rarely. Besides food and the most necessary clothing only one rupee is deducted annually as wage from the purchase price: thus, practically, the child belongs to the buyer for the duration of his life.

It is the duty of individual members of a family clan to work together so that the clan property will be maintained and will produce the necessary amount for the maintenance of all. The clan mother must oversee primarily that the appropriate customs and usages are preserved. She is held in high esteem by all. To do something against her wish to offend her, to call her insulting names, or to go so far as to strike her is considered sang (taboo), a severe crime that causes misfortune. It is a great sin (peq) and a thoroughly great disgrace (ongwuth ch tam) for the whole clan.(7) As long as a member

7. Also considered similar crimes are selling clan property in secret, incest, desecrating burial places in a coarse manner, making use of holy grounds or wood.

/134/ of the family has committed such a crime and has not begged pardon from the clan mother and the elders of the clan, perhaps with the words: pardon me, I have committed an error (to map to nga leh

16: McCormack K-4,5 (1956-1958) 1964
AR7 Khasi AR7
[P. 110B]

another. In other words, a state is not a fixed territorial entity. In the early twentieth century, the most populous of the 25 chiefdoms, Khyrim, contained 30,833 persons occupying 7,850 houses in 372 villages, and the least populous, Nongkhrai, contained 248 persons occupying 53 houses in 3 villages. Fifteen of the chiefdoms were headed by a *syiem* (chief), three by a *lyngdoh* (priest), six by a *siaw*, and one by a *wahadadar*. These leaders all had executive and judicial functions, but a chief's authority was limited in that he had to obtain the approval of his executive council before acting. The other leaders were subject to a similar limitation. A chief maintained a small police force. His major sources of revenue were market tolls, fines, and, more recently, income from licenses to distill rice whisky. Succession to a ruling role in the larger states traditionally involved election by members of a lineage that had a hereditary right to chief, from among members of a lineage that had the hereditary right to rule. In British times, the elective basis was broadened, differentially in the various states, even to the point of popular elections. (Cf. Aitchison 1931, Lyngdoh 1962.) Social stratification. The three classes of lineage are the nobles, the commoners, and the slaves or servants. This stratification applies only to the succession to office in the native-state system, for there is no hereditary power, and in a village assembly everyone has equal voice. The noble lineages have the hereditary right to fill from among their male members roles such as village or state priest, councillor to a chief, or electors of a chief. The free lineages which today are considered as slave or servant lineages had the inherited obligation to render special services to a chief's household. There is no Khasi term for "commoner." Every lineage other than a noble or a slave lineage is a commoner lineage, and the commoner lineages are in the majority. Warfare. Warfare was suppressed by the British, and little is known for certain about its traditional forms. The tactics which confronted the British were the ambush and the guerrilla raid. Traditional goals included taking heads from other Khasis and capturing women from the valleys.

RELIGION. Major and indigenous religions. A Welsh Calvinistic Methodist missionary penetrated into Cherrapunji in 1832, and the work that he began continues to this day. His society, which has since become the Welsh Presbyterian Foreign Mission, introduced writing, village primary schools, a high school, a theological seminary, and a hospital. Competing missionaries followed, and by 1914 some thirty Khasis were pouring over the tenets not only of traditional Hinduism and Islam but also of the Buddhism, Brahmo Samaj, Arya Samaj, and Theosophy (See 1914). By the 1950s, missionaries of the Church of God and the Seventh Day Adventists were

LAMDOH CEREMONY.

This ceremony is identical with that of *Pynhiar ayejat*, except that the bride and bridegroom do not interchange rings, and that there is no sacrifice of the pig. The parties merely buy some pig's flesh and perform a puja with a small portion of the flesh of the legs of the animal. Amongst the poor, fish sometimes takes the place of pork at the *Iadi-kind* ceremony. The latter consists of a drinking bout mingled with scattered sentences by a *nongkhnia* (sacrificer), the invocations and prayers being the same as at the *Pynhiar ayejat*. The *Lamdoh* and *Iadi-kind* ceremonies take the place of the more elaborate *Pynhiar ayejat* in most places now-a-days.

LYNGKAM MARRIAGE.

The ritual observed at these marriages is described as under:—First of all a proposal is made in the following manner. A *lyngap*, or go-between, is sent, with the brother of the girl for whom a husband is required, to the house of the father of the young man (not to the house of the mother as in the case with the Khasis). If the proposal is accepted, the father of the young man kills a pig, and gives a feast to the people of the village of his father-in-law elect; also to the go-between and the *lyngap* (brother of the bride). The father of the bride then gives a similar feast. A sum of Rs. 1 each is given as a present to the go-between by the fathers of the bride and bridegroom, and the father of the bride pays from Rs. 5 to Rs. 15 to the father of the bridegroom. Further feasting occurs at the house of the father of the bride. The go-between then sacrifices a pig and two fowls at the house of the bridegroom, and afterwards performs the same sacrifice at the house of the bride. At the house of the bride, after the fowls and the pig have been sacrificed, the go-between, after drinking liquor himself, pours out some on the floor of the house and then gives some to the bride and bridegroom to drink. The killing of the fowls, the sacrifice of the pig, and the libation of liquor are essentials at a Lyngkam marriage. The sacrifice of the fowls is also an essential feature

2:Stegmiller-21 M-4,5(no date)1921 AN7 Sheet AN7

784 not sei) See here the piece u dykhot (11) and
782

11. A piece of sacrificial meat.

the sour things u lanjew (12) (a strong and

12. Herbs, roots.

sweet liquor) sei (is it not sei)

[174] All relatives and acquaintances, friends and neighbors are invited to this sacrificial feast. There is a big festive meal, chiefly of meat and bacon. But before the eating begins, the rang (horn) and ngap (fork) which were laid on the "adulterer stone" before the curing of the pig are removed. At this sacrifice all the money collected before (11 or 7 1/2 or 5 1/2 of a kiw) must be completely used up, as it is forbidden to preserve any of it in house so that it will not get mixed up with the daily wage or one's earnings.

[175] The remarriage must naturally occur in another sib (jaid) if the sang is to be inherited; because otherwise the sang would remain in the family.

784 Most of the sang that occur, different according to the families or the sibs, are the following: (13)

13. Gurson, The Khasis, p. 5.

[176] 1. ~~Building a house with stone walls on all four sides.~~
2. The use of iron nails in building a house.
3. The use of more than one kind of wood in building a hearth.
4. The use of resinous wood in building a house.
5. Felling wood in a holy forest (except

15: Nakano E-6 (1955-1956) 1967 AR? Khasi AR?

society? Among the matrilineal Central Bantus, Richards says that the determining factor in residence at marriage is the marriage payment or the type of goods and services which the bridegroom gives (Richards, 1950, p. 149). However, the Khasi have no such custom in the marriage contract, it is therefore out of the question to explain the two types of residence in this way. In the case of the Khasi, the determining factor is the type of marriage with relation to the rule of inheritance and ownership of property, which is closely related to the structure of the sing. Khasi marriages can be divided into two categories i.e., marriage with an heiress and with a non-heiress. Marriages with an heiress must be uxorilocal. This accounts for category 1 or 3 of the household pattern. On the other hand, marriages with a non-heiress become uxorilocal and correspond to category 4 of the household unit.

IV. Relations with the Husband

A man married to an heiress, usually lives with his wife's parents and her unmarried or divorced brothers and sisters. For a man, life after marriage under such circumstances requires great adjustment and endurance. The husband's status is especially weak when a male member of the wife's kin lives in the same household. The management of property and all economic activities are entirely controlled by the authority (wife's brother or maternal uncle) of the sing. The husband works in the wife's field under constant supervision from this authority. Both economic activities and domestic affairs are always under the management of this authority. The children have more attachment to, and are more obedient to, the maternal uncle than to the father. The tie between the uncle and the nephew is so strong that the father is rather like an additional member of the household. He is the last person to be introduced to visitors.

This family system is clearly reflected in the daily behaviour. When we visited the Khasi household of a youngest daughter, if a man (obviously the husband) came first to greet us, he always said "please wait, my wife (or mother-in-law) is coming." And it was the wife who entertained us, offering tea or pan and discussing matters with us, while her husband remained silent in the corner of the room, or in the next room. If her uncle or brother was there, he would be the person who talked to us, while his niece or sister served us. In such a case, we were seldom introduced to the husband. When I was working at Shella, I happened to stay in such a family. I had hardly any opportunity to talk to the husband during the two weeks of my stay. He left the house very early in the morning and came back late in the evening from the fields. While he was at home, he was

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

MARRIAGE.

591 It is proposed in this section to consider marriage from its social side, the religious aspect thereof being reserved for another paragraph. The most remarkable feature of the Khasi marriage is that it is usual for the husband to live with his wife in his mother-in-law's house, and not for him to take his bride home, as is the case in other communities. This arrangement amongst the Khasis is no doubt due to the prevalence of the matriarchate. As long as the wife lives in her mother's house, all her earnings go to her mother, who expends them on the maintenance of the family. Amongst the Khasis, after one or two children are born, and if a married couple get on well together, the husband frequently removes his wife and family to a home of his own, and from the time the wife leaves her mother's house she and her husband pool their earnings, which are expended for the support of the family. Amongst 591
the Syntengs, however, and the people of Maodai, the case 576
is different, for with them the husband does not go and live in his mother-in-law's house, he only visits her there. In Jowai some people admitted to me that the husband came to his mother-in-law's house only after dark, and that he did not eat, smoke, or even partake of betel-nut there, the idea being that because none of his earnings go to support this house, therefore it is not etiquette for him to partake of food or other refreshment there. If a Syntengs house is visited, it is unusual to find the husbands of any of the married daughters there, although the sons of the family may be seen in the house when they have returned from work. Generally in the day-time you will find in a Syntengs dwelling an old crone, who is the grandmother or even the great-grandmother, of the family, also grandchildren or great-grandchildren; but the husbands of the 796
married daughters are not there. The Syntengs seem to have 69
more closely preserved the customs of the matriarchate than the Khasis, and the Syntengs claim that their *niam* or religious ceremonies are purer, i.e. that they more closely correspond to what they were in ancient times than those of the 591
Khasis. Amongst the Syntengs, occasionally, a widow is 765
allowed to keep her husband's bones after his death, on cer-

21: Khrumfeis E-4,5 (1950) 1953 AR7 Khasi AR7

on a historical past, different from that of the Khasi proper, the former having been ruled by the powerful, but somewhat Hindoised dynasty of the Jaintia Rajas until the Jaintia Wars of the British; the latter by small independent chiefs. Yet Jaintia social organization appears on the whole to preserve the matrilineal social structure clearer and to be less influenced by plains-acculturation, than that of the Khasi, though a few features of Brahmanical religious observances and also some traces of racial admixture are found in the immediate vicinity of Jowai, the former summer residence of the Jaintia Rajas. Stronger no doubt, than this influence, was that exercised by the British and non-Assamese Indians in the provincial capital Shillong since 1866. Methods of agriculture and other aspects of material civilization differ but little in the Jaintia- and Khasi plateau-areas.

The same cannot be said of both: the Wár-Khasi and Wár-Jaintias. Linguistically their affiliations are with the Khasi or Jaintias respectively, in the plateau-areas. Economically, however, both Wár-groups form a separate pan-leaf cultivating unit in the little accessible steep southern slopes of the Khasi- and Jaintia Hill massif. Both Wár-groups live in the environment of luxurious tropical flora and fauna, sharply differentiated from the cool, barren plateau with its perennial winds and the heroic, if solitary beauty of its highland heaths, which forms the background of both the Khasi- and Jaintia plateau-groups.

The age of the Wár-Khasi and -Jaintias, as one independent economic, — and two -half-independent dialectical linguistic entities, is an intricate problem. The two Wár-groups subsist on pan-leaf cultivation as a money crop, grown in the thick tree-gardens as creepers; not on food-cultivation, as do the plateau-groups, because there is insufficient space on the steep slopes, for vegetable gardens or -fields. The pan-leaf cultivators therefore depend on food, purchased from outside. The slopes seem to have been uninhabited until not long ago. Yet pan-leaf chewing is such an integral part of Khasi life, that until quite recently, and occasionally even now, a distance between two places is not measured by the number of hours used for walking, but by the number of betelnut- and pan-leaf packages, consumed on the way. Also the common benediction among Khasi expresses the wish that so and so may eat pan in the Garden of God. Yet pan-cultivation and the settlements of the Wár-people as pan-leaf cultivators in the southern slopes seem comparatively young. Pan-cultivation on the plateau is impracticable. It is therefore possible that pan was for a long time only a much valued import article from the plains, bartered against Khasi ore and iron tools, though it is now an export article from the Wár-country, brought to the markets of the plains, by both Wár-Khasi and Wár-Jaintia women and men.

According to a tradition, across which I came among the Nonglamin clan of the Nongmuker village, the ancestors of the present Wár people were on the plateau at a time when no pan-cultivation was going on in the slopes and none of the present big estates of pan-tree gardens was yet held by their present (Wár-) owners. A not distant ancestor of a Nonglamin clan-member who about two or three generations ago told the story to U Siang (one of

which are not found usually to the people of India. Shots not above mentioned below, and even the Khasi chief to the Government officer is quite ready to take his turn at the bow to his private garden. The men make excellent stonemasons and carpenters, and are ready to learn heavy carpentry and mechanical work. They are inveterate chewers of betel and the pan leaf (when they can get the latter), both men, women, and children; distances in the interior being often measured by the number of betel-nuts that are usually chewed on a journey. They are not addicted usually to the use of opium or other intoxicating drugs. They are, however, hard drinkers, and consume large quantities of spirit distilled from rice or millet. Rice beer is also manufactured; this is used not only as a beverage, but also for ceremonial purposes. Spirit drinking is confined more to the inhabitants of the high plateau and to the people of the War country, the Bhoiis and Lyngngams being content to partake of rice beer. The Wikiru who inhabit what is known as the "Bhoi" country, lying to the north of the district, consume a good deal of opium, but it must be remembered that they reside in a malarious tract country, and that the use of opium, or some other prophylactic, is probably beneficial as a preventive of fever. The Khasis, like other people of Indo-Chinese origin, are much addicted to gambling. The people, and especially those who inhabit the War country, are fond of litigation. Col. Dixon remarks, "As regards truthfulness the people do not excel, for they rarely speak the truth unless to suit their own interests." Col. Dixon might have confined this observation to the people who live in the larger centres of population, or who have been much in contact with the dwellers of the plains. The inhabitants of the far interior are, as a rule, simple and straightforward people, and are quite as truthful and honest as peasants are wont to other countries. My impression is that the Khasis are not less truthful certainly than other Indian compatriots. Mr. Cech, writing in 1907, speaks well of the Khasis. The following is his opinion of them:—"They are a powerful, athletic race of men, rather below the middle size, with a manliness of gait and demeanour. They are fond of their nationality, and look down with contempt upon the degenerate race of the

[the Khasis ---- Ind p.1]

577 plans, jealous of their power, have to action, and have no
[illegible] to falsehood."

[illegible] Khasis of the interior who have adopted Christianity are
[illegible] generally cleaner in their persons than the non-Christians,
[illegible] and their women dress better than the latter and have an air
[illegible] of self-respect about them. The houses in a Christian village
[illegible] are also far superior, especially where there are resident Euro-
[illegible] pean missionaries. Khasis who have become Christians often
[illegible] take to religion with such earnestness (witness the recent
[illegible] religious revival in these hills, which is estimated by the Welsh
[illegible] missionaries to have added between 4,000 and 5,000 converts to
[illegible] Christianity) and are model fathers, it being a pleasing
[illegible] sight to see men, women, and children trooping to church on
a Sunday dressed in their best, and with quite the Sunday
expression on their faces one sees in England. It is a pleasure
to hear the sound of the distant church bell on the hill-side on
a Sunday evening, soon to be succeeded by the beautiful Welsh
hymn tunes which, when wafted across the valleys, carry one's
thoughts far away. The Welsh missionaries have done, and
continue to do, an immense amount of good amongst these people.
It would be an evil day for the Khasis if anything should move
to arrest the progress of the mission work in the Khasi Hills.

[illegible]

[illegible] The Khasis inhabit the Khasi and Jaintia Hills, although
[illegible] there are a few Khasi settlers in the neighbouring plains
districts. The Census Report of 1901 gives the following
figures of Khasi residents in the plains:—

Cachar	[illegible]
Sylhet	[illegible]
Chittagong	[illegible]
Kamrup	[illegible]
Darrang	[illegible]
Nowgong	[illegible]
Sibsagar	[illegible]
Lakhimpur	[illegible]
Garo Hills	[illegible]
North Cachar	[illegible]
Naga Hills	[illegible]

bGordon E-4, 5 (no date) 1907 AR7 Khasi AR7

[illegible] [illegible] ness, short for *bias* (grandmother), and *ba*, mother. *Ka Iawbei* is the primeval ancestress of the clan. She is to the Khasis what the "tribal mother" was to old Celtic and Teutonic genealogists, and we have an interesting parallel to the reverence of the Khasis for *Ka Iawbei* in the Celtic goddess Brigit, the tribal mother of the Brigantes. Later on, the Ka Iawbei, she was canonized, and became St. Bridget.*

[illegible] The greater number of the flat table-stones we see in front of the standing monoliths in these hills are erected in honour of *Ka Iawbei*. In former times, it was the custom to offer food to her on these stones. In cases of family quarrels, or dissensions amongst the members of the same clan, which is to desired to bring to a peaceful settlement, it is customary to perform a sacrifice to the first mother, "*Ka Iawbei*." They first of all take an augury by breaking eggs, and if it appears from the broken egg-shells that *Ka Iawbei* is offended, they offer to her a cotton cloth, and sacrifice a hen. [illegible] To these occasions incantations are muttered, and a small drum, called, "*Ka 'ding ding ding*," is beaten. It is not unlikely that the Khasi household deities, *Ka Iai ding* and *Ka Iaew ka jingpon*, to whom pujas are offered for the welfare of the house, are also *Ka Iawbei* in disguise. Notwithstanding the strong influence of the matriarchate, we find that U Thawlang, the first father and the husband of *Ka Iawbei*, is also revered. To him on occasions of domestic trouble a cock is sacrificed, and a *jingkong* or cloudless coat is offered. This puja is called *haba tap Thawlang*, i.e. covering the grandfather. The following incantation to U Thawlang is then chanted — "Oh, father Thawlang, who hast enabled us to be born, who hast given us my stature and my life, I have wronged thee, oh father, be not offended, for I have given thee a pledge and a sign, i.e. a red and white cloudless coat. Do not deliver us into the power of (the goddess of) illness, I have offered thee the propitiatory — ok that thou mayest carry us in thine arms, and that I may be aware of thee, my father Thawlang." [illegible] We see clearly from the above prayer that the Khasi idea is that the spirit of the deceased only becomes capable of

* Kati Dawson says on "mother age civilisation."

TRZ

a) at the mau ating (first burial),
b) at the mau phou (second burial),
c) at the mau bah (third burial).

20. The sacrifice in memory of the deceased:
a) the sacrifice at the end of a month,
b) the sacrifice at the end of a year.

These various sacrifices can be offered by the official lyngdoh as well as by other lyngdoh or even by ordinary men from the people, provided they know precisely the ritual which governs the family concerned and are guided by it.

TRZ TRZ A definite spiritual attitude is not required for any sacrifice. There is only one exception here: namely at the sacrifice for the third and last burial of the house in the mau bah. This may only be carried out if all relatives of the sib concerned are living in peace with each other. This must be established by the lyngdoh himself who is performing the sacrifice. If any kind of enmity or a quarrel is discovered by the investigation, the burial and the sacrifice that goes with it must be postponed until the condition of general peace in the family is fulfilled.

TRZ TRZ As concerns the place of the sacrifices, the areas may be divided in the following way:

1. Sacrifice is made in the hut:
at the name giving,
after recovering health.

2. Sacrifice is made in the courtyard in front of the hut:
when questioning spirits,
before important business,
in cases of sickness,
where health,
in case of death.

3. Sacrifice is made away from the house:
at a connection at the place it occurs,
at the three different burials of the house at the places where they occur,

bungler!" (27) When the opponent aims and

27. P.G. Schuhele, "Das Pfeilschiessen der Shoal" (Arrow Shooting Among the Shoal), Salvatorianische Mitteilungen (Salvatorian Communications), 1930, No. 2.

shoots they shout at him: "Ion ikpudu, ken ohimpi i.e., ent earth, ent sand" (the opponent's arrow is supposed to fly into the earth or sand). There is ample opportunity here for talking extemporaneously as the Shoal do love to do. Following the examples mentioned above they shout at the archers of their own team or of the opponents' team. At the same time I have never noticed that anybody felt insulted or that quarrels and fights ever arose. If somebody feels affected by the remarks, he or one of his team tries to overtrump his opponent by a really potent remark. If that is successful everybody rejoices in the comment and the round of shooting continues peacefully. When a round of ten or more archers who have each shot three or more arrows is finished, the judge enters the closed-off place and counts out loud the arrows sticking in the target. With a great hullabaloo the crowd confirms the number of hits; the opponents do the same and then the contest begins again with all the (27) action described above. When this process has been repeated often, a longer pause occurs. During this, and often during the shorter recess after each round, the women and girls hand out refreshments. The water pipe makes the rounds and no one spares prices. This is continued till

Because of her whole position as guardian of the inherited religion and customs, it is not frequent that such a woman breaks with the ancestor cult. If this does happen, it does not necessarily mean that she loses the entire property. That depends really on the position the other members of the family take. If they are all still firm heathens, who wish to have nothing to do with Christianity, they can force the clan mother to give everything up. The high respect for her is frequently so great, however, that either the whole clan or at least a part of it decides to take the same way and change religions with the clan mother. The part that remains heathen will certainly propose a division of the family property. This is also possible in other cases.

4. Division of the Family Property.

Although it is rare, the weal and woe of a family-clan can require that a family-clan be split into two clans /Clan/ and that a division of the common property be undertaken. The basis for this is if the family /Gwaklacks/ becomes too big, if the elders in the family council /Bib/ are no longer united and have and revenge disease to demon, if a part of the clan /Clan/ wishes to seize the heron fields by violence and refuses to deliver the harvest for the common need, if one branch has brought the whole clan /Kipps/ dishonor and shame by false oath, incest, revenge, treachery or some other severe crime. Only the guilty party will be excluded from the clan /Clan/ in such cases, if he remains stubborn and impenitent. But if he begs for forgiveness with his lips and participates in the expiatory sacrifice, forgiveness will not be refused him. But a certain bitter remorse and bad feeling often remain behind.

In the conversion to another religion, it often depends on how the clan mother and also the family elders are inclined towards the religion in question, and also on who is changing religions. If it is only brothers, sons, nephews, or grandsons, of the clan mother, a division is out of the question, since the men are not capable of inheriting. But if it is the youngest or next youngest daughter or even the dame of the clan mother, then a division of property can be undertaken. A clan mother after all is so attached to her child or her nearest blood relatives that she would not like to push them entirely away from herself unless she were completely set against the religion in question and angered. If that should be so in individual cases, the heirs concerned will still consider, whether it is not more advisable to wait to change her religion until the clan mother has closed her eyes and she then has free play. Then that which was mentioned at the conclusion of the previous section has arrived.

29: Hunter G-4 (no date) 1897 AR? Khasi AR?

291 only of fine silk for the bride, a part of which hangs gracefully on her
as the salwar in front. No notice is here taken of what has
undoubtedly been added and borrowed from their more civilized
neighbours in the plains.

58 • "Marriage. — The marriageable age for females is from 15 to
18; for males, from 18 to 24. Matrimonial alliances are con-
tracted either through the parents or the living representatives of
the families to which the parties belong. The mode of procedure
is still very primitive and unceremonious. The bridegroom,
escorted by a number of friends and relatives, goes to the house
of the bride, where all are feasted and lodged for the night; on the
morrow he leads the bride, accompanied by a number of her
relatives, to his own house, and entertains the company with dishes
of boiled rice and fresh pork. After remaining there a day or two, 591
the newly-married couple return together to the house of the wife,
which becomes their future home. Marriage is dissoluble by 596
regular divorce, for any sufficient cause, and often without any
assignable reason except mutual dislike or want of issue, the latter
being the most common case of all. Marriage with the Khasis [581]
is simply a conventional arrangement, with nothing further for its
object than the procreation of children; failing that, it is no longer
looked upon as a contract permanently binding. Divorce is effected
in the presence of eye-witnesses—the parents, or the heads of clans.
Five cowries (*kauri*) are produced by the parties and exchanged,
then cast away by mutual consent, and the ceremony is over.
Parties once divorced can never again contract marriage with 587
each other, but they are at liberty to marry into other families.
Polygamy, strictly so called, is not mentioned by Khasi women. 595
Adultery is looked upon as a serious crime. If the two cowries 597
have not been cast away by mutual consent, both husband
and wife are held to be subject to the "sacrificial dues;"
and even when either dies in outlawry, the survivor is not at 587
liberty to contract a fresh alliance until he or she pays the family
a sum of money as the means of removing the surviving party
from subjection to the "sacrificial dues." The husband is a 593
stranger, so to speak, in the family he has entered, and perpetuates 611
the race of others, not his own. The children in all questions of
lineage and personal rights follow the mother. There are always
two houses in the same family—that of the husband, and that of
the wife. Whatever the husband may have earned or acquired in 593
628

St Gordon C-3 (no date) 1904 AR? Sheet AR?

child is a female. Up to the present time I have not discovered any trace of the crescent.

8. *Marriage ceremony.*—Marriage is a purely civil contract. The most prominent features of the Khasi marriage are the following:—

(a) The cymbiar spojat, or betrothal.

(b) The pouring out of libations of liquor to the *Jowbai* (the first national ancestress).

(c) The eating by bride and bridegroom out of the same plate.

(d) The mixing of liquor by the bridegroom, or go-between.

(e) The taking of the bride to the house of mother of the bridegroom, where a ring is placed on her finger by her mother-in-law.

9. *Divorce* can be easily obtained amongst the Khasis. Adultery, want of issue, and incompatibility of temper, are some of the more frequent causes. The usual ceremony of divorce is as follows:—The husband breaks the wife five sovereigns, or pice. The wife breaks them back to the husband, with five of her own. The man then either throws them away or breaks them over to some village elder, who throws them away. Divorce is then complete.

10. *Death, ceremonies.*—The corpse is bathed and laid on its back. A fowl's egg (*ka'ingkynsi*) is then placed on the navel. A cock (*ka' ka'ewbal*) (a fowl that scratches the way) is sacrificed. The limbs of the fowl and its feathers are placed in a bamboo basket, which is hung up over the head of the corpse. Sick people sacrifice a cow also, called *ka mait pyrsiem*. When a cow is sacrificed it is shot through the heart with an arrow. From the time of bathing the body till it is burned, offerings are offered daily; these offerings are called *ai ja mint ja sip*. It is the custom amongst some to place the corpse in a long narrow box or coffin, which has been hollowed out of the trunk of a tree; this is called *ka shynrah*. When this procedure is adopted, a small pig, which is killed by a spear (*ka mawsi*) is sacrificed. This sacrifice takes place during the night. A goat (*U long ma' bandiew* goat to wash the dead)—which is believed to be a stupefant to bear the sins of the deceased—is sacrificed. The corpse is then taken outside and placed on a bamboo bier (*ka trong*). When the *shynrah* is used it is placed inside the bier. Rope rice is scattered on the ground, and water is poured from a *kuta*. On arrival at the burning place, the bier, with the corpse in it, is placed on the pyre, or *jingthang*. The egg placed on the navel is then broken on a plank and a fowl (*Ka ma pudi*) is sacrificed. Two arrows are shot, one to the east and another to the west (this is a Khasi custom only); the arrows are intended for the protection of the spirit on its way to another world. Fire is then applied to the pyre.

Oh God from above, oh God from below, Thou God who omniscient, who keepest and preservest, Thou God who createst man and the origin and source of human life,—as ordained by Thee, Oh God, U Blei (God in the male aspect), Ka Blei (God in the female aspect) that there should be *I Kha* (person to bear and give birth) *I man* (person with whom and through whom to give man to life and to grow), as token has been brought down this day, [a ring is given], so that Thou mayest hear clearly from above, that such and such *jaid* (kind, clan) and such and such a *jaid* (kind, clan) have become joined in marriage in order to increase, in order to grow, so as to increase the state of being female and the state of being male (i. e. male and female population)." [This is said as a woman of a certain clan always marries a man of a different clan.] As I have 591
said elsewhere, "There is no tradition among the 713
Khasis that there was ever a time when the status of marriage did not exist among our ancestors. There is a belief among the Khasis that they were instructed in their religion and that their ceremonies and rites were delivered by God Himself to the

14:Roy 1-5 (no date) 1938 AR7 Khasi AR7

[59] [71] *Hynniew Trep Hynniew Skum* (the seven castes, seven roots). These seven castes or roots were seven pairs of virgin women and men created by God to marry and they formed seven homes (families) and from these the country was filled and the rites and ceremonies were obtained. Thus the Khasi takes pride in the fact that God Himself delivered their religion and the rites and ceremonies unto them. ... The Khasi matrilineal system has come down through ages and with a definite idea of the union of one man with one woman. This is significant for those who consider that marriage is and has always been common to the whole human race, and it raises the question as to whether the Khasi idea is the survival of a period when the nature of paternity was not understood".

[85] [601] [551] In the sacred rites of baptism of this simple folk we find that a Khasi grandmother will not officiate in the name-giving ceremony unless in the marriage of her son with the woman to whom the child is born there has been the regular ceremony of marriage.

19: Nakano E-9 (1955-1956) 1967 AR? Khasi AR?

society? Among the matrilineal Central Bantus, Richards says that the determining factor in residence at marriage is the marriage payment or the type of goods and services which the bridegroom gives (Richards, 1950, p. 149). However, the Khasi have no such custom in the marriage contract, it is therefore out of the question to explain the two types of residence in this way. In the case of the Khasi, the determining factor is the type of marriage with relation to the rule of inheritance and ownership of property, which is closely related to the structure of the sing. Khasi marriages can be divided into two categories i.e., marriage with an heiress and with a non-heiress. Marriages with an heiress must be uxorilocal. This accounts for category 1 or 3 of the household pattern. On the other hand, marriages with a non-heiress become uxorial and correspond to category 4 of the household unit.

IV. Marriage with an Heiress

A man married to an heiress, usually lives with his wife's parents and her unmarried or divorced brothers and sisters. For a man, life after marriage under such circumstances require great adjustment and endurance. The husband's status is especially weak when a male member of the wife's kin lives in the same household. The management of property and all economic activities are entirely controlled by the authority (wife's brother or maternal uncle) of the sing. The husband works in the wife's field under constant supervision from this authority. Both economic activities and domestic affairs are always under the management of this authority. The children have more attachment to, and are more obedient to, the maternal uncle than to the father. The tie between the uncle and the nephew is so strong that the father is rather like an additional member of the household. He is the last person to be introduced to visitors.

This family system is clearly reflected in the daily behaviour. When we visited the Khasi household of a youngest daughter, if a man (obviously the husband) came first to greet us, he always said "please wait, my wife (or mother-in-law) is coming." And it was the wife who entertained us, offering tea or pan and discussing matters with us, while her husband remained silent in the corner of the room, or in the next room. If her uncle or brother was there, he would be the person who talked to us, while his niece or sister served us. In such a case, we were seldom introduced to the husband. When I was working at Shella, I happened to stay in such a family. I had hardly any opportunity to talk to the husband during the two weeks of my stay. He left the house very early in the morning and came back late in the evening from the fields. While he was at home, he was

always somewhat outside the family concentration, which was centred on the maternal uncle and his sisters, nephews and nieces, by whom I was well taken care of. This is somewhat similar to the situation amongst the Cewa and the Yao of the Central Bantus, which have what Richard calls 'the detachable husband' (Richards, 1950, pp. 232-35, 248), though the parallel is not by any means exact.

There is, therefore, inevitably an element of tension in the relations between the wife's maternal uncle (including parents-in-law) and the husband (son-in-law) and this tension makes the latter's life extremely uncomfortable. This awkward position is well shown in the divorce rate. At Kongton (see List 9), out of 60 couples (house-owners and their spouses), the number of persons who had experiences of divorce was 33 (female 15, male 18) and those married more than twice numbered 13 (female 7, male 6). Out of 60 couples, there were only 32 in which neither husband nor wife had been divorced. In my census of Jaringa village, 70 per cent of all divorce cases were marriages to Bengalis. In general, the period when divorce occurs more frequently is before a couple get children and after the wife has passed the child-bearing age. A marriage breaks up either through the action of the wife or of the husband, but generally through that of the wife. However, the state of separation which I presently describe is brought about by the husband, though later it results in a divorce from the wife. Divorce does not mean a great catastrophe for a Khasi wife, especially if she is an heiress and her husband's economic contribution is not significant. Moreover, in this society remarriage is as easy for a widow or divorcée, as it is to divorce. In the villages of Sohkynduh and Kongton, the couple who wants to divorce has only to throw a few Assam together in the presence of some witness, usually an elderly man.

In addition to divorce, there are many actual separations of husband and wife, of short or long duration, when the husband runs away from his wife's house to his sister's. Though it does not always end in divorce, considerable number of husbands have a strong tendency to spend most of their time at their sister's house. Khasi women often told me, "I don't know why he does not come back to my place." I have often found the husband staying at his sister's house only a few houses away from his wife's, without any particular reason. They are obliged to see each other every day whether divorced or separated. This kind of ambiguity in the marriage relation seems to have an important correlation with the Khasi social structure, combined with the village endogamy. The man and and wife have grown up together from their childhood in the same village and known each other very well. Hence their psychology cannot clearly distinguish the marriage form as a newly-established independent social relation.

ship. They will live in the same familiar atmosphere as before their marriage. The implications of this antiquity in the married state are considerable. Particularly the husband's uncomfortable situation, when the wife is known, encourages him to take marriage too seriously.

A husband who undergoes hardship in his wife's house, finds himself on the authority in his sister's house; if he is not the authority, he can find at least a respected position as uncle or brother. In the case of a man of authority in the ring, the tendency for him to regard his ring as more important than his married life is proportionately stronger, as I will discuss later. Hence the most unstable and unsuccessful marriages are those between the heiress and the man of authority. This is one of the reasons we often find among the Khasi a brother or an uncle, who is already married, acting nevertheless as the head to a family (ring) and as a member of its domestic group. This means that he is in a state of temporary separation or divorced. Among the Ashanti, a man and his wife's brother are never found as members of a common household (Fortes, ibid., p. 184), but among the Khasi, on the contrary, a man and his wife's brother are often found as members of a common household. In such cases, however, the brother has no wife, or never brings his wife to his ring. Therefore, a man and his wife and his sister never reside together. As far as the residence of women is concerned, the Khasi keep to the strict descent rule; two women who belong to different descent groups never live together. This point differentiates the Khasi residence pattern, in which social structure is involved, from that not only of the Ashanti but also of the Tiv where the head of a descent group can bring his wife to his sister's household, though, among other members, conjugal marriage is the rule. These differential aspects of matrilineal systems will be discussed from a more theoretical point of view later.

In addition, should a Khasi man even succeed in spending his life with his wife's kinsmen, as soon as the wife dies, he will usually return to his ring, that is, to his sister's house, where he is received warmly and where he often acts as the de facto authority, as in the similar situation of divorce and separation. Thus the strong matrilineal structural principle tends to orient a man towards his own descent group, the ring.

The man's attachment to his ring is very great throughout his life. In this regard the Khasi differ from the matrilineal Nagar families Hsieh. Among the latter, returning to the matrilineal kin is regarded by the man as an imposition rather than as the enjoyment of a legitimate privilege (see Iwata, ibid., p. 177).[1] This difference

1. He seems to have had as one of the reasons of the fluidity of marriage among the Nagar families. Indeed, on this precise point they differ from the Khasi when marriage is rather unstable.

after divorce or husband's death, the Ekuri woman stays on in her household. Indeed many divorced or widowed poor wives, whose children are still small, try their best to live and bring up their children by themselves without asking their brothers' help. Of course a mother and her small children may go back to live in her natal ward. Such cases are found particularly when the woman's ward is rich. However, during my field work, I found no cases of psychological inferiority in Ekuri women, widows or divorcees, such as we usually find in other societies. The personality of the individual seems to reflect the social structure.

Given such strong residential independence on the part of the non-heiress, economically divorced from her descent group, and situated towards sociological separation from it, the husband's economic and social contribution is handsomely rewarded by the establishment of a stable, happier, matrimonial life. In fact, as already mentioned, the divorce rate among such couples is very low contrasted with the high rate among marriages with heiresses. More accurately, I should say that divorce is more likely to occur among the latter owing to the conflict of loyalties towards spouse and ward. Therefore, when such partner has less loyalty towards his or her natal ward, the divorce rate becomes correspondingly lower. Thus, among the Ekuri, successful marriages are frequently found where there is branching off from an ward and a new ward is always established by a husband's contribution.

Ekuri men, who are well aware of this fact, prefer to marry a non-heiress, since they will then form an independent household and remain immune to pressure from their wife's kin. However, they say a poor or lazy man prefers marriage with an heiress. As Richards said of the matrilineal Central Bantus, the residence on marriage seems to be a most important index of the husband's status, though the determining factors of the residence of the Ekuri differ from those of the Bantus (see p. 109).

In the case of marriage with an heiress, when the wife dies, the husband usually returns to his ward (the youngest sister's house). But in marriage with a non-heiress the husband often remains with his children, if his children are not too small and he is not planning to marry any woman other than his late wife's younger sister. If he marries his wife's younger sister, he has the right to stay on. This kind of sororal marriage cannot take place in the case of a man married to an heiress, since a Ekuri man is not allowed to marry the late wife's elder sister. This form of sororate is found among the Ekuri, but the levirate is unknown, such as can be seen among the Ashanti and the Ibo, where a man takes his late brother's wife. Among the Ekuri, even if a widow happened to marry her late husband's

19: Nakane K-9 (1959-1964) 1967 AR? Khasi AR?

any man other than their husband. Women before marriage enjoy a considerable freedom in love affairs, but once married these are no longer tolerated. Women should be faithful wives. They should be so in order to keep their husbands who have a strong tendency to leave their wives. The husband of a woman who has an affair with another man, will never come back to her. There is no attraction to draw the husband, who has been at his sister's, to his wife's house unless she is good and charming. Such Gurdon's remarks as "There is no evidence to show that polyandry ever existed among the Khasis. Unlike the Tibetans, the Khasi women seem to have contented themselves always with one husband, at any rate with one at a time" (Gurdon, 1914, p. 77), is utterly nonsense: a Khasi woman is placed in a situation which is not easy to monopolize even one husband. However, the Khasi social organization in general does not accord to the practice of polyandry.

MARRIAGE AND FAMILY. Mode. According to the traditional courtship pattern, a group of young male relatives and friends made nightly visits to the house of some virgin girl in another village, approaching her through bamboo while she and her parents appeared them, and staying the night to avoid the dark walk home. Marriage was according to the wishes of the parents after negotiation by a go-between from the boy's side. Girls might be 15, and boys 17 years of age. Girls have now acquired freedom of movement through attending school, however. Premarital sexual play is common, and young people choose their own spouses when the girl is about 16 and the boy 21. The most common mode of marriage is elopement, for Christians and non-Christians alike, but some Christians marry in church, and some Khasis still marry according to the traditional ceremony or some variation on it. There are no preferred or prescribed marriage types, nor is there a bride price or dowry. Form. Monogamy is the ideal for all. Extension of incest taboos. Sibs are exogamous. Other prohibited marriage partners are real and classificatory FaSi and FaBr, FaBrCh, FaSiCh, and FaSiSiCh. The MoBrWi is also prohibited. Boy

strip of fine silk for the loins, a part of which hangs gracefully as low as the calves in front. No notice is here taken of what has undoubtedly been added and borrowed from their more civilised neighbours in the plains. 291

MARRIAGE.—The marriageable age for females is from 15 to 18; for males, from 18 to 24. Matrimonial alliances are contracted either through the parents or the living representatives of the families to which the parties belong. The mode of procedure is still very primitive and unceremonious. The bridegroom, escorted by a number of friends and relatives, goes to the house of the bride, where all are feasted and lodged for the night; on the morrow he leads the bride, accompanied by a number of her relatives, to his own house, and entertains the company with dishes of boiled rice and fresh pork. After remaining there a day or two, the newly-married couple return together to the house of the wife, which becomes their future home. Marriage is dissoluble by regular divorce, for any sufficient cause, and often without any assignable reason except mutual dislike or want of issue, the latter being the most common case of all. Marriage with the Khásiás is simply a conventional arrangement, with nothing further for its object than the procreation of children; failing that, it is no longer looked upon as a contract permanently binding. Divorce is effected in the presence of eye-witnesses—the parents, or the heads of clans. Five cowries (*kawris*) are produced by the parties and exchanged, then cast away by mutual consent, and the ceremony is over. Parties once divorced can never again contract marriage with each other, but they are at liberty to marry into other families. Polygamy, strictly so called, is not sanctioned by Khási custom. Adultery is looked upon as a serious crime. If the five cowries have not been cast away by mutual consent, both husband and wife are held to be subject to the "matrimonial demon;" and even when either dies in wedlock, the survivor is not at liberty to contract a fresh alliance until he or she pays the family a sum of money as the means of removing the surviving party from subjection to the "matrimonial demon." The husband is a stranger, so to speak, in the family he has entered, and perpetuates the race of others, not his own. The children in all questions of lineage and personal rights follow the mother. There are always two interests in the same family—that of the husband, and that of the wife. Whatever the husband may have earned or acquired in

SECTION III.

LAWS AND CUSTOMS.

TRIBAL ORGANIZATION.

128 [97] The inhabitants of the Khasi and Jaintia Hills may be said to be divided into the following sections:—Khasi, Syntengs or Pnar, Wáir, Bhoi, and Lyngam. These divisions represent collections of people inhabiting several tracts of country and speaking dialects which, although often deriving their origin from the Khasi roots, are frequently so dissimilar to the standard language as to be almost unrecognisable. The above sections may be sub-divided as follows:—The Khasis into the inhabitants of the central high plateau, Cherra and Nongstoin, Mahadon, Maria, Nongkhlaw, and the neighbouring Siemships. The Syntengs or Pnars may be divided as follows:—Into Syntengs proper, Nongtungs, and Khawangs; the Wáirs into Wáir proper, and Wáir Pnar; the Bhois into Jaitbongs, Myntris, Rynghbongs, and the Khasi-Bhois, *i.e.* Khasis who inhabit the low country to the north of the district, which is called generally the "Bhoi." The Lyngams are a separate division. They must not be confused with the Dkos or Hatas who are Garos. It must, however, be remembered that the Jaitbong, Myntri, and Rynghbong sub-divisions of the Bhoi division are not Khasi, but Mikir, *i.e.* they belong to the Bodo or Bara group. The Lyngams are half Khasis and half Garos, and the Dkos or Hatas are Garos who observe the Khasi custom of erecting memorial stones. The above tribes and sub-tribes are not strictly endogamous, nor are they strictly exogamous, but they are more endogamous than exogamous; for instance, Syntengs more often marry Syntengs than Khasis, and vice versâ, and it would be usually considered derogatory for a

101 Sta. 619

Khasi of the Uplands to marry a Bhoi or War woman, and a diagram to marry a Lyngdoh. These divisions are subdivided into a number of septs, taking Mr. Risley's definition of "sept" as being the largest consanguine division of the tribe. It will, however, be more convenient to speak of these septs as "clans," the word "clan" having been used in other parts of this Monograph and by other writers.

Many of the clans trace their descent from ancestresses or *hiaw* (grandmothers), who are styled *ka Ioohoi Tymmei*, lit. grandmothers of the root (i.e. the root of the tree of the clan). In some of the clans, the name of this ancestress survives; take as instances the Mylliem-ngap and Mylliem-pdah clans of the Khynriam State, the name of the ancestresses of the clans being *ka ngap* (honey, i.e. the sweet one), and *ka pdah* respectively. This tribal ancestress, as will be seen in the paragraph of the monograph dealing with ancestor-worship, is greatly revered, in fact, she may almost be said to be deified. The descendants of one ancestress of the clan, *Ka Ioohoi Tymmei*, are called *shi kur* or one clan. We then come to the division of the *kpah* or sub-clan, all the descendants of one great grandmother (*ka Ioohoi Tymmei*), being styled *shi kpah*. The next division is the *iing* (lit. house) or family. It is almost invariably the case that the grandmother, her daughters and the daughter's children, live together under one roof, the grandmother during her life-time being the head of the house. The grandmother is styled *ka Ioohoi Khynnow*, or the young grandmother, to distinguish her from the other two grandmothers, *ka Ioohoi-tymmei* and *ka Ioohoi-tymmen* who have been mentioned above. The young grandmother, her daughters and their children are said to belong to *shi iing*, one house, the word *iing* in this instance possessing amongst the Khasis the same significance as the English word *family*.

We will now see how the Khasi clan (*kur* or *jaid*) grew out of the Khasi family (*iing*). Let us take the example of the great Diengdoh clan of Cherra. Disregarding the myth that the Diengdohs are descended from a mermaid, it may be stated that there seems to be a fairly general belief amongst the Diengdohs that their first ancestress or *hiaw* came from the

Sun (probably the Sun of Justice), and the Amwong Empire-
ion. They fled to a place called Lyndengumtilli, near Lyngkye-
ion. Finding this place unsuitable as a home, the family split up into four divisions. One division returned to Jowai, where it increased and multiplied and after-wards gave into the Lais class, another went to Nongkhlaw and became the Dienglah Kylla class; another went to Shwiong and formed what is now known as the Pariong class; the fourth, after some vicissitudes of fortune, went to Sangpreah and Chorra, at which place it established the powerful Dienglahlah class, and became after-wards one of the chief semi-c or minister class of this state. I have quoted the history of the origin of the Dienglah class at some length, to show what I consider to be an example of the Khasi conception of how the class was formed, i.e. from a common ancestress, all of the class having traditions more or less of descent from some particular Kinsa or ancestress. This story moreover is remarkable as pointing to a Khasi migration from beyond the Kopili river to their present abode. The clans of the present day are nothing more or less than exogamous families, they are bound together by the religious tie of ancestor-worship in common, and of a common tribal sepulchre, except in cases of clans which have, owing to their size, split up into several sub-divisions, like the Dienglah class; each sub-division possessing their own sepulchre. Ancestor-worship in common and tribal sepulchres in common serve to indicate that the original unit was the family and not the tribe, for there would be no reason for the members of a clan to worship the same household gods and to deposit the remains of the clan members in the same tomb unless there was some strong tie, such as that of consanguinity, binding them together. It has been already mentioned that each of these clans is strictly exogamous; this again supports the family origin theory. A Khasi can commit no greater sin than to marry within the tribe. Some of the clans are prohibited moreover from intermarriage with other clans, because of such clans being of common descent. If the titles (see Appendix) are carefully examined, it will be seen that some of them bear the names of animals, such as the *Shwish* or monkey clan, the *Thaw* or crab clan, or of trees, such as the Dienglah clan (already referred to). The

In Gordon E-6, 9 (no date) INT? AR? Khasi AR?

given that she does not remarry; the idea being that so long as the house remain in the widow's keeping, the spirit of her husband is still with her. On this account many wives who revere their husband's memories and who do not contemplate remarriage, purposely keep the house for a long time. If a widow marries, even after the customary taboo period of one year, whilst her deceased husband's house are still in her keeping, she is generally looked down upon. Her children in such a case perform the ceremony of handing over the bones of their father to his clan in a building specially erected for the purpose. The widow cannot enter therein, or even go near it, whilst the ceremony is proceeding, no matter whether the *ding-sang*, or the price for removing the taboo after a husband's death, has been paid to the husband's clan or not. There is no evidence to show that polyandry ever existed amongst the Khasis. Unlike the Thibetans, the Khasi women seem to have contented themselves always with one husband, at any rate with one at a time. Certainly at the present day they are monandrists. Polygamy does not exist amongst the Khasis; such a practice would naturally not be in vogue amongst a people who observe the matriarchate. There are instances, however, of men having wives other than those they have regularly married, and in the War country children by such wives enjoy rights to their father's acquired property equally with the children by the legally married wife. As the clans are strictly exogamous, a Khasi cannot take a wife from his own clan; to do this would entail the most disastrous religious, as well as social consequences. For to marry within the clan is the greatest sin a Khasi can commit, and would cause excommunication by his kinsfolk and the refusal of funeral ceremonies at death, and his bones would not be allowed a resting place in the sepulchre of the clan. To give a list of all the Khasi exogamous clans would perhaps serve no useful purpose, but I have prepared from information, kindly furnished me by the Siems of Khyrim and Cherrapunji, a list of the clans in those States which will be found in Appendices A and B. These will suffice as examples. It will be seen from the Cherra list that the different divisions of the Dienglieh clan, viz. Lain, Dienglieh-bah, Dienglieh-kylla, are prohibited from intermarriage; this is due to these branches of the clan being

[illegible] descended from a common ancestress. There are other instances of clans being connected with one another, such connection being called by the Khasis *iaiñ bor*. Whenever such connection exists, intermarriage is strictly prohibited, and is considered to be sang. There is no custom of hypergamy. A Khasi cannot marry his maternal uncle's daughter during the lifetime of the maternal uncle. This is probably due to the fact that the maternal uncle, or *bei*, in a Khasi household is regarded more in the light of a father than of an uncle. His children, however, would belong to the clan of his wife, and these would, therefore, in ordinary case be no bar to the nephew marrying one of them. Marriage with the daughter of a father's sister is not allowed during the lifetime of the father, but after the father's death there is no religious bar, although such unions are looked upon with disfavour by the Khasis. In the War country, however, such marriages are totally prohibited. A Khasi cannot marry two sisters, but he can marry his deceased wife's sister after the expiry of one year from the wife's death, on payment of *jing sang* (price of sang, or taboo) to the wife's clan. A Khasi cannot marry the daughter of his father's brother, she is his own like (or brth sister). Similarly he cannot marry the daughter of his father's paternal uncle. He can, however, marry the daughter of his mother's brother, provided that the brother is dead. This somewhat paradoxical state of affairs is explained by the fact that the children of the mother's brother belong to a different clan to that of the mother, i.e. to the mother's brother's wife's clan. The Khasi, Syiemg, War, and Lyngam divisions are not strictly endogamous groups, and there is nothing to prevent intermarriage between them. For instance, it has been the custom in the Nongkhlaw Sima family to obtain husbands for the princesses of the state from the War country. There is no custom amongst the Khasis of two men exchanging daughters, i.e. each marrying his son to the other's daughter. Notwithstanding the existence of the matriarchate, and the fact that all ancestral property is vested in the mother, it would be a mistake to suppose that the father is a nobody in the Khasi house. It is true that the *bei*, or [illegible]'s elder brother, is the head of the house, but the father is the executive head of the new house, where, after children

Preliminaries.—A young man of marriageable age, say between seventeen or eighteen years of age and twenty-five, has upon a girl of say between thirteen and eighteen years, as likely to become a fitting partner; probably he has been acquainted with the young woman for some time before and is on more or less easy terms of intimacy with her. He mentions the name of the girl to his parents and mother and sister in the house, and they agree or disagree, as the case may be. Sometimes marriages are arranged by the parents of the young people themselves. Having agreed regarding the fitness of the bride, the young man's parents and a male representative of the family, or in some cases a man unconnected with the family, arrange matters with the parents of the bride. The latter then consult their daughter's wishes. According to the late F. Barlow Rice, the daughter usually always agrees, it is very seldom that it is necessary to bring any pressure to bear. The parents then investigate whether there is any, or what, such as clan relationship, between the young woman and her intended, in the way of the marriage. If there is found to be such kinship, they fix a date for finally arranging the marriage (*Sao-ko Tai Bhiu*). On the day appointed the bride's family consult the auguries by boiling eggs and examining fowl's entrails. If the omens are favourable well and good. Should they be unfavourable, they abandon the marriage project. There is a strong prejudice against a marriage taking place under unfavourable auguries, the belief being that such an union will be childless, that the bride will die an untimely death, or that poverty will ensue. Given favourable auguries, the parents fix a day for the marriage. It was formerly the custom for the bridegroom to provide himself beforehand with a ring, usually of silver, but, amongst the rich, of gold, which is called *ko ngjet* (hence the name of the marriage ceremony *yodaw-ngjet*), and for the bride to provide herself with a similar ring. The bridegroom used to place his ring upon the bride's finger, and the bride used to place her ring upon the bridegroom's finger; it is however believed that this custom is now nowadays. On the marriage day a man is selected from the party of the bridegroom called a *kinsay* or go-between. The bridegroom then sets out with

TOTEMS

The word *pyrsa* is one in common use amongst the Naga tribes. It seems to be a matter of doubt whether the word belongs to any of the numerous languages or dialects spoken by these tribes; but for our purposes it may be taken to mean taboo. The Khasi word *ang*, which implies an interdiction either religious or social from doing any particular thing, might have been employed; but as the word *pyrsa* is so commonly used when speaking of taboos amongst the hill tribes of this province, I have thought fit to employ it here. The word *pyrsa*, or taboo, may be held to include the Khasi *ang*. Taboos amongst the Khasis, Wars and Lyngpows may be divided into two sections; (a) general, and (b) special. Instances of general taboos have not been found amongst the Khasis, but the following taboo called *Ka ang kha* amongst the War villages of Sohbar and Nongpi is peculiar and therefore worthy of description. Its chief peculiarity is that during the time the *ang kha* continues, the inhabitants of these two villages are not allowed to associate with foreigners. This *pyrsa* takes place twice a year, in the months of June and November, and lasts for a month each time. During the *pyrsa* foreigners are not allowed to stay the night in these two villages, and the villagers must not sleep the night outside their villages. If they do not return home for the night, they are subjected to a fine. There is a prohibition against eating, smoking, or chewing betel-nut with foreigners during the period. The above is the only instance of general taboo that I have been able to find amongst the Wars, but in the Lyngpow villages there is a taboo on all outsiders at the time of the village puja. Such a taboo amongst the Lyngpows is not to be wondered at, as they have probably imbibed the notion from their Garo mothers, intermarriages between Lyngpows and Garos being common. The Garos, like other Tibeto-Burmans, have numerous taboos. There are numerous instances of special taboos among the Khasis. *Kata ahang ang*, or marrying within the *kur* or *shai*, is the most important taboo of all, and is regarded as the most serious offence a Khasi can commit. It admits of no expiation, and the house and sons of the offender cannot be visited in the [illegible]

or difference. It is owing to these three different names being used for the same people that there has been so much confusion about Lyngams previously; e.g. at one course they were named Lyngam, at another they received the appellation of Garo, and at a third conversation they were called Khasis. In Section I the habitat of the Lyngams has been roughly defined. It is impossible to define the Lyngam country exactly, because these people are continually shifting their village sites owing to the exigencies of jhum cultivation, which has been described in Section II. Some of the Lyngams preserve a tradition that they originally came from the Kamrup plains. It is interesting that a people, like the Garos in so many respects, should have the same idea as the Garos as to the hills on the south bank of the Brahmaputra not always having been their abode. The Garo legend is that they dwelt for some years in the Goalpara and Kamrup plains after they descended from Thibet, and before they moved to the Garo Hills; and there is unmistakable evidence of their occupation of both districts in the shape of certain Garo villages on both banks of the Brahmaputra for some little distance up the river. If, as I suspect, the Lyngams are an offshoot of the Garos, it is, perhaps, possible that they entered the Khasi Hills much in the same way as the Garos entered the hill district to which they have given their name. The Lyngams are much darker than the Khasis, and possess the Thibeto-Burman type of feature often to a marked degree. It is not extraordinary that they should have adopted some of the Khasi customs, for the Khasis, being the stronger people, would in course of time be bound to influence them in this respect. That the Lyngams observe the matriarchate and erect (some class) memorial stones is not peculiar, because the Garos, like the Khasis, are also a matriarchal people (to a limited degree), and the custom of erecting memorial stones is not confined to the Khasis, for other hill tribes in Assam observe the practice, e.g. certain Naga tribes and the Mikirs; and the Garos themselves put up carved posts, called bima, in honour of the departed. Although there is not much intermarriage between the Khasis and the Lyngams nowadays, perhaps in days gone by there was a mixture of blood, the result being the hybrid race we are now

quilt, made out of the bark of a tree, which is beaten out and then carefully sewn, several layers of fattened bark being used before the right thickness is attained. This quilt is called by the Lyngngam "*Ka-ngiler*" (Gara-simpah). Food is cooked in earthen pots, but no plates are used, the bread being one of the morning tree taking their place. The leaves are thrown away after use, a fresh supply being required for each meal.

The Lyngngam know rice beer, they do not distil spirits; the beer is brewed according to the Khasi method. Gamos they have none, and there are no *pnial* archery meetings like those of the Khasis. The Lyngngam methods of hunting are setting spring guns and digging pitfalls for game. The people say that now the Government and the Siem of Nongstoin have prohibited both of these methods of destroying game, they no longer employ them. But I came across a pitfall for deer not long ago in the neighbourhood of a village in the Lyngngam country. The people declared it to be a very old one; but this I very much doubt, and I fear that these objectionable methods of hunting are still used. The Lyngngam fish to a small extent with nets, but their idea of fishing, *par excellence*, is poisoning the streams, an account of which has already been given in this monograph. The Lyngngam are omnivorous feeders, they may be said to eat everything except dogs, snakes, the *hulok* monkey, and lizards. They like rice, when they can get it; for sometimes the out-turn of their fields does not last them more than a few months. They then have to fall back on *Jobstears* and millet. They eat arum largely, and for vegetables they cook wild plantains and the young shoots of bamboos and cane plants. The Lyngngam are divided up into exogamous clans in the same manner as the Khasis. The clans are overgrown families. The Lyngngam have some stories regarding the founders of these clans, of which the following is a specimen:—"A woman was asleep under a *sukhar* tree in the jungle, a flower from which fell on her, and she conceived and bore a female child who was the ancestress of the Nongsukhar clan." Some of the stories of the origins of other clans do not bear repeating. There do not appear to be any hypergamous groups. As with the Khasis, it is a deadly sin to

552, many any one belonging to your own fan, or clan. Unlike the
617 Khasis, however, a Lyngam can marry two women at a time.
The Lyngam marriages are arranged by *kinsmen* or go-betweens,
675 much in the same way as Khasi marriages; but the ritual
339 observed is less elaborate, and shows a mixture of Khasi and
346 Garo customs (see Section III). The Lyngams intermarry
with the Garos. It appears that sometimes the parents of girls
587 elect bride-money, and marriages by capture have been heard
of. Both of these customs are more characteristic of the Bodo
369 tribes of the plains than of the Khasis. There are no special birth
732 rites, as with the Khasis, except that when the umbilical cord
353 falls a fowl is sacrificed, and the child is brought outside the
house. Children are named without any special ceremony.
764 The death customs of the Lyngams have been described in
Section III. A peculiar characteristic is the keeping of the
dead body in the house for days, sometimes even for several
months, before it is buried. The putrefying corpse inside the
house seems to cause these people no inconvenience, for
while it remains there, they eat, carry on their ordinary
avocations, and sleep there, regardless of what would be
718 considered by others an intolerable nuisance. The religion of
these people consists of a mixture of ancestor-worship and the
propitiation of the spirits of hill and fall, which are, most of them,
believed to be of evil influence, as is the case with other savage
776 races. As with the people of Sangtam, the principal
782 ceremony, "*ko lam lai*," is worshipped for the welfare of the
clan, a cow being sacrificed to Ief, with a gourd of rice-beer, and
leaves of the sak, or *dimpening* tree. The leaves of the sak are
afterwards hung up inside the house, together with the jaw-bone
of the pig. Sacrifices are offered to a forest demon, *U Bangjang*
(a god who brings illness), by the roadside; also to *Ko*
Ninny Bylli U Mejpome, the god of cultivation, at seed time,
on the path to the forest clearing where the seed is sown.
Models of paddy river-leaves, baskets and agricultural imple-
ments are made, seed being used to indicate the grain. These are
placed by the roadside, the skulls of the sacrificial animals and
the feathers of fowls being hung up on bamboos about the place
793 where the sacrifice has been performed. There are no priests or
796 *lyngdoks*, the fathers of the hamlet performing the various cere-
monies.

If other alternative being made all the patterns involved have been noted, the agreement divided is so finally completed with the ceremony mentioned. It was mentioned above, what rights for the religious cult are to be found in the lot of the clan section. The little bamboo platted of bamboo cane, which is considered the special seat of the divine ancestors of the clan, /Clan/ is not divided, /Sib/ another, similar basket is made. In sacrifice of grass and pigs, these divisions are then arranged so that a part of them may take up their dwelling in this basket for the protection of the newly constructed clan. If the sacrificial priest can announce the agreement of the deceased spirits with the division from the oracle of the entrails and by egg throwing, then this basket is brought to the new clan hut. On another day one of the two bamboo poles is then taken to the new hut with further sacrifices. Each of the two separated parties must fetch a new pole to go with the other one. In a like way the existent sacrificial vessels, such as the baskets, cups, and good bowls are divided. With this ceremony the agreements made about the division of the other property are considered legally existent. Each party now goes its own way independent of the other. Certain relationships of kinship and kinship still remain in existence. However, the law of marriage, which otherwise would make impossible the marriage between members of the same family clan without regard to the degree of relationship, is no longer in existence.

If, as the conversion of one part of the members of the clan to the Christian religion, the division of property can be accomplished legally, it is better to insist on it. The members who have become Christian are more easily protected from disadvantageous treatment. Even if they should take part of the fields for themselves to separate management, the part of the clan that remained heathen could demand this back years later. Enmity, hate, and revenge would then follow. Without the formal ceremony combined with the sacrifices mentioned a Khasi does not recognize a division as legal. Since Christians cannot participate in such a sacrificial ceremony, there is nothing to do other than to have this ceremony undertaken while those seeking to be baptized are still catechumens. Before they are accepted then into the church by baptism, the heathen cult objects that were brought into the clan hut must be removed. "To /Sib/ this most important ceremony, "the missionary of the Synteng territory, P. Benedikt Heber S.D.S., once related, "I usually went myself if it was possible for me to or sent a European clerk of the Order. Thereby the ceremony acquired a great deal

[[See category 16, pp 4,5 — Analysis]]

By Gordon G-3 (no date) 1106 AB? Khoei AB?

(ii) It is sexy to use nails in fixing the timber of a house. 784

(iii) The digon, or boomerang, should be made of one kind of timber only.

(iv) To build a house with unknown timber ('nah ikhoei). Only the Khoei's family may use such timber.

(v) To cut trees from the sacred forest.

(vi) To take or give anything with the left hand.

(vii) To step over the body of any person.

(viii) To kill a fowl or a goat without throwing first rice over the body of the victim.

(ix) To drink the milk of a cow or goat.

(x) To talk with any man, except with those who are working together, when the thrashing of paddy is going on.

(xi) Not to give fire or water when anyone demands the same.

(xii) A twin birth is sexy. It is a more serious matter even than sexy if the twins are of opposite sexes.

There are rules of sexy regarding marriages within prohibited degrees of relationship, and there is a very stringent rule of sexy against marrying within the kor, or clan. Those who do this are excommunicated and their house or saloon are not allowed to be placed in the family mausoleum. To marry within the same kor, or clan, is the greatest crime a Khoei can commit. 784 281.

There are special rules of sexy affecting certain families, e.g., for the clan *Ringthibing* to eat a certain kind of leaves, for the clan *Khoeiwood* to eat pork, for the Chorus Kom's family to eat dry fish, for the family of the Kom of Wyllem to eat the pumpkin. Possibly, these taboos may be rules of totemism in these families. 784 [illegible]

14. *The Thiw superstition.*—The following sexiest account of this interesting superstition appeared on page 104, paragraph 10, of the *Amow Gazette* of the 5th August 1998. I do not think I can do better than repeat it here: "The tradition is that there was once in a cave over Chorwapuji a gigantic snake, or *Thiw*, who consumed great horse among men and animals. At last one man, bolder than his fellows, took with him a load of grain and sat himself down by the cave and offered them one by one to the Thiw. By degrees the monster became friendly, and learnt to open his mouth at a word from the man, to receive the lump of food which was then thrown in. When confidence was thoroughly established, the man heated a lump of iron red hot in a furnace, induced the snake at the usual signal, to open his mouth, and then threw in the red hot lump, and so killed him. He then cut up the body and sent pieces in every direction, with orders that the people were to eat them. Wherever the order was 773

Khar Dumpey. These three clans—Khar Dohling, Khar Dumpey and Khar Sohsah cannot intermarry on account of their common ancestry. U Kleson, the sister's husband of U Sohbah Rai is of Khar Dumpey clan and furnished me with the above details. He stated that his ancestress married a man of the old settler clans of Mawphlang and came to her husband's village. This man, being of the Khadar Kur, could build a house and cultivate land from the community holding. The property thus acquired passed to the daughters; and gradually the clan Khar Dumpey grew more numerous, and acquired rights in the Ri Raid like an old clan. [Genealogy XIII].

(d) The family of the first wife of U Gongning furnishes another illustration. The woman Ka Li came with her widowed mother from Cherra. The father had been a Syntong from Jowai. The girl has been married by U Bohan, who is a member of one of the old settler clans. He has built a house for his family and made an excellent potato garden out of the common land for the maintenance of his wife and children. They will inherit it from him according to the usual Khasi custom. [Genealogy XIII].

[77-] (e) U Roberts who is a Syntong of Jowai, and a Christian by religion (Genealogy V) came to Mawphlang in 1920-21 and after a couple of years married a non-Christian Khasi girl by Khasi rites thereby losing his membership of the church. He cultivated Ri Raid land when he stayed with his wife's mother Ka Sharai [Genealogy V]. This woman is of Khar Sohsah clan. One of her ancestresses, came to Mawphlang only a few generations ago, and married a man of the old clans. Her descendants have thereby obtained the privilege of cultivating Ri Raid. U Roberts has divorced his wife and no longer possesses this right. He now works as a tailor in the village, and lives with a friend near the bazaar.

614 (f) Gurdon has suggested that the large number of clans having Khar as the first part of the name of the Kur have originated from ancestresses who were carried off from the plains

[p. 33]

CHAPTER IV

The Khasi marriage prohibitions may now be discussed in some detail. The rules regarding levirate and sororate have already been noted. The Khasi is also exogamous with regard to his Kur. This bar extends to clans derived from the same ancestry. A Khasi cannot also marry his father's brother's daughter, or his father's father's brother's daughter. He cannot marry his mother's brother's daughter as long as this uncle is alive but may do so after the death of this relative. He cannot also marry his father's sister's daughter as long as the father is alive but may marry her after the death of his father. Gordon remarks that even then "such unions are looked upon with disfavour by Khasis. In the War country, such marriages are totally prohibited."

It has been noted in the previous chapter, that the basic unit of Khasi society is the house where the children are born and where the women stay all their lives and with which the men also are connected intimately even when they go elsewhere on marriage. It has also been observed that the authority is vested entirely in the men. The women have various rights not found in many patriloneal groups; but it would be a mistake to underestimate the position of the men in the house. The father is the head of his small family—the simple family consisting of himself, his wife and the children. He is also the person in authority over his sisters' households in matters affecting the extended family as opposed to the simple family. Although his own children, and the children born in his natal house are distinguished on accounts of their social and economic differentiation, nevertheless, they are, to a certain extent, both like children to

him. His own brothers again, are to him his successors in the permanent rights, which are linked with the house of birth. Their bones all return to the common memory of ancestral home. Apparently, this close association of the brothers with the house of birth is responsible for the rule that children of brothers cannot marry. If we formulate the prohibitions from the standpoint of the woman, we can get a clear idea of their significance.

A Khasi woman cannot marry her father's brother's son; nor even the son of this cousin. Again, a Khasi woman cannot marry her father's sister's son during the life-time of her father; but may do so after his death. As we know, the father's death and return of the bones cross the link of the children and their mother with the father's house of birth. The women who safeguard and maintain the Khasi religious traditions, will thereafter raise no objection to the marriage of a woman of their house with the father's sister's son, who is now no longer closely related and is a man of another house merely. But the case is different with the other cross-cousin. A woman cannot marry her mother's brother's son, even after the death of that uncle, without incurring odium. In the War country, such a marriage is not permissible even after the uncle's death. We know that the relation with the mother's brother is not severed either at marriage or at death. The links are maintained even after death. His bones come back and rest in the memory of the house and the clan of his women relatives. The decease of this uncle does not therefore place his son in the category of a person with whom the formerly existing bond has been broken. We may sum up the distinction as follows :—

In the case of the father's sister's son, the death of the father breaks the link between a woman and her cousin in the other house, as neither of the parents of that male cousin were born in the house or extended family of the woman. In the case of the mother's brother's son, the father of that cousin is of the woman's own house and one with whom the bond endures even

after death. In the first case the house of the male-cousin's parent will not rest in the memory of the girl's house. In the second case, the house of one parent of the male cousin will rest there.

The restrictions on cross-cousin marriage, and the difference in the two cases, bring out the importance of the house of birth and of the women who preserve the continuity of the Khasi religious traditions in this house. From the women's standpoint, the bar on intermarriage of children of sisters is absolute. Their house will rest in the same memory after death in every case. The limitations on marriage of cross-cousins, who are of different households are less strict, the degree depending on the closeness of the link with the house of birth of the women concerned.

The prohibition of marriage of parallel cousins born of two brothers is based on a similar reason. Stress is laid by men on the unity of brothers, just as the women stress the unity of sisters. The rights in property and common or practically common residence, and the custodianship of the "religion" unite the latter. The authority and other rights already noted, unite the brothers in similar fashion. They also are in a sense guardians of the "religion." It is true that they marry in different households; but the bond that links them together and with the natal house is not broken thereby. We have seen that they retain the links and rights during life. Also, on death, they all return to the house of birth, in the repository of bones, and eventually are united with all men born in their house and the houses that have preceded it, in the same Kur. (This unity of the men and separation from the women is observed in the placing of the bones for the two sexes at every stage of the bone disposal rites.) Their children will therefore be linked always to this house through the bones of their fathers.

The recognition of the permanent bond linking the members of the natal house is, therefore, here also the important factor in prohibiting intermarriage between their children.

Hodson has suggested that the prohibition of marriage of parallel cousins was the result of an earlier dual stage of Khasi

§ 82 society. He states "In a dual society the children of two brothers are commonly so closely related as to be unable to marry. This prohibition takes no straight to the dual days. It survives—because—if it does not directly promote—it does not impede the great social necessity which arises when a multiple society develops from a dual society, the necessity of giving wives to and getting wives from the new groups. The children of two brothers are called pure Kin because they are kins on the male side."

The prohibition of marriage of a woman with the father's brother's son's son is ascribed to the necessity of prohibiting "a marriage which originated and was maintained by the dual system." Hodson explains that under dual organisation and matrilineal descent a man's F.F.B.D. would be of the opposite moiety and married to a man classed as mother's brother. Among Gurs a man married his mother's brother's widow and also her daughter under the sororate system for control of property." "Kinship custom definitely forbids a marriage which is the pivot of the Gurs system which rests on the maintenance of the dual interest in the estate. This dual control would obviously be difficult to maintain against the pressure of competing groups which results from the development from a dual basis to a multiple basis." The rules regarding cross-cousin marriage are also ascribed by him to the break-up of the dual system. Hodson did not consider it necessary to distinguish the actual cross-cousin and mother's brother and father's sister from the classificatory kin of that status. He states that the distinction between the two kinds of cross-cousin marriage could not be drawn until "the dual system had ceased to operate, since so long as it flourished, the wife of the mother's brother would be the father's sister." His explanation of the prohibitions is that they "facilitate, may be intended to facilitate and may survive because they facilitate marriages with men of class other than those of the two, to which the parents belong." Hodson fails to realise that there is no evidence of preferential mating of cross-cousins in the past,

among Khasis. Even the Garos whom he cites apparently as representing a type of social organisation which the Khasis had earlier, do not encourage marriage with the father's sister's daughter. There is also no evidence that a Khasi ever married his mother's brother's widow. As I have shown earlier, the marriage prohibitions regarding cross-cousins can be explained on the basis of existing social and economic forces in Khasi society. The rule regarding exclusion of the F.B.Z.Z merely states that a woman cannot marry the son of her para Kha. It is not a new prohibition.

We may now state the reasons why a Khasi calls his father's brothers by the same term as father, and the wives of these uncles, as mother, using of course a qualifying term for seniority and juniority. As noted before, a Khasi boy or girl calls his mother's sister's children brothers and sisters. He avoids them strictly in marriage. They are not like cross-cousins, marriageable under certain circumstances. Any sexual approach towards them would have led in the old days to exile and also excommunication. The children of the father's brother are similarly excluded from the category of marriageable persons. They are like brothers and sisters, and as such are addressed as Bah, Hep and Kong. They are referred to as Para Kha. As Hodson observes, the term Para conveys, when used as a prefix, the idea of having common rights or status. It also means, when used by itself, a younger brother or sister. The term Kha refers to relation (by birth) through a male. It is used for example in the combination Bah Kha, which denotes both variaties of cross-cousins, the children of the mother's brother, as well as the father's sister. A Khasi man (and) woman has already another set of parallel cousins who are sexually tabooed. Their parents are given terms denoting the father and mother, with certain modifications. As the children of the father's brothers are also sexually tabooed, it would be natural to extend to them the terms used for the parents of the other group of non-marriageable cousins.

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

For the species to increase and continue he says, Here—

The mother to bear and give birth—	—	The son of others	The aunt *ka nia kha* (father's sister)	Ia Ib

156 601 611

For the house to continue and the world to remain he says, Here—

The aunt *ka nia kha* (father's sister)	—	The son *u khun kha* (son of brother of *ka nia kha*)	The cousin *ka kakha* (daughter of *ka nia kha*) father's sister)	Ib IIa

For the person (*rapiew*) to crystalise, and the stature (*ryniong*) to remain he says, Here—

father's mother (*ka kmie kha*) —	The son *u khun kha* (son of brother of *ka nia kha*, who is grandson of *ka kmie kha* (father's mother)	The cousin *ka para kha* (daughter of father's brother)	Ib IIIa

The Khasi knows the 'sang' (*sacru*, sacred, that which is forbidden as sacred). He has experimented and therefore he says *ka sang iap* (*lit.*, that which is 'sacred' or forbidden or taboo unto death) in the case of those who committed incest in the same *jaid*, kind, species, that is, those of the *a* group. It is sacrilege. There is no greater punishment than for this sin,—a punishment so severe that the Khasi will not permit the bones of these transgressors to enter the family cairn. Similarly they regard as an act of sacrilege for children of brothers (*shi para kha*) to inter-marry. Thus the Khasi regards as 'sacred', that is, forbidden or tabooed, for those who are sprung of or connected through the same womb, and for those who are generated of and are suspended from or strung to one umbilical cord in origin, to marry. That is they regard as *sang* for the *a+b* man—woman group to marry the *b* son. [see Tables (1) & (2)].

684

582

14:Roy 1-5 (no date) 1938 AR7 Khasi AR7

582 The Khasi knows the 'byrsieh'. The word *byr* means 'to appear', and, *sieh* means foul, thus *byrsieh* means to defile or corrupt; and '*tep*' means cover, *byrtep* means to cover, to spread over. Hence *ka byrsieh ka byrtep* means something which spreads over and makes everything foul, defiled and corrupt. Khasis regard marriage even in the case of cousins as not the right thing (*lit.*, not good), the *khun kha* (son of the son) that is the *b* son and his sister to give the seed to the house of his *kmie kha* (mother of the son, i.e. father's mother), that is, the house of the *a* group. Thus [824] no seed, e.g., seed of trees, rice, cucumber, pumkins, *shriw* or Job's tears, or millet, are taken from the children of the son by the family of the mother of that son, that is, no seed is taken from the children (*ki khun kha*) born of the son by his mother and sisters. Any seed given by these grand-children born of the brothers must be paid for if taken by his mother and sisters.

Thus Khasis do not consider that it is good for children of the brothers to marry the children of the sisters, though they are cousins, i.e. for III (a) to marry II(a). They believe that there will be misfortune and that they will not thrive. They consider it is better that the brother of II(a) marries the sister of III(a). In the case of these nearest cousins, however, they avoid such marriages so long as I (b), the father who is the uncle of II(a) is alive. [Table (3)]

Khasis do not consider it the right thing (regard it as 'bad') for the elder or younger brother of the wife to marry the elder or younger sister of

14: Roy I-5 (no date) 1938 AR7 Khasi AR7

the husband. Whichever side is *jem ka rwiang* 582
(*lit.* whose person is less strong, less able to resist the evil) will suffer death. The word *rwiang* means more than literally 'fortune.' The word *rwiang* goes with *rngiew* and the two are coupled together as *ka Rngiew ka Rwiang*. *Rngiew* is the person, the man's 'ama'. '*Rwiang*' is the encircling power produced by that person, hence *jem ka rwiang* means the power encircling the man's person becoming easy of being conquered or subdued. (*Jem* = easy, pliable.)

In a word, the Khasi's idea of himself is that he 156
stands in the middle of the world. We do not 601
find terms in the languages of peoples with the family system to express varieties of relationship to the extent that we have in the Khasi vocabulary. Some of the other languages content themselves with terms for father, mother, uncle, aunt, cousin. They have no words to differentiate the classificatory-descriptive system of terms showing relationship with mother, mother's elder and younger sistere (*mei, mei san, mei nah*); father and his elder and younger brothers (*kpa, kpa san, kap nah*) and father's brother's children (*para kha*), father's mother (*mei kha*), mother's mother (*mei rad,*) wife's brother (*kynum*), husband's brother (*kong*), and so on. We find in the Khasi sociology, departments of 156
social organization indicating the attitude towards 829
life which is peculiar to the Khasi. The terms are 601
not mere names but serve to show well-defined groups based on an idea of their special functions. As Dr. R. R. Marett says, "Exogamy, and everything 121

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

else that we do is instinct with a *plus*; and for the student of religion or of human culture in any of its forms, to account for that *plus* is the sum and substance of his task.....Whereas, then, there is likelihood that any *a posteriori* reason existed for believing that in-breeding makes for sterility, if indeed it be true in fact at all, there might well have been an *a priori* conviction to much the same effect based simply on a fear that to tamper with the fountain-head of human vitality would somehow cause it to dry up." The Khasi stands in the world as exogamous in his rule of life, and he says '*sang bad byrsieh*', that is, endogamy is forbidden and if it should ever be committed it will render life defiled and corrupt. He says this out of the fear of the knowledge that any act of carelessness in the prohibited area of the source of human life and vitality, which is in the Khasi phrase '*long briw*' (*long* is to be or become, *briew* is man, i.e., to be or become man), will make that source of human life to dry up. So he says, 'duh I jaid I khong' (*duh*=is exterminated; *jaid*=kind, species; *khong*=root).

In refutation of such aspersions as that the Khasi has no rules of marriage, I shall quote the most sacred pronouncement the Khasi when two persons, the man and the woman, are initiated into that state. Calling upon the name of God the Khasi says—"*U Lei thaw briew man briw, u' Lei ne ka 'Lei synshar'*, (God who creates man and is the source of human life, God who keeps, controls, preserves), "*Hei ko Blei na jrong, Ko*

14: Roy I-5 (no date) 1938 AR7 Khasi AR7

Blei na tbian, ko Lei Synshar, Ko Blei triw, man briw, kumba la hukum kumba bhu ma phi U Blei ka Blei ban long I Kha I man, kumba la pynhiar ka synjat mynta ka sgni, ba phin tip, ba phin sngew na jrong ho kyndiang ba ita I jaid bad ita I jaid ki la iapoi kha poi man ban iaroi ban ia man ban ia heh ka long kynthei ka long shynrang', Oh God from above, oh God from below, Thou God who controllest, who keepest and preservest, Thou God who createst man and the origin and source of human life,—as ordained by Thee, Oh God, U Blei (God in the male aspect), Ka Blei (God in the female aspect) that there should be *I Kha* (person to bear and give birth) *I man* (person with whom and through whom to give cause to life and to grow), as token has been brought down this day, [a ring is given], so that Thou mayest hear clearly from above, that such and such *jaid* (kind, clan) and such and such a *jaid* (kind, clan) have become joined in marriage in order to increase, in order to grow, so as to increase the state of being female and the state of being male (i. e. male and female population)." [This is said as a woman of a certain clan always marries a man of a different clan.] As I have said elsewhere, "There is no tradition among the Khasis that there was ever a time when the status of marriage did not exist among our ancestors. There is a belief among the Khasis that they were instructed in their religion and that their ceremonies and rites were delivered by God Himself to the

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

necessary. The chances of acquiring a piece of land nowadays are small, except for very successful men, and usually the size of the plot is only just enough to maintain one household. When this land is passed on to the next generation, the youngest daughter will hold the title to it. This fact tends to exclude married elder sisters from the right to use the land, since it is not sufficient for more than one household. Thus the ultimogeniture succession rule seems to have developed more sharply and to have encouraged limited inheritance in conjunction with the shortage of land. 178 423 428

This tendency creates unbalance in the economy of the households within a community. It is a usual picture in Khasi villages, for the bigger and well-built houses to be occupied by the youngest daughter's family, while the elder sisters reside in poor huts. Youngest daughters are usually landowners, while their elder sisters have often to become day-labourers after their marriage, unless their husbands are capable men, or their fathers wealthy enough to give them some share of their acquired property. On the whole, the variations at present between rich and poor are considerable in a Khasi community, in comparison with that of the Garo, where the economic condition of each household in a village is more or less similar. These differences are not only a matter of economic organization but arise from the nature of each social structure. 178 184 423 428 556 [171]

The economic and social patterns of Sohkynduh and Kongton are very similar, but their dialects are slightly different: my interpreter, who came from Cherrapunje, could work quite well at Sohkynduh, but at Kongton he found some difficulty, especially with the speech of the old men, and with their religious expressions. The head man of Kongton, who was quite accustomed to the Cherra dialect, acted as an interpreter for us. Such differences in dialect in the Khasi Hills are common phenomena; it is said that every valley has its own dialect. Differences are found not only in speaking, but also, to a certain extent, in culture and in social usages. 197 [124]

II. Village Endogamy

One of the outstanding features of Khasi social organization is the predominant tendency of endogamy on the level of the village, which contrasts with the structural orientation of the Garo village exogamy. This is closely connected with the distributions of clans and the nature of the descent groups. 582 621 [171]

The Khasi population consists of a number of *kur*, matrilineal clans, whose members consider themselves to be descended from a common ancestress. The members of the same *kur* have a common 614 [765] [769]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

- - - - - Affinal relations (indirect) among household-members.

particular two families are not restricted to one, but may be accumulated two or three, though I omitted to indicate these in Fig. 10.

582 There are some extensions of marriage relations with members
591 outside the village. In Sohkynduh, out of 88 (48 houseowners and
61 40 their husbands) 13 men and 2 women came from neighbouring
621 villages. Owing to the predominant uxorilocal arrangement, those
628 who came in from outside the village were mostly men. By these members, five different *kur*, new to Sohkynduh, were found, as shown in List 7 (17-21). Most of these outsiders came from villages inside the Kadashinong, or villages no further than a day's journey there and back. This area might be called a secondary endogamous area, and includes more than half a dozen villages. In Kongton, 20 husbands and 3 women came from neighbouring villages by their marriages. The secondary endogamous areas of Kongton and of Sohkynduh are not the same but they overlap in certain places, the surrounding areas being centred on each village. There were, by December 1955, no instances of direct marriage between these two villages.

184 There are a few exceptions to local endogamy, such as those
582 individuals who have become Christians and are educated in towns
621 like Shillong or Cherrapunjee. They usually move to a town, seeking
[795]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

184
582
621
[771]
[178]

some clerical work. However, such instances are very rare in these regions and few Christians are to be found among the people. So far as my genealogical table accounts for, only two boys from Sohkynduh, and one girl and one boy from Kongton, left for Shillong, and married there. In contrast to these exceptional cases in these villages, in the upland Khasi Hills, there are considerable changes in the composition of a village with high geographical and social mobility of population because of the spread of Christian education and urban influence.

166
178
582
621
[184]

The people of the two villages say that marriages with outside people were not formally practised, and were only a recent tendency. However, the composition of the population of the two villages showed extensive movements of population in the past (not to urban areas, but from village to village). Such movement is attributed mostly to migration by a family rather than by an individual on marriage. This type of migration is clearly found also in the process of the formation of Jatinga village (see Appendix, Jatinga).

582
621
184

The composition of the village community and the social characteristics of Sohkynduh and Kongton show very similar features of village endogamy. They seem to be typical of the traditional pattern of Khasi villages. Village endogamy is the intrinsic pattern among the Khasis. This fact can be also observed to a considerable degree in Shella and Jatinga.

[P. 116 is blank]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

601 term *mama* for mother's brother designates as well mother's mother's
[171] brother. 3) Terms for mother's sister *(kmie)* and father's sister *(ñia)* are different; and, needless to say, father's brother is called *kpa*, not *kñi*. 4) Mother's mother *(meirad)* is differentiated from father's mother *(meikha)*, though the grandfathers on both sides are termed *parad*.

• 582 As regards cross-cousin marriage, which, as we have seen, was an
601 essential part of Garo social structure, the Khasi have no institutional
[171] arrangements. The cross-cousin distinction is indeed found in the Khasi kinship terminology. Among those who are called *para* (sibling), an additional term is applied to cross-cousins (both matrilateral and patrilateral). They are called *bakha*. However, this additional cross-cousin term should not be considered as indicating a preference
[171] for cross-cousin marriage. This is structurally different from that of the Iroquois type discussed in terms of Garo kinship terminology, in which a prescrived cross-cousin marriage is involved. The term *para* (sibling) is more often used for them than *bakha*.[1] Actually, among the Khasi there is no preference for cross-cousin marriage; indeed there are even indications to the contrary, in that marriage with the mother's brother's daughter is not allowed during the life-time of the maternal uncle. In the same way, marriage with the father's sister's daughter is not allowed during the life-time of the father.

582 In fact, the Khasi have numerous prohibitions of marriages between near kin on both paternal as well as maternal sides. The first and second parallel cousins are avoided. Those related to father within three generations are avoided. Within such a framework of marriage prohibitions, the use of a special additional term for cross-cousins is an indication of marriageable relatives within the framework of prohibition. This should not be considered to indicate a marriageable member in an active sense or a preference for cross-cousin marriage.

However, such marriages do sometimes appear in my census; for example, a man may have married a woman who is the sister of his brother's wife, or of his sister's husband. Thus sometimes between two descent groups there are more than two exchanges of men. But such relations are temporary and would terminate after one or two
582 generations. There is no structural continuity. My censuses of four Khasi villages do show some tendency to marriages between two
614 specific *kur*, but I consider this to be largely accidental. When the choice of an individual is random, but one or two *kur* are larger than the others, it will naturally follow that there will be a high frequency

[171] 1. Such use of the dual terminology is also found among the Zuni and the Trukese, (see the discussion, in pp. 154-155).

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

of marriages between these two *kur*. Such marriage arrangements cannot be regarded as constituting a cross-cousin institution. From my data of four villages it was not possible to produce any institutionalized pattern. 582 614

In general, the selection of a marital partner depends mainly on personal choice, though the authority of the *iing* (descent group) and parents should be consulted. The man proposes to the girl. The network of marriage relations among the Khasi seems in no way to follow any set principle. Every marriage is likely to be fortuitous: it is ruled simply by temporary personal liking, except for the strict rule of exogamy and the avoidance of near kin.

Exogamy is strictly kept. In the olden days breaking this rule was equivalent to being sentenced to death. Offenders had their heads shaved in a particular way and had to leave the Khasi community completely. Even now such a marriage is considered as the worst kind of sin; a Khasi Christian intellectual said to me that it was worse than homicide. I came across one couple who had broken this rule. Though they had different *kur* names, both *kur* were segments of one common *kur*. It happened in Jatinga, one of the most modern Khasi communities whose inhabitants were all Christians. The couple were not allowed to have their house inside the village. Their house was in the jungle about one mile away from the village. 178 582 614 684

Successive sororate marriage—marriage to a younger sister of the late wife—is practised, since it justifies the widower in remaining in the same household as his children after his wife's death. Otherwise, the Khasi rule demands that he should leave the house and his children in order to remarry another woman. We shall deal with this aspect again in terms of marriage. 587

II. Principle of Descent and Succession

Previously I have mentioned the *kpoh*, the matrilineal kin group with a common great grandmother. This is not, however, an institutional corporate descent group. The most important functional descent unit is called *iing*. The *iing* is the lowest order of clan segmentation, smaller than the *kpoh*—a *kpoh* may include two or more *iing*. The generation depth of an *iing* is usually two to four, in some cases an *iing* is formed only by mother and child. The Khasi consider this unit to be the most important social index for the classification of individuals. Marriages are arranged by individual *iing*, not by wider groups of kinsmen. The *iing* is the structurally significant norm. The term *iing* is also used for a house building itself, as is the *nok* of the Garo. However, the membership of the *iing*, as I shall 613

611

tion of the matrilineal system (see Nakane, 1958/B and 1962). In comparison with the Ashanti, the Khasi or the Trobriand type gain considerable stability by sacrificing either *A* or *B* line, which is one of the possible ways of preserving the matrilineal system along with the practice of co-habitation of the married couple.

Another solution of the conflicting situation in such a society is the practice of cross-cousin marriage, as in the case of the Ashanti, which brings two conflicting factors together, the matrilineage and the family of procreation. In this case, the cross-cousin marriage tends to take place between the first cross-cousins centred around each man. Fortes states, "Cross-cousin marriage most often occurs between the children of full siblings or of uterine first cousins . . . cross-cousin marriage offers a possibility of reconciling the conflicting influences of conjugal, parental, and matrilineal kinship ties" (1950, p. 282). This is quite different from the cross-cousin marriage of the Garo, because among the latter, the cross-cousin marriage being practised as the basis of the whole structure of society, it makes no difference whether a cross-cousin is first or classificatory. In the case of the Ashanti and other matrilineal systems of a similar type, such as the Mayombe and the Kongo, it is considered most desirable to enter into a first cross-cousin marriage; classificatory cross-cousin marriage, such as among the Garo, does not make much sense. Moreover, the cases of cross-cousin marriage tend to take place among comparatively wealthy members in a society (see Rattray, 1927, Chapter XXIX). If one has no property in the Ashanti type society, then cross-cousin marriage has not much meaning. 9
[582]

The cross-cousin marriage of matrilineal systems has been often referred to as being the solution to the conflicting situations of a man as a husband and as a brother. I suggest here that this can be applied to the matrilineal system of the Ashanti type; not to those of the Khasi type where men have already given up the role of forming the central core of the matrilineage. In these societies, the solution is already given through the sacrifice of one line. There are no conflicting economic factors, though men are still in a situation of social conflict between their matrilineage and family of procreation. This hypothesis is confirmed empirically by the fact that there are no prescribed or preferential cross-cousin marriages among the Khasi, the Hopi, the Zuni, the Trukese and the Negri Sembilan Malay,[1] where a man is not in economic conflict with his matrilineage and family of procreation. His nephews are already outside his economic K
[582]

1. "In arranging marriages the preference is for someone 'near'. As cross-cousins are the nearest possible naturally a large number of these marriages occur . . . This preference, however, is not explicitly institutionalised . . ." (Swift, 1958, p. 156).

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

621 descent grouping are often different. This is a very similar pattern to the
[184] mobility which I discussed in Sohkynduh and Kongton (see p. 112).

One of the outstanding features in this community is the strong paternal
178 authority, established especially in the first generation, because the father's
593 (husband's) contribution was very important in such circumstances: their domestic units were completely independent from the *iing* either of husband
61 or wife. Some of them came with their wives, and many younger ones and their sons brought their wives from their homeland afterwards, thus practising
621 virilocal marriage.

They have an interesting social usage which reflects the importance of the husband of the first generation. This is the addition of the name of the husband of the first generation to the matrilineal clan name in order to differentiate each particular descent group established at Jatinga within the same clan. For instance, Rupsi-Tah, Rupsi-Loh, Rupsi-Khla and Rupsi-Lati are found in the Rupsi clan. Rupsi-Tah is one of the lines of the first immigrants to Jatinga, which I have mentioned as Rupsi: Tah was taken from Pryntah, the husband of Sintu (Rupsi) (see p. 171). Thus the present inhabitants of Jatinga are very conscious of their father or grandfather, though they strictly follow the matrilineal descent rule. From such a usage of naming a clan, the Indian officer, who gave me some information about Jatinga before I went there, made the mistaken deduction that they had changed from matrilineal to patrilineal, assuming this to have come about as a result of the influence of patrilineal tribes around Jatinga. But this is simply due to the fact, firstly, that they hold in high regard the man of the first generation, because of his great contribution; secondly, that they distinguish themselves from members of the same clan according to the descent group established at each immigration; in other words, it indicates each *iing* grouping in the village.

178 The fundamental Khasi social organization based on the matrilineal system did not change at all. I could observe in Jatinga exactly the same principle
184 in action as I had found in Sohkynduh and Kongton. The village endogamy has also been well established in the present generation: there are about 20 dif-
• 582 ferent clans which can intermarry, and taking a spouse from an outside com-
61 munity has become very rare nowadays. Marriage patterns in relation to the *iing* structure and all its related aspects are surprisingly similar to that of the
621 communities in the Khasi Hills. The solidarity of the *iing* is even greater in Jatinga, particularly among the rich, because of the greater accumulation of wealth and greater economic activity, which also increases the authority of the *iing* as manager of considerable property—this was also the case with the Shella people. Jatinga demonstrates that in spite of colonization and of a significant change in economic activities, Khasi social organization has maintained itself intact. This situation is in contrast with the considerable social changes observed among the Garo community in colonial areas like Rinsibara and Joshipara.

621 ### *Intermarriage.*

178 From the earliest period of the establishment of Jatinga up to the present,
582 some changing aspects of marriage patterns relating to intermarriages are to be observed.

563 As I stated before, in the earlier period, the people used to bring their spouses from their homeland, but they also married neighbouring tribal peoples, namely,
563 the Zemi-Naga, the Kuki and the Cacharee of villages close to Jatinga, and also the Lushai, the Bengalee, the Moslem and the Anglo-Indian who lived
621 in Haflong, the biggest political and commercial centre in the Hills, situated

ing from the time it consists of an elementary family until it grows to a local descent group four generations deep. [Cf. Chattopadhyay 1941.] **Kin terminology.** The terms of address given below are also terms of reference except where otherwise indicated, and are uniform for male and female speakers. They were collected in an upland Khasi village near Shillong (cf. Ehrenfels 1953 for some regional variants). [114]

MARRIAGE AND FAMILY. **Mode.** According to the traditional courtship pattern, a group of young male relatives and friends made nightly visits to the house of some virgin girl in another village, appraising her through banter while she and her parents appraised them, and staying the night to avoid the dark walk home. Marriage was according to the wishes of the parents after negotiation by a go-between from the boy's side. Girls might be 15, and boys 17, years of age. Girls have now acquired freedom of movement through attending school, however. Premarital sexual play is common, and young people choose their own spouses when the girl is about 19 and the boy 21. The most common mode of marriage is elopement, for Christians and non-Christians alike, but some Christians marry in church, and some Khasis still marry according to the traditional ceremony or some variation on it. There are no preferred or prescribed marriage types, nor is there a bride price or dowry. **Form.** Monogamy is the ideal for all. **Extension of incest taboos.** Sibs are exogamous. Other prohibited marriage partners are real and classificatory FaSi and FaBr, FaBrCh, FaMo, and FaMoMo. The MoBrWi is also prohibited. Roy [114]

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

of father in Russian (for the *tzar*, etc.), (secondly) the youngest, not the oldest, daughter performs the family rites and inherits the family-property [21]. Even in cases when there is no woman to inherit, the youngest, not the oldest son inherits [22]. Among the conservatively matrilineal Pnár (Jaintia) this term of diminution *i*, however, carries at times a somewhat contemptuous meaning, though the minorate is strongly in force also among them. The ambivalent position of this honorific term of diminution is thus significant (comp. term 9/*e* among Pnár and infra.) 601 [428] [196]

Term 7 — mother: (*i mei*) — The prefix *i* used among Khasi and Wár Khasi signifies particular reverence (supra: term 6). The classificatory character of the term has been discussed by CHATTOPADHYAY [23]. [193]

Term 9/*f* — *hep* for all younger siblings, cousins and even other young folk does not indicate the consideration which the terms 9/*d* — *kong* for older sisters and female cousins, or 9/*e* — *bah* for their male equivalents indicate. The term *san* (9/*e* among Pnár) stands here, as generally, for elder and implies a honorific meaning (comp. term 6 supra and term 13/*a* infra).

Terms 10/*a* and *b* show that husband and wife address each other by equal terms and do in no way indicate anything like an inferior position of either wives or husbands of which I did also not find any indications otherwise. It may here be mentioned that property rights even in newly established estates, vest in women and are inherited by women, — not generally men. 601 562

Term 11*d* — *ka khun khadduh* — the youngest daughter whose important position in Khasi religious ritual, social organization and inheritance law has already been referred to sub term 6 and described in detail elsewhere [27]. The affectionate character of this term finds vivid expression in the abbreviation *ka duh*, which I heard from sisters and the father of a youngest daughter. 601 [593]

Term 13/*a* — *mei san* (mother's older sister). The word *san* (older) here has a definitely honorific character, although the *mei khynnah* — the mother's younger sister (term 13/*b*) may be the heir of Ego's ancestral property. This constellation corresponds to the peculiar significance of terms 6, 9/*d* and especially 11/*d* (supra).

Terms 13, 14, 15/*a*, 18, 18/*a*, 18/*b*, and the terms for cousins 19, 20, 21/*a*, 21/*b*, 22 show, like term 7 — mother (supra), classificatory character. The restriction on cross-cousin marriage is of different nature, according as to whether they belong to different households, or not, as has been discussed by CHATTOPADHYAY [28]. [582]

Term 16/*a* — *ñia* (mother's brother's wife) is basically the same as term 15 — *ñia kha* (father's sister) [29] though the latter is qualified by the additional term *kha*: (begetting, birth) which signifies paternal relationship (see: term No. 1).

[29] In detail discussed by CHATTOPADHYAY (1941), p. 27.

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

namely that male members of a matrilineal clan enjoy, among Khasi as among other matrilineal groups in India, a position which, far from unenviable, is a very high one in itself and doubly fortified by the respect which to the same male family member is being shown (*a*) in his capacity as the father of his children in his wife's clan (comp. term 8 of the list), and (*b*) in that of the maternal uncle (comp. terms 14, 14/*a*, 14/*b* and 26 and 28). 601 602

The terms 33/*b*, *c*, *g*, *h*, have classificatory character. 601

The term 33/*e* — *u kong* for the husband's older sister's husband is one of the exceptions of the rule that *kong* generally signifies an honoured older female relative but, as in this case, also her husband (comp. term 26).

Term 36/*a* *u pa* (father) in its usage among Pnár (Jaintia), also for stepfather is significant. A Pnár child has no legal clan-relationsihp with his/her biological father, who belongs to another (matrilineal) clan than the child and mother. Yet the honorific term *pa* is, among Pnár, also applied to a stepfather, although neither legal, nor biological but merely ideological relationship via the mother, exists between stepfather and -child. This use of the word *pa* thus seems to emphasize both, firstly the integration of the matrilineal family structure, by making an unrelated stepfather to be looked upon as father, owing to his relationship with Ego's mother and, secondly the important sociological and psychological position of the father in this matrilineal family structure which appears to go back to an old tradition among the Pnár. 601 593 [614]

Term 41 — *para 'rieu lum* [33] (Assamese hill tribals) are characteristically termed *para* (Brethren), although they are different in many respects, from the Khasi, yet considered as definitely nearer related than all other neighbours, grouped under the 601

Term 43 — *dkhar* (plainspeople) [34], — a term which varies in emotional content from contempt pure and simple to an attitude, somewhat parallel to what ordinary English usage would generally associate with the expression "continental". Marriages of Khasi girls and boys with *dkhar* do occur, though infinitely rarer than marriages of (especially educated) Khasi girls with (educated) *para 'rieu lum*, Nepalese, Gurkha or Chinese boys. One of the reasons which is usually being given for this preference for non-Indians is by no means colour-prejudice, but the taboo on either beef or pork which most *dkhar ïong* [35] (Indians, Hindus or Muslims, respectively) observe; a taboo which they generally extend to their Khasi wives, thus preventing them from enjoying two favourite Khasi national dishes. Another more psychological reason is the overbearing treatment of wives, which is generally ascribed to *dkhar ïong*, more even than to *dkhar li* [36]. It is in this connection 601 582

[33] Literally: Brethren Humans Hill.

[34] With Dkhar are here meant the plainspeople as such; — not the Khasi Dkhar (or Khar) clans which are mostly, if not always, descended from ancestresses who had been captured in the plains and brought to the Khasi Hills; comp. CHATTOPADHYAY (1941), pp. 30/31 and EHRENFELS (1950/*A*), pp. 33/34. [101]

[35] Literally: Plainspeople black.

[36] Literally: Plainspeople white.

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

601 582 significant that the reason, given for the comparatively frequent marriages of Khasi girls with Chinese boys is not the greater physical resemblance which no doubt exists between the average Khasi and the average Chinese (Dkhar) as compared to the average non-Chinese Dkhar (Indians, Europeans, Africans, Americans and others) but the belief that Chinese husbands are less domineering in their attitudes towards their wives, than are other Dkhar.

marry any one belonging to your own *kur*, or clan. Unlike the Khasis, however, a Lyngam can marry two sisters at a time. The Lyngam marriages are arranged by *kniangs*, or go-betweens, much in the same way as Khasi marriages; but the ritual observed is less elaborate, and shows a mixture of Khasi and Garo customs (see Section III.). The Lyngams intermarry with the Garos. It appears that sometimes the parents of girls exact bride-money, and marriages by capture have been heard of. Both of these customs are more characteristic of the Bodo tribes of the plains than of the Khasis. There are no special birth customs, as with the Khasis, except that when the umbilical cord falls a fowl is sacrificed, and the child is brought outside the house. Children are named without any special ceremony. The death customs of the Lyngams have been described in Section III. A peculiar characteristic is the keeping of the dead body in the house for days, sometimes even for several months, before it is burnt. The putrefying corpse inside the house seems to cause these people no inconvenience, for whilst it remains there, they eat, carry on their ordinary avocations, and sleep there, regardless of what would be considered by others an intolerable nuisance. The religion of these people consists of a mixture of ancestor-worship and the propitiation of the spirits of fell and fall, which are, most of them, believed to be of evil influence, as is the case with other savage races. As with the people of Nongstoin, the primaeval ancestress, "*ka Iaw bei*," is worshipped for the welfare of the clan, a sow being sacrificed to her, with a gourd of rice-beer, and leaves of the oak, or *dieng-ning* tree. The leaves of the oak are afterwards hung up inside the house, together with the jaw-bone of the pig. Sacrifices are offered to a forest demon, *U Bangjang* (a god who brings illness), by the roadside; also to *Ka Miang Bylli U Majymma*, the god of cultivation, at seed time, on the path to the forest clearing where the seed is sown. Models of paddy store-houses, baskets and agricultural implements are made, sand being used to indicate the grain. These are placed by the roadside, the skulls of the sacrificial animals and the feathers of fowls being hung up on bamboos about the place where the sacrifice has been performed. There are no priests or *lyngdohs*, the fathers of the hamlet performing the various ceremonies.

16: McCormack E-4,5 (1956-1958) 1964
[P. 108 B] AR7 Khasi AR7

children, but Christian influence has eradicated or driven underground the consumption by women and children. **Industrial arts.** The only industrial arts traditionally practiced in all households were a rudimentary carpentry and a simple utilitarian basketry. Other arts were few, and were practiced as village specialties: the washing and smelting of iron ore and the forging of hoes, daos, knives, swords, and cooking pots (upland Khasis); the spinning of cotton thread (Mynso village, Jaintia); the dyeing of cotton thread and the weaving of cloth (Jaintias, Bhois, Lyngngams, Wars); the spinning and weaving of Eri silk (Khyrwang and Nongtung villages, Bhoi and Jaintia); and the hand manufacture, without wheel, of painted earthenware pots (Larnai village, Jaintia). Ironworking and the production of cotton goods have nearly died out through the competition of machine-made goods. Carpentry has greatly improved. An innovation of major importance is the sewing and tailoring, on sewing machines, of ready-made garments for both sexes. [Cf. Darrah 1896; C., W. 1832.] **Trade.** Khasi villages normally contain a number of household shops operated by women. Every Khasi also lives within walking distance of several village markets that are held on successive days of the eight-day week. The limits of market intercourse for the members of any particular village can be roughly distinguished by their naming the days of their week, which are called after the active markets. The exception is the huge market at Shillong, much of which is active daily, and which serves as a magnet for Khasis from all over the hills. The traditional barter has given way to currency in all markets. The small ones contain at least some local farm produce, plus other essentials like betel nut, and the food and tea stalls which serve as centers of social intercourse. The big markets contain not only regional produce and manufactures but also products from distant parts of the hills, brought for sale by traveling middlemen. There is also substantial trade, from the hills to the valleys, in potatoes, pears, hides, lac, cotton, caoutchouc, the wood of the sal tree, Eri silk thread, limestone, coal, ivory, bay leaf, betel nut, pan leaves, bananas, sugar cane, oranges, til, turmeric, and chilies. From the plains to the hills, there is trade in dried fish, paddy rice, salt, cooking oil, kerosene, matches, tea, sugar, wheat flour, machine-made cloth, shoes, metal pots, crockery, porcelain objects, coral beads, silver, and gold. Markets are important not only as economic institutions but also as centers for recreation (including archery competitions), courtship, reaffirmation of kinship ties with distant relatives, and the dissemination of information of all kinds. [Cf. Stegmiller 1924a.] **Division of labor.** Men do the heavy work, such as clearing and burning the swidden fields, caring for cattle and goats and driving them to market, butchering and selling large cuts of beef and pork, carpentry and mining, and driving and laboring on motor vehicles. They also tailor men's

MARRIAGE AND FAMILY. **Mode.** According to the traditional courtship pattern, a group of young male relatives and friends made nightly visits to the house of some virgin girl in another village, appraising her through hunter while she and her parents appraised them, and staying the night to avoid the dark walk home. Marriage was according to the wishes of the parents after negotiation by a go-between from the boy's side. Girls might be 15, and boys 17, years of age. Girls have now acquired freedom of movement through attending school, however. Premarital sexual play is common, and young people choose their own spouses when the girl is about 19 and the boy 22. The most common mode of marriage is elopement, for Christians and non-Christians alike, but some Christians marry in church, and some Khasis still marry according to the traditional ceremony or some variation on it. There are no preferred or prescribed marriage types, nor is there a bride price or dowry. **Form.** Monogamy is the ideal for all. **Extension of incest taboos.** Sibs are exogamous. Other prohibited marriage partners are real and classificatory FaSi and FaBr, FaBrCh, FaMo, and FaMoMo. The MoBrWi is also prohibited. Boy [114]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[583] *Preliminaries.*—A young man of marriageable age, say between seventeen or eighteen years of age and twenty-five, fixes upon a girl of, say between thirteen and eighteen years, as likely to become a fitting partner; probably he has been acquainted with the young woman for some time before, and is on more or less easy terms of intimacy with her. He mentions the name of the girl to his parents, and uncles and aunts in the house, and they agree or disagree, as the case may be. Sometimes marriages are arranged by the parents of the young people themselves. Having agreed regarding the fitness of the bride, the young man's parents send a male representative of the family, or in some cases a man unconnected with the family, to arrange matters with the parents of the bride. The latter then ascertain their daughter's wishes. According to the late U Jeelen Roy, the daughters nearly always agree, it is very seldom that it is necessary to bring any pressure to bear. The parents then investigate whether there is any *sang*, or taboo, such as clan relationship, between the young woman and her intended, in the way of the marriage. If there is found to be no such hindrance, they fix a date for finally arranging the marriage (*baw ia kut ktien.*) On the day appointed the bride's family consult the auspices by breaking eggs and examining fowls' entrails. If the omens are favourable, well and good. Should they be unfavourable, they abandon the marriage project. There is a strong prejudice against a marriage taking place under unfavourable auspices, the belief being that such an union will be childless, that the bride will die an untimely death, or that poverty will ensue. Given favourable auspices, the parents fix a day for the marriage. It was formerly the custom for the bridegroom to provide himself beforehand with a ring, usually of silver, but, amongst the rich, of gold, which is called *ka synjat* (hence the name of the marriage ceremony *pynhiar-synjat*), and for the bride to provide herself with a similar ring. The bridegroom used to place his ring upon the bride's finger, and the bride used to place her ring upon the bridegroom's finger; it is however believed that this custom is rare nowadays. On the marriage day a man is selected from the party of the bridegroom called *u kniang*, or go-between. The bridegroom then sets out with

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

LAMDOH CEREMONY.

This ceremony is identical with that of *Pynhiar synjat*, except that the bride and bridegroom do not interchange rings, and that there is no sacrifice of the pig. The parties merely buy some pig's flesh and perform a puja with a small portion of the flesh of the legs of the animal. Amongst the poor, fish sometimes takes the place of pork at the *Iadih-kiad* ceremony. The latter consists of a drinking bout mingled with muttered sentences by a *nongkinia* (sacrificer), the invocations and prayers being the same as at the *Pynhiar synjat*. The *Lamdoh* and *Iadih-kiad* ceremonies take the place of the more elaborate *Pynhiar synjat* in most places now-a-days.

LYNNGAM MARRIAGES.

The ritual observed at these marriages is described as under: —First of all a proposal is made in the following manner. A *ksiang*, or go-between, is sent, with the brother of the girl for whom a husband is required, to the house of the father of the young man (not to the house of the mother as is the case with the Khasis). If the proposal is accepted, the father of the young man kills a pig, and gives a feast to the people of the village of his father-in-law elect; also to the go-between and the *borang* (brother of the bride). The father of the bride then gives a similar feast. A sum of Rs. 1 each is given as a present to the go-between by the fathers of the bride and bridegroom, and the father of the bride pays from Rs. 5 to Rs. 15 to the father of the bridegroom. Further feasting ensues at the house of the father of the bride. The go-betweens then sacrifice a pig and two fowls at the house of the bridegroom, and afterwards perform the same sacrifice at the house of the bride. At the house of the bride, after the fowls and the pig have been sacrificed, the go-between, after drinking liquor himself, pours out some on the floor of the house and then gives some to the bride and bridegroom to drink. The killing of the fowls, the sacrifice of the pig, and the libation of liquor are essentials at a Lynngam marriage. The sacrifice of the fowls is also an essential feature

584 585 574 782 [431] 585 102

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

582 marry any one belonging to your own *kur*, or clan. Unlike the
614 Khasis, however, a Lynngam can marry two sisters at a time.
595 The Lynngam marriages are arranged by *ksiangs*, or go-betweens,
584 much in the same way as Khasi marriages; but the ritual
582 observed is less elaborate, and shows a mixture of Khasi and Garo customs (see Section III.). The Lynngams intermarry
583 with the Garos. It appears that sometimes the parents of girls exact bride-money, and marriages by capture have been heard of. Both of these customs are more characteristic of the Bodo
847 tribes of the plains than of the Khasis. There are no special birth
782 customs, as with the Khasis, except that when the umbilical cord
553 falls a fowl is sacrificed, and the child is brought outside the house. Children are named without any special ceremony.
764 The death customs of the Lynngams have been described in Section III. A peculiar characteristic is the keeping of the dead body in the house for days, sometimes even for several months, before it is burnt. The putrefying corpse inside the house seems to cause these people no inconvenience, for whilst it remains there, they eat, carry on their ordinary avocations, and sleep there, regardless of what would be
771 considered by others an intolerable nuisance. The religion of these people consists of a mixture of ancestor-worship and the propitiation of the spirits of fell and fall, which are, most of them, believed to be of evil influence, as is the case with other savage
776 races. As with the people of Nongstoin, the primaeval ancestress, "*ka Iaw bei*," is worshipped for the welfare of the
782 clan, a sow being sacrificed to her, with a gourd of rice-beer, and leaves of the oak, or *dieng-sning* tree. The leaves of the oak are afterwards hung up inside the house, together with the jaw-bone of the pig. Sacrifices are offered to a forest demon, *U Bangjang* (a god who brings illness), by the roadside; also to *Ka Miang Bylli U Majymma*, the god of cultivation, at seed time, on the path to the forest clearing where the seed is sown. Models of paddy store-houses, baskets and agricultural implements are made, sand being used to indicate the grain. These are placed by the roadside, the skulls of the sacrificial animals and the feathers of fowls being hung up on bamboos about the place
793 where the sacrifice has been performed. There are no priests or
796 *lyngdohs*, the fathers of the hamlet performing the various ceremonies.

ing from the time it consists of an elementary family until it grows to a local descent group four generations deep. [Cf. Chattopadhyay 1941.] **Kin terminology.** The terms of address given below are also terms of reference except where otherwise indicated, and are uniform for male and female speakers. They were collected in an upland Khasi village near Shillong (cf. Ehrenfels 1953 for some regional variants). 602 601 [114]

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

Deputy-Commissioner for 1876-77 states that in that year 168 persons in all were brought before the magistrates, the most common classes of cases being theft and house trespass. In the same year 89 civil suits were instituted, of which 83 were for money claims, 2 for immoveable property, 2 for restitution of conjugal rights, and 2 in connection with religion and caste. In the Political Court there were 31 cases tried during the year, of which 13 were civil and 18 criminal. In the latter class of cases process issued against 60 persons, of whom 20 were convicted and 40 acquitted. The details of the two following cases will illustrate the condition of social life in the District. The first was a case of grievous hurt. The Siem of Myl-liem had sent four persons to fetch a man named U Dorja, who had been selected to marry the Siem's sister. While on their way the messengers were attacked by a number of persons, evidently relatives of U Dorja who were opposed to the marriage. One of them was severely beaten, and died within twelve days from pneumonia. The offenders, numbering five in all, were sentenced to pay a fine of Rs. 10 (£1) each, or in default to suffer fourteen days' imprisonment. The second case was one of oppression. It originated in a dispute about land, situated in a locality over which both the Siem of Nongklao and the Lyngdoh of Soh-iong claimed to exercise jurisdiction. The parties out of possession had gone to lay their complaint before the Siem, whereupon the Lyngdoh, with eight other persons, seized three of the complainants' kinsmen, ill-treated them, and kept them in durance with the object of having the complaint submitted to himself for adjudication. The Lyngdoh was sentenced to a fine of Rs. 50 (£5), and his companions were warned and discharged.

JAIL STATISTICS.—There are two jails in the Khási and Jáintiá Hills:—(1) The jail at Shillong, which is directly under the charge of the Deputy-Commissioner; and (2) the lock-up at Jowái, under the Assistant-Commissioner. It has been proposed to build a new jail at Shillong; the present structure consists only of bamboo huts, surrounded by a fence of the same material.

The following are the jail statistics for 1875:—Daily average number of prisoners, 40·91, of whom 1·07 were females; daily average number of sick, 1·42; number of deaths, 4, or 10 per cent. of the average daily strength. The total expenditure was Rs. 7430 (£743), or an average of Rs. 181 (£18, 2s.) per prisoner. This high rate of expenditure is due to the cost of rations at Shillong.

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

III. Explanations

1. General

124 Most of my informants were illiterate. The spelling of the terms was
128 checked and corrected by my English-speaking and writing Khasi- and
601 Pnár- friends, mentioned in para one, to whom thanks are being here once more expressed. All responsibility for spelling mistakes, however, which may have slipped into this list has of course to be borne by me.

Blanks (—) or question marks (?) in one of the columns do not necessarily mean that there is no word used, by the respective group, for the particular term. They more often indicate that my informants did not use, or know, the particular term, or that I failed to enquire about it in a
[114] manner sufficiently clear to my informants. This is particularly true of general terms, partly or fully corresponding to English general terms, such as parents or grand-parents, or the terms No. 9/*a* and *b*, 13, 15/*a*, 19-21, and 26, which were partly explained to me, by Khasi friends in Shillong, where I stayed some time after completion of field-work during the rainy season. Hence I could no more return for verification to the little accessible Wár-villages in the steep southern slopes. Although I am planning to utilise a future opportunity for such checking up, I am yet publishing the present results in the hope that they may thus become accessible to field-workers among other S. E.-Asiatic, and especially Austro-Asiatic speaking peoples.

193 All terms which are equal for both sexes (cf. Nos. 10, 11, 18, 19, etc.)
601 are used with *ka* and *u* respectively. These sexdetermining preposed articles,
128 as also the honorific *i* are specially mentioned in the list, only if this is essential for the understanding of the respective terms as in Nos. 3-5, 7, 8, or 10.

2. Special

601 Term No. 1 — to give birth or beget (*kha*) signifies also relatives on the paternal side as in *para kha* (paternal cousins No. 9/*c*), in contradistinction to *para kur*, 9/*b*, (lit.: cousins of the clan), i. e. maternal cousins, since the clan is a matrilineal unit. This usage of the word *kha* appears also
[842] significantly in the terms 15/*a*, 17, 18/*b*, 20, 22, 32 and, as an integral part of the Khasi kinship terminology, renders it highly improbable that the Khasi matrilineal system could lave originated in ignorance of the biological function of the father. It is a significant feature in the matrilineal social system.

The terms 3 to 3/*b* refer to unmarried but biologically marriageable youths.
[881] It will be noted that there are (and were in 1914) no indications of puberty-
[584] rites for either girls or boys. There is also no child-marriage among Khasi. The use of special terms for mature, unmarried youths is therefore significant.

Term 6 — *i* as honorific article, is at the same time indicative of
[428] diminution [23], which is remarkable for two reasons: (firstly) the diminution is used for the oldest and most respected family members, like the diminution

[23] NISSOR SINGH (1906), p. 84.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

child are prohibited by custom from crossing a stream or washing their clothes until the navel-string falls off, for fear that the child should be attacked by the demons of the hills and the vales. 846 784

The Wár birth customs are substantially the same as those of the Khasis, but there is the difference that a Wár family after a birth is *sang*, or taboo, for seven days, whereas amongst the Khasis the only prohibition is that the parents must not cross a stream or wash their clothes until they have propitiated the spirits. A twin birth is *sang*, or taboo. The Khasis argue that as there is but one *Ka Iawbei* (first ancestress), and one *U Thawlang* (first ancestor), so one child, either male or female, should be born at a time. A twin birth is accordingly regarded as a visitation from God for some *sang*, or transgression, committed by some member of the clan. When the twins are of opposite sexes the *sang* is considered to be extremely serious, the Khasi idea being that defilement has taken place within the womb. The case is treated as one of *shong kur*, or marriage within the clan, and the bones of the twins cannot be placed in the sepulchre of the clan. 844 846 845 773 [766]

There are no special birth customs amongst the Lynngams. 844
There is no trace of the *couvade* amongst the Khasis. 846

MARRIAGE.

We now come to consider marriage amongst the Khasis from a religious point of view. Shadwell has said that marriage amongst the Khasis "is purely a civil contract." This statement is not correct, for there is an elaborate religious ceremony at which God the creator, *U'lei thaw briew man briew*, the god or goddess of the State, U or *ka'lei Synshar*, and, what is probably more important, the ancestress and ancestor of the clan, *Ka Iawbei-tymmen* and *U Thawlang*, are invoked. There are three marriage ceremonies prevalent amongst the Khasis, which are (*a*) *Pynhiarsynjat*, (*b*) *Lamdoh*, and (*c*) *Iadih-kiad*, respectively. The first and second forms above mentioned are considered the more respectable; the last-named is resorted to by the very poor who cannot afford the greater expense entailed by the first two ceremonies. 845 776

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[582] *Preliminaries.*—A young man of marriageable age, say between seventeen or eighteen years of age and twenty-five, 584 fixes upon a girl of, say between thirteen and eighteen years, as likely to become a fitting partner; probably he has been acquainted with the young woman for some time before, and is on more or less easy terms of intimacy with her. He mentions the name of the girl to his parents, and uncles and aunts in the house, and they agree or disagree, as the case may be. Sometimes marriages are arranged by the parents of the young people themselves. Having agreed regarding the fitness of the bride, the young man's parents send a male representative of the family, or in some cases a man unconnected with the family, to arrange matters with the parents of the bride. The latter then ascertain their daughter's wishes. According to the late U Jeeban Roy, the daughters nearly always agree, it is very seldom that it is necessary to bring any pressure to bear. The parents then investigate whether there is any *sang*, or taboo, such as clan relationship, between the young woman and her intended, in the way of the marriage. If there is found to be no such hindrance, they fix a date for finally 787 arranging the marriage (*bau ia kut ktien.*) On the day appointed 585 the bride's family consult the auspices by breaking eggs and 842 examining fowls' entrails. If the omens are favourable, well 735 and good. Should they be unfavourable, they abandon the 761 marriage project. There is a strong prejudice against a marriage taking place under unfavourable auspices, the belief being that such an union will be childless, that the bride will 585 die an untimely death, or that poverty will ensue. Given favourable auspices, the parents fix a day for the marriage. It was formerly the custom for the bridegroom to provide himself beforehand with a ring, usually of silver, but, amongst the rich, of gold, which is called *ka synjat* (hence the name of the marriage ceremony *pynhiar-synjat*), and for the bride to provide herself with a similar ring. The bridegroom used to place his ring upon the bride's finger, and the bride used to place her ring upon the bridegroom's finger; it is however believed that this custom is rare nowadays. On the marriage day a man is selected from the party of the bridegroom called *u ksiamg*, or go-between. The bridegroom then sets out with

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

The bridegroom then sets out with this man and a number of followers, clothed in clean garments and wearing either white or red pagris (a black pagri not being considered a fitting head-dress on this occasion), to the house of the bride, where a feast has been prepared, and fermented rice-beer (*ka-kiad-hiar*) in gourds (*klong*) placed ready. The bride, her female attendants, and her mother and aunts have collected in the meantime, dressed in their best, wearing their jewellery, and with their heads uncovered, for it is not thought proper for the females to cover their heads on the marriage day. On the side of the bride, also, a *ksiang* (go-between) has been appointed, and it is his duty to manage all the business of the marriage on behalf of her family. Some young men of the bride's party go to meet the bridegroom's contingent by way of doing them honour. When they have reached the bride's house, the *ksiang* of the bridegroom enters first, followed by the bridegroom, and after him the bridegroom's party. The *ksiang* then hands over the bridegroom to the maternal uncle (*kni*) of the bride, or to the bride's father. Either of the latter then provides the bridegroom with a seat next the bride. The bride and bridegroom exchange bags of betel-nut, and where the custom of investiture of the ring is in vogue, these tokens are interchanged. The *ksiangs* of the bridegroom and bride recite the marriage contract in lengthy formulae, which may be found on pages 6, 7, 8 of the late U Jeebon Roy's interesting notes on the Khasi religion. The two *ksiangs* then take up, each of them, a gourd containing fermented liquor from the gourd provided by the contracting party, and give them to an old man who is versed in sacrificial lore, who solemnly mixes the contents together. Three dried fish are produced, and are placed on the floor of the house. The priest thus appointed then solemnly adjures the gods in the following words :—

Hei, oh god from above; oh god from below; oh *'lei synshar*; oh god who hast created man; as thou hast ordained this marriage, the ring has been given this day; thou wilt know; thou wilt hear; from the clear firmament above that . . . . have been married this day. Thou wilt bless them; thou wilt grant them prosperity; thou wilt show them the way; thou wilt show them the road, that they may be well, that they may obtain dwellings and houses,

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

585 that they may prosper, that they may obtain rice and fish, that
788 they may possess hundreds and thousands; thus, oh god." The priest then pours liquor on the ground three times from the gourd, counting "one, two, three." He then continues the invocation thus, "*Hei*, thou, oh mother; oh grandmother; oh maternal uncle; oh father: oh *Suid-nia*; oh younger grandmother; oh elder grandmother; oh younger grandfather; oh elder grandfather. As the flesh has fallen (on the floor, i.e. the feast has been prepared), the ring has been put on, the three strips of flesh are ready (alluding to the three dried fish already mentioned), you will all of you (ancestors) give ear, you will continue giving strength and spirit (i.e. to the married pair) that they may be well" (and so on, as written in the first invocation). He then pours out the liquor three times as before. He then adjures the Sieu, the elders, and all the people who do not belong to either of the two clans, and pours out liquor three times as before. The three pieces of dried fish are first placed on the *tympan*, the high rack above the fire-place, then removed and tied to the ridge-pole of the house, amidst shouts of
585 *Ho, hoi, hoi, hoi.* The poor then sacrifice a fowl, and the
769 rich a pig without blemish (*uba tlem*), to *u Suid nia* and *ka Iaw-bei* (the spirits of deceased ancestors of the family), and present them with *dykhot*, or pieces of flesh. Two or three days afterwards, the bride, accompanied by her female relatives, pays a visit to the bridegroom at his house, and after this they go and come as they like to one another's houses.
591 After two or three children have been born, they take down the
782 pieces of dried fish from the roof and sacrifice two pigs, one on behalf of the husband and another on behalf of the wife. Then they say there can be no possible *sang*, and husband and wife use each other's things and pool their earnings, and if the husband has a house of his own, the wife can go and live with him; this, however, is not the custom amongst many of the Syntengs, who more strictly observe the principles of the
585 matriarchate. The cost of the marriage ceremonies amongst
435 Khasis, Syntengs and Wárs, may be put down at between Rs. 50 and Rs. 200 according to the position of the parties.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

LAMDOH CEREMONY.

This ceremony is identical with that of *Pynhiar synjat*, except that the bride and bridegroom do not interchange rings, and that there is no sacrifice of the pig. The parties merely buy some pig's flesh and perform a puja with a small portion of the flesh of the legs of the animal. Amongst the poor, fish sometimes takes the place of pork at the *Iadih-kiad* ceremony. The latter consists of a drinking bout mingled with muttered sentences by a *nongkinia* (sacrificer), the invocations and prayers being the same as at the *Pynhiar synjat*. The *Lamdoh* and *Iadih-kiad* ceremonies take the place of the more elaborate *Pynhiar synjat* in most places now-a-days.

LYNNGAM MARRIAGES.

The ritual observed at these marriages is described as under:—First of all a proposal is made in the following manner. A *ksiang*, or go-between, is sent, with the brother of the girl for whom a husband is required, to the house of the father of the young man (not to the house of the mother as is the case with the Khasis). If the proposal is accepted, the father of the young man kills a pig, and gives a feast to the people of the village of his father-in-law elect; also to the go-between and the *borang* (brother of the bride). The father of the bride then gives a similar feast. A sum of Rs. 1 each is given as a present to the go-between by the fathers of the bride and bridegroom, and the father of the bride pays from Rs. 5 to Rs. 15 to the father of the bridegroom. Further feasting ensues at the house of the father of the bride. The go-betweens then sacrifice a pig and two fowls at the house of the bridegroom, and afterwards perform the same sacrifice at the house of the bride. At the house of the bride, after the fowls and the pig have been sacrificed, the go-between, after drinking liquor himself, pours out some on the floor of the house and then gives some to the bride and bridegroom to drink. The killing of the fowls, the sacrifice of the pig, and the libation of liquor are essentials at a Lynngam marriage. The sacrifice of the fowls is also an essential feature

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

585 of a Garo marriage. The Lynngams, unlike the Garos, do not
782 observe which way the beaks of the fowls turn when they are thrown on the ground after being sacrificed. The Lynngams,
787 like the Khasis, take auguries from the entrails of the fowls and the pig. After these ceremonies are over, the Lynngam pair are allowed to cohabit. The cost of an ordinary Lynngam
585 marriage is from Rs. 30 to Rs. 40. The marriage system in
435 vogue among the Lynngams may be described as a mixture of the Khasi and Garo customs. As has already been stated,
101 the Lynngams are a mongrel breed of Khasis and Garos.

CEREMONIES ATTENDING DEATH.

764 The death customs of the Khasis are not only very elaborate, but possess a significance of their own, it is, therefore, necessary to describe them in detail; they are as follows:—

763 A member of the family bends down towards the ear of the apparently deceased person and calls him or her by name three times, to make sure that death has occurred. If no answer comes, the family laments, for it is then con-
964 cluded that the person is really dead. The body is then bathed
291 in warm water from three earthen pots and is reverently laid on a mat (*japung*), where it is dressed in white cloth, a peculiar feature of the dressing being that the waist-cloth and turban are folded from left to right, and not from right to left, as in the case of the living. An egg called *u'leng kpoh*
764 is placed on the stomach of the deceased, and nine fried grains, of *riw hadem*, or Indian corn, are tied round the head with a string. The rich place ear-rings in the ears and other jewellery on the body of the deceased, it being necessary that this jewellery should be specially made for the occasion, and they
[775] deck the corpse with valuable cloths. A cock, *u'iar kyad lynti* (literally the cock that scratches the way), is sacrificed, the idea being that a cock will scratch a path for the spirit to the next world. A sacrifice of a bull, or of a cow in case the deceased is a woman, (*u* or *ka masi pynsum*,) follows. Portions of the left leg of the fowl and the lower part of the jaw of the bull or cow are kept, to be placed afterwards in the *mawshieng*, or bone,

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

child is a female. Up to the present time I have not discovered any trace of the *couvade.* 000 [546]

6. *Marriage ceremony.*—Marriage is a purely civil contract. The most prominent features of the Khasi marriage are the following :— [581] 585

(*a*) The *pynhiar synjat*, or betrothal.

(*b*) The pouring out of libations of liquor to *Ka Iawbei* (the first maternal ancestress).

(*c*) The eating by bride and bridegroom out of the same plate.

(*d*) The mixing of liquor by the *ksiangs*, or go-betweens.

(*e*) The taking of the bride to the house of mother of the bridegroom, where a ring is placed on her finger by her mother-in-law.

7. *Divorce* can be easily obtained amongst the Khasis. Adultery, want of issue, and incompatibility of temper, are some of the more frequent causes. The usual ceremony of divorce is as follows:—The husband hands the wife five cowries, or pice. The wife hands these back to the husband, with five of her own. The man then either throws them away or hands them over to some village elder, who throws them away. Divorce is then complete. 586

8. *Death, ceremonies.*—The corpse is bathed and laid on its back. A fowl's egg (*ka'lengkypoh*) is then placed on the navel. A cock (*ka' iarkrad lynti*=the fowl that scratches the way) is sacrificed. The limbs of the fowl and its feathers are placed in a bamboo basket, which is hung up near the head of the corpse. Rich people sacrifice a cow also, called *ka masi pynsum.* When a cow is sacrificed it is shot through the heart with an arrow. From the time of bathing the body till it is burned, offerings are offered daily; these offerings are called *ai ja miet ja step.* It is the custom amongst some to place the corpse in a long narrow box or coffin, which has been hollowed out of the trunk of a tree; this is called *ka shyngoid.* When this procedure is adopted, a small pig, which is killed by a spear (*u narsuh*) is sacrificed. This sacrifice takes place during the night. A goat (*U lang sait ksuid*=a goat to wash the devil)—which is believed to be a scapegoat to bear the sins of the deceased—is sacrificed. The corpse is then taken outside and placed on a bamboo bier (*ka krong*). When the *shyngoid* is used it is placed inside the bier. Some rice is scattered on the ground, and water is poured from a *lhota.* On arrival at the burning-place, the bier, with the corpse in it, is placed on the pyre, or *jingthang.* The egg placed on the navel is then broken on a plank and a fowl (*Ka iar padat*) is sacrificed. Two arrows are shot, one to the east and another to the west (this is a Khasi custom only); the arrows are intended for the protection of the spirit on its way to another world. Fire is then applied to the pyre. 764

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

else that we do is instinct with a *plus*; and for the student of religion or of human culture in any of its forms, to account for that *plus* is the sum and substance of his task.....Whereas, then, there is likelihood that any *a posteriori* reason existed for believing that in-breeding makes for sterility, if indeed it be true in fact at all, there might well have been an *a priori* conviction to much the same effect based simply on a fear that to tamper with the fountain-head of human vitality would somehow cause it to dry up." The Khasi stands in the world as exogamous in his rule of life, and he says '*sang bad byrsieh*', that is, endogamy is forbidden and if it should ever be committed it will render life defiled and corrupt. He says this out of the fear of the knowledge that any act of carelessness in the prohibited area of the source of human life and vitality, which is in the Khasi phrase '*long briw*' (*long* is to be or become, *briew* is man, i.e., to be or become man), will make that source of human life to dry up. So he says, 'duh I jaid I khong' (*duh*=is exterminated; *jaid*= kind, species; *khong*=root).

In refutation of such aspersions as that the Khasi has no rules of marriage, I shall quote the most sacred pronouncement the Khasi when two persons, the man and the woman, are initiated into that state. Calling upon the name of God the Khasi says—"*U Lei thaw briew man briw, u' Lei ne ka 'Lei synshar'*, (God who creates man and is the source of human life, God who keeps, controls, preserves), "*Hei ko Blei na jrong, Ko*

14: Roy I-5 (no date) 1938 AR7 Khasi AR7

Blei na tbian, ko Lei Synshar, Ko Blei triw, man briw, kumba la hukum kumba bhu ma phi U Blei ka Blei ban long I Kha I man, kumba la pynhiar ka synjat mynta ka sgni, ba phin tip, ba phin sngew na jrong ho kyndiang ba ita I jaid bad ita I jaid ki la iapoi kha poi man ban iaroi ban ia man ban ia heh ka long kynthei ka long shynrang', Oh God from above, oh God from below, Thou God who controllest, who keepest and preservest, Thou God who createst man and the origin and source of human life,—as ordained by Thee, Oh God, U Blei (God in the male aspect), Ka Blei (God in the female aspect) that there should be *I Kha* (person to bear and give birth) *I man* (person with whom and through whom to give cause to life and to grow), as token has been brought down this day, [a ring is given], so that Thou mayest hear clearly from above, that such and such *jaid* (kind, clan) and such and such a *jaid* (kind, clan) have become joined in marriage in order to increase, in order to grow, so as to increase the state of being female and the state of being male (i. e. male and female population)." [This is said as a woman of a certain clan always marries a man of a different clan.] As I have said elsewhere, "There is no tradition among the Khasis that there was ever a time when the status of marriage did not exist among our ancestors. There is a belief among the Khasis that they were instructed in their religion and that their ceremonies and rites were delivered by God Himself to the

582 585 539 581 773

178 no polygynists, though there were many personal temporary illicit
184 relations or love affairs.

It is true that even in interior villages polygyny is rapidly decreas-
595 ing. In the two villages I found only two cases of polygyny: a man with two wives in Sohkynduh (Josio in List 6, whose wives are 26 and 32), and a man with three wives in Kongton (Jubongrai in List 9, whose wives are 8, 20 and 52). These cases appeared clearly as cases of polygyny which the villagers recognized as such, speaking of them quite differently from the way they would have spoken of lovers, calling them wives and husbands. Of course, the first wife socially outranks the secondary wives, as *ka tynga trai*, and the term *ka tynga tuh* is used for the latter, as Gurdon states (1914, p. 80). The difference being that the first wife has a legal marriage ceremony while the
• 585 others have not—*ka tynga tuh* means literally 'stolen wife.' About the marriage ceremony, Gurdon gives a detailed discription (*ibid.*,
595 pp. 127-130) and says there are three forms of marriage ceremonies, *Pynhiarsynjat*, *Lamdoh* and *Iadih-hiad*. The first and second forms are considered the more respectable; the last one is resorted to by the very poor who cannot afford the greater expense entailed by the first two. Unfortunately, during my stay in these villages, no marriage ceremony took place, but villagers described to me what seems to be the *Iadih-hiad*, where only a fowl is sacrified, and the whole procedure is much simpler than that described by Gurdon. However, whatever the complexity and richness may be, there is a distinct line between having a ceremony and not having it, and this draws the distinction between the status of the first wife and that of the secondary wives.

428 Nevertheless, this distinction has more of a social bearing than the
595 legal bearing it has in a patrilineal system. Since they follow the matrilineal system, the legal distinction between the first wife and
851 the secondary wife does not affect their children's status and their property rights, at least not in the villages where I worked. The children's social locus is determined by their mother. The children (particularly the youngest daughter) have the right to inherit their father's acquired property which is automatically under their mother's ownership. If the polygynist father has acquired property by working their mother's field, or in trading on behalf of their mother, whether she be the first wife or the second, this property undoubtedly belongs to the children of that wife, not to the first wife alone. The father's physical locus at the time of his economic realisations is the decisive factor.

591 The Khasi polygynist, without bringing his wives into one house-
595 hold, alternates his residence among them, in turn or according to his temper., This practice is similar to that of the Trukese described by Goodenough (1951, p. 123), and quite different from that of the Garo

ing from the time it consists of an elementary family until it grows to a local descent group four generations deep. [Cf. Chattopadhyay 1941.] **Kin terminology.** The terms of address given below are also terms of reference except where otherwise indicated, and are uniform for male and female speakers. They were collected in an upland Khasi village near Shillong (cf. Ehrenfels 1953 for some regional variants). 602 601 [IA]

MARRIAGE AND FAMILY. **Mode.** According to the traditional courtship pattern, a group of young male relatives and friends made nightly visits to the house of some virgin girl in another village, appraising her through banter while she and her parents appraised them, and staying the night to avoid the dark walk home. Marriage was according to the wishes of the parents after negotiation by a go-between from the boy's side. Girls might be 15, and boys 17, years of age. Girls have now acquired freedom of movement through attending school, however. Premarital sexual play is common, and young people choose their own spouses when the girl is about 19 and the boy 21. The most common mode of marriage is elopement, for Christians and non-Christians alike, but some Christians marry in church, and some Khasis still marry according to the traditional ceremony or some variation on it. There are no preferred or prescribed marriage types, nor is there a bride price or dowry. **Form.** Monogamy is the ideal for all. **Extension of incest taboos.** Sibs are exogamous. Other prohibited marriage partners are real and classificatory FaSi and FaBr, FaBrCh, FaMo, and FaMoMo. The MoBrWi is also prohibited. Boy 584 582 569 178 836 584 585 585 184 583 581 835 [IA]

[P. 111 B] AR7 Khasi AR7

household deities, and measles and smallpox deities. 776
Deities of the first two categories are simply aspects 771
of the high God or Goddess. • The earth is peopled with two great orders of land demons and water demons who cause all undesirable, unnatural, and otherwise inexplicable events, acting either on their own or as instruments in the hands of sorcerers. Apart from omens, both in nature and in dreams, 787
Khasis attach supernatural significance also to mystic 822
numbers, and to the colors white, black, and red. They hold especially important folk beliefs regarding 824
betel nut, paddy rice, gold and silver, and clothing. **Practitioners.** The two classes of religious practition- 781
ers are the village or state priests and the sacrificers. 793
Both are male. They use the same divinatory tech- 754
niques of reading broken eggshells and the entrails of cocks, and they both sacrifice cocks, hens, goats, pigs, and cattle. Their skills are not taught to them so much as picked up by observation and confirmed by demonstrations of efficacy. A priest is elected from among the men of his sib to direct his skills to the public good until he dies, and his rewards are institutionalized and come from the village or the state. A sacrificer acts for private persons or kin groups, on call, and is rewarded by them personally with gifts in cash or in kind. The sacrificer is called upon to explain and then to ritually remedy every variety of misfortune, especially illness, though his powers are nowadays regarded with ambivalence, and he is widely expected to become a sorcerer sooner or later. • There are two major types of sor- 754
cerer. One is the ritual specialist or sacrificer who secretly turns his skills from good to evil, manipulating demons to injure a person or kin group, and acting always for himself alone out of considerations of jealousy or revenge. The other is normally a leading citizen, a woman who is so wealthy and successful that it is believed that she must keep a *thlen*, i.e. a creature which will bring her prosperity as long as she feeds it periodically with human blood. To provide this blood, the men of her household, or other males whom she bewitches with a special whisky, will indiscriminately murder anyone except a mem- [184]
ber of her matrilineage. The Jaintias have an analogue to the *thlen* in their *taro*, except that the ultimate result is death from illness rather than murder. Minor witchcraft can be perpetrated by poison keepers or persons with an evil eye, who are often women. **Ceremonies.** The important traditional 843
ceremonies were the life-crisis rituals relating to 844
pregnancy and childbirth, the naming of a child, and 553
death. Lesser ceremonies related to marriage and 764
divorce, and to housebuilding. All these rituals were 585
addressed primarily to the ancestors, and they are 586
still performed in modified form by many Khasis. 342
Other rituals, which were performed by groups such 769
as villages, sibs, local descent groups, or households, 178
were addressed to the unnamed aspects of the high 782

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

have been born to him, his wife and children live with him. It 573
is he who faces the dangers of the jungles, and risks his life for 604
wife and children. In his wife's clan he occupies a very high place, he is second to none but *u kwi*, the maternal uncle, while in his own family circle a father and husband is nearer to his children and his wife than *u kwi*. The Khasi saying is, "*u kpo ulo lah ban ioi, u kwi ulo tang ha ka iap ka im*," which may be translated freely as, "the father bears the heat and burden of the day, the maternal uncle only comes when it is a question of life or death." The Khasi father is revered not only when living, but also after death as *U Thawlang*, and special ceremonies are performed to propitiate his shade. Further remarks on the subject of marriage will be found in the Section which deals with religion.

DIVORCE.

Divorce amongst the Khasis is common, and may occur for 586
a variety of reasons, such as adultery, barrenness, incompatibility of temperament, &c. The rule amongst the Khasis is that both parties must agree, but amongst the Wars, especially the people of Shella, the party who divorces the other without his or her consent must pay compensation, which is called *ka ngawsia*, or *ka thawn*. Amongst the Khasis it is not the custom to enforce restitution of conjugal rights; as a rule, when husband and wife cannot live together amicably, they agree to divorce one another; but occasionally it happens that either the husband or the wife will not agree to a divorce. Usually the husband would be willing to live with his wife; but when the latter consents neither to live with her husband nor to accept a divorce, a difficult situation arises, and it is in the event of such a contingency happening that the necessity of assessing *ka ngawsia*, or *ka thawn* (compensation), occurs. [517]
The latter is computed by the village elders. Parties who have been divorced cannot afterwards remarry one another, but they are at liberty to marry into other families. A woman cannot [615]
be divorced during pregnancy. The following description of the divorce ceremony is taken from U Joshua Roy's note on the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

586 Khasi religion. If the marriage has been celebrated according to the *pynkiar synjat* rite, a *kniang* (go-between) is necessary on each side, also the *kni*, or maternal uncles of the parties, to witness the divorce. In other cases the presence of the *kniang* is unnecessary, but some acquaintances and friends as well as the relatives on both sides should witness the ceremony. The husband and the wife each bring five cowries (*sbài*), or, more commonly nowadays, five pice. The wife gives her five cowries or pice to her husband, who places them with his, and then returns the five cowries or coins to his wife, together with his own five. The wife then returns the ten shells or coins to the husband who throws them on the ground. A crier (*u nông pyrta shnong*) then goes round the village to proclaim the divorce, using the following words:—

[203] "Kaw—hear, oh villagers, that U—— and K—— have become separated in the presence of the elders. Hei! thou, oh, young man, canst go and make love to Ka—— for she is now unmarried (*khynraw*), and thou, oh, spinster, canst make love to U——. Hei! there is no let or hindrance from henceforth." Among the Khasis divorce must be by mutual consent, [587] and the ceremony must take place in the open air. Until the divorce ceremony has been performed as above described, neither husband nor wife can marry again, but after it has taken place, either can remarry, but not within the family of the divorced husband or wife. In the event of a husband or wife being absent for a long period, say ten years, without any communication having been received from either of them, a divorce ceremony is performed by the relatives on his or her behalf. It is stated by U Jeebon Roy * that the rule of 575 monogamy is not so strict for the husband as it is for the wife, 428 he can contract an informal alliance with another woman, the only prohibition being that she must not belong to the original wife's village. Such a wife is called *ka tynga tuh*, literally, stolen wife, in contradistinction to the legally married wife (*ka tynga tuai*). The children by the unmarried wife are called *ki khun khiar* (children from the top). By children from the top is understood to mean children from the branches not from the root (*trai*) of the tree. Such children cannot claim ancestral property [illegible] the wife's country.

113 * See page 18, "Ka Niam Khasi." (U Jeebon Roy.)

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

ancestral property, except in the Wár country. In the event of a divorce the mother is always allowed the custody of the children. Divorces amongst both Khasis and Syntengs are of common occurrence, the result being that the children in many cases are ignorant of even the names of their fathers. For the mother, on the other hand, the children cherish a very strong affection, all their sympathies and affections binding them closely to the mother's kin. Divorce amongst the Syntengs, though resting on the same principle as that of the Khasis, differs in detail, and must be described separately. It is as follows:—In the first place it is not necessary for both husband and wife to be consenting parties, as is the case with the Khasis. In the Nongkhlih doloiship divorce takes place before the relatives of the parties. The man has to give eight annas as a sign of the divorce, and clothes worth Rs. 3/- or Rs. 5/- to the wife. There is a similar custom in the Suhtnga and Amwi doloiships. In the Jowai doloiship the divorce takes place in the presence of a village official called *U basan*. The husband or the wife gives the *basan* an eight anna piece, the latter gives this either to the wife or to the husband, as the case may be. The *basan's* share of the eight annas is two pice, the remainder being spent on liquor. The *basan* is entitled to a further fee of one anna from the man. If a wife does not agree to accept divorce, she is entitled to receive two pieces of cloth from the husband to the value of Rs. 3/-. This compensation is called *thnem*. The divorce then takes place. If a wife wishes to divorce her husband, and the latter is unwilling, before she can obtain divorce, she must pay *thnem* to the value of the whole amount the husband has spent on her and her children during the marriage. Divorce customs in Nartiang and Nongjinghi doloiships are much the same, only the amounts tendered by the parties and that of compensation differing.

In conclusion it should be stated that the great drawback attaching to divorce in ordinary communities, i.e. the effect that it has on the lives of the children of the marriage, does not apply to the Khasis, for with them the children always live with their mother and their mother's family, which latter would be bound to maintain them in the event of a divorce.

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

child is a female. Up to the present time I have not discovered any trace of the *couvade.* 000 [546]

6. *Marriage ceremony.*—Marriage is a purely civil contract. The most prominent features of the Khasi marriage are the following :— [581] 585

(*a*) The *pynhiar synjat*, or betrothal.

(*b*) The pouring out of libations of liquor to *Ka Iawbei* (the first maternal ancestress).

(*c*) The eating by bride and bridegroom out of the same plate.

(*d*) The mixing of liquor by the *ksiangs*, or go-betweens.

(*e*) The taking of the bride to the house of mother of the bridegroom, where a ring is placed on her finger by her mother-in-law.

7. *Divorce* can be easily obtained amongst the Khasis. Adultery, want of issue, and incompatibility of temper, are some of the more frequent causes. The usual ceremony of divorce is as follows :—The husband hands the wife five cowries, or pice. The wife hands these back to the husband, with five of her own. The man then either throws them away or hands them over to some village elder, who throws them away. Divorce is then complete. 586

8. *Death, ceremonies.*—The corpse is bathed and laid on its back. A fowl's egg (*ka'lengkypoh*) is then placed on the navel. A cock (*ka' iarkrad lynti* = the fowl that scratches the way) is sacrificed. The limbs of the fowl and its feathers are placed in a bamboo basket, which is hung up near the head of the corpse. Rich people sacrifice a cow also, called *ka masi pynsum.* When a cow is sacrificed it is shot through the heart with an arrow. From the time of bathing the body till it is burned, offerings are offered daily; these offerings are called *ai ja miet ja step.* It is the custom amongst some to place the corpse in a long narrow box or coffin, which has been hollowed out of the trunk of a tree; this is called *ka shyngoid.* When this procedure is adopted, a small pig, which is killed by a spear (*u narsuh*) is sacrificed. This sacrifice takes place during the night. A goat (*U lang sait ksuid* = a goat to wash the devil)—which is believed to be a scapegoat to bear the sins of the deceased—is sacrificed. The corpse is then taken outside and placed on a bamboo bier (*ka krong*). When the *shyngoid* is used it is placed inside the bier. Some rice is scattered on the ground, and water is poured from a *lhota.* On arrival at the burning-place, the bier, with the corpse in it, is placed on the pyre, or *jingthang.* The egg placed on the navel is then broken on a plank and a fowl (*Ka iar padat*) is sacrificed. Two arrows are shot, one to the east and another to the west (this is a Khasi custom only); the arrows are intended for the protection of the spirit on its way to another world. Fire is then applied to the pyre. 764

lk Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

removal of the bar on remarriage was also of the same kind elsewhere in the neighbouring States. Clearly, the idea of leviration or sororation is incompatible with this idea of the marriage bond continuing even after death and necessitating a ceremony to break it. It may also be noted that while the Khasis permit divorce somewhat easily, remarriage is not permitted of either party "within the family of the divorced husband or wife" (G). A Khasi cannot also marry two sisters, although he can marry irregularly, more than one woman and also the wife's sister after the decease of the wife. We can now discuss why a woman or a man refers to the brothers and sisters of the husband or wife by the kinship terms used by the spouse, qualified by a special term. When a man marries and goes to live in the house of his wife's mother, he comes in contact with unmarried sisters of the wife. But he knows that they are sexually to be avoided. He lives in the wife's mother's house only during the life time of his wife. A wife's sister is comparable to a Kur sister sexually, during this period.

But his economic relations and religious ties require that a distinction should be made between these "sisters" and the "Kur sisters." The qualifying term supplies this requirement. The woman, on the other hand, has no direct relations with her husband's brothers. She has however to keep in touch with the husband's female relatives. The bones of the husband go over to the mother's house and eventually to the clan ossuary. The husband is also a potential manager of the property of his female relatives. She has therefore to take note of the order in age of her husband's sisters. As her husband uses the terms for sisters for the sisters-in-law, it is quite natural for her to extend such usage to her husband's sisters. The brothers of the husband do not count at all so far as the woman is concerned, and she will not therefore have any special term for them. As the sisters are referred to as Para Kynsi and Hymmen Kynsi, so will the brothers of the husband be referred to by similar terms. The absence of any sexual privileges between the woman and her

14: Roy I-5 (no date) 1938 AR7 Khasi AR7

human beings all over the four quarters of the globe (*chi snieh ka pyrthei*) with whom, in the world, he can give in marriage and take in marriage, shows the nature which is believed to be innate in the Khasi, and his supposed power of moulding the world. His nature is to grow and to resist, to extend and spread out. It is against his idea of life to remain narrow or limited and resourceless. He is not to be made small or made an orphan, it will not do for him and his idea of the world to '*sah khlem khun kelem kti*,' stay without kind and species, without child, without issue. A couple would even seek to separate if there are no children of the union. His idea is, so to say, 'imperialistic,' to sow and spread out. As I wrote elsewhere, "A Khasi marries men and women of all races; to his Khasi parent the issues are all one and the same without any distinction of caste or creed or colour or possessions. The children are the 'khun kha' (*khun* = child, *kha* = born, i.e. children who are born through the union of a descendant of the parent with a descendant of another parent), and these children are unified into families and are assimilated, in the Khasi idea of life, while these groups of families are traced to their mother and are made to revolve on this ancestress as the pivot of their existence."

Thus the Khasi shows :—

One one side – mother
|
Son—mother
which is, – mother
|
the son of one's own – his kinswoman
On the other side also he shows – mother
|
Son – mother
which is – Father's mother
|
the son of others his kinswoman

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 always somewhat outside the family conversation which was centred
593 on the maternal uncle and his sisters, nephews and nieces, by whom
604 I was well taken care of. This is somewhat similar to the situation amongst the Cewa and the Yao of the Central Bantus, which have what Richard calls 'the detachable husband' (Richards, 1950, pp. 233-35, 248), though the parallel is not by any means exact.

428 There is, therefore, inevitably an element of tension in the relations
581 between the wife's maternal uncle (including parents-in-law) and the husband (son-in-law) and this tension makes the latter's life extremely
• 586 uncomfortable. This awkward position is well shown in the divorce rate. At Kongton (see List 9), out of 61 couples (house-owners and
[604] their spouses), the number of persons who had experience of divorce
[606] was 33 (female 15, male 18) and those married more than twice
[592] numbered 19 (female 7, male 12). Out of 61 couples, there were only 31 in which neither husband nor wife had been divorced. In my
[593] census of Jatinga village, 70 per cent of all divorce cases were marriages to heiresses. In general, the period when divorce occurs more frequently is before a couple get children and after the wife has passed the child-bearing age. A marriage breaks up either through the action of the wife or of the husband, but generally through that of the wife. However, the state of separation which I presently describe is brought about by the husband, though later it results in a divorce from the wife. Divorce does not mean a great catastrophe for a Khasi wife, especially if she is an heiress and her husband's economic
[587] contribution is not significant. Moreover, in this society remarriage is as easy for a widow or divorcée, as it is to divorce. In the villages of Sohkynduh and Kongton, the couple who wants to divorce has only to throw a few Annas together in the presence of some witness, usually an elderly man.

581 In addition to divorce, there are many actual separations of husband and wife, of short or long duration, when the husband runs away from
593 his wife's house to his sister's. Though it does not always end in divorce, considerable number of husbands have a strong tendency to spend most of their time at their sister's house. Khasi women often told me, "I don't know why he does not come back to my place." I have often found the husband staying at his sister's house only a few houses away from his wife's, without any particular reason. They are obliged to see each other every day whether divorced or separated. This kind of ambiguity in the marriage relation seems to have an important correlation with the Khasi social structure, combined with the village endogamy. The man and and wife have grown up together from their childhood in the same village and known each other very well. Hence their psychology cannot clearly distinguish the marriage form as a newly-established independent social relation-

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

171 seems to come *firstly* from the different residential arrangement on
592 marriage: among the Negri Sembilan a man marries into his wife's
602 group, i.e. his wife's village; being thus separated from his kin, and
613 as a result of the physical absence of his wife's brother or maternal
428 uncle in his domestic family, he enjoys considerable rights in his wife's household—as Swift states, he is 'master in his own house.' On the other hand, since among the Khasi the man stays in the village where his mother's (or mother's successor's) house is, even after his marriage, his relation to his natal house is preserved; *secondly*, from the structural difference of organization of the descent group. Among the Khasi, the *iing* is always the centre of the descent group, based on unigeniture succession and inheritance. Hence, the core of the descent group is always found physically in a particular household, whereas among the Negri Sembilan, the descent group is *not* organized on a *household* level, but is a much wider organization, including apparently many households. Membership of an actual household and of a descent group are at different levels. To marry out and become a member of his wife's household means for the man the transfer of his household membership. Likewise, his sister's husband becomes a member of his sister's household. Thereby he becomes a secondary member of his sister's household after marriage though he keeps his memberhsip in the descent group to which his sister belongs. Among the Khasi, membership of a descent group always corresponds to membership of a particular household. The Khasi man can always demand his rights at his natal house primarily, as he is a member of that descent group. But it should be noted that he has this right only in his mother's (or mother's successor's) household, not his other sisters' (non-heiress') and mother's sisters' households (unless one of them is successor of his mother), though they may belong to the same descent group. These matri kin's households are considered as separate *iing* (strict functional descent group) from his.

• 586 Indeed, sometimes a man cannot find his *iing*, because his mother
613 died leaving no daughter to succeed her, or his sister died leaving
736 no successor, and his *iing* became extinct. Such a case occasionally
428 happens when a man becomes a divorcé or a widower as he is getting old. Then he has to face a serious social and economic condition. In divorcing, he has to leave everything he owned, his earnings including the house which he built, and even children . . . really he has nothing left him except his body.[1] Such a wretched man collects some timber and makes a small hut for himself, though sometimes lads who sympathize with him help him to build it. Unless he finds some woman

1. A widower has an alternative solution—to remain in his late wife's household till he marries again, though his position is not comfortable there.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

whom he can marry, he has to endure this miserable lonely life, while often in the same village his former wife is living in a well-built house with her children and her matrilineal relatives as before. Households of 3, 13 and 30 of Sohkynduh in List 6, and 23, 29, 38 and 56 of Kongton in List 9 are instances of such cases. It is really a pitiful picture to see such a man, aged and poor, living all alone. 586 613 736 428

V. Marriage with the Non-heiress

Outsiders who come to the Khasi Hills are often impressed by the Khasi husband's miserable status and express surprise at the high divorce rate. This is mostly due to exaggeration based on the marriage with the heiress. However, where a man marries a non-heiress, there are many successful marriages with paternal authority. In most of these cases a man's status as a husband and as a father is stable. First of all, the domestic residential unit is an elementary family. From the onset of the marriage the husband's labour is of great importance to his family, since a non-heiress usually has no economic background, i.e., no dowry or inherited property (see p. 105). The economic circumstances allow a man to be the *de facto* head even though whatever he earns belongs, as a rule, to his wife. A man who succeeds at the beginning of his married life is respected and honoured as father in his family for the rest of his life. By this type of marriage, the man's status is firmly established. It is therefore a more secure form of marriage than a match with an heiress. 184 428 593

In such a marriage the children love and obey their father. The management of his acquired property will be taken over by his son and the property will be handed over to his daughter. Thus the paternal authority is as well established in this form of domestic family, as in a patrilineal family. However, the great difference from a patrilineal case is that the husband/father status is not permanent as the authority of the family. Theoretically he exercises it in the absence of a male adult member of his wife's *iing* (actually founded by his contribution), in other words, till his son is grown up (see p. 12). In the next generation this will form an established *iing* in which the husband of his youngest daughter will suffer again. [613]

The household of this kind of marriage with a non-heiress actually enjoys a considerable degree of independence from the descent groups of both wife and husband. If a man who has established a matrimonial life independent of his wife's natal *iing*, is not the authority of his natal *iing*, his relation with the latter usually becomes weaker. Economic and residential factors make it possible for the men to make the considerable shift from his *iing* to his wife's *iing*, and though 592 593 613

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

182 Even after divorce or husband's death, the Khasi woman stays on in her
586 household. Indeed many divorced or widowed poor wives, whose
613 children are still small, try their best to live and bring up their children
736 by themselves without asking their brothers' help. Of course a mother and her small children may go back to live in her natal *iing*. Such cases are found particularly when the woman's *iing* is rich. However, during my field work, I found no sense of psychological inferiority in Khasi women, widows or divorcées, such as we usually find in other societies. The personality of the individual seems to reflect the social structure.

182 Given such strong residential independence on the part of the
184 non-heiress, economically divorced from her descent group, and
586 oriented towards sociological separation from it, the husband's eco-
593 nomic and social contribution is handsomely rewarded by the estab-
613 lishment of a stable, happier, matrimonial life. In fact, as already mentioned, the divorce rate among such couples is very low contrasted with the high rate among marriages with heiresses. More accurately, I should say that divorce is more likely to occur among the latter owing to the conflict of loyalties towards spouse and *iing*. Therefore, when each partner has less loyalty towards his or her natal *iing*, the divorce cases become correspondingly fewer. Thus, among the Khasi, successful marriages are frequently found where there is branching off from an *iing*. And a new *iing* is always established by a husband's contribution.

182 Khasi men, who are well aware of this fact, prefer to marry a
184 non-heiress, since they will then form an independent household and
581 remain immune to pressure from their wife's kin. However, they say a poor or lazy man prefers marriage with an heiress. As Richards said of the matrilineal Central Bantus, the residence on marriage seems to be a most important index of the husband's status, though the determining factors of the residence of the Khasi differ from those of the Bantus (see p. 124).

182 In the case of marriage with an heiress, when the wife dies, the
184 husband usually returns to his *iing* (the youngest sister's house). But
587 in marriage with a non-heiress the husband often remains with his
593 children, if his children are not too small and he is not planning to
613 marry any woman other than his late wife's younger sister. If he
736 marries his wife's younger sister, he has the right to stay on. This kind of sororal marriage cannot take place in the case of a man married to an heiress, since a Khasi man is not allowed to marry the late wife's elder sister. This form of sororate is found among the Khasi, but the levirate is unknown, such as can be seen among the Ashanti
182 and the Ila, where a man takes his late brother's wife. Among
587 the Khasi, even if a widow happened to marry her late husband's

says that the MoBrCh but not the FaSiCh is prohibited (1897: 2), but Gurdon says that the MoBrCh is eligible after the death of MoBr, and that FaSiCh is eligible after the death of Fa (1907: 78). Nowadays both types of marriage occur, whether the linking relative is living or dead. **Residence.** Residence is either duolocal or matrilocal under the roof of the wife's mother until the birth of one or two children. For a man married to a youngest daughter, it then continues to be matrilocal. For men married to other daughters, it becomes uxorilocal; there have also always been cases of virilocal residence, and it is now common to find neolocal residence in Shillong. For non-Christian Jaintias, it is duolocal throughout the marriage. **Domestic unit.** The domestic unit is the elementary family, though for a youngest daughter it may temporarily include also her aged mother, aged father, unmarried siblings, or divorced or widowed brothers. **Inheritance.** Traditionally, after the Khasi mother had helped each of her daughters to build and supply a house when each one married and had children, her only real obligation to help them economically was ended. Everything she possessed, excepting certain personalty that was destroyed in her cremation, was inherited by her youngest daughter. Failing daughters, a woman's property reverted to her next youngest sister's daughter. Today, this pattern is often modified by putting more property into the hands of older daughters and even sons. [Cf. Cantlie 1934; Becker 1924.] **Divorce.** A woman may effect numerous and usually brief separations from her husband by simply closing the door of her house to him, whereupon he returns to the house of his mother or youngest sister. Divorce, however, must be initiated by mutual consent. Divorce is very common, even though women resist it because they do not wish to lose a provider, and men because they do not wish to lose their children. Formerly it was accomplished by a simple ritual in the presence of witnesses, followed by public announcement by a town crier. Now, the witnesses and the public announcement have been dispensed with, and evidence for divorce consists only in the word of the parties concerned.

835 [114] [178] 591 592 428 [178] 586 586 178

SOCIOPOLITICAL ORGANIZATION. **Political organization.** The basic unit of political organization is the village, which is composed of one or more dominant local descent groups plus several others. Village government is by an assembly of all resident adult males, under the informal chairmanship of a headman elected by them from among their number. The membership of any immigrant household into a village is defined by the participation of the household's males in this assembly. Sustained membership in a village is voluntary. Khasi chiefdoms probably arose out of voluntary associations of villages, which occasionally transferred allegiance from one chief to another.

62 174 619

household deities, and measles and smallpox deities. 776
Deities of the first two categories are simply aspects 771
of the high God or Goddess. ● The earth is peopled with two great orders of land demons and water demons who cause all undesirable, unnatural, and otherwise inexplicable events, acting either on their own or as instruments in the hands of sorcerers. Apart from omens, both in nature and in dreams, 787
Khasis attach supernatural significance also to mystic 822
numbers, and to the colors white, black, and red. They hold especially important folk beliefs regarding 824
betel nut, paddy rice, gold and silver, and clothing.
Practitioners. The two classes of religious practition- 791
ers are the village or state priests and the sacrificers. Both are male. They use the same divinatory tech- 793
niques of reading broken eggshells and the entrails 754
of cocks, and they both sacrifice cocks, hens, goats, pigs, and cattle. Their skills are not taught to them so much as picked up by observation and confirmed by demonstrations of efficacy. A priest is elected from among the men of his sib to direct his skills to the public good until he dies, and his rewards are institutionalized and come from the village or the state. A sacrificer acts for private persons or kin groups, on call, and is rewarded by them personally with gifts in cash or in kind. The sacrificer is called upon to explain and then to ritually remedy every variety of misfortune, especially illness, though his powers are nowadays regarded with ambivalence, and he is widely expected to become a sorcerer sooner or later. ● There are two major types of sor- 754
cerer. One is the ritual specialist or sacrificer who secretly turns his skills from good to evil, manipulating demons to injure a person or kin group, and acting always for himself alone out of considerations of jealousy or revenge. The other is normally a leading citizen, a woman who is so wealthy and successful that it is believed that she must keep a *thlen*, i.e. a creature which will bring her prosperity as long as she feeds it periodically with human blood. To provide this blood, the men of her household, or other males whom she bewitches with a special whisky, will indiscriminately murder anyone except a mem- [184]
ber of her matrilineage. The Jaintias have an analogue to the *thlen* in their *taro*, except that the ultimate result is death from illness rather than murder. Minor witchcraft can be perpetrated by poison keepers or persons with an evil eye, who are often women. **Ceremonies.** The important traditional 843
ceremonies were the life-crisis rituals relating to 844
pregnancy and childbirth, the naming of a child, and 553
death. Lesser ceremonies related to marriage and 764
divorce, and to housebuilding. All these rituals were 585
addressed primarily to the ancestors, and they are 586 ●
still performed in modified form by many Khasis. 342
Other rituals, which were performed by groups such 769
as villages, sibs, local descent groups, or households, 178
were addressed to the unnamed aspects of the high 782

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

strip of fine silk for the loins, a part of which hangs gracefully as low as the calves in front. No notice is here taken of what has undoubtedly been added and borrowed from their more civilised neighbours in the plains. 291

'MARRIAGE.—The marriageable age for females is from 15 to 18; for males, from 18 to 24. Matrimonial alliances are contracted either through the parents or the living representatives of the families to which the parties belong. The mode of procedure is still very primitive and unceremonious. The bridegroom, escorted by a number of friends and relatives, goes to the house of the bride, where all are feasted and lodged for the night; on the morrow he leads the bride, accompanied by a number of her relatives, to his own house, and entertains the company with dishes of boiled rice and fresh pork. After remaining there a day or two, the newly-married couple return together to the house of the wife, which becomes their future home. Marriage is dissoluble by regular divorce, for any sufficient cause, and often without any assignable reason except mutual dislike or want of issue, the latter being the most common case of all. Marriage with the Khásiás is simply a conventional arrangement, with nothing further for its object than the procreation of children; failing that, it is no longer looked upon as a contract permanently binding. Divorce is effected in the presence of eye-witnesses—the parents, or the heads of clans. Five cowries (*kauris*) are produced by the parties and exchanged, then cast away by mutual consent, and the ceremony is over. Parties once divorced can never again contract marriage with each other, but they are at liberty to marry into other families. Polygamy, strictly so called, is not sanctioned by Khási custom. Adultery is looked upon as a serious crime. If the five cowries have not been cast away by mutual consent, both husband and wife are held to be subject to the "matrimonial demon;" and even when either dies in wedlock, the survivor is not at liberty to contract a fresh alliance until he or she pays the family a sum of money as the means of removing the surviving party from subjection to the "matrimonial demon." The husband is a stranger, so to speak, in the family he has entered, and perpetuates the race of others, not his own. The children in all questions of lineage and personal rights follow the mother. There are always two interests in the same family—that of the husband, and that of the wife. Whatever the husband may have earned or acquired in

58 591 586 [581] 587 595 837 587 593 611 593 428

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

589 dition that she does not remarry; the idea being that as long as
765 the bones remain in the widow's keeping, the spirit of her husband is still with her. On this account many wives who revere their husband's memories, and who do not contemplate
587 remarriage, purposely keep the bones for a long time. If a
765 widow marries, even after the customary taboo period of one year, whilst her deceased husband's bones are still in her keeping,
[346] she is generally looked down upon. Her children in such a case perform the ceremony of handing over the bones of their father to his clan in a building specially erected for the purpose. The widow cannot enter therein, or even go near it, whilst the ceremony is proceeding, no matter whether the *jing sang*, or the price for removing the taboo after a husband's death, has been
595 paid to the husband's clan or not. There is no evidence to show that polyandry ever existed amongst the Khasis. Unlike the Thibetans, the Khasi women seem to have contented themselves always with one husband, at any rate with one at a time. Certainly at the present day they are monandrists. Polygamy does not exist amongst the Khasis; such a practice would naturally not be in vogue amongst a people who observe the matriarchate. There are instances, however, of men having wives other than those they have regularly married, and in the Wár country children by such wives enjoy rights to their father's acquired property equally with the children by the legally
582 married wife. As the clans are strictly exogamous, a Khasi
688 cannot take a wife from his own clan; to do this would entail
764 the most disastrous religious, as well as social consequences. For to marry within the clan is the greatest sin a Khasi can commit, and would cause excommunication by his kinsfolk and the refusal of funeral ceremonies at death, and his bones would
[115] not be allowed a resting-place in the sepulchre of the clan. To
614 give a list of all the Khasi exogamous clans would perhaps serve no useful purpose, but I have prepared from information, kindly
582 furnished me by the Siems of Khyrim and Cherrapunji, a list of the clans in those States which will be found in Appendices A and B. These will suffice as examples. It will be seen from the Cherra list that the different divisions of the Diengdoh clan, viz. Lalu, Diengdoh-bah, Diengdoh-kylla, are prohibited from intermarriage; this is due to those branches of the clan being

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

614 descended from a common ancestress. There are other instances
582 of clans being connected with one another, such connection being called by the Khasis *iateh kur*. Whenever such connection exists, intermarriage is strictly prohibited, and is considered to be *sang*. There is no custom of hypergamy. A Khasi cannot marry his maternal uncle's daughter during the lifetime
[604] of the maternal uncle. This is probably due to the fact that the maternal uncle, or *kni*, in a Khasi household is regarded more in the light of a father than of an uncle. His children, however, would belong to the clan of his wife and there would, therefore, in ordinary cases be no bar to the nephew marrying one of them. Marriage with the daughters of a father's sister is not allowed during the lifetime of the father, but after the latter's death there is no religious ban, although such unions are looked upon with disfavour by the Khasis. In the Wár country, how-
587 ever, such marriages are totally prohibited. A Khasi cannot
582 marry two sisters, but he can marry his deceased wife's sister after the expiry of one year from the wife's death, on payment of *jing sang* (price of *sang*, or taboo) to the wife's clan. A
582 Khasi cannot marry the daughter of his father's brother; she is his *para kha* (lit. birth sister). Similarly he cannot marry the daughter of his father's paternal uncle. He can, however, marry the daughter of his mother's brother, provided that the brother is dead. This somewhat paradoxical state of affairs is explained by the fact that the children of the mother's brother belong to a different clan to that of the mother, i.e. to the mother's brother's wife's clan. The Khasi, Synteng, Wár, and Lynngam divisions are not strictly endogamous groups, and there is nothing to prevent intermarriage between them. For instance, it has been the custom in the Nongkhlaw Siem family to obtain husbands for the princesses of the state from the Wár country. There is no custom amongst the Khasis of two men exchanging daughters, i.e. each marrying his son to
[423] the other's daughter. Notwithstanding the existence of the matriarchate, and the fact that all ancestral property is vested in the mother, it would be a mistake to suppose that the father
593 is a nobody in the Khasi house. It is true that the *kni*, or
604 mother's elder brother, is the head of the house, but the father is the executive head of the new home, where, after children

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

have been born to him, his wife and children live with him. It 593
is he who faces the dangers of the jungles, and risks his life for 604
wife and children. In his wife's clan he occupies a very high place, he is second to none but *u kni*, the maternal uncle, while in his own family circle a father and husband is nearer to his children and his wife than *u kni*. The Khasi saying is, "*u kpa uba lah ban iai, u kni uba tang ha ka iap ka im*," which may be translated freely as, "the father bears the heat and burden of the day, the maternal uncle only comes when it is a question of life or death." The Khasi father is revered not only when living, but also after death as *U Thawlang*, and special ceremonies are performed to propitiate his shade. Further remarks on the subject of marriage will be found in the Section which deals with religion.

DIVORCE.

Divorce amongst the Khasis is common, and may occur for 586
a variety of reasons, such as adultery, barrenness, incompatibility of temperament, &c. The rule amongst the Khasis is that both parties must agree, but amongst the Wars, especially the people of Shella, the party who divorces the other without his or her consent must pay compensation, which is called *ka mynrain*, or *ka thnem*. Amongst the Khasis it is not the custom to enforce restitution of conjugal rights; as a rule, when husband and wife cannot live together amicably, they agree to divorce one another; but occasionally it happens that either the husband or the wife will not agree to a divorce. Usually the husband would be willing to live with his wife; but when the latter consents neither to live with her husband nor to accept a divorce, a difficult situation arises, and it is in the event of such a contingency happening that the necessity of assessing *ka mynrain*, or *ka thnem* (compensation), occurs. [587]
The latter is computed by the village elders. Parties who have been divorced cannot afterwards remarry one another, but they are at liberty to marry into other families. A woman cannot [843]
be divorced during pregnancy. The following description of the divorce ceremony is taken from U Jeebon Roy's note on the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

586 Khasi religion. If the marriage has been celebrated according to the *pynhiar synjat* rite, a *ksiang* (go-between) is necessary on each side, also the *kni*, or maternal uncles of the parties, to witness the divorce. In other cases the presence of the *ksiang* is unnecessary, but some acquaintances and friends as well as the relatives on both sides should witness the ceremony. The husband and the wife each bring five cowries (*sbài*), or, more commonly nowadays, five pice. The wife gives her five cowries or pice to her husband, who places them with his, and then returns the five cowries or coins to his wife, together with his own five. The wife then returns the ten shells or coins to the husband who throws them on the ground. A crier (*u sòng*
[203] *pyrta shnong*) then goes round the village to proclaim the divorce, using the following words :—

"Kaw—hear, oh villagers, that U—— and K—— have become separated in the presence of the elders. Hei! thou, oh, young man, canst go and make love to Ka—— for she is now unmarried (*khynraw*), and thou, oh, spinster, canst make love to U——. Hei! there is no let or hindrance from henceforth." Among the Khasis divorce must be by mutual consent,
[587] and the ceremony must take place in the open air. Until the divorce ceremony has been performed as above described, neither husband nor wife can marry again, but after it has taken place, either can remarry, but not within the family of the divorced husband or wife. In the event of a husband or wife being absent for a long period, say ten years, without any communication having been received from either of them, a divorce ceremony is performed by the relatives on his or her behalf. It is stated by U Jeebon Roy * that the rule of
595 monogamy is not so strict for the husband as it is for the wife,
428 he can contract an informal alliance with another woman, the only prohibition being that she must not belong to the original wife's village. Such a wife is called *ka tynga tuh*, literally, stolen wife, in contradistinction to the legally married wife (*ka tynga tuei*). The children by the unmarried wife are called *ki khun kliar* (children from the top). By children from the top, is understood to mean children from the branches not from the root (*traj*) of the tree. Such children cannot claim ancestral property except in the wife's country.

113 * See page 18, "Ka Niam Khasi." (U Jeebon Roy.)

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

765 If any stream has to be crossed, a rough bridge is made of
764 branches and grass. This trail of leaves and the bridges are intended to guide the spirit of the deceased to the cairn. The person who carries the bones is not allowed to turn round, or to the right, or to the left, but must proceed straight to the cairn. On reaching it, a *nongkaia*, or sacrificer, washes the bones three times and then places them in an earthen pot, tying up the mouth with a white cloth. Then, having taken three pieces of the hard yolk of an egg, three leaves of bread, the leg of the fowl, "*u'iar krad lynti*," and the lower jaw-bones of the animals which have been sacrificed, he places them inside the cairn and shuts the door. Eatables and
765 betel-nut are then placed on the top of the cairn. Early next
787 morning the relatives and friends go to the cairn with fresh food and water, and look about for new foot-prints, the idea being
[775] that from these foot-prints they can foretell future events. This they do until the third night after the cremation. During these three nights the front door of the house formerly occupied by the deceased is never closed, it being thought that the spirit may wish to return and visit its earthly abode. The whole family is moreover *sang*, or taboo, during this period, and no manner of work can be done. When the three nights are over, it is called the *lait ia*, i.e. the days (of mourning) are passed, and three eggs are broken to ascertain what was the cause of the death. After this the family goes to bathe, and
[783] the clothes and mats in the house are washed. When this has been done, the taboo is removed and the family can go to work. After a month a pig or a fowl is sacrificed, the ceremony
782 being called "*ai bam lait hoai*." It will be observed that *three*
765 seems to be the lucky number throughout these funeral
801 ceremonies. The number seems to bear a similar significance in other matters of Khasi ritual, e.g. the pouring out of libations, which is always done three times.

587 It is *sang* or taboo for a Khasi widow to re-marry within one
428 year from the death of her husband, there is a similar prohibition for a husband re-marrying; but such *sang* can be got over by the payment of a fine to the clan of the deceased. After the expiration of one year the fine is reduced in amount. Khasi widows do not as a rule re-marry, according to U Jeelem Roy,

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

587 unless they have no female children, in which case the clan
428 urges them to re-marry, so that the chain of inheritance may not be broken, inheritance amongst the Khasis always passing in the female line.

CUSTOMS IN CONNECTION WITH DEATHS BY VIOLENCE OR ACCIDENT.

766 These customs are interesting enough to deserve a separate
782 description; they are as follows:—

776 If a man dies by the sword, before his body can be burnt, a sacrifice of a black hen must be offered to *Ka Tyrut*, the goddess of death. The bones are then placed in a stone cairn. Again they are removed, and, after eggs have been broken, are taken to a river bank and there washed. If there is no river at hand, a tank is dug for the purpose, which is called *umkoi*. There are various such *umkois* in different parts of the district, e.g. near Raliang and Nartiang. A sacrifice of a goat is offered to the god *U Syngkai Bamon*, and a sow to *Ka Ramshandi*, both of whom are evil deities. Another sow is sacrificed to *Ka Tyrut*. After this the bones are placed in another newly-built cairn. The ceremony of placing the bones in one and
[787] then removing them to another cairn is usually performed three times; but unless the auspices, as deduced from the eggs, are favourable, the relatives must go on sacrificing and removing the bones until they are so. These ceremonies having been completed, they erect a flat table-stone, or *mawkynthei*, for the ghost of the departed to sit upon, and return home, where they propitiate their ancestors with offerings of food. In the case of the murdered victims of the *thlen* superstition the same ceremonies are observed. For people who have died by drowning, or been killed by wild animals, and for women who have died in child-birth, similar pujas are
766 offered, except that a sacrifice to *U Syngkai Bamon* does not take place. In the case of one who has died at a distance from
782 his home, e.g. in a foreign country, whose body has not been burnt in accordance with custom, and whose bones have not been collected, the members of his clan, or his children, take three or five seeds or cowries (*shai*) to a place where three roads meet. Here they summon the spirit of the departed in a loud voice,

782 The Khasi also erect little platforms with little houses from long bamboo sticks in which food is served to the spirits of the woods and fields (to serve [siang-] actually means spread out, as one spreads out a carpet or as one spreads out leaves for serving rice on).

[789] But not only through making sacrifices do the Khasi try to propitiate the devils and thereby make them harmless. They even try it with violence. Thus, as mentioned above, they drive the cholera demoness out of the house with sticks. Also during a cremation they shoot three arrows to ward off evil spirits.

There are many ways of warding off evil spirits; or, for acquiring their help words, wishes, or curses are used, as, for example, during a match of arrow shooting, the watchers who stand by the target try to keep the arrows of the opponents from hitting the target by calling on some god (ksuid) and the more they shriek, the sooner they believe they will attain their purpose. They wish to influence the arrows of the opponents.

3. Taboos (sang)

784 The sang or taboos of the Khasi also belong
782 to superstition. Sang means the same as "sacrilegiously or most strictly forbidden." This sang can be traced back to totemistic views. Sang can be something for a single person, for a house (iing) or a family, for a sib and a whole race (jaid). If a man or a woman whose spouse has
•[587 921] died remarries, the sang is transferred to the relatives of the deceased man or woman. This "inheritance" of the sang is different according to the sib. By accepting the sang the inheritors must pay 11 of a [ul] kaḃ or 7 1/2 of a kaẇ or 5 1/2 of a kaẇ. By kaḃ the number 1280 is actually understood. But it means, however, that

784 not so!) See here the piece u dykhot (11) and
782

11. A piece of sacrificial meat.

the sour things u lanjew (12) (a strong and

12. Herbs, roots.

sweet liquor) not (is it not so!)

[517] All relatives and acquaintances, friends and neighbors are invited to this sacrificial feast. There is a big festive meal, chiefly of meat and bacon. But before the eating begins, the rang (horn) and ngap (fork) which were laid on the "adulterer stone" before the cursing of the pig are removed. At this sacrifice all the money collected before (11 or 7 1/2 or 5 1/2 of a kha) must be completely used up, as it is forbidden to preserve any of it in house so that it will not get mixed up with the daily wage or one's earnings.

[517] The remarriage must naturally occur in another sib (jaid) if the sang is to be inherited; because otherwise the sang would remain in the family.

784 Most of the sang that occur, different according to the families or the sibs, are the following: (13)

13. Gordon, The Khasis, p. 5.

[518] 1. Building a house with stone walls on all four sides.
2. The use of iron nails in building a house.
3. The use of more than one kind of wood in building a hearth.
4. The use of resinous wood in building a house.
5. Felling wood in a holy forest (except

divides equally. U Subu Rai explained that each house counted as a separate unit. Thus if Ka Jem, Ka Jin and all their daughters were alive, the married daughters who lived in a separate house, namely, Ka Laimon, Ka Laibon, Ka Aimon and Ka Hoiman of Ka Jem's house, and Ka Phre of Ka Jin's line, would each get a share. But Ka Jem and her Ka Khadduh Ka Aiben who lives in the mother's house would get only one share. So would Ka Jin, Ka Eiribon and the unmarried daughters of the latter. The descendants of Ka Lung would get seven equal shares for distribution to each house, and not two shares first, divided later into shares corresponding to the number of daughters for Ka Jem's and Ka Jin's house. The manager does not get any share of the collections. Authority in the management of the ancestral property therefore passes from one male to another, in the extended family, and the Kur, in a manner which necessitates a clear distinction of seniority and juniority of brothers, among themselves and also of sisters with regard to brothers. 421 [429] [428]

The case of succession is similar. Gurdon notes that the Siemship in Mylliem State passes from a man to his next brother, and "failing such brothers, by the eldest of his sisters' sons; failing such nephews by the eldest of the sons of his sisters' daughters; failing such grand nephews by the eldest of the sons of his mother's sisters" and so forth in the female line. In Nongkrem, the son or similar male relative of the High Priestess becomes by delegation a Siem. The office of the High Priestess passes from a woman to her eldest surviving daughter; and failing daughters to the eldest daughter of her eldest daughter; failing daughters of her eldest daughter, to the eldest daughter of her second daughter, and so on. This is the customary line of succession, and is stated by Gurdon to be "uniform in all cases" practically. 428 793 643

Neither levirate, nor sororate are practised by the Khasis. Widows are stated (G) quite often not to remarry if there are daughters. There is no question of the control of the property 587 421

587 421 of the woman by her husband. No occasion arises either of taking his place on death, by his brother or by sister's son; or of a sister of a deceased wife being made over to a man, as is the custom among Garos, where the husband of the heiress manages the property of his wife. Among the Khasis, the widow or widower cannot normally remarry before the end of a year after the death of the husband or wife. When a year is over, a payment is made to the Kur of the deceased to remove 587 the disability. If the man or woman want to remarry before 782 the year is out, a larger sum is paid. In Mawphlang, a sum of Rs. 5-4-0 is paid at the end of the year and Rs. 11-4-0 for untimely remarriage (within the year). The payment is made to the Ka Khadduh of the deceased in each case, and a ceremony severing the relation with the dead spouse is performed. A pig is purchased with the money and it is sacrificed in the house of the Ka Khadduh by a man—usually a neighbour. If the deceased was a man, the following invocation is made: [539] "Ha kane ka mied la shim nong sang bad knia nong sang is phi. Ka tnga uta uta ban is khuid."

Free translation :—

"On this night the tabooed person is sacrificing to you. The wife of so-and-so (naming the man) is hereby made pure."

The pig is then killed by thrusting an iron spike through the shoulder. It is then cooked and eaten by the people present. This mode of killing is known as "dung."

The myntri Orongsing, whose genealogy has been noted, remarried a year after the death of his first wife Ka Resimai. This woman died two years ago, and the ceremony for removing the bar on remarriage was performed only last year. The money was made over to an old man U Ru, who is well acquainted with the rites. He purchased a pig and killed it by the "dung" method in the compound of Ka Resimai's mother, Ka Sheribon. The spike might be of wood or iron, stated U Ichon. I was informed by the myntri U Subu Rai that the ceremony of

lk Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

removal of the bar on remarriage was also of the same kind elsewhere in the neighbouring States. Clearly, the idea of leviration or sororation is incompatible with this idea of the marriage bond continuing even after death and necessitating a ceremony to break it. It may also be noted that while the Khasis permit divorce somewhat easily, remarriage is not permitted of either party "within the family of the divorced husband or wife" (G). A Khasi cannot also marry two sisters, although he can marry irregularly, more than one woman and also the wife's sister after the decease of the wife. We can now discuss why a woman or a man refers to the brothers and sisters of the husband or wife by the kinship terms used by the spouse, qualified by a special term. When a man marries and goes to live in the house of his wife's mother, he comes in contact with unmarried sisters of the wife. But he knows that they are sexually to be avoided. He lives in the wife's mother's house only during the life time of his wife. A wife's sister is comparable to a Kur sister sexually, during this period.

But his economic relations and religious ties require that a distinction should be made between these "sisters" and the "Kur sisters." The qualifying term supplies this requirement. The woman, on the other hand, has no direct relations with her husband's brothers. She has however to keep in touch with the husband's female relatives. The bones of the husband go over to the mother's house and eventually to the clan ossuary. The husband is also a potential manager of the property of his female relatives. She has therefore to take note of the order in age of her husband's sisters. As her husband uses the terms for sisters for the sisters-in-law, it is quite natural for her to extend such usage to her husband's sisters. The brothers of the husband do not count at all so far as the woman is concerned, and she will not therefore have any special term for them. As the sisters are referred to as Para Kynsi and Hymmen Kynsi, so will the brothers of the husband be referred to by similar terms. The absence of any sexual privileges between the woman and her

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

of marriages between these two *kur*. Such marriage arrangements cannot be regarded as constituting a cross-cousin institution. From my data of four villages it was not possible to produce any institutionalized pattern. 582 614

In general, the selection of a marital partner depends mainly on personal choice, though the authority of the *iing* (descent group) and parents should be consulted. The man proposes to the girl. The network of marriage relations among the Khasi seems in no way to follow any set principle. Every marriage is likely to be fortuitous: it is ruled simply by temporary personal liking, except for the strict rule of exogamy and the avoidance of near kin.

Exogamy is strictly kept. In the olden days breaking this rule was equivalent to being sentenced to death. Offenders had their heads shaved in a particular way and had to leave the Khasi community completely. Even now such a marriage is considered as the worst kind of sin; a Khasi Christian intellectual said to me that it was worse than homicide. I came across one couple who had broken this rule. Though they had different *kur* names, both *kur* were segments of one common *kur*. It happened in Jatinga, one of the most modern Khasi communities whose inhabitants were all Christians. The couple were not allowed to have their house inside the village. Their house was in the jungle about one mile away from the village. 178 582 614 684

Successive sororate marriage—marriage to a younger sister of the late wife—is practised, since it justifies the widower in remaining in the same household as his children after his wife's death. Otherwise, the Khasi rule demands that he should leave the house and his children in order to remarry another woman. We shall deal with this aspect again in terms of marriage. 587

II. Principle of Descent and Succession

Previously I have mentioned the *kpoh*, the matrilineal kin group with a common great grandmother. This is not, however, an institutional corporate descent group. The most important functional descent unit is called *iing*. The *iing* is the lowest order of clan segmentation, smaller than the *kpoh*—a *kpoh* may include two or more *iing*. The generation depth of an *iing* is usually two to four, in some cases an *iing* is formed only by mother and child. The Khasi consider this unit to be the most important social index for the classification of individuals. Marriages are arranged by individual *iing*, not by wider groups of kinsmen. The *iing* is the structurally significant norm. The term *iing* is also used for a house building itself, as is the *nok* of the Garo. However, the membership of the *iing*, as I shall 613

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 always somewhat outside the family conversation which was centred
593 on the maternal uncle and his sisters, nephews and nieces, by whom
604 I was well taken care of. This is somewhat similar to the situation amongst the Cewa and the Yao of the Central Bantus, which have what Richard calls 'the detachable husband' (Richards, 1950, pp. 233-35, 248), though the parallel is not by any means exact.

428 There is, therefore, inevitably an element of tension in the relations
581 between the wife's maternal uncle (including parents-in-law) and the
586 husband (son-in-law) and this tension makes the latter's life extremely uncomfortable. This awkward position is well shown in the divorce
[604] rate. At Kongton (see List 9), out of 61 couples (house-owners and
[606] their spouses), the number of persons who had experience of divorce was 33 (female 15, male 18) and those married more than twice
[592] numbered 19 (female 7, male 12). Out of 61 couples, there were only
[593] 31 in which neither husband nor wife had been divorced. In my census of Jatinga village, 70 per cent of all divorce cases were marriages to heiresses. In general, the period when divorce occurs more frequently is before a couple get children and after the wife has passed the child-bearing age. A marriage breaks up either through the action of the wife or of the husband, but generally through that of the wife. However, the state of separation which I presently describe is brought about by the husband, though later it results in a divorce from the wife. Divorce does not mean a great catastrophe for a Khasi wife, especially if she is an heiress and her husband's economic
[587] contribution is not significant. Moreover, in this society remarriage is as easy for a widow or divorcée, as it is to divorce. In the villages of Sohkynduh and Kongton, the couple who wants to divorce has only to throw a few Annas together in the presence of some witness, usually an elderly man.

581 In addition to divorce, there are many actual separations of husband and wife, of short or long duration, when the husband runs away from
593 his wife's house to his sister's. Though it does not always end in divorce, considerable number of husbands have a strong tendency to spend most of their time at their sister's house. Khasi women often told me, "I don't know why he does not come back to my place." I have often found the husband staying at his sister's house only a few houses away from his wife's, without any particular reason. They are obliged to see each other every day whether divorced or separated. This kind of ambiguity in the marriage relation seems to have an important correlation with the Khasi social structure, combined with the village endogamy. The man and and wife have grown up together from their childhood in the same village and known each other very well. Hence their psychology cannot clearly distinguish the marriage form as a newly-established independent social relation-

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

Even
182 after divorce or husband's death, the Khasi woman stays on in her
586 household. Indeed many divorced or widowed poor wives, whose
613 children are still small, try their best to live and bring up their children
736 by themselves without asking their brothers' help. Of course a mother and her small children may go back to live in her natal *iing*. Such cases are found particularly when the woman's *iing* is rich. However, during my field work, I found no sense of psychological inferiority in Khasi women, widows or divorcées, such as we usually find in other societies. The personality of the individual seems to reflect the social structure.

182 Given such strong residential independence on the part of the
184 non-heiress, economically divorced from her descent group, and
586 oriented towards sociological separation from it, the husband's eco-
593 nomic and social contribution is handsomely rewarded by the estab-
613 lishment of a stable, happier, matrimonial life. In fact, as already mentioned, the divorce rate among such couples is very low contrasted with the high rate among marriages with heiresses. More accurately, I should say that divorce is more likely to occur among the latter owing to the conflict of loyalties towards spouse and *iing*. Therefore, when each partner has less loyalty towards his or her natal *iing*, the divorce cases become correspondingly fewer. Thus, among the Khasi, successful marriages are frequently found where there is branching off from an *iing*. And a new *iing* is always established by a husband's contribution.

182 Khasi men, who are well aware of this fact, prefer to marry a
184 non-heiress, since they will then form an independent household and
581 remain immune to pressure from their wife's kin. However, they say a poor or lazy man prefers marriage with an heiress. As Richards said of the matrilineal Central Bantus, the residence on marriage seems to be a most important index of the husband's status, though the determining factors of the residence of the Khasi differ from those of the Bantus (see p. 124).

182 In the case of marriage with an heiress, when the wife dies, the
184 husband usually returns to his *iing* (the youngest sister's house). But
• 587 in marriage with a non-heiress the husband often remains with his
593 children, if his children are not too small and he is not planning to
613 marry any woman other than his late wife's younger sister. If he
736 marries his wife's younger sister, he has the right to stay on. This kind of sororal marriage cannot take place in the case of a man married to an heiress, since a Khasi man is not allowed to marry the late wife's elder sister. This form of sororate is found among the Khasi, but the levirate is unknown, such as can be seen among the Ashanti
182 and the Ila, where a man takes his late brother's wife. Among
587 the Khasi, even if a widow happened to marry her late husband's

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

brother (actually not likely to happen), the levirate has no sociological implication in the social structure, which is specifically related to the residence rule. The levirate seems to have a significant function only when a marriage is virilocal—when the husband has full rights over his residence and property. This is also another aspect where the Khasi structure shows a marked difference from that of the Ashanti and the Ila, etc. 182 587

VI. Marriage of the Man of Authority of an *Iing*

Among these successful marital families, there are also shadows of a matrilineal order. These affect especially those men who are in the position of authority in an *iing*. Such a man, though he has an independent household with his wife and children, often visits his youngest sister's (or niece's) house, *iing (ka iing sen)*, and sometimes stays there. Such a man's attachment to his *iing* is not only social or psychological, but also often economic. The man, as authority of his natal *iing*, usually has economic control over the management, particularly so, if his *iing* has considerable property or active trading business. As husband/father in his family he works for his wife and children, but often takes into consideration as well the interests of his *iing*. I found such cases especially among richer villagers in Shella and Jatinga, where the main economic activities were based on trading. 592 593 602 613 [182]

Among the Khasi, it is quite a traditional rule of the division of labour that women engage in trading activities at markets whether on a large or small scale. Husbands may carry goods from field to market, but male members are kept away from the actual scene of the selling and buying. However, these activities on the part of the women are controlled and accounted for by their uncle or brother, or even son (or, if no male member is available, by the husband), though in many cases they form separate domestic families. The man's control over the trade appears more marked when the scale of business is large. [443] [462]

A man of Jatinga, who worked in a shop in Haflong, spent his salary in keeping his wife and children, but at the same time he kept the accounts of his sister who was a professional merchant. Thus, the economy of the *iing* and that of the co-residential group are crossed by the dual role of the man. Hence, among the Khasi, residential autonomy is not always an indication of economic autonomy. However, it should be clearly understood that a man's acquired property goes to his co-residential group, not to his *iing*. [421]

A man of authority is attached to his *iing* by the stronger ties of religious, social and economic (management) duties as well as by

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

strip of fine silk for the loins, a part of which hangs gracefully as low as the calves in front. No notice is here taken of what has undoubtedly been added and borrowed from their more civilised neighbours in the plains. 291

'MARRIAGE.—The marriageable age for females is from 15 to 18; for males, from 18 to 24. Matrimonial alliances are contracted either through the parents or the living representatives of the families to which the parties belong. The mode of procedure is still very primitive and unceremonious. The bridegroom, escorted by a number of friends and relatives, goes to the house of the bride, where all are feasted and lodged for the night; on the morrow he leads the bride, accompanied by a number of her relatives, to his own house, and entertains the company with dishes of boiled rice and fresh pork. After remaining there a day or two, the newly-married couple return together to the house of the wife, which becomes their future home. Marriage is dissoluble by regular divorce, for any sufficient cause, and often without any assignable reason except mutual dislike or want of issue, the latter being the most common case of all. Marriage with the Khásiás is simply a conventional arrangement, with nothing further for its object than the procreation of children; failing that, it is no longer looked upon as a contract permanently binding. Divorce is effected in the presence of eye-witnesses—the parents, or the heads of clans. Five cowries (*kauris*) are produced by the parties and exchanged, then cast away by mutual consent, and the ceremony is over. Parties once divorced can never again contract marriage with each other, but they are at liberty to marry into other families. Polygamy, strictly so called, is not sanctioned by Khási custom. Adultery is looked upon as a serious crime. If the five cowries have not been cast away by mutual consent, both husband and wife are held to be subject to the "matrimonial demon;" and even when either dies in wedlock, the survivor is not at liberty to contract a fresh alliance until he or she pays the family a sum of money as the means of removing the surviving party from subjection to the "matrimonial demon." The husband is a stranger, so to speak, in the family he has entered, and perpetuates the race of others, not his own. The children in all questions of lineage and personal rights follow the mother. There are always two interests in the same family—that of the husband, and that of the wife. Whatever the husband may have earned or acquired in

58 591 586 [581] 587 595 837 587 593 611 593 428

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

The above and other similar sacrifices to the gods of the State or divisions of the State may be said to be the communal religious duties of the *lyngdohs*. The duties of *lyngdohs* with reference to private persons may now be mentioned. When it is found that any two people have made an incestuous marriage, that is to say a marriage within the exogamous group of the *kur*, or clan, the parties at fault are taken before the *lyngdoh* by their clansmen, who request him to sacrifice in order to ward off the injurious effects of the *sang*, or taboo, of such a connection from the kinsfolk. On this occasion a pig is sacrificed to *u'lei lyngdoh* and a goat to *ka lei long raj*. The parties at fault are then outcasted. As mentioned in another place, the sin of incest admits of no expiation for the offenders themselves. In the Khyrim State, it is said by the *lyngdohs* themselves, although not by the Siem or the myntries, that they are the reversionary legatees of all the persons who die without leaving female heirs (*iap duh*). In other Siemships such property passes to the Siem. The *lyngdoh* of Nongkrem can also take possession of the property of persons who have been found to harbour an evil spirit (*jingbih*) in their houses. It appears that in such cases the house and furniture are burnt, as in the case of the *Taroh* superstition in the Jaintia Hills, the *lyngdoh*, however, taking possession of jewellery or anything else of value. The only practical service the *lyngdoh* renders in return is to build the afflicted person a new house; unless, indeed, we take into account the casting forth of the devil by the *lyngdoh*. Mr. Jenkins, of Shangpung, in the Jaintia Hills, writes: "Such is the belief of the people in the evil spirits, that they are completely under the influence of the priests and spend large sums of money in order to secure their favour. They live in constant dread lest by the least transgression or omission they should offend these avaricious men and so bring upon themselves the wrath of the demons." The influence of the *lyngdohs* over the people in the Jaintia Hills seems to be stronger than in the Khasi Hills. For instance, it came to my notice in Raliang that crops cannot be cut until the *lyngdoh* has seen them, in other words, until the *lyngdoh* has claimed and obtained his share of the produce. In many places, however, in the Khasi Hills the *lyngdoh* is much dis-

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

MARRIAGE.

591 It is proposed in this section to consider marriage from its social side, the religious aspect thereof being reserved for another paragraph. The most remarkable feature of the Khasi marriage is that it is usual for the husband to live with his wife in his mother-in-law's house, and not for him to take his bride home, as is the case in other communities. This arrangement amongst the Khasis is no doubt due to the prevalence of the matriarchate. As long as the wife lives in her mother's house, all her earnings go to her mother, who expends them on the maintenance of the family. Amongst the Khasis, after one or two children are born, and if a married couple get on well together, the husband frequently removes his wife and family to a house of his own, and from the time the wife leaves her mother's house she and her husband pool their earnings, which are expended for the support of the family. Amongst
591 the Syntengs, however, and the people of Maoshai, the case
576 is different, for with them the husband does not go and live in his mother-in-law's house, he only visits her there. In Jowai some people admitted to me that the husband came to his mother-in-law's house only after dark, and that he did not eat, smoke, or even partake of betel-nut there, the idea being that because none of his earnings go to support this house, therefore it is not etiquette for him to partake of food or other refreshment there. If a Synteng house is visited, it is unusual to find the husbands of any of the married daughters there, although the sons of the family may be seen in the house when they have returned from work. Generally in the day-time you will find in a Synteng dwelling an old crone, who is the grandmother, or even the great-grandmother, of the family, also grandchildren or great-grandchildren; but the husbands of the
796 married daughters are not there. The Syntengs seem to have more closely preserved the customs of the matriarchate than
611 the Khasis, and the Syntengs claim that their *niam* or religious ceremonies are purer, i.e. that they more closely correspond to what they were in ancient times than those of the
589 Khasis. Amongst the Syntengs, occasionally, a widow is
765 allowed to keep her husband's bones after his death, on con-

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

589 765 dition that she does not remarry; the idea being that as long as the bones remain in the widow's keeping, the spirit of her husband is still with her. On this account many wives who revere their husband's memories, and who do not contemplate 587 765 remarriage, purposely keep the bones for a long time. If a widow marries, even after the customary taboo period of one year, whilst her deceased husband's bones are still in her keeping, [346] she is generally looked down upon. Her children in such a case perform the ceremony of handing over the bones of their father to his clan in a building specially erected for the purpose. The widow cannot enter therein, or even go near it, whilst the ceremony is proceeding, no matter whether the *jing sang*, or the price for removing the taboo after a husband's death, has been 595 paid to the husband's clan or not. There is no evidence to show that polyandry ever existed amongst the Khasis. Unlike the Thibetans, the Khasi women seem to have contented themselves always with one husband, at any rate with one at a time. Certainly at the present day they are monandrists. Polygamy does not exist amongst the Khasis; such a practice would naturally not be in vogue amongst a people who observe the matriarchate. There are instances, however, of men having wives other than those they have regularly married, and in the Wár country children by such wives enjoy rights to their father's acquired property equally with the children by the legally 582 688 764 married wife. As the clans are strictly exogamous, a Khasi cannot take a wife from his own clan; to do this would entail the most disastrous religious, as well as social consequences. For to marry within the clan is the greatest sin a Khasi can commit, and would cause excommunication by his kinsfolk and the refusal of funeral ceremonies at death, and his bones would [115] 614 582 not be allowed a resting-place in the sepulchre of the clan. To give a list of all the Khasi exogamous clans would perhaps serve no useful purpose, but I have prepared from information, kindly furnished me by the Siems of Khyrim and Cherrapunji, a list of the clans in those States which will be found in Appendices A and B. These will suffice as examples. It will be seen from the Cherra list that the different divisions of the Diengdoh clan, viz. Lalu, Diengdoh-bah, Diengdoh-kylla, are prohibited from intermarriage; this is due to those branches of the clan being

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

custom. In the Amwi doloiship a widow who consents to pay the costs of her husband's funeral, provided she agrees not to re-marry, inherits half of her husband's acquired property. 428 [589]

In the Wár country the children inherit both ancestral and acquired property in equal shares, both males and females, with the exception that the youngest daughter is given something in addition to her share, although not such a large share of the property as amongst the Khasis. Amongst the Mikir-Bhois, i.e. the Mikirs who inhabit the Bhoi doloiship of the Jaintia Hills, the law of inheritance is totally different from that of the Khasis, for males succeed to all property, whether ancestral or acquired. Thus, if a man dies, leaving son, mother, wife, and daughters, the son takes all. If there are several sons, they divide. If there are no sons, the property goes to the nearest male heir. If a woman dies, leaving husband and children, the husband takes all If the husband is dead, and there are sons and daughters, the former inherit. The great difference in the custom of inheritance between Khasis and Bhois is, as I have already pointed out, part of the evidence that these people are of different origin.

The Lynngam law of inheritance is the same as that of the Khasis. The youngest daughter obtains the largest share of the ancestral property, the remainder being divided between the remaining daughters. The sons do not get any share. The rule is also said to apply with regard to acquired property.

ADOPTION.

Both Khasis and Syntengs observe a custom known as *'rap iing* (an abbreviation for *ia rap iing*, literally, to help the house). This is practically adoption. If in a family the female members have died out, the male members of the family are allowed by custom to call (*khot*) a girl from some other family, to act as *ka'rap iing*, and to perform the family religious ceremonies, and therefore to inherit the family ancestral property. The female so introduced into the family then takes her place as *ka khun khadduh*, or youngest daughter, and becomes the head of the house (*ka trai iing*). The 597 428

clothing, operate the large Khasi business establishments in Shillong, and provide all civic and religious leadership. Women care for children and for the home, do the marketing, and sell dried fish, betel nut, lime, fruits, and rice breads at markets. Other tasks can be performed by either sex. **Land tenure.** Land was formerly divided into sib land and public domain. Sib land was corporately held in perpetuity, and was inalienable except by the unanimous consent of all members of the sib. The public domain was subject to usufructuary right by anyone who kept the land regularly under habitation or cultivation, with a lapse of no more than three years. Most villages grew up on public domain, and then reckoned all land inhabited or under cultivation by a village member as village land. Forests were public, except for sacred groves possessed by villages or lineage groups, and everyone was free to gather branches for fuel. Wastelands and streams were also public. By now, most public domain and village land, together with its forest cover, has been pre-empted as private property and is being rented and sold as such. Sib lands remain intact, unless the sibs agree to rent, lease, or sell. [Cf. Cantlie 1934.] 462 423 [178].

KIN GROUPS. **Descent.** Descent is matrilineal, and the Khasi is a member exclusively of his own matrilineage from birth to death. Adoption, which is very rare, is only within the matrilineage. **Kin groups.** The maximal matrilineage is the sib; this is a named, widely dispersed, strictly exogamous, lineage group, which claims but cannot trace its origin from a single ancestress. Sibs used to meet as corporate groups from time to time. Some sibs are linked with others in large amorphous groups that are unnamed and are defined solely by exogamy. Such a group is composed of two or more sibs, the ancestresses of which are claimed to have been either real sisters or dear friends who out of affection declared that thereafter their descendants would be as consanguineals. The origin and function of sib-linkage is now unknown, and today the members of a sib will often disagree on whether or not their sib is linked with another. • The minimal matrilineage is the local descent group, or *ing*. This is the largest kin group that normally rallies at life crises. It is said that the *ing* formerly spanned six generations; today, it encompasses only four. If an *ing* grows to more than four generations in a single village, it segments. New houses are located at some distance from the old and the *ing* soon forgets exactly how to trace genealogical connection, except for which segment descended from a youngest sister. The term *ing* may also be applied to an extended family, an elementary family, and a house. The elementary family is the basic domestic unit in Khasi society. In any village there are likely to be one or two households which stand as sole local representatives of the lineage of the female household head. Such a household is known as an 611 [897] 614 602 [59] •

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

614 to his own matriarchal stock, and at his death his bones
764 are deposited in the cromlech of his mother's kin. In
Jowai he neither lives nor eats in his wife's house, but
[591] visits it only after dark (p. 76). In the veneration of
ancestors, which is the foundation of the tribal piety,
769 the primal ancestress (*Ka Iâudei*) and her brother are
211 the only persons regarded. The flat memorial stones
set up to perpetuate the memory of the dead are called
after the woman who represents the clan (*mâw kyathei*,
p. 150), and the standing stones ranged behind them
are dedicated to the male kinsmen on the mother's
side.

776 In harmony with this scheme of ancestor worship,
the other spirits to whom propitiation is offered are
mainly female, though here male personages also figure
(pp. 106—109). The powers of sickness and death are
all female, and these are those most frequently wor-
shipped (p. 107). The two protectors of the household
are goddesses (p. 112), though with them is also revered
the first father of the clan, *U Thâwlang*.

793 Priestesses assist at all sacrifices, and the male
643 officiants are only their deputies (p. 121); in one
important state, Khyrim, the High Priestess and actual
head of the State is a woman, who combines in her
person sacerdotal and regal functions (p. 70).

195 The Khasi language, so far as known, is the only
member of the Mûn-Khmēr family which possesses
a grammatical gender, distinguishing all nouns as
masculine and feminine; and here also the feminine
nouns immensely preponderate (p. 206). The pronouns
of the second (*wē*, *phâ*) and third person (*â*, *kâ*) have
separate forms for the sexes in the singular, but in the
plural only one is used (*phi*, *ki*), and this is the plural
form of the feminine singular.

000 It may perhaps be ascribed to the pre-eminence
[the husband . . . Analyst]

MARRIAGE.

591 It is proposed in this section to consider marriage from its social side, the religious aspect thereof being reserved for another paragraph. The most remarkable feature of the Khasi marriage is that it is usual for the husband to live with his wife in his mother-in-law's house, and not for him to take his bride home, as is the case in other communities. This arrangement amongst the Khasis is no doubt due to the prevalence of the matriarchate. As long as the wife lives in her mother's house, all her earnings go to her mother, who expends them on the maintenance of the family. Amongst the Khasis, after one or two children are born, and if a married couple get on well together, the husband frequently removes his wife and family to a house of his own, and from the time the wife leaves her mother's house she and her husband pool their earnings, which are expended for the support of the family. Amongst
591 the Syntengs, however, and the people of Maoshai, the case
576 is different, for with them the husband does not go and live in his mother-in-law's house, he only visits her there. In Jowai some people admitted to me that the husband came to his mother-in-law's house only after dark, and that he did not eat, smoke, or even partake of betel-nut there, the idea being that because none of his earnings go to support this house, therefore it is not etiquette for him to partake of food or other refreshment there. If a Synteng house is visited, it is unusual to find the husbands of any of the married daughters there, although the sons of the family may be seen in the house when they have returned from work. Generally in the day-time you will find in a Synteng dwelling an old crone, who is the grandmother, or even the great-grandmother, of the family, also grandchildren or great-grandchildren; but the husbands of the
796 married daughters are not there. The Syntengs seem to have more closely preserved the customs of the matriarchate than
611 the Khasis, and the Syntengs claim that their *niam* or religious ceremonies are purer, i.e. that they more closely correspond to what they were in ancient times than those of the
589 Khasis. Amongst the Syntengs, occasionally, a widow is
765 allowed to keep her husband's bones after his death, on con-

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

585 768 that they may prosper, that they may obtain rice and fish, that they may possess hundreds and thousands; thou, oh god." The priest then pours liquor on the ground three times from the gourd, counting "one, two, three." He then continues the invocation thus, "*Hoi*, thou, oh mother; oh grandmother; oh maternal uncle; oh father; oh *Sidd-sin*; oh younger grandmother; oh elder grandmother; oh younger grandfather; oh elder grandfather. As the fresh has fallen (on the floor, i.e. the feast has been prepared), the ring has been put on, the three strips of flesh are ready (alluding to the three dried fish already mentioned), you will all of you (ancestors) give out, you will continue giving strength and spirit (i.e. to the married pair) that they may be well" (and so on, as written in the first invocation). He then pours out the liquor three times as before. He then adjures the Siem, the elders, and all the people who do not belong to either of the two clans, and pours out liquor three times as before. The three pieces of dried fish are first placed on the *tympan*, the high rack above the fire-place, then removed and tied to the ridge-pole of the house, amidst shouts of 585 769 *Ho, hoi, hoi, hoi*. The priest then sacrifices a fowl, and the rich a pig without blemish (also fowl), to *Sniid* sin and *Ka Iew-bri* (the spirits of deceased ancestors of the family), and present them with *dphlint*, or pieces of flesh. Two or three days afterwards, the bride, accompanied by her female relatives, pays a visit to the bridegroom at his house, and after this they go and come as they like to one another's house. 591 782 After two or three children have been born, they take down the pieces of dried fish from the roof and sacrifice two pigs, one on behalf of the husband and another on behalf of the wife. Then they say there can be no possible sang, and husband and wife use each other's things and pool their earnings, and if the husband has a house of his own, the wife can go and live with him; this, however, is not the custom amongst many of the Syntengs, who more strictly observe the principles of the 585 matriarchate. The cost of the marriage ceremonies amongst 435 Khasis, Syntengs and Wars, may be put down at between Rs. 50 and Rs. 200 according to the position of the parties.

[p. 19]

CHAPTER II

Descent, among Khasis, is counted through the mother; residence is also matrilocal. A woman lives with her mother from her birth until some time after her marriage. After one or two children have been born her husband may build for his family a house on the village land, in the village of the wife; this house becomes her property. The ancestral house goes to the youngest daughter. In the absence of a daughter the next youngest sister's youngest daughter becomes the heiress. Rarely, a man will take his wife to his mother's village. This case will be considered later.

A man is born, in the house of the mother's mother, or if the parents have built a separate house, in the house of his mother. He continues to live there until his marriage, when he generally goes to live in the wife's mother's house, whether it is in the same village or a different village.

The myntri U Soba Dai married in the village of Mawphlang, where his mother also lived, and built the house, which is known as his house. It is, technically, the property of his wife Ka Shyngoh and will be inherited by Ka Dhonlum, and thereafter, by Ka Riotima. The house of U Soba Dai's mother, Ka Jin has been inherited by Ka Riotim, and will go in the next generation to Ka Pem. If the latter has no daughters, the property will go to Ka Doni and failing her heiress, to Ka Phra and then to Ka Lamih. If she has no issue, it will pass to her sister Ka Lamih and so on to Ka Lajor. If Ka Lajor has no daughters, the property will go to Ka Joni's family to her youngest daughter Ka Aiton. As she has only sons, the next heiress will be Ka Synon, and if she predeceases Ka Aiton or has no daughters, the girl Ka Riotim will inherit next. If

his house or paddy field or grove; but the sale does not extend to anything more than his right of occupancy.....Any site, garden or plain of cultivation if abandoned, can be taken by another."

A son of a house of the village, of which the Kur is of the ancient settlers or has been given similar privileges, has the right of building a house, and of cultivating land in the Ri Raid. Reference has been made to the rule practice whereby a man brings his wife from her mother's house to his own village. In such a case he may set up a separate house on the community land, and cultivate some of it, to maintain his wife and children. The property will pass, on his death, to his daughters as usual. It will not go to his mother or sister.

(a) The man U Harilak married twice, but did not settle down with his wife on either occasion. He built a house in Mawphlang which is his mother's ancestral village and brought each wife there. Both of them were divorced in turn and have left. If any of his wives had lived with him the house would have gone to his daughters. Now, however, the heiress is Ka Jwan, the daughter of a sister. [Genealogy 1(b)].

(b) The woman Ka Lakimon is of the old Lyngdoh clan of Mawphlang. When U Lyman married her, he set up a house in Mawphlang and cultivated land. But on his death, the woman went away to Shillong with her children, about 10-15 years ago, selling the house and abandoning the jhum land. The son U Bollestar has recently come to Mawphlang and is working in U Sutu Rai's house. If he settles down, *i.e.*, marries and wants to set up a house, he can do so on the Ri Raid. (Genealogy IV).

(c) The foundress of the Khar Dumpep clan was a woman of the village Dumpep, and of clan Khar Dohling. She had two other sisters. One of the three sisters went to Mylliem, and another came to Mawphlang while the third remained at Dumpep as Ka Khadduh. The girl who went to Mylliem founded the Khar Sohtun Kur and the girl who came to Mawphlang founded

SOCIAL GROUPINGS AMONG THE KHASIS OF ASSAM

by Bhabananda Mukherjee

Dept. of Anthropology, Govt. of India

Calcutta

(Received on 20th October, 1957)

Introduction

THE Khasis, who inhabit the United Khasi and Jaintia Hills district of Assam, are matrilineal. Like the Garos, they are matrilocal in residence. Exclusive ownership over family property is claimed by the Khasi women and the youngest daughter (*Ka-Khaddoh*) who lives permanently in the house of her mother, is the custodian of the family property and the holder of religion (*Ka bat ka-siewi*)[1].

This paper deals with the social groupings, namely, the clan, sub-clan and family, of the Khasis. The materials were collected in 1954 from Mawphlang, Cherapunji and Mawlah and Mawsmai villages further south of the Chera State.

Discussion

In the language of the Khasi, the prefix *Ka* is usually used before the name of a woman or any object belonging to a woman (or considered feminine). The use of *Ka* as a prefix before the name of each social group is suggested to have bearing on Khasi matriliny. *Kur* is not a very expressive and exact term for a clan. *Kabur*, which is supposed to have sprung from the woman (*long jaid na ka kpaikul*)[2] is more exact. Similarly, *Ka-Ki'pah* and *Ka-ing* denote the sub-clan and family respectively.

There are some extensions of marriage relations with members outside the village. In Sohkynduh, out of 88 (48 housewners and 40 their husbands) 13 men and 2 women came from neighbouring villages. Owing to the predominant uxorilocal arrangement, those who came in from outside the village were mostly men. By these members, five different *kur*, new to Sohkynduh, were found, as shown in List 7 (17-21). Most of these outsiders came from villages inside the Kadashinong, or villages no further than a day's journey there and back. This area might be called a secondary endogamous area, and includes more than half a dozen villages. In Kongton, 20 husbands and 3 women came from neighbouring villages by their marriages. The secondary endogamous areas of Kongton and of Sohkynduh are not the same but they overlap in certain places, the surrounding areas being centred on each village. There were, by December 1955, no instances of direct marriage between these two villages.

184
582
621
[795]

There are a few exceptions to local endogamy, such as those individuals who have become Christians and are educated in towns like Shillong or Cherrapunjee. They usually move to a town, seeking

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 The Khasi domestic unit (co-residential group) can be divided into four categories:

1. Households consisting of wife, husband and their children, wife's unmarried sisters and brothers—sometimes including widowed or divorced.
2. [613] Households including all members of an *iing* (excluding their spouses from members of 1). In this type, larger households contain all the descendants of three or more generations from one woman (in this case, an *iing* corresponds to a *kpuh*).
3. [591] Households of intermediate type between 1 and 2. Husbands are supposed to live in their wife's house, but they often go back to their sister's house for meals, and sometimes sleep there. They are supposed to work in their wife's field but they might work in their mother's (sister's) field, if necessary. This tendency is especially strong among newly married couples before they have a child.
4. Households consisting of only one elementary family. This mostly happens when a man married a non-heiress.

Most Khasi households are of types 1, 3 and 4 and these three types are usually found within one village. They were found in the four villages in which I worked. It is to these dwelling units that I have given the name of house in Lists 6 and 9. Category 2, according to [178] the information of Khasis and Jaintias, was used to be found among the Jaintias, though nowadays such cases are rapidly decreasing, changing into forms 1, 3 and 4. The members of category 2 belong to an *iing*, which structurally corresponds to the *tarwad* of the Nayar, and the *parwi* of the Minangkabau.

178 Category 2 may have been practised among certain of the Khasi
184 a long time ago. Kongton people said that as recently as their father's
591 generation, there were many husbands who stayed at the mother's house after their marriage and visited the wife at night. Nowadays, visiting husbands are very unusual cases in the Khasi Hills, though such situations may occur among newly married couples before they have children. Gurdon, who wrote his book *The Khasi* in 1914, states:

"Amongst the Khasis, after one or two children are born, and if a married couple get on well together, the husband frequently removes his wife and family to a house she and her husband post their earings, which are expended for the support of the family" (p. 76).

In the Khasi Hills, the transition period between duolocal residence and neolocal or uxorilocal residence seems to have been shortened during the last forty or fifty years. This might have been effected through the influence of Christian marriages, which start cohabitation of the wife and the husband immediately after the marriage ceremony. However, in Jaitings whose inhabitants originated in the Jaintia Hills where duolocal marriage is the usual practice, there are even now many instances of a man staying at his mother's house for several

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

years after his marriage. During this period he works in his wife's 178
field, then, if the couple gets on well, they start to live together in
an independent house (non-heiress's case) or in the wife's house 184
(heiress's case). In spite of the fact that the inhabitants are all Christians, they have retained this custom.

It is difficult to determine at what date the Khasi people have 178
changed from duolocal marriage to uxorilocal marriage. However, 591 •
the present dwelling unit, with its fluid relationship between husband and wife (in fact, there are many cases of category 3), suggests a situation linked with the duolocal residence pattern. The fragmentary historical information available and the present Khasi residence pattern suggest that the duolocal arrangement may be an older pattern of marriage. When I was in Kongton there was no husband who stayed at his mother's house permanently, visiting his wife at night. The head man told me that, when he married, there were many who did not stay in the wife's house. He was the first person to settle in the wife's house. In his case, he said, he felt sympathy for his wife who had no brother who could work for her. After he had settled in his wife's house, many villagers began to follow his example.[1] When the [621]
pattern of a visiting marriage was in vogue, a village must have constituted a more compact endogamous unit. If the husband's house was in another village, a visiting marriage must have been a great inconvenience. The tendency to settle in the wife's house and work for the wife's house must have brought about a wider range of marriage contracts, such as with members of nearby villages, even though in the present form of marriage, village endogamy is much preferred as it is decidedly advantageous particularly for a husband, since he can continue his life in the same familiar environment in spite of uxorilocal marriage.

The variations in the pattern of co-residential grouping, which 592
I have classified into four categories, reflect two different themes in 593
the social structure of the Khasi. On the one hand they represent 613
different stages in the maturity of the individual families concerned. For example, a householder who starts in category 3 or 4 may end as an old man in category 1. On the other hand these variations also reflect the polar opposition between the obligations of matrilineal kinship and the obligations of parenthood; a man, in particular, has conflicting obligations towards the *ing* of his sister and the *ing* of

1. However, all the information which I collected in the upland Khasi [184]
Hills indicates that the uxorilocal residence pattern has been practised for a long time. According to stories often told by the Kongton people, they migrated from the Jaintia Hills. If these accounts are to be taken as a reflection of the real history of their migration, it would seem that the Kongton people may have kept up the Jaintia custom including the duolocal residence pattern up to recent times, while the majority of the Khasi practised uxorilocal marriage.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 his wife. Paternal rights are not well recognized among the Khasi.
593 The religious elements in the *iing* institution lay stress only on matri-
613 lineal solidarity. These elements tend therefore to orient each individual of the domestic unit to his or her own matrilineal kin group, the *iing*. This results in unstable relations between members of each elementary family, in other words, the marriage relation is one of the weakest.

000 This is the crucial point in matrilineal societies, and has been much discussed by anthropologists. Richards says,

> "In this balance of privileges and duties between the patrikin and the matrikin the crucial point is obviously the husband's right to determine the residence of the bride. If she and her children live in the same homestead or village as his kinsmen, his domestic authority is likely to be greater than where they remain with the wife's relative" (Richards, 1950, p. 208).

This statement is quite acceptable for those matrilineal systems which provide possibility for a man to take his wife from her matrikin to his house or village where the husband's kin are found, as in cases of the matrilineal Central Bantus, the Ashanti, the Trobriands and
• 591 the Nayar in North Malabar. However, among the Khasi, there is no such custom of removing a wife from her kin to that of her husband. Since most marriages take place inside a village, there are only two different residential arrangements: one is to take the husband to the wife's house, where he lives with his wife's parents and other matrikin; the second is for the newly married couple to establish an independent house. Among Khasi men and women the usual practice is to leave the parents' house at marriage, except in the case of the heiress (the youngest daughter). In this respect the Khasi differ again from the Nayar and the Minangkabau who form a sibling family on the basis of duolocal residence,[1] and from the Hopi, the Zuni and the Trukese who form a residential group of an extended family, based on matrilineal descent including in-marrying husbands of married females. Khasi sisters do not form a residential group after their marriage; sisters' houses are scattered over the whole village residential area, mixing with households of other descent groups (see Fig. 10 with List 8).

Then, what is the factor that makes the Khasi have two different types of residence i.e. uxorilocal and neolocal[2] within a matrilineal

1. Only the case of some traditional Jaintias (category 2) would appear to show groupings similar to those of the Nayar, however, I did not work among them, nor are there anthropological reports available for them, particularly in this respect.

2. I use 'neolocal' in terms of house-building, since they usually build a house for newly married couple in the same village where both wife's and husband's parents live—village endogamy.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

society? Among the matrilineal Central Bantus, Richards says that the determining factor in residence at marriage is the marriage payment or the type of goods and services which the bridegroom gives (Richards, 1950, p. 249). However, the Khasi have no such custom in the marriage contract, it is therefore out of the question to explain the two types of residence in this way. In the case of the Khasi, the determining factor is the type of marriage with relation to the rule of inheritance and ownership of property, which is clearly related to the structure of the *iing*. Khasi marriages can be divided into two categories i.e., marriage with an heiress and with a non-heiress. Marriages with an heiress must be uxorilocal. This accounts for category 1 or 3 of the household pattern. On the other hand, marriages with a non-heiress become neolocal and correspond to category 4 of the household unit.

IV. Marriage with the Heiress

A man married to an heiress, usually lives with his wife's parents and her unmarried or divorced brothers and sisters. For a man, life after marriage under such circumstances require great adjustment and endurance. The husband's status is especially weak when a male member of the wife's kin lives in the same household. The management of property and all economic activities are entirely controlled by the authority (wife's brother or maternal uncle) of the *iing*. The husband works in the wife's field under constant supervision from this authority. Both economic activities and domestic affairs are always under the management of this authority. The children have more attachment to, and are more obedient to, the maternal uncle than to the father. The tie between the uncle and the nephew is so strong that the father is rather like an additional member of the household. He is the last person to be introduced to visitors.

This family system is clearly reflected in the daily behaviour. When we visited the Khasi household of a youngest daughter, if a man (obviously the husband) came first to greet us, he always said "please wait, my wife (or mother-in-law) is coming." And it was the wife who entertained us, offering tea or pan and discussing matters with us, while her husband remained silent in the corner of the room, or in the next room. If her uncle or brother was there, *he* would be the person who talked to us, while his niece or sister served us. In such a case, we were seldom introduced to the husband. When I was working at Shella, I happened to stay in such a family. I had hardly any opportunity to talk to the husband during the two weeks of my stay. He left the house very early in the morning and came back late in the evening from the fields. While he was at home, he was

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

ship. They still live in the same familiar atmosphere as before their 581
marriage. The implications of this ambiguity in the married state are 593
considerable. Particularly the husband's uncomfortable situation, when the wife is heiress, encourages him to take marriage less seriously.

A husband who undergoes hardship in his wife's house, finds 581
himself as the authority in his sister's house; if he is not the authority, 591
he can find at least a respected position as uncle or brother. In the 592
case of a man of authority in the *iing*, the tendency for him to regard 593
his *iing* as more important than his married life is proportionately 602
stronger, as I will discuss later. Hence the most unstable and unsuccessful marriages are those between the heiress and the man of 604
authority. This is one of the reasons we often find among the Khasi: 613
a brother or an uncle, who is already married, acting nevertheless as 428
the head to a family *(iing)* and as a member of its domestic group. This means that he is in a state of temporary separation or divorced. Among the Ashanti, a man and his wife's brother are never found as [171]
members of a common household (Fortes, 1950, p. 262), but among the Khasi, on the contrary, a man and his wife's brother are often found as members of a common household. In such cases, however, the brother has no wife, or never brings his wife to his *iing*. Therefore, a man and his wife and his sister never reside together. As far as the residence of women is concerned, the Khasi keep to the strict descent rule; two women who belong to different descent groups never live together. This point differentiates the Khasi residence pattern, in which social structure is involved, from that not only of the Ashanti but also of the Yao where the head of a descent group can bring his wife to his sister's household, though, among other members, uxorilocal marriage is the rule. These differential aspects of matrilineal systems will be discussed from a more theoretical point of view later.

In addition, should a Khasi man even succeed in spending his life 602
with his wife's kinsmen, as soon as the wife dies, he will usually 613
return to his *iing*, that is, to his sister's house, where he is received warmly and where he often acts as the *de facto* authorithy, as in the similar situation of divorce and separation. Thus the strong matrilineal structural principle tends to orient a man towards his own descent group, the *iing*.

The man's attachment to his *iing* is very great throughout his 171
life. In this regard the Khasi differs from the matrilineal Negri 592
Sembilan Malay. Among the latter, returning to the matrilineal kin 602
is regarded by the man as an imposition rather than as the enjoyment 613
of a legitimate privilege (see Swift, 1958, p. 157).[1] This difference 428

1. He presents this fact as one of the reasons of the durability of marriage [581]
among the Negri Sembilan. Indeed, on this precise point they differ from the Khasi where marriage is rather unstable.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

178 no polygynists, though there were many personal temporary illicit
184 relations or love affairs.

It is true that even in interior villages polygyny is rapidly decreas-
595 ing. In the two villages I found only two cases of polygyny: a man with two wives in Sohkynduh (Josio in List 6, whose wives are 26 and 32, and a man with three wives in Kongton (Jubongrai in List 9, whose wives are 8, 20 and 52). These cases appeared clearly as cases of polygyny which the villagers recognized as such, speaking of them quite differently from the way they would have spoken of lovers, calling them wives and husbands. Of course, the first wife socially outranks the secondary wives, as *ka tynga trai*, and the term *ka tynga tuk* is used for the latter, as Gurdon states (1914, p. 80). The difference being that the first wife has a legal marriage ceremony while the others have not—*ka tynga tuk* means literally 'stolen wife.' About
585 the marriage ceremony, Gurdon gives a detailed discription (*ibid.*,
595 pp. 127-130) and says there are three forms of marriage ceremonies, *Pynkhiarynjat*, *Lamdoh* and *Iadih-kiad*. The first and second forms are considered the more respectable; the last one is resorted to by the very poor who cannot afford the greater expense entailed by the first two. Unfortunately, during my stay in these villages, no marriage ceremony took place, but villagers described to me what seems to be the *Iadih-kiad*, where only a fowl is sacrified, and the whole procedure is much simpler than that described by Gurdon. However, whatever the complexity and richness may be, there is a distinct line between having a ceremony and not having it, and this draws the distinction between the status of the first wife and that of the secondary wives.

428 Nevertheless, this distinction has more of a social bearing than the
595 legal bearing it has in a patrilineal system. Since they follow the
851 matrilineal system, the legal distinction between the first wife and the secondary wife does not affect their children's status and their propety rights, at least not in the villages where I worked. The children's social locus is determined by their mother. The children (particularly the youngest daughter) have the right to inherit their fathers acquired property which is automatically under their mother's ownership. If the polygynist father has acquired property by working their mother's field, or in trading on behalf of their mother, whether she be the first wife or the second, this property undoubtedly belongs to the children of that wife, not to the first wife alone. The father's physial locus at the time of his economic realisations is the decisive factor.

591 The Khasi polygynist, without bringing his wives into one house-
595 hold, alternates his residence among them, in turn or according to his tempt. This practice is similar to that of the Trukese described by Goodenough (1951, p. 123), and quite different from that of the Garo

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

which I described previously, where a man brings his secondary wives to his first wife's house in which he is acting as the head. Furthermore, sororal polygyny is prohibited, while it was prefered among the Garo in terms of wives taken from the same *makari*, though mostly not real sisters. The strong jealousy, which I observed, among the Khasi wives of a polygynist, would appear to make such polygynous marriages with closely related women practically impossible. As shown in List 6 & 9 every single one of the wives of each polygynist belongs to different *kur*, and the two secondary wives of the man of Kongton came from neighbouring villages.

These aspects of Khasi polygyny are related fundamentally to the underlying Khasi social structure. It should be remembered that every married woman has her independent household, *iing*, and that two women of different descent groups never reside together (see p. 127). The picture is one of every married woman holding a key-point in the whole network of the social system, and men fit into this network with much flexibility. The strong stability of women and the fluid nature of men in terms of residence naturally produces this form of polygyny. This analogy is also true of lovers' relations and illegal marriages. Though polygyny is a rapidly decreasing institution all over the Khasi Hills, cases of lovers' relations and illegal marriages are found to be very numerous among the Khasi, as compared with neighbouring tribes and peoples in Assam.

Throughout my discussions of various forms of Khasi marriage, I found men to be more or less in the position wittily described by one of them as "having one leg in my sister's house, the other in my wife's," except in cases of the husband/father who succeds in establishing paternal authority, as in marriages with a non-heiress. Even in the latter a man might have a period of uncertainty until his children were born and until the economic basis for his matrimonial life was firmly established. For the rest, Khasi men would be in the position of either becoming the authority of an *iing*, or swinging between their sister and their wife, which may produce more opportunities for lovers' relations. One of a man's legs is certainly always found in his sister's house, the other may rest in his wife's, but it may also rest in another woman's house. The wife being rather accustomed to his occasional absence due to his visits to his sister's house, another kind of absence does not mark any great change from the usual situation, at least not physically. Such situations occur particularly in the earlier stage of the marriage, as a sort of continuation of premarital affairs, which are quite freely practised: it is a usual custom before marriage for young men to sleep at a girl's house whom they like though they say sexual intercourse usually does not take place in such cases. This I observed in Sohkynduh and Kongton.

of complications and variations in matrilineal systems. The matrilineal system is not a mirror of the patrilineal system; it is a different system in which more complicated mechanisms are involved. This complexity of the matrilineal system is a decided handicap when it comes to resisting radical economic changes. In order to preserve the system, a fairly stable economy is required, well-balanced in its population and resources. This may be one of the reasons for the rapid disintegration or unstability of social organization of matrilineal peoples in the world. 121 171 182 611

The difficulty of preserving in function both lines *A* and *B* is caused by residential problems—individual marriages which contradict the sibling cohesion. According to my theoretical analysis, there are four alternative ways of resolving such contradictory factors, each case being represented by actual ethnographic samples.[1] Each arrangement represents a different degree of the function of the two lines *A* and *B* in relation to the residential pattern, as following (see Fig. 13): G K 171 182 591 611

FIG. 13. — *Central Core of Matrilineages in Relation to Property Groups and Residential Groups.*

The Garo type. The co-residential type is 'husband-wife' instead of 'brother-sister.' The function of both lines *A* and *B* is equally strong. This is kept by the marriage contract between two local lines, so that it is possible to keep the function of each line against the residential separation of the two lines in one descent group. This type is found at the moment only among the Garo.

1. For this discussion I take only such major matrilineal samples for which ample documentation is available. G K [121]

The Nayar type: The counter scheme of the Garo type: the co-residential type is 'brother-sister' instead of 'husband-wife.' The function of both line *A* and *B* is equally strong. This type is found among the traditional Nayar (except those in North Malabar) and the Minangkabau matrilineal people.

The Khasi type: The ideal co-residential type consists of a woman with either her husband or her brother. The function of line *A* is much stronger than that of line *B*. This type is found among the Khasi, the Hopi, the Zuni, the Trukese, the Negri-Sembilan Malay, the Yao, etc.

The Ashanti type: The ideal co-residential type consists of a man with either his wife or his sister. The function of line *B* is much stronger than that of line *A*. This type is found among the Ashanti, the Gwembe Tonga, the Mayombe, the Trobrianda, the Nayar of North Malabar, etc.

In terms of the strong function of both lines *A* and *B*, both the Garo type and the Nayar type may fall into a similar category. But as already explained, their structure basically differs from one another, and clearly appears as the counter schemes of different residential arrangements. The Nayar type shares with the Khasi a rather similar structure in terms of a descent group equated with a property group, while in the Garo type the two lines *A* and *B* of a single descent group never form an independent property unit.

If, leaving aside the Garo type, we consider the three others, the Nayar type appears again different from the rest in so far as in it, both lines fulfill an equally strong function, while in the Khasi and Ashanti types, one of the two lines is always more developed functionnally than the other. The Nayar type presents the highest degree of descent group solidarity among the three. This Nayar situation might be compared with that of the traditional Chinese patrilineal systems.[1] In both social systems the structural importance of marriage is minimized: the role of a spouse is only to ensure descendants of the matrilineal (patrilineal) group. The structural importance of a husband (wife) is almost neglected, while the wife (husband) holds the paramount locus in her (his) descent line. The descent group manifests the strongest solidarity within itself, neglecting affinal relations with other groups. This principle results in the custom of the "visiting husband" in the matrilineal system; and, in the patrilineal system, in a total social shift of the wife by her complete assimilation into her husband's group, and separation from her descent group,—she has no social and personal independent locus in terms of the structure. It is an interesting fact that the most extreme scheme of highly institutionalized unilineal systems can be seen among societies of pre-industrialized high civilization. These schemes are structurally opposed to those of the system of the moiety

1. Fortes touches this point in his paper (Fortes, 1959, p. 208).

[Jatinge]

three miles away from Jatinga. As one may expect in such a situation, quite a number of intermarriages with these peoples appear in my census of Jatinga. The resultant of these intermarriages was that when the couple and their children lived in Jatinga, they were considered to have become Khasi; otherwise they were held to be non-Khasi, whether the spouse was man or woman. This orientation of social recognition of the result of intermarriage was generally seen among Khasi in such situations, not only in the case of Jatinga. 563 621

The following are extracts of intermarriages from my genealogical table of Jatinga people. 563 591 621

A. Cases of intermarriages in which the descendants became Khasi.

1. A woman of the Dome clan married a Kuki man. All members of the present Dome clan at Jatinga are their descendants.
2. A woman of the Rymbai clan married a Kuki man as her second marriage. Their descendants are Rymbai.
3. A man of the Suchiang clan married a Mikir woman, and lived in Jatinga. They had one daughter who married a man of the Hua clan of Jatinga. They named this woman's line 'Shadap' as one of the Khasi clans. Later this Mikir woman's sister's daughter married a man of Rupsi-Lati, and their descendants were also named 'Shadap' by the villagers. Thus Shadap clan was created by a Mikir woman who married a Khasi man of Jatinga.
4. A Khasi man married a Lushai woman and lived at Aijal, the headquarters of the Lushai Hills. They said he became Lushai. Later a man of the Pajat clan of Jatinga married his daughter from Aijal. This couple lives at Jatinga and has several children. The villagers said they have to give them a new clan name. It is under consideration.

B. Cases of intermarriages leading to the emigration of Jatinga inhabitants.

5. A man of Jatinga married a woman of Zemi-Naga as his second marriage and lives at his wife's village.
6. A woman (the daughter of the woman of Rymbai, who married a Kuki: A-2) married a Moslem man and lives at Haflong.
7. A woman of Rymbai married a Panjabee and lives at Shillong. This woman is (B-6)'s mother's sister's daughter.
8. A woman of Siangshai clan married an Assamese and lives at Gauhati.
9. A woman of Rupsi-Tah married an Anglo-Indian and has gone to the United Provinces.
10. A woman of Jatinga married a man of Zemi-Naga and went to his village.
11. A woman of Jatinga married a man of Cacharee and lived at his village some time, but she came back to Jatinga after divorcing him.

A cases belong to the earlier period when Jatinga had a shortage of population, while *B* cases, except 10 and 11, are found among the present younger generation. The population, which had increased rapidly in the last twenty years with economic prosperity, is suffering from the recent economic depression caused by the Partition as well as from the great damages done to their orange gardens and pan-leaf gardens by tree diseases. Moreover they have an unbalanced rate of birth according to sex: females are more numerous than males. Therefore, many daughters marry out as shown in the cases of *B*. The above-cited cases are only concerned with intermarriages with non-Khasi, but there are still other women who married Khasi men and who reside outside Jatinga, as for example, at Haflong and Shillong. [161]

In the village there are still many unmarried girls without suitable spouses. In the olden days, it was less difficult to marry neighbouring tribal peoples. 178 563 621

group of matrilineal and Mon-Khmer-speaking people who claim as their ancestral homeland the present-day United Khasi-Jaintia Hills District (within approximately 90° 47' and 92° 52' E. and 25° 5' and 26° 5' N.). This group includes the Jaintias (also Pnar or Synteng) in the southeast, who differ from the Khasis primarily in their duolocal residence pattern and less virulent forms of sorcery. (The Hadens in eastern Jaintia are Kuki people.) It also includes the Lyngngams (also spelled Lyngngam) in the west, who practice migratory swidden agriculture and certain peculiar funerary rites, and are said by Ehrenfels (1955) to be culturally intermediate between Khasis and Garos. Finally, it includes Bhois, Wars, and upland Khasis, which terms are primarily territorial. Bhoi country is the north-central part of the District, and is culturally complicated by the presence of Mikirs, Lalungs, and Nepalis. War country spans the entire southern length of the District, so that Wars divide into Jaintia Wars and Khasi Wars, of these, the Khasi Wars have traditionally transmitted property to sons as well as to daughters. The upland center of the District is the country of the Khasis proper, those whose culture provides the most useful model for interpreting the variations found elsewhere. [For general reference on all categories of Khasi culture, cf. Costa 1906 and 1937, also Gordon 1907, especially for data on regional variations.] Geography. The District is 5,554 square miles of hilly tableland, intricately dissected by numerous rivers, and marked by significant ecological variation over very short distances. The tableland steps gently downward north from Shillong Peak, which at 6,445 feet is the highest point in the District, and over about 35 miles runs into the Brahmaputra valley where this is some 250 feet above sea level. To the south, the land slopes more steeply downward for about 30 miles, and then drops abruptly, in cliff and steep-slope formations, to the Ganges sea-level delta that begins at its north with Sylhet. The annual southwest monsoons drop torrential rains around Cherrapunji and Mawsynram villages (for Cherrapunji, a record 905 inches in 1861), but less, reaching Shillong 33 miles to the northeast, provide only about 100 inches per year. Rainfall is again greater in Bhoi, which shares the Brahmaputra valley climate. Climate is temperate on the high Shillong plateau, where it seldom freezes and never snows. To the north, climate becomes subtropical, forest is jungle, and fauna abound. The climate to the south is also subtropical. [Cf. Hooker 1891: chap. XXIX.] Linguistic affiliation. Khasi is one of the major Mon-Khmer languages, related to Mon, Khmer, Semang-Sakai, Nicobarese, and Palaung-Wa. The major Khasi dialects are Khasi, Jaintia, and Lyngngam, to which Gowers adds War. Further minor variations occur from village to village. The Khasis had no type until 1842, when the roman alphabet was successfully applied to the Cherrapunji dialect of Khasi proper. [Cf. Sabat 1901, Gowers 1903-29: 2: 88ff. in 1902.]

says that the MoBrCh but not the FaSiCh is prohibited (1897: 2), but Gurdon says that the MoBrCh is eligible after the death of MoBr, and that FaSiCh is eligible after the death of Fa (1907: 78). Nowadays both types of marriage occur, whether the linking relative is living or dead. Residence. Residence is either duolocal or matrilocal under the roof of the wife's mother until the birth of one or two children. For a man married to a youngest daughter, it then continues to be matrilocal. For men married to other daughters, it becomes uxorilocal, there have also always been cases of virilocal residence, and it is now common to find neolocal residence in Shillong. For non-Christian Jaintias, it is duolocal throughout the marriage. Domestic unit. The domestic unit is the elementary family, though for a youngest daughter it may temporarily include also her aged mother, aged father, unmarried siblings, or divorced or widowed brothers. Inheritance. Traditionally, after the Khasi mother had helped each of her daughters to build and supply a house when each one married and had children, her only real obligation to help them economically was ended. Everything she possessed, excepting certain personally that was destroyed in her cremation, was inherited by her youngest daughter. Failing daughters, a woman's property reverted to her next youngest sister's daughter. Today, this pattern is often modified by putting more property into the hands of older daughters and even sons. [Cf. Cantlie 1934, Becker 1954.] Divorce. A woman may effect numerous and usually brief separations from her husband by simply closing the door of her house to him, whereupon he returns to the house of his mother or youngest sister. Divorce, however, must be initiated by mutual consent. Divorce is very common, even though women resist it because they do not wish to lose a provider, and men because they do not wish to lose their children. Formerly it was accomplished by a simple ritual in the presence of witnesses, followed by public announcement by a town crier. Now, the witnesses and the public announcement have been dispensed with, and evidence for divorce consists only in the word of the parties concerned.

SOCIOPOLITICAL ORGANIZATION. Political organization. The basic unit of political organization is the village, which is composed of one or more dominant local descent groups plus several others. Village government is by an assembly of all resident adult males, under the informal chairmanship of a headman elected by them from among their number. The membership of any immigrant household into a village is defined by the participation of the household's males in this assembly. Sustained membership in a village is voluntary. Khasi chieftdoms probably arose out of voluntary associations of villages, which occasionally transferred allegiance from one chief to another.

strip of fine silk for the loins, a part of which hangs gracefully as low as the calves in front. No notice is here taken of what has undoubtedly been added and borrowed from their more civilized neighbours in the plains. 291

*Marriage.—The marriageable age for females is from 15 to 18; for males, from 18 to 24. Matrimonial alliances are contracted either through the parents or the living representatives of the families to which the parties belong. The mode of procedure is still very primitive and unceremonious. The bridegroom, escorted by a number of friends and relatives, goes to the house of the bride, where all are feasted and lodged for the night; on the morrow he leads the bride, accompanied by a number of her relatives, to his own house, and entertains the company with dishes of boiled rice and fresh pork. After remaining there a day or two, the newly-married couple return together to the house of the wife, which becomes their future home. Marriage is dissoluble by regular divorce, for any sufficient cause, and often without any assignable reason except mutual dislike or want of issue, the latter being the most common case of all. Marriage with the Khásiás is simply a conventional arrangement, with nothing further for its object than the procreation of children; failing that, it is no longer looked upon as a contract permanently binding. Divorce is effected in the presence of eye-witnesses—the parents, or the heads of clans. Five cowries (*kawrie*) are produced by the parties and exchanged, then cast away by mutual consent, and the ceremony is over. Parties once divorced can never again contract marriage with each other, but they are at liberty to marry into other families. Polygamy, strictly so called, is not sanctioned by Khási custom. Adultery is looked upon as a serious crime. If the five cowries have not been cast away by mutual consent, both husband and wife are held to be subject to the "matrimonial demon;" and even when either dies in wedlock, the survivor is not at liberty to contract a fresh alliance until he or she pays the family a sum of money as the means of removing the surviving party from subjection to the "matrimonial demon." The husband is a stranger, so to speak, in the family he has entered, and perpetuates the race of others, not his own. The children in all questions of lineage and personal rights follow the mother. There are always two incomes in the same family—that of the husband, and that of the wife. Whatever the husband may have earned or acquired in

Khasi of the Uplands to marry a Bhoi or War woman, and 101
a disgrace to marry a Lyngam. These divisions are sub- 582
divided into a number of septs, taking Mr. Risley's definition of 614
"sept" as being the largest exogamous division of the tribe. It will, however, be more convenient to speak of these septs as "clans," the word "clan" having been used in other parts of this Monograph and by other writers.

Many of the clans trace their descent from ancestresses or 614
hiew (grandmothers), who are styled *ki Iawbei-Tynrai*, lit. grandmothers of the root (i.e. the root of the tree of the clan). In some of the clans, the name of this ancestress survives; take as instances the Mylliem-ngap and Mylliem-pdah clans of the Khyrim State, the names of the ancestresses of the clans being *ka ngap* (honey, i.e. the sweet one), and *ka pdah* respectively. [776] This tribal ancestress, as will be seen in the paragraph of the monograph dealing with ancestor-worship, is greatly reverenced, in fact, she may almost be said to be deified. The descendants of one ancestress of the clan, *Ka Iawbei Tynrai*, are called *shi kur* or one clan. We then come to the division of the *kpah* or sub-clan, all the descendants of one great grandmother (*ka Iawbei Tynrai*), being styled *shi kpah*. The next division is the *iing* (lit. house) or family. It is almost in- [512] variably the case that the grandmother, her daughters and the daughter's children, live together under one roof, the grandmother during her life-time being the head of the house. The grandmother is styled *ka Iawbei Khynraw*, or the young grandmother, to distinguish her from the other two grandmothers, *ka Iawbei-tynrai* and *ka Iawbei-tynrai* who have been mentioned above. The young grandmother, her daughters and their children are said to belong to *shi iing*, one house, the word *iing* in this instance possessing amongst the Khasis the same significance as the English word *family*.

We will now see how the Khasi clan (*kur* or *jaid*) grew out 614
of the Khasi family (*iing*). Let us take the example of the 773
great Diengdoh clan of Cherra. Disregarding the myth that the Diengdohs are descended from a mermaid, it may be stated that there seems to be a fairly general belief amongst the Diengdohs that their first ancestress or *hiew* came from the

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

for difference in sex, is applied to both. The corresponding uncle and aunt by marriage are referred to by terms which make this clear. The husband of the father's sister is a "Ma" like the mother's brother and is also referred to as "Kni." But as his position by age is unimportant, the adjective of position is lacking in his case. Similarly the mother's brother's wife and the father's sister have a common term "Nia"; but the latter has her relationship through the father clearly indicated by the additional term "Kha" which refers to kinship through a male. The mother's brother's wife is, on the contrary, an aunt by marriage. The husband of the father's sister derives his term through his wife; and the wife of the mother's brother, through her husband. The identities M.B. = F.S.H. and M.B.W. = F.S. are therefore derived indirectly and are not original. Hodson's hypothesis that they represent actual identity of kinship in an earlier dual society therefore turns out to be superfluous.

Reciprocally, a man refers to his sister's children by a term which is different from that for his own children. A woman also refers to her brother's children by this term which is different from that used for her own or her sister's children. As indicated, the M.B. as well as the F.S. are both on a parallel footing, and are practically labelled together, allowing for differences of sex.

We may say that there are, in Khasi society, two clearly recognised units. One of these is the house and household, where the men and women have been born. Inside this house group, the sisters have similar rights, actual as well as potential. As we have seen, on the death of one sister, where there is no female issue, another sister takes her place in continuing the traditional religious entity of the group. The brothers again, among themselves, take one another's place in succession, in the matter of authority, and of management of the family property. The other unit is that of the woman, her husband and the children. We may refer to it as the unit set up by marriage.

Referring to the first type, we may say that the second type results from the men of the house going out to marry women of other houses. As the sons settle down in the wife's mother's house and later on set up a separate house on her land, the continuity of tradition in the house of birth is kept up by the women who remain behind.

It would however be a mistake to suppose that the bond between the members born in a house is severed on marriage. We have noted before that the bones of a dead man return eventually to his mother's house, for final deposition in the clan cemetery, or at least that of the extended household. The bond between the mother's brother and sister's children has also been noted as well as the authority exercised by the former over the extended family.

Further links between a man and his mother's Kur will appear from a study of the rules of inheritance and land tenure with regard to men. Any property that a man acquires before marriage belongs to his mother's house. Myntri U Sohn Rai, for example, earned money before his marriage, and he purchased some land with this amount, in a village called Mawlah. It will go to his sisters and their heirs on his death. The earnings of a man after marriage, and after he has settled down in his wife's mother's house (or wife's house), among Khasis proper, generally go to the wife and daughters on death. But any gifts made by the parents at marriage have to be returned on death. Similarly, if a man has earned money after marriage, independently of his wife's capital, a part can be claimed on death by the man's mother's group.

Again, if a man returns to his mother's village after marriage, he can exercise his rights to cultivate the common land there. Every village community has its [illegible] land known as Ri Raid. As David Roy states (CN), "people can occupy a raid land where they build their houses and cultivate. For cultivation purposes land not more than can be cultivated is taken. The occupant can sell his house and the site and the garden of

[p.2] [Th] ce take each a clan member with the name Ka Ding Lan. She has two sons and five daughters, and in addition two brothers and two sisters who are all married. Also each of the five daughters and two sisters has four children. These forty-six people live with the clan mother and form the family clan of the Lan. To these we also add the sons [p.3] and brothers, the nephews and grandsons, but not their children. The latter have nothing to do with the family Lan but belong to the family clan of their wives, live with that clan and are counted to it. Likewise neither the husband of Ka Ding Lan, nor the husbands of the various daughters, sisters, sisters, and granddaughters belong here. They are all counted with their own clans, live and work with them according to Khasi custom, and only visit their wives occasionally perhaps after dark.

[p.4] The entire clan-family of Lan is housed in 4 or 6 huts, which all stand next to each other in a semicircle or are built one above the [p.5] other on the slope of a hill, according to the character of the land. A garden frequently surrounds them in which maize, sweet potatoes, [p.6] potato-like roots of Sob-ri and Sohmi, bananas and, on the southern slopes of the Khasi Mountains, also coffee, pineapples, and other fruits are cultivated. A circle of bamboo cane that is so important for building purposes, household objects, and /1.96/ implements surrounds the garden and huts. This bamboo cane grows up so thick so as are to a height of 15 or 16 meters and at the same time forms a good protection against bad weather. A wall (rumeiko) of thrown-up earth encloses everything, forming an enclosed farm, prevents unexpected access, and protects cattle and crops from the attacks and devastations of wild animals.

[p.7] What is considered the family property of such a clan? Primarily it is the land, the gardens, the rice fields, woods, fallow mountain [p.8] and grazing lands. On the southern slopes of the Khasi Mountains there are fields for the cultivation of cape, orange groves, betel groves, plantations of betel palms and of pepper leaves which far and wide are so highly treasured for betel chewing as a means of pleasure. (5)

[p.9] Usually there is so much land available that the family-clan can nourish itself properly and also increase in number

[p.10] According to its size and wealth a family clan also owns a [p.11] corresponding number of cows, oxen, hens, pigs, and goats. Neither the milk nor the flesh of the cows is used. They are kept for the

absence of S, D, E, K and N, U succeeds to the office (Ne is grown up. If U is too young, a chance arises for F's husband, if F is alive, if not, for W's husband.[1] In the event that none of these males be available, finally the office is taken by F and then by W. It should be noted that the office assumed by F's husband, W's husband, F or W could have to be returned to W's son, as soon as he comes of age. These cases are considered a temporary measure to meet an emergency. 611

The Khasi follow a strict descent line, and neither a classificatory uncle (or brother) is allowed to take over the authority of the ring.[2] 611 Though if there is no successor to the property, a daughter may be 615 adopted from the nearest matrilineal descent group. Instead of the adoption of a daughter, the following steps may also be taken. The property is handed over to the nearest matrilineal descent group; or if there is a son, he may inherit his father's or mother's acquired property, but ancestral property should go to a matrilineal kin. In such cases, the particular ring actually becomes extinct: in the former case, though the property is handed over to another ring, this ring belongs to the same matrilineal line; in the latter, the property goes eventually to the son's wife and to his children, i.e. an ring of an entirely different line. The latter arrangement suggests that though the Khasi follow the strict descent line, so far as the acquired property is concerned, the child has primary rights over the mother's other matrilineal kin, as expressed by the son's right of inheritance in the absence of a daughter. In this way, the ring may become extinct by the death of the female member who has no daughter.

The Khasi consider the ring institution as the basic and most 615 important functional unit; it represents also the religious unit which keeps ancestral property and shares a common religious ceremony. This is indeed the key to the whole Khasi social organization.

III. Kinship Unit

In this section I shall deal with the relation between the ring and 572 ● or between the marital family (husband, wife and children) and the 615 ring. Among the Garo, the unit corresponds to the actual group of individuals residing within one household. Upon this point the Khasi system is more complicated since spouses of members of the ring are excluded from the ring.

1. This would only arise in cases where the husbands of F or W live in the same household as their wives.
2. In the case of succession to the chieftainship, a classificatory sister's son is taken in the absence of a direct nephew or brother.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 The Khasi domestic unit (co-residential group) can be divided into four categories:

1. Household consisting of wife, husband and their children, wife's unmarried sisters and brothers—sometimes including widowed or divorced.
2. Household including all members of an *ing* (including their spouses from members of 1). In this type, larger household covers all the descendants of three or more generations from one woman (in this case, an *ing* corresponds to a *kpoh*).
3. Household of intermediate type between 1 and 2. Husbands are supposed to live in their wife's house, but they often go back to their sister's house for meals, and sometimes sleep there. They are supposed to work in their wife's field but they might work in their mother's (sister's) field, if necessary. This tendency is especially strong among newly married couples before they have a child.
4. Household consisting of only one elementary family. This mostly happens when a man married a non-Khasi.

[591]

Most Khasi households are of types 1, 3 and 4 and these three types are usually found within one village. They were found in the four villages in which I worked. It is to these dwelling units that I have given the name of house in Lists 6 and 9. Category 2, according to the information of Khasis and Jaintias, was used to be found among the Jaintias, though nowadays such cases are rapidly decreasing, changing into forms 1, 3 and 4. The members of category 2 belong to an *ing*, which structurally corresponds to the *tarwad* of the Nayar, and the *pawa* of the Minangkabau.

[178]

178
194
591

Category 2 may have been practised among certain of the Khasi a long time ago. Kongton people said that as recently as their father's generation, there were many husbands who stayed at the mother's house after their marriage and visited the wife at night. Nowadays, visiting husbands are very unusual cases in the Khasi Hills, though such situations may occur among newly married couples before they have children. Gordon, who wrote his book *The Khasi* in 1914, states:

> "Amongst the Khasis, after one or two children are born, and if a married couple get on well together, the husband frequently removes his wife and family to a house she and her husband post their marriage, which are expected for the support of the family" (p. 76).

In the Khasi Hills, the transition period between matrilocal residence and neolocal or uxorilocal residence seems to have been shortened during the last forty or fifty years. This might have been effected through the influence of Christian marriages, which start cohabitation of the wife and the husband immediately after the marriage ceremony. However, in Jaintiapa whose inhabitants originated in the Jaintia Hills where duolocal marriage is the usual practice, there are even now many instances of a man staying at his mother's house for several

19: Nakane K-5 (1955-1956) 1967 AR7 Khasi AR7

years after his marriage. During this period he works in his wife's 178
field, then, if the couple gets on well, they start to live together in 184
an independent house (non-heiress's case) or in the wife's house
(heiress's case). In spite of the fact that the inhabitants are all
Christians, they have retained this custom.

It is difficult to determine at what date the Khasi people have 178
changed from duolocal marriage to uxorilocal marriage. However, 591
the present dwelling unit, with its fluid relationship between husband
and wife (in fact, there are many cases of category 3), suggests a situa-
tion linked with the duolocal residence pattern. The fragmentary
historical information available and the present Khasi residence pattern
suggest that the duolocal arrangement may be an older pattern of
marriage. When I was in Kongton there was no husband who stayed
at his mother's house permanently, visiting his wife at night. The
local man told me that, when he married, there were many who did
not stay in the wife's house. He was the first person to settle in the
wife's house. In his case, he said, he felt sympathy for his wife who
had no brother who could work for her. After he had settled in his
wife's house, many villagers began to follow his example.[1] When the [621]
pattern of a visiting marriage was in vogue, a village must have
constituted a more compact endogamous unit. If the husband's house
was in another village, a visiting marriage must have been a great
inconvenience. The tendency to settle in the wife's house and work
for the wife's house must have brought about a wider range of marriage
contracts, such as with members of nearby villages, even though in
the present form of marriage, village endogamy is much preferred as
it is decidedly advantageous particularly for a husband, since he can
continue his life in the same familiar environment in spite of uxori-
local marriage.

The variations in the pattern of co-residential grouping, which 592
I have classified into four categories, reflect two different themes in 593
the social structure of the Khasi. On the one hand they represent 613
different stages in the maturity of the individual families concerned.
For example, a householder who starts in category 3 or 4 may end as
an old man in category 1. On the other hand these variations also
reflect the polar opposition between the obligations of matrilineal
kinship and the obligations of parenthood; a man, in particular, has
conflicting obligations towards the *sing* of his sister and the *sing* of

1. However, all the information which I collected in the upland Khasi [184]
Hills indicates that the uxorilocal residence pattern has been practised for a
long time. According to stories often told by the Kongton people, they migrat-
ed from the Jaintia Hills. If these accounts are to be taken as a reflection of
the real history of their migration, it would seem that the Kongton people may
have kept up the Jaintia custom including the duolocal residence pattern up
to recent times, while the majority of the Khasi practised uxorilocal marriage.

15: Nakane E-5 (1955-1956) 1967 ART Khasi ART

his wife. Paternal rights are not well recognized among the Khasi. The religious elements in the *siang* institution lay stress only on matrilineal solidarity. These elements tend therefore to orient each individual of the domestic unit to his or her own matrilineal kin group, the *siang*. This results in unstable relations between members of each elementary family, in other words, the marriage relation is one of the weakest.

This is the crucial point in matrilineal societies, and has been much discussed by anthropologists. Richards says,

> "In this balance of privileges and duties between the partners and the matrilineal the crucial point is obviously the husband's right to determine the residence of the bride. If she and her children live in the same homestead or village as his kinsmen, his domestic authority is likely to be greater than where they remain with the wife's relatives" (Richards, *supra*, p. xvii).

This statement is quite acceptable for those matrilineal systems which provide possibility for a man to take his wife from her matrilineal to his home or village where the husband's kin are found, as in cases of the matrilineal Central Bantus, the Ashanti, the Trobriands and the Nayar in North Malabar. However, among the Khasi, there is no such custom of removing a wife from her kin to that of her husband. Since most marriages take place inside a village, there are only two different residential arrangements: one is to take the husband to the wife's house, where he lives with his wife's parents and other matrilineal, the second is for the newly married couple to establish an independent house. Among Khasi men and women the usual practice is to leave the parents' house at marriage, except in the case of the *kniemi* (the youngest daughter). In this respect the Khasi differ again from the Nayar and the Minangkabau who form a sibling family on the basis of duolocal residence,[1] and from the Hopi, the Zuni and the Trobriand who form a residential group of an extended family, based on matrilineal descent including in-marrying husbands of married females. Khasi sisters do not form a residential group after their marriage; sisters' houses are scattered over the whole village residential area, mixing with households of other descent groups (see Fig. 1, with List 3).

Then, what is the factor that makes the Khasi have two different types of residence i.e. uxorilocal and neolocal[2] within a matrilineal

1. Only the case of some traditional Javanese kinship at would appear to show groupings similar to those of the Nayar, however. Did not work among them, nor are there anthropological reports available for them, particularly in this respect.

2. I use 'neolocal' in terms of house-building, since they usually build a house for newly married couple in the same village where both wife's and husband's parents live—village endogamy.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

society? Among the matrilineal Central Bantus, Richards says that the determining factor in residence at marriage is the marriage payment or the type of goods and services which the bridegroom gives (Richards, 1950, p. 249). However, the Khasi have no such custom in the marriage contract, it is therefore out of the question to explain the two types of residence in this way. In the case of the Khasi, the determining factor in the type of marriage with relation to the rule of inheritance and ownership of property, which is closely related to the structure of the *iing*. Khasi marriages can be divided into two categories i.e., marriage with an heiress and with a non-heiress. Marriages with an heiress must be uxorilocal. This accounts for category 1 or 3 of the household pattern. On the other hand, marriages with a non-heiress become uxorilocal and correspond to category 4 of the household unit.

IV. Marriage with an Heiress

A man married to an heiress, usually lives with his wife's parents and her unmarried or divorced brothers and sisters. For a man, life after marriage under such circumstances require great adjustment and endurance. The husband's status is especially weak when a male member of the wife's kin lives in the same household. The management of property and all economic activities are entirely controlled by the authority (wife's brother or maternal uncle) of the *iing*. The husband works in the wife's field under constant supervision from this authority. Both economic activities and domestic affairs are always under the management of this authority. The children have more attachment to, and are more obedient to, the maternal uncle than to the father. The tie between the uncle and the nephew is so strong that the father is rather like an additional member of the household. He is the last person to be introduced to visitors.

This family system is clearly reflected in the daily behaviour. When we visited the Khasi household of a youngest daughter, if a man (obviously the husband) came first to greet us, he always said "please wait, my wife (or mother-in-law) is coming." And it was the wife who entertained us, offering tea or pan and discussing matters with us, while her husband remained silent in the corner of the room, or in the next room. If her uncle or brother was there, he would be the person who talked to us, while his niece or sister served us. In such a case, we were seldom introduced to the husband. When I was working at Shella, I happened to stay in such a family. I had hardly any opportunity to talk to the husband during the two weeks of my stay. He left the house very early in the morning and came back late in the evening from the fields. While he was at home, he was

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

• 592 always somewhat outside the family conversation which was centred
593 on the maternal uncle and his sisters, nephews and nieces, by whom
604 I was well taken care of. This is somewhat similar to the situation amongst the Cewa and the Yao of the Central Bantus, which have what Richard calls 'the detachable husband' (Richards, 1950, pp. 233-35, 248), though the parallel is not by any means exact.

428 There is, therefore, inevitably an element of tension in the relations
581 between the wife's maternal uncle (including parents-in-law) and the
586 husband (son-in-law) and this tension makes the latter's life extremely uncomfortable. This awkward position is well shown in the divorce
[604] rate. At Kongton (see List 9), out of 61 couples (house-owners and
[606] their spouses), the number of persons who had experience of divorce
[592] was 33 (female 15, male 18) and those married more than twice
[593] numbered 19 (female 7, male 12). Out of 61 couples, there were only 31 in which neither husband nor wife had been divorced. In my census of Jaitinga village, 70 per cent of all divorce cases were marriages to heiresses. In general, the period when divorce occurs more frequently is before a couple get children and after the wife has passed the child-bearing age. A marriage breaks up either through the action of the wife or of the husband, but generally through that of the wife. However, the state of separation which I presently describe is brought about by the husband, though later it results in a divorce from the wife. Divorce does not mean a great catastrophe for a Khasi wife, especially if she is an heiress and her husband's economic
[589] contribution is not significant. Moreover, in this society remarriage is as easy for a widow or divorcée, as it is to divorce. In the villages of Sohkynduh and Kongton, the couple who wants to divorce has only to throw a few Assam together in the presence of some witness, usually an elderly man.

591 In addition to divorce, there are many actual separations of husband
599 and wife, of short or long duration, when the husband runs away from his wife's house to his sister's. Though it does not always end in divorce, considerable number of husbands have a strong tendency to spend most of their time at their sister's house. Khasi women often said, too, "I think, know why his [illegible] wife comes [illegible] to my place." I have often found the husband staying at his sister's house only a few houses away from his wife's, without any particular reason. They are obliged to see each other every day whether divorced or separated. This kind of ambiguity in the marriage relation seems to have an important correlation with the Khasi social structure, combined with the village endogamy. The man and and wife have grown up together from their childhood in the same village and known each other very well. Hence their psychology cannot clearly distinguish the marriage form as a newly-established independent social relation-

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

ship. They still live in the same familiar atmosphere as before their marriage. The implications of this ambiguity in the married state are considerable. Particularly the husband's uncomfortable situation, when the wife is heiress, encourages him to take marriage less seriously. 581 593

A husband who undergoes hardship in his wife's house, finds himself as the authority in his sister's house; if he is not the authority, he can find at least a respected position as uncle or brother. In the case of a man of authority in the *iing*, the tendency for him to regard his *iing* as more important than his married life is proportionately stronger, as I will discuss later. Hence the most unstable and unsuccessful marriages are those between the heiress and the man of authority. This is one of the reasons we often find among the Khasi a brother or an uncle, who is already married, acting nevertheless as the head to a family *(iing)* and as a member of its domestic group. This means that he is in a state of temporary separation or divorced. Among the Ashanti, a man and his wife's brother are never found as members of a common household (Fortes, 1950, p. 260), but among the Khasi, on the contrary, a man and his wife's brother are often found as members of a common household. In such cases, however, the brother has no wife, or never brings his wife to his *iing*. Therefore, a man and his wife and his sister never reside together. As far as the residence of women is concerned, the Khasi keep to the strict descent rule; two women who belong to different descent groups never live together. This point differentiates the Khasi residence pattern, in which social structure is involved, from that not only of the Ashanti but also of the Yao where the head of a descent group can bring his wife to his sister's household, though, among other members, uxorilocal marriage is the rule. These differential aspects of matrilineal systems will be discussed from a more theoretical point of view later. 581 591 592 593 602 604 619 428 [171]

In addition, should a Khasi man even succeed in spending his life with his wife's kinsmen, as soon as the wife dies, he will usually return to his *iing*, that is, to his sister's house, where he is received warmly and where he often acts as the *de facto* authority, as in the similar situation of divorce and separation. Thus the strong matrilineal structural principle tends to orient a man towards his own descent group, the *iing*. 602 619

The man's attachment to his *iing* is very great throughout his life. In this regard the Khasi differs from the matrilineal Negri Sembilan Malay. Among the latter, returning to the matrilineal kin is regarded by the man as an imposition rather than as the enjoyment of a legitimate privilege (see Swift, 1958, p. 157).[1] This difference 171 592 602 619 428

1. He presents this fact as one of the reasons of the durability of marriage among the Negri Sembilan. Indeed, on this precise point they differ from the Khasi where marriage is rather unstable. [581]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

171 seems to come *firstly* from the different residential arrangement on
• 592 marriage: among the Negri Sembilan a man marries into his wife's
602 group, i.e. his wife's village; being thus separated from his kin, and
619 as a result of the physical absence of his wife's brother or maternal
428 uncle in his domestic family, he enjoys considerable rights in his wife's household—as Swift states, he is 'master in his own house.' On the other hand, since among the Khasi the man stays in the village where his mother's (or mother's successor's) house is, even after his marriage, his relation to his natal house is preserved; *secondly*, from the structural difference of organization of the descent group. Among the Khasi, the *sing* is always the centre of the descent group, based on uniginiture succession and inheritance. Hence, the core of the descent group is always found physically in a particular household, whereas among the Negri Sembilan, the descent group is *not* organized on a *household* level, but in a much wider organization, including apparently many households. Membership of an actual household and of a descent group are at different levels. To marry out and become a member of his wife's household means for the man the transfer of his household membership. Likewise, his sister's husband becomes a member of his sister's household. Thereby he becomes a secondary member of his sister's household after marriage though he keeps his membership in the descent group to which his sister belongs. Among the Khasi, membership of a descent group always corresponds to membership of a particular household. The Khasi man can always demand his rights at his natal house primarily, as he is a member of that descent group. But it should be noted that he has this right only in his mother's (or mother's successor's) household, not his other sisters' (non-heiress') and mother's sisters' households (unless one of them is successor of his mother), though they may belong to the same descent group. These matri kin's households are considered as separate *sing* (strict functional descent group) from his.

586 Indeed, sometimes a man cannot find his *sing*, because his mother
619 died leaving no daughter to succeed her, or his sister died leaving
716 no successor, and his *sing* became extinct. Such a case occasionally
428 happens when a man becomes a divorcé or a widower as he is getting old. *Then he has to face a serious social and economic condition. In* divorcing, he has to leave everything he owned, his earnings including the house which he built, and even children . . . really he has nothing left him except his body.[1] Such a wretched man collects some timber and makes a small hut for himself, though sometimes lads who sympathize with him help him to build it. Unless he finds some woman

1. A widower has an alternative solution—to remain in his late wife's household till he marries again, though his position is not comfortable there.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

whom he can marry, he has to endure this miserable lonely life, while often in he same village his former wife is living in a well-built house with her children and her matrilineal relatives as before. Households of 3, 13 and 30 of Sohkynduh in List 6, and 13, 19, 38 and 56 of Kongton in List 5 are instances of such cases. It is really a pitiful picture to see such man, aged and poor, living all alone. 586 619 756 428

V. Marriage with the Non-heiress

Outsiders who come to the Khasi Hills are often impressed by the Khasi husband's miserable status and express surprise at the high divorce rate. This is mostly due to exaggeration based on the marriage with the heiress. However, where a man marries a non-heiress, there are many successful marriages with paternal authority. In most of these cases a man's status as a husband and as a father is stable. First of all, the domestic residential unit is an elementary family. From the moment of the marriage the husband's labour is of great importance to his family, since a non-heiress usually has no economic background, i.e., no dowry or inherited property (see p. 105). The economic circumstances allow a man to be the *de facto* head even though whatever he earns belongs, as a rule, to his wife. A man who succeeds at the beginning of his married life is respected and honoured as father of his family for the rest of his life. By this type of marriage, the man's status is firmly established. It is therefore a more secure form of marriage than a match with an heiress. 184 428 599

In such a marriage the children love and obey their father. The management of his acquired property will be taken over by his son and the property will be handed over to his daughter. Thus the paternal authority is as well established in this form of domestic family, as in a patrilineal family. However, the great difference from a patrilineal case is that the husband/father status is not permanent as the authority of the family. Theoretically he exercises it in the absence of a male adult member of his wife's *ring* (actually founded by his contribution), in other words, till his son is grown up (see p. 11). In the next generation this will form an established *ring* in which the husband of his youngest daughter will suffer again. [619]

The household of this kind of marriage with a non-heiress actually enjoys a considerable degree of independence from the descent groups of both wife and husband. If a man who has established a matrimonial life independent of his wife's natal *ring*, is not the authority of his natal *ring*, his relation with the latter usually becomes weaker. Economic and residential factors make it possible for the man to make the considerable shift from his *ring* to his wife's *ring*, and though 592 599 619

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 593 619 be clearly maintains the label of his descent group, he is at least divorced from them economically. If a father's activities were such as to permit the accumulation of wealth to be handed over to the next generation, he is always remembered with great respect and admiration by his successors and by the descendants of his wife's matrilineal line. In such a case he is looked upon as a member of his wife's descent group rather than of his mother's descent group. The best examples of this are the cases of men belonging to the first generation of Jaitinga villagers, especially that of the founder of Jaitinga. These immigrants to Jaitinga mostly accompanied their wives, who were not heiresses (as I mentioned previously, the unit of Khasi immigrants is mostly found in this kind of a couple); and most of them established successful matrimonial life with paternal authority, having been freed from the gravity of both matri-kin of wife as well as of husband.

[166]

Not necessarily confined to such cases of immigrants, even in an ordinary situation, if husband is ready to devote himself for his wife and children, the matrimonial life mostly turns happier and well established one. For under the Khasi matrilineal system, a wife, if she is not the heiress, is normally oriented to develop surprisingly high degree of independence from her descent group, i.e. her natal *iing*, unlike women of other matrilineal societies. This fact is closely related with the unique structure of the *iing*, as already discussed.

As a woman (non-heiress) tends to keep a certain distance to her natal *iing*, her brother accordingly decreases his concern to her new household. The pressure of the authority (wife's maternal uncle or brother) of wife's natal *iing*, on such a household becomes less marked. The wife's brothers are members of her natal *iing*, not of her new established *iing*, and therefore none of them can act as an authority over her new *iing*, though they may exercise certain pressure on the sister's husband, since the sister who established the new *iing* still keeps her membership in her natal *iing*. In fact a husband actually feels pressure from his wife's brothers, the occasional visits of the authority of her natal *iing* exercise a psychological check on his whole control over her and his children. Should any serious misfortune occur in the marriage, the wife will run to her brother for consultation. Furthermore, as member of her natal *iing*, he has the right to demand the property acquired by him if his wife has no successor, since it automatically belongs to his wife unless he acquired it without cohabitation with her, or through the capital of his *iing*. However, the process of segmentation in the *iing* leads the wife to greater attachment to her husband, particularly when his economic contribution is important, and as a consequence weakens her ties with her natal *iing*.

619 The limited rights of the brother over his sister's (non-heiress)

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

brother (actually not likely to happen), the levirate has no sociological implication in the social structure, which is specifically related to the residence rule. The levirate seems to have a significant function only when a marriage is virilocal—when the husband has full rights over his residence and property. This is also another aspect where the Khasi structure shows a marked difference from that of the Ashanti and the Ila, etc. 182 587

VI. Marriage of the Man of Authority of an *Iong*

Among these successful marital families, there are also shadows of a matrilineal order. These affect especially those men who are in the position of authority in an *iong*. Such a man, though he has an independent household with his wife and children, often visits his youngest sister's (or niece's) house, *iong (ha iong ieu)*, and sometimes stays there. Such a man's attachment to his *iong* is not only social or psychological, but also often economic. The man, as authority of his natal *iong*, usually has economic control over the management, particularly so, if his *iong* has considerable property or active trading business. As husband/father in his family he works for his wife and children, but often takes into consideration as well the interests of his *iong*. I found such cases especially among richer villagers in Mylliu and Jaitinga, where the main economic activities were based on trading. 592 599 602 619 [182]

Among the Khasi, it is quite a traditional rule of the division of labour that women engage in trading activities at markets whether on a large or small scale. Husbands may carry goods from field to market, but male members are kept away from the actual scene of the selling and buying. However, these activities on the part of the women are controlled and accounted for by their uncle or brother, or even son (or, if no male member is available, by the husband), though in many cases they form separate domestic families. The man's control over the trade appears more marked when the scale of business is large. [443] [462]

A man of Jaitinga, who worked in a shop in Haflong, spent his salary in keeping his wife and children, but at the same time he kept the accounts of his sister who was a professional merchant. Thus, the economy of the *iong* and that of the co-residential group are crossed by the dual role of the man. Hence, among the Khasi, residential autonomy is not always an indication of economic autonomy. However, it should be clearly understood that a man's acquired property goes to his co-residential group, not to his *iong*. [421]

A man of authority is attached to his *iong* by the stronger ties of religious, social and economic (management) duties as well as by

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 593 602 613 [123]

sentiment, in spite of his forming an independent domestic unit. Such a man with two households, the family of orientation and of procreation, says "one leg is in my sister's house and the other is in my wife's," and he feels more at home in his sister's. In villages, whenever a Khasi man in such a position invited me, I was always taken to his sister's (or niece's) house, his *iing*, not to his wife's. There I was warmly welcomed with highest respect by the women of the household as the guest of their uncle (or of their brother), the head of the *iing*. Khasi men whom outsiders often regard as hopeless in their social position, thus enjoy the highest status in their *iing*.

One Khasi gentleman who occupies a fairly high post in the Government, at Haflong, leaving his wife (non-heiress) and children at Shillong, to my question "when you go to Shillong into which house do you first step," immediately replied, "As soon as I get back to Shillong, I take the way to my sister's home and there take the evening meal with them, enjoying their talk. Then I go to my wife's house where my loving children are waiting." This shows a typical Khasi man's psychology in relation to a family of orientation and of procreation. His first concern on coming back to his homeland is whether his sister and her children are well, since he is the man of authority in that *iing*. He feels much more relaxed in his sister's house where he is held in higher regard and more cared for.

I came across many similar cases. In Jaitinga and Shella, each man on returning from their work, often have their evening meal with their sisters though their wives are waiting for them. Furthermore, if they choose to do so, they sleep at their sister's house without even going back to their wife's house. This results in an unstable married life, where a wife has to face a psychological handicap caused by the occasional absence of the husband, in spite of her advantageous position in a matrilineal and uxorilocal system. Many wives worry every day over whether or not their husbands will come to their house at night. And often this concern changes into sadness and loneliness when the husband does not return for several days on end. The wife knows her husband is at his sister's house in the same village. But she has no right to fetch her husband home. As in Western social dancing, the women have to wait till their partners come. During my field work I often came across these lonely women, just waiting for their husbands, each knowing he was only a few houses away. Though these Khasi women never show their feelings of loneliness in the presence of others, I, being a female anthropologist, was often told of the sadness of their married life. The situation of these women can be more easily understood if we remember the process of the segmentation of the *iing*, which separates each married woman from her descent group, her natal *iing*.

The Nayar type: The counter scheme of the Garo type: the co-residential type is 'brother-sister' instead of 'husband-wife.' The function of both line *A* and *B* is equally strong. This type is found among the traditional Nayar (except those in North Malabar) and the Minangkabau matrilineal people.

The Khasi type: The ideal co-residential type consists of a woman with either her husband or her brother. The function of line *A* is much stronger than that of line *B*. This type is found among the Khasi, the Hopi, the Zuni, the Trukese, the Negri-Sembilan Malay, the Yao, etc.

The Ashanti type: The ideal co-residential type consists of a man with either his wife or his sister. The function of line *B* is much stronger than that of line *A*. This type is found among the Ashanti, the Gwembe Tonga, the Mayombe, the Trobriands, the Nayar of North Malabar, etc.

In terms of the strong function of both lines *A* and *B*, both the Garo type and the Nayar type may fall into a similar category. But as already explained, their structure basically differs from one another, and clearly appears as the counter schemes of different residential arrangements. The Nayar type shares with the Khasi a rather similar structure in terms of a descent group equated with a property group, while in the Garo type the two lines *A* and *B* of a single descent group never form an independent property unit.

611

If, leaving aside the Garo type, we consider the three others, the Nayar type appears again different from the rest in so far as in it, both lines fulfill an equally strong function, while in the Khasi and Ashanti types, one of the two lines is always more developed functionally than the other. The Nayar type presents the highest degree of descent group solidarity among the three. This Nayar situation might be compared with that of the traditional Chinese patrilineal systems.[1] In both social systems the structural importance of marriage is minimized: the role of a spouse is only to ensure descendants of the matrilineal (patrilineal) group. The structural importance of a husband (wife) is almost neglected, while the wife (husband) holds the paramount locus in her (his) descent line. The descent group manifests the strongest solidarity within itself, neglecting affinal relations with other groups. This principle results in the custom of the "visiting husband" in the matrilineal system and in the patrilineal system, in a total social shift of the wife by her complete assimilation into her husband's group, and separation from her descent group,—she has no social and personal independent locus in terms of the structure. It is an interesting fact that the most extreme scheme of highly institutionalized unilineal systems can be seen among societies of pre-industrialized high civilization. These schemes are structurally opposed to those of the system of the society

1. Fortes touches this point in his paper (Fortes, 1950, p. 208).

15: Nakane E-5 (1955 1956) 1967 AR? Khasi AR?
Garo AR5

lineage is a corporate unilineal descent group of which the members can establish demonstrable genealogical relationships to each other. According to Firth, "lineage is essentially a unilineal descent group with some corporate functions, normally related by segmentary process to other descent groups of the same type, and with them usually covering the entire society" (1957, p. 4). The Garo and the Khasi can then be said to have the lineage, but to lack its segmentary organization which normally is found in a unilineal society. Both social structures exemplify the importance of the residence as a functional unit, against the wider descent group which may be called the lineage group. K 9 171 182 619

In the case of the Garo, the localized lineage is expressed in terms of the village (or group of villages) whose land bears the name of the localized lineage. However, it is the village which acts as the functional corporate body, the economic and ritual unit, not the group of members of the localized lineage. The village theoretically consists of the members of the two localized lineages, as represented in the headman and his wife respectively. Practically, though it bears the name of a particular lineage to which the wife of the headman belongs, as also usually the majority of the inhabitants, it includes many other lineage members as well as the traditional two lineages. Therefore, the lineage is not, in this sense, an exclusive corporate unit with a ritual and economic function, though it has a theoretical framework to the structure. 9 182 619 621

In the case of the Khasi, the lineage is found only on a household scale, centred in the woman, the property owner with members having direct matrilineal kinship ties to the former, such as her brothers, elder sisters, sons and daughters, who may or may not reside in the same household—the members of the *iing*. Beyond this unit (the *iing*) one can hardly find any functional organization based on the descent system. In other words, the lineage becomes a functional unit only at the level of the household, e.g., the lowest level of segmentation of the descent group, as it lacks wider external organization by the same principle. The lineage is considered rather as a ritual conception implying exogamy, not an organized body of kin. K 182 592 619

These phenomena contrast sharply with the Hopi and the Ashanti social organization, where lineage organization has crucial importance wider than on a household level. Many factors can be considered in this connection. First of all, the locus of property and ceremonial unit are the most distinctive features. Among the Khasi, property and ceremonial units are always found in an *iing*, represented by the youngest daughter's household, while that of the Hopi and the Ashanti are in a wider lineage organization in which members of many households are usually included. The Zuni pattern seems also similar to that of the Khasi. The difference between the Khasi and Zuni lies K 9 171 182 619 592

613

in the rule of inheritance; the former follows uniposture (ultimogeniture), while the latter does not. Therefore, the number of members of a Zuni household is naturally larger than that of the Khasi.[1] Against the average number of a Khasi household, four to five, that of the Zuni is seven and a half to eight persons (Kroeber, 1917, p. 104). Among the Khasi, sisters separate through marriage in every generation, leaving the youngest in their natal house; while Zuni sisters may stay together even after their marriages. Kroeber states:

> "The house belongs to the women born of the family. They come into the world, pass their lives, and within the walls they die . . . New and then a new dwelling may be built by all the females, or for a girl of the house by an enterprising husband; but in general the same walls, or reserved rooms on the same spot (*ibid.*, pp. 47-48). . . . It is true that a Zuni 'house' often contains what we should regard as two or three households, but as long as it includes only one used hearth, and all natives insist that the two or three households are a single one" (*ibid.*, p. 104).

The internal composition of the household may differ from that of the Khasi, but the household in terms of the important institutionalized unit, is very similar to the Khasi. Li An-che states that "characteristics of a joint household based on the kinship principle stand out very strikingly" (Li, 1937, p. 75). Eggan's statement brings Zuni social organization much closer to the issue. He writes, "In terms of Kroeber's table it would seem that the Zuni tend to equate a lineage with a household, except in cases of recent expansion or building off" (Eggan, 1950, p. 189). He gives a further illuminating analysis of this point:

> "We have noted that the lineage principle, . . . also provides a mechanism for the inheritance of ceremonial duties and obligations and the transmission and preservation of fetishes and other ceremonial paraphernalia. In Zuni this inheritance is phrased in terms of the household, but it is clear that it is the lineage segment born into the household that is important. This lineage segment, or at least the female line thereof, also owns land and holds it in trust for succeeding generations, to be worked by the men who marry into the household" (*ibid.*, p. 208).

Another similar equation of lineage and household, comparable to that of the Khasi and the Zuni, is found among the Trobiand. According to Goodenough (1951):

> 1. This involves not only the difference of the number of members in a household but also the relation between the members of a descent group. As already discussed, the core of the descent group among the Khasi, is the pair of siblings: the owner of the property (the youngest sister) and the authority (a brother), not the sibling group altogether (see p. 130) as happens in other matrilineal systems appearing in this discussion. In regard to the uniposture succession itself, the Garo share the same system as the Khasi, though it appears to operate differently by reason of the structural difference of organization.

619

"In aboriginal times they used to be associated with most lineages a dwelling house, *iawa* (p. 93) . . . *iawa* is the corporate property of the lineage or descent line whose women live in it, but it is normally built by their husbands" (p. 98).

Here, it is clear that a household provides the major locus of a lineage. In other words, a lineage is a corporate property group with a common residence. This is also the case of the Nayar *tarwad* and the Minangkabau *parwi*, though in these cases the household excludes the spouses of its members, while with the Khasi, the Zuni, and the Trobriand the spouses (in most cases, the husbands) share the residence.

Though they may differ in scale and size from one society to another, as well as from one household to another, the functional lineage founded upon residence has then a similar range in all of these systems. For convenience sake, I tentatively term this type of lineage "household-lineage,"[1] as opposed to that of the Hopi and the Ashanti, which might be termed "segmentary-lineage."

The average number of Khasi and Garo household members is four to five, that of the Zuni seven and a half to eight as stated above, the Trobriand is eighteen (from to thirty-four in Kiriwina Island, according to Goodenough), while the Nayar range from thirty to two hundred. These differences, I think, mostly depend on the economic (and environmental) situation; they should not be regarded as structural, except for the Garo and the Khasi, which, because of the uxorilocal rule, have smaller and fairly uniform households. The wide range of variation of composition which we observe among the Trobriand and the Nayar is due in reality to economic and environmental factors: the more favorable the circumstances, the larger the unit.

The co-residential group and the property unit do not always necessarily correspond. One property group may consist of more than two independent residences. But even in such cases, the lineage is likely to be found in a group which formed a co-residential unit in the recent past, and which should be considered as marginal cases, derived from the recent fission of a group—it is a lineage in process of fission not a constant kin-group based on other organization such as we find among the Ashanti and the Hopi. Usually such a lineage ceases to function shortly after it loses its common property, which usually follows closely upon the fission of the residential unit. Then, in the course of time a once-recognized lineage group disappears into the common sea of the clan, which represents only a ritual and exogamous unit. In some cases, even this clan loses its function, as happens among the Nayar and the Minangkabau, where the lineage which

1. It should be noted that it does not mean that the lineage consists of household members, but that the lineage solidarity is found around the range of a household scale.

corresponds (or corresponded in the near past) to the co-residential property-group itself becomes an exogamic unit, disrupting the wider unit of the clan. Structurally it can be said that in these societies a lineage cannot exercise its full function unless it has a common residence based on a property unit.

In contrast to these societies, I cannot help but think that the Ashanti and the Hopi belong to a different type. Both Fortes and Eggan lay great emphasis on the descent principle, based on the ethnographic data of the Ashanti and of the Hopi respectively. The best examples of statements concerning this issue are the accounts in which both stress their disagreement with Kroeber's argument of 1938 in favour of the priority of local residence relationships over those of descent, under the title of "Basic and secondary patterns of social structure."

Fortes states:

"A lineage cannot easily act as a corporate group if its members can never get together for the conduct of their affairs. It is not surprising therefore to find that the lineage in African societies is generally locally anchored, but it is not necessarily territorially compact or exclusive. A compact nucleus may be enough to act as the local center for a group that is widely dispersed. I think it would be agreed that lineage and locality are independently variable and how they interact depends on other factors in the social structure. As I interpret the evidence, local ties are of secondary significance, *pace* Kroeber, for local ties do not appear to give rise to structural bonds in and of themselves. There must be common political or kinship or economic or ritual interests for structural bonds to emerge. Again spatial dispersion does not immediately put an end to lineage ties or to the ramifying ties found in cognatic systems like that of the Lozi. For legal status, property, office and cult act centripetally to hold dispersed lineages together and scattered kindred" (Fortes, 1953, p. 29).

Eggan states:

"For the Hopi the kinship structure is centered primarily around the lineage; the household relationships are secondary (Eggan, 1950, p. 119) . . .

"Furthermore, it is the lineage and clan, rather than the household group, which is invested with lands and ceremonies and which is considered to own the house itself. Important as are the ties of residence and subsistence associations, they are not the key groupings for Hopi communities—nor for basics of our interpretation.

"Kroeber explicitly leaves kinship out of account in his analysis of 'basic and secondary patterns of social structure,' but in a sense kinship is more fundamental than either patterns of residence or formal grouping. Our analysis of Hopi kinship has suggested that both the household and the lineage organizations are encompassed in the kinship system. And it is clear that the kinship system is organized in terms of the lineage principle rather than in terms of residence" (*ibid.*, p. 138).

These arguments seem to me to refer more to a difference of social organization than to a theoretical contrast. On the basis of my own

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7 *
Garo AR5

field work as well as on the accounts of various matrilineal systems. 800
I feel strongly that there must be different types of systems which may be distinguished as "household-lineage" and "segmentary-lineage". Fortes and Eggan postulate the pre-eminence of the descent principle over residence. Though this may be the case among the Ashanti and the Hopi, it does not fit the cases belonging to what I call "household-lineage" type. Firth's argument emphasizing the importance of rights to group membership being associated with locality, fits very well with the latter case. With more precision and subtlety than Kroeber, he argues that "residence by itself does not give title to descent-group membership, but land rights established by descent-group membership tend to remain operational only through residence" (Firth 1957, p. 7).

I believe there are crucial differences between these household-lineage type and segmentary-lineage type organizations. The technical process of fission into segments is similar in both types. But in the former, once a segmented group attains autonomy, the relation between the segments will easily be forgotten after a few generations, as it has no significant social implication. Among these societies, people's genealogical memory outside the residential group is surprisingly poor. This empirical fact also suggests a different structure from that of the segmentary system.

In both types of society the internal organization of a household is the same, but it differs externally. Eggan states that "Kroeber's and Parsons' statements about the lack of system in regard to Zuni kinship indicate judgement from some arbitrary standard" and adds "The concept of the lineage provides a bridge between the household and the clan" (Eggan, *ibid.*, p. 197). I cannot agree with this. In K
fact, my study of the Garo, the Khasi and the Nayar corresponds q
very well to the Zuni situation described by Kroeber and Parsons. 171
There are matrilineal systems which lack a bridge between the household and the clan. 182

Then what is it that makes the difference between the two types 592 *
of organization in similar unilineal systems? I am not sure that I can 619
provide at present effective hypotheses on this issue. Moreover, empirical facts show that the household-lineage type organization is likely to be found among more complicated societies or in a society with considerable mobility. This we gather also if we compare the village compositions of the Hopi and the Zuni. In the case of the Khasi, K
we see that there was considerable mobility in population even in [166]
remote villages, so that we easily understand that in such a condition lineage membership hardly maintained itself. This seems to agree with the view put forth by Fortes on segmentary systems. Fortes 000
says the limits of the spread or span of internal segmentation of the

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

000 Such variety in residential arrangements and such flexibility in inheritance rule complicates considerably the composition of the residential unit when a property group (residential domestic unit) grows. Richards gives an interesting illustrative description of the formation of a Bemba residential unit:

> "The Bemba bridegroom starts his married life as a stranger in his wife's village, but since his daughters remain with him for some years after marriage he builds up a grand-family composed of his daughters, their husbands, and their children. In some cases he is able to persuade his sons-in-law to remain permanently with him, while in others he is even able to keep his sons in his own village. In time some of his sister's sons, with their wives, will choose to come and settle with him, so that he will be head of a group of rather heterogeneous composition" (Richards, *ibid.*, p. 227).

Here we find a man's wife's matrilineal kin (his daughters and sons, including the daughters' descendants); his own matrilineal kin (his sisters' sons); and the third matrilineal sets (his sons' wives and his sister's sons'wives). Such a mixed composition of a residential unit may never be found among societies belonging to those types previously discussed; such residential composition would be impossible if the matrilineal principle was functioning strongly in the structure of the actual property group.

Thus, the Bemba type presents an outstanding structural difference from the other types of matrilineal systems in which the matrilineal inheritance rule was the decisive factor for the formation of the residence unit. It is clear that in the Bemba type, both a man and a woman are fairly free from the economic control of his and her matrilineal group, and their relations are somewhat like those of the husband of the Khasi type and the wife of the Ashanti type. Therefore, the conflicts between one's matrilineal group and family of procreation are minimized, particularly in the economic sphere.

171
182
592
611

This analysis throws much light on the following remarks of Richards bearing on different aspects of the similar formation of descent groups among the Yao and the Bemba.

> "The head of a Yao village of this sort (taking his wife to his matrilineage residence) thus has authority over his wife's children and over those of his sisters, but the position of the wife's children seems to be clearly differentiated from that of the sister's children, and Mitchell speaks of a traditional hostility between them. I never saw evidence of such hostility in Bemba villages, which also often contain a man's children and his sister's children" (Richards, *ibid.*, p. 235).

This difference should really be ascribed to the structural difference between the Khasi type (the Yao) and the Bemba type. In the former the matrilineal structural force is strongly functioning in the residential group, whereas in the latter it is minimized.

177 people remained non-Hindu in their basic beliefs and social customs. Hindu
648 influences are nevertheless predominant in their culture, especially in their way
771 of living which shows a practical adaptability, somewhat similar to the Japanese
795 acceptance of modern western culture without becoming Christian. In my
[797] census of Shella village, the people calling themselves 'Hindu' amount to 40 per
[162] cent of the total, but they are the recent converts to the Ramakrishna School which established a missionary station at Shella after the Partition. The Christians constitute 30 per cent of the total, most of them having been converted during the last ten years, as in the case of the Ramakrishna School.[1] The rest remain as they were, of Khasi belief. These conversions to either
[455] Ramakrishna or Christianity seem to have been encouraged by the unstable situation of the people resulting from the recent economic depression in this area.

439 The Partition of India and Pakistan in August 1947, which drew the bor-
458 derline a few miles south of Shella village, considerably upset village economy
648 by stopping all trade with Bengal, though a limited amount of trade is allowed with local people at the border. Because of this political change, all the produce of Shella gardens is rotting away for lack of markets, while all of the rice fields were taken by Pakistan. Goods now come to Shella only from the uplands, carried upon men's shoulders over the most difficult pass, which makes everything very expensive. Many families have sold their gold and other treasures, and some families are facing starvation.[2]

182 Concerning the conversion to a new religion, an interesting phenomenon
171 is to be observed. The conversion to Christianity or to Ramakrishna is mostly
• 592 by individual. I found in my census that the wife and husband often belong to different religions. This is a very different picture from the Garo, among whom
613 I always found that the husband and wife belonged to the same religion: the
771 conversion of the husband to Christianity was always followed by that of the
795 wife. I think this reflects the structural difference which influences the actual relationship between the husband and wife. Among those Khasi, instead of the husband and wife, the maternal uncle and his nephews and nieces are mostly of the same religion. The function of the *eng*, the most important social unit religious unit, thus appears also in the conversion to a new religion, stronger than that of a domestic unit.

Intermarriage

648 The close economic and cultural contact of the Shella people and the Bengalies
771 is not matched by social contact. The essential barrier between the two peoples is the difference of religion which dominates the entire social order in such
563 society. Though these Khasi were important traders, richer than the neighbouring Hindu peasants, they were considered by the Hindu as outcasts with whom they never shared social activities. Intermarriages were therefore very rare. In Shella village, only two exceptional cases were found in my census:

1. A Khasi woman married to a Garlia (cattle-keeper), they live at Shella Bazaar (Shelaga).
2. A Khasi woman has marital relations with a Bengalee medical doctor who has resided at Dhaung in Shella for six years. He already has a Bengalee

1. These two entirely different missionary activities are competing with each other, and are somewhat related to the political powers within this area.
2. The state government is doing its best to provide them with additional facilities: for example, providing air transport for the transportation of oranges from Shella to Gauhati and Calcutta. However, such arrangements cannot cover the great economic loss suffered by the Shella people.

10. Issue G-3 (1954) 1963 AR7 Khasi AR7

It is seen from the above table that proportion of landless families was quite high in Sunder area and Pojuna area numbering for 31 and 28 per cent of the total number of families in the respective area, against 19 in the General area. Considering holdings in general and classifying them as small holdings (if has their 3 acres), medium holding (3-5 acres) to be from 10 acres and large holdings (10 acres and above), the proportion of landless holding land to the three holding groups is found to be respectively 18 per cent, 28 per cent and 18 per cent in Sunder area, 27 per cent 26 per cent and 7 per cent in Pojuna area and 24 per cent, 24 per cent and 6 per cent in General area.

Considering only the landless holding land as will be evident from table 2(1) in the appendix in Sunder area the proportion of families in the three holding groups i.e. small, medium and large are respectively 32%, 31% and 36% of the landless holding land while for Pojuna area they are 34%, 42% and 9% and for General area 38%, 40% and 4% respectively.

As to the area covered by the three holding groups in the Sunder area, Pojuna area and General area, the small holding area respectively 8 per cent 19 per cent and 21 per cent of the total agricultural land medium holding area respectively 29 per cent, 52 per cent and 19 per cent and the large holding area 63.52 per cent, 29.08 per cent and 27.41 per cent respectively. Thus in Sunder area 79 per cent of the landless holding land cover only 8 per cent of the total agricultural land in the village while in Pojuna area 68 per cent of the families own 19 per cent in the land and in General area 54 per cent of the families own 21 per cent of total land. As a result the individual holding under the small holding group are small averaging between 0.54 acre to 2.16 acres in Sunder area, 0.60 acres to 2.32 acres in Pojuna area and 0.67 acres to 2.57 acres in General area. The average size of holdings per family in the small holding group in the Sunder area are respectively 2.16 acres, 1.67 acres and 1.33 acres as compared to 0.54 acre, 0.75 acre and 2.02 acres in the medium holding group and 23.92 acres, 19.02 acres and 19.02 acres in large holding group. Average size of holding per family holding land in Sunder area, Pojuna area and General area comes to respectively 2.42 acres, 2.09 acres and 2.15 acres. However considering estimated holdings only as will be seen from Table 2(1) in the appendix the above figures stand at 2.18 acres, 2.12 acres and 2.21 acres respectively considering the fact that a considerable portion of land is either left fallow or leased out to others.

The following table will throw light on the point

24

[illegible] The total number of bagasse in 687 holdings in Sample of area [illegible] to 2,340 giving an average of 3.40 bagasse per holding. So, in 943 holdings in project area is 4,[illegible] which gives an average 1.96 bagasse per holding, while in General area 145 holdings comprise of 493 bagasse, i.e. 3.40 bagasse per holding. A comparison of the above figure with the average bagasse figure of 3.07, 4.32, 4.05 and 3.05 per holding in Palar Hills, Dhanraj, Sikhagiri and Lakshmipur districts respectively goes to show that position of bagasse in the district is higher than that in Palar Hills but less than that in other districts.

It will be seen from table 24.1 on the opposite that in the small holding group (less than 2 acres) average number of bagasse per holding is 1.90 in Sample, 1.88 in Project and 2.41 in General area. The average size in the corresponding holding group being 1.50 acres 1.61 acres and 1.55 acres, in Sample area, Project area and General area the average size of bagasse in the respective area works out at [illegible] and [illegible] acres. Similarly it will be seen that average size of bagasse for medium holding group are, in Sample area 1.41 acres (average size of medium holding 4.45 acres) in Project area 1.51 acres (average size of holding 4.56 acres) and in General area 1.51 acres (average size of holding 4.56 acres), while for large holding group being 2.21 acres, 2.06 acres and 2.15 acres respectively against the average large holding size of 10.05 acres, 10.05 acres and 10.05 acres in the respective area.

Ownership

[illegible] 4.1 The operating unit in the rural agricultural sector is in most cases the family farm. Farmers, cultivators, agricultural and agricultural labour as regards to the agricultural activities in these farms are given through a joint effort of the family unit. Family [illegible] farm accounts are maintained through employment of hired labourers are employed during the busy seasons.

[illegible] In this respect a farm has been defined as consisting of all agricultural land operated by a single family with or without employment of labour. The family unit or man will have the right of possession, enjoyment and alienation over the farm land operated by it and in this sense the farm is characterised from holding which comprises of such land with non-right the family ownership possessing right of enjoyment and alienation.

TABLE D-5

Distribution of farms according to size

6.6 The summary distribution of farms in the three areas is shown in the following table :—

Size of farms (in acres)	Dundee area			Pudoor area			Ghanaul area		
	No. of farms	Total area (acres)	Average size of farm (acres)	No. of farms	Total area (acres)	Average size of farms (acres)	No. of farms	Total area (acres)	Average size of farm (acres)

CHAPTER IX

Income and Expenditure

9.1 The great majority of rural people are members of families of two or more persons sharing a common income earned mostly by joint efforts of family members and also disbursed in supplying the consumption needs of the family as a whole. An attempt is made below, therefore, to analyse the aspects of income and expenditure of the rural families family-wise.

9.2 It has already been mentioned that the majority (i.e., about 72 per cent) of the families of all the three areas pursued agriculture as a principal occupation. Some of these families follow cottage industries, trade, transport, labour, etc. as subsidiary occupations. The rest of the families had either agriculture as subsidiary occupation or were independent of agriculture. The larger section of these families were non-agricultural labourers. The following table gives the distribution of families in different income groups.

TABLE C-1

Frequency distribution of families in different income groups

Income Group Rs.	No. of families											
	Sector area				Plains area				General area			
	Mainly agricultural land	Non-agricultural	Total	Average annual gross income per family (Rs. 0.00)	Mainly agricultural land	Non-agricultural	Total	Average annual gross income per family (Rs. 0.00)	Mainly agricultural	Non-agricultural	Total	Average annual gross income per family (Rs. 0.00)

Total —	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

(3)

From table above, it is difficult to judge the relative prosperity of agricultural and non-agricultural families. The annual gross income of 69 per cent of the agricultural families is less than Rs.720-00 a year while that of 87 per cent of them is below Rs.1,000 a year. Thus the remaining 13 per cent of the families only have a gross annual income of above Rs.1,000 a year. Among non-agricultural families the corresponding proportions are 32 per cent, 78 per cent and 21 per cent. Thus proportion of non-agricultural families with annual gross income less than Rs.720, is greater than the corresponding proportion of agricultural families. The petty traders, porters and other non-agricultural labourers who are universally very poor constitute this non-agricultural class. On the other hand proportion of non-agricultural families with annual gross income of more than Rs.720 exceeds the corresponding proportion for agricultural families. These non-agricultural families comprise of a good number of business men, contractors, etc., who are comparatively a bit well off than the agriculturists.

In Project area proportion of agricultural families and non-agricultural families with annual gross income of less than Rs.720 is 35 per cent and 29 per cent respectively as against 69 per cent and 32 per cent of their respective counterpart in Border area. Proportions of families with gross income below Rs.1,000 a year is 54 per cent and 66 per cent indicating that proportions of agricultural as well as non-agricultural families with income above Rs.1,000 a year are greater than their corresponding counterparts in Border area.

In general area (villages) it is significant to note that proportion of agricultural families with gross annual income of over Rs.1,000 is negligible (01 per cent) while those under Rs.720 and Rs.1,000 are 62 per cent and 55 per cent respectively.

Table below in Other reveals that 30 per cent of the gross income in the Border area, 34 per cent in the Project area and 36 per cent in the General area is earned by families in the income group less Rs.1,000 contributing as much as 85 per cent of the total number of families in the respective areas.

TABLE G-3

Percentage distribution of income and families in different income groups

Total	...	...	[illegible]	[illegible]	...	...	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

From the above table it is seen that average annual gross income of predominantly agricultural families in Border area, Project area and General area are respectively Rs. 1,035, Rs. 1,095 and Rs. 874. Apparently it appears that people in the General area are poorer than those in Border area. This however cannot be said to be true, for, from a consideration of the distribution of families in table G-1 it will be seen that average income figures for Border area and Project area are in fact inflated due to existence of a number of families in higher income group.

To the income of families in Border area agriculture and Animal husbandry contribute 58 per cent followed by Labour-service-profession which contribute 34 per cent (Labour includes agricultural labour also). Miscellaneous sources such as charity remittance, loan realised, etc., contribute 1 per cent. Others in order of importance are liquidation of assets, non-agricultural enterprises such as Trade, Cottage Industries, etc., which respectively account for 4 per cent, 3 ~~and~~ per cent only.

In project area main contributors are agriculture and Animal husbandry and Labour-service, profession etc.. accounting for 48 per cent and 36 per cent respectively followed by Liquidation of assets, and non-agricultural pursuits such as trade and cottage industries which respectively contribute 8 per cent and 5 per cent of the families total gross income.

Main contributors to family income in General area are in order of importance agriculture, Labour-service, profession, etc.. non-agricultural enterprise, and Liquidation of assets, which respectively accounts for 53 per cent, 36 per cent, 6 per cent, and 4 per cent of the families total gross income.

It is also seen that of the total average income of families, value of items produced at farm or at home and consumed at home account for 16 per cent of the families total annual gross income in Border area, 27 per cent in Project area and 35 per cent in General area. Thus average annual cash receipt of an agricultural family in the three areas comes to 84 per cent, 73 per cent and 65 per cent respectively, of the families average gross annual income, *i. e.*, Rs.1,035·06, Rs.1,095·33 and Rs. 873·98 respectively.

5.4 Excluding non-agricultural families it is seen that average gross annual income per family in Border area, Project area and General area are respectively Rs.[illegible], Rs.[illegible] and Rs.[illegible] respectively. The main contributor to this income in Border area is Trade followed by Service, Profession, Labour and Agriculture and Animal husbandry; those in Project area are Labour-Service-Profession followed by Trade, small scale manufacture and agriculture and Animal husbandry. The comparatively higher average income from small scale manufacture and handicraft is due to existence of quite a good number of upper families with quite a large amount of annual income. This contributes to gross annual income of non-agricultural families in General area in order of importance are agriculture and animal husbandry, service-profession and labour. It is significant that among the non-agricultural families also agriculture and animal husbandry emerge to be the biggest contributor. This is due to the fact that in General area villages there are a large number of Nepali families whose principal occupation is cattle rearing and earned enough by selling milk, ghee, and livestock. These families were classed as non-agricultural families.

5.5 Of the gross income, agriculturists spend a portion in their farms on items such as purchase of seed, manure, etc., cost of maintenance of livestock, wages and salaries for labourers, and transport of produce while other spend a portion on running their household enterprises such as purchase of merchandise for trading, purchase of plants and machinery and raw materials for household enterprises, wages and salaries for employees, etc. The net annual income per family, as will be evident from table G-6, comes to Rs.[illegible] in Border area, Rs.[illegible] in Project area and Rs.[illegible] in General area. The corresponding figures for agricultural families being Rs.[illegible], Rs.[illegible] Rs.[illegible] and for non-agricultural families Rs.[illegible], Rs.1,[illegible] and Rs.[illegible] respectively.

The following table shows the annual expenditure of families in running their enterprises.

TABLE G-7

Consumption in Amount

Items	Border area			Project area			General area		
	No. of items the sample fig. items	Average value of items consumed		No. of items the sample fig. items	Average value of items consumed		No. of items the sample fig. items	Average value of items consumed	
		per capita Rs. Rs. (Rs.)	per family Rs. (Rs.)		per capita Rs. Rs. (Rs.)	per family (Rs.)		per capita Rs. Rs. (Rs.)	per family (Rs.)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1. Food	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
2. Agricultural inputs [illegible]									
(a) Fertilizers	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
(b) Implements and equipment	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
(c) Others [illegible]									
3. Building	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
4. Furniture & fixtures	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	—	—	—
5. Plant & equipment tools, etc. for handicraft enterprises	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	—	—	—
6. Others	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	—	—	—

Thus it is seen that proportion of families purchasing livestock is highest in all the three areas, followed by that purchasing agricultural tools, implements. Considering investment for farm, building is conspicuous in all the three areas, contributing largely towards a net investment is seen in all the three areas. Others of importance are land and agricultural assets.

3.1. **Consumption expenditure of the family.**— The following tables show the broad pattern of the average family consumption expenditure in the three village-groups. The comparison of annual expenditure on food, clothing and other items of consumption which determine the standard of living of the rural families are displayed separately.

Size of average family—In Border area 5.7 members,
Project area 6.0 members and
General area 6.7 members.

TABLE G-8

Household Consumption Expenditure

Items	Dhaka area				Project area				Control area			
	Cash on premises	Obtained in kind & consumed at home	Total	P.C.	Cash on premises	Obtained in kind and consumed at home	Total	P.C.	Cash on premises in	Obtained in kind & consumed at home	Total	P.C.

	—	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Grand Total	—	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

varied between 1.66 per cent to 2.03 per cent in the three areas. It is very likely that this figure will be an under-estimate due to the fact that people addicted to it do not like to admit so. The existence of a large number of licensed liquor distilleries - numbering upto 8 in a single village, and the brisk trade in these distilleries bear testimony to the fact that a large share of family income is drained out through liquor.

Among miscellaneous items clothing and footwear accounted for nearly 4 per cent in Barbil area, 5 per cent in Pagari area and 5 per cent in Gaurad area. Next to it in importance is medicine and doctor which accounted for about 3 per cent of the total annual expenditure in all the three areas.

Generally speaking, the comparatively high percentage of expenditure on food and low percentages on other items like clothing, house and its repair, education, etc., indicates a low standard of living of the rural families in general.

5.6. It may be of some interest to know how the families belonging to typical economic groups divide their income between their current living expenses and other outlays on goods and services. The picture of the family expenditure pattern is summarised in the following table.

TABLE G 9

Analysis of family expenditure in different income groups

Similar features	Income group											
	Below Rs. 100	100-150	150-200	200-250	250-300	300-350	350-400	400-500	500-600	600-700	700-800	800 and above

19: Assam G-5 (1958) 1963 AR7 Khasi AR7

It is noticed that food is the largest single item of expenditure at every income level demanding about two-thirds or more of the average over all expenditure. It is significant to note that money outlays on food increase markedly at successive income level. This wide range of expenditure is the result of very low standard of food consumption in the low income groups and also possibly of increasing number of members per family in the higher income groups.

434
502
511

One striking feature revealed by the summary table of family income and expenditure given above is the average net deficit shown by the families of almost each income-group, except perhaps marginal surplus in respect of a few income-groups in the higher level. Thus for majority of the families the entire family income was not adequate on the average to meet current outlays on food and other necessities and comforts of daily living. Even the advantage of comparatively large average income was more than balanced by the larger differential increase in the family expenditure due either to their larger family size or comparatively higher standard of living or both.

426 Of the total number of loans 81 per cent in Border area, 18 per cent in Project area and 20 per cent in General area were free of interest while rate of interest for 9 per cent, 30 per cent and 60 per cent respectively of the loans in the three areas were found to be 20 per cent or more per annum which in cases ranged upto 200 per cent.

241 434 592 10.8. Farm output of 67 per cent of the families in Border area, 36 per cent of families in Project area and 60 per cent of families in General area were less than Rs. 500 a year, while 5 per cent, 30 per cent and 1 per cent of the families in the respective area earned more than Rs. 2,000.00 a year from their farms. Of the total number of farms fetching less than or Rs. 500.00 a year in Border area 33 per cent of them are medium sized farms and 4 per cent large sized farms, the corresponding proportions for Project area and General area being 21 per cent, 1 per cent, 27 per cent and 1 per cent.

24 433 10.9. In Border area the most important crops are oranges, betelnut, paddy, and betel leaf which respectively accounted for 31 per cent, 27 per cent, 19 per cent and 9 per cent of the total harvested area. In Project area paddy and orange are the most important crop which accounted respectively for 82 per cent and 3 per cent of the total harvested area. The most important crops in the General area are paddy and potato which respectively accounted for 61 per cent and 7 per cent of the total harvested area.

On the basis of data collected for all the villages investigated average yield per acre worked out at paddy 11.65 maunds, potato 21.61 maunds, oranges 3.77 lutis (5908 numbers) and betelnut 2.95 lutis (12980 numbers). These yield exhibited wide variation among the three areas.

434 592 10.10. Proportions of families with annual gross income of less than Rs. 750, Rs. 750 to less than Rs. 3,000, and above Rs. 3,000, were respectively found to be 49 per cent, 45 per cent and 6 per cent in Border area, 36 per cent, 60 per cent and 6 per cent in Project area and 45 per cent, 54 per cent and 1 per cent in General area. Average annual gross income per family worked out at Rs. 1,076.30 in Border area, Rs. 1,829.40 nP. in Project area and Rs. 864.36 nP. in General area which for predominantly agricultural and non-agricultural families respectively stood at Rs. 1,035.06 nP. and Rs. 1,161.91 nP. in Border area, Rs. 1,095.33 nP. and 1,644.36 nP. in Project area and Rs. 873.98 nP. and 780.84 nP. in General area. In all the three areas main contributors to family income were agriculture, service-profession-labour and trade accounting respectively for 41 per cent, 35 per cent and 15 per cent of the total average income in Border area, 37 per cent, 40 per cent and 9 per cent in Project area and 53 per cent, 36 per cent and 5 per cent in General area.

The net annual income per family in different income groups varied between Rs. 60 to 2,849 in Border area, between Rs. 110 to Rs. 3,508 in Project area and between Rs. 92 to Rs. 2,004 in General area. The average over all per family net annual income worked out at Rs. 853 in Border area, Rs. 989 in project area and Rs. 750 in General area and the same *per capita* at Rs. 231 in Border area, Rs. 215 in Project area and Rs. 153 in General area.

142 young are comely, of a buxom type, and, like the men, with highly-developed calves, the latter always being considered a beauty. The children are frequently remarkably pretty. Khasis carry very heavy burdens, it being the custom for the 482 cooly of the country to carry a maund, or 82 lbs. weight, or even more occasionally, on his back, the load being fixed by means of a cane band which is worn across the forehead; women carry almost as heavy loads as the men. The coolies, both male and female, commonly do the journey between Cherrapunji and Shillong, or between Shillong and Jowai, in one day, carrying the heavy loads above mentioned. Each of the above journeys is some thirty miles. They carry their great loads of rice and salt from Therria to Cherrapunji, an ascent of about 4,000 feet in some three to four miles, in the day. The Khasis are probably the best porters in the north of India, and have frequently been requisitioned for transport purposes on military expeditions.

157 The people are cheerful in disposition, and are light-hearted by nature, and, unlike the plains people, seem to 522 thoroughly appreciate a joke. It is pleasant to hear on the road down to Theriaghat from Cherrapunji, in the early morning the whole hillside resounding with the scraps of song and peals of laughter of the coolies, as they run nimbly down the short cuts on their way to market. The women are specially cheerful, and pass the time of day and bandy jokes with passers-[461] by with quite an absence of reserve. The Khasis are certainly more industrious than the Assamese, are generally good-tempered, but are occasionally prone to sudden outbursts of [533] anger, accompanied by violence. They are fond of music, and [797] rapidly learn the hymn tunes which are taught them by the Welsh missionaries. Khasis are devoted to their offspring, 593 and the women make excellent nurses for European children, 463 frequently becoming much attached to their little charges. The people, like the Japanese, are fond of nature. A Khasi 517 loves a day out in the woods, where he thoroughly enjoys 824 himself. If he does not go out shooting or fishing, he is con-825 tent to sit still and contemplate nature. He has a separate name for each of the commoner birds and flowers. He also has names for many butterflies and moths. These are traits which are not found usually in the people of India.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

614 descended from a common ancestress. There are other instances
582 of clans being connected with one another, such connection being called by the Khasis *iateh kur*. Whenever such connection exists, intermarriage is strictly prohibited, and is considered to be *sang*. There is no custom of hypergamy. A Khasi cannot marry his maternal uncle's daughter during the lifetime
[604] of the maternal uncle. This is probably due to the fact that the maternal uncle, or *kni*, in a Khasi household is regarded more in the light of a father than of an uncle. His children, however, would belong to the clan of his wife and there would, therefore, in ordinary cases be no bar to the nephew marrying one of them. Marriage with the daughters of a father's sister is not allowed during the lifetime of the father, but after the latter's death there is no religious ban, although such unions are looked upon with disfavour by the Khasis. In the Wár country, how-
587 ever, such marriages are totally prohibited. A Khasi cannot
582 marry two sisters, but he can marry his deceased wife's sister after the expiry of one year from the wife's death, on payment of *jing sang* (price of *sang*, or taboo) to the wife's clan. A
582 Khasi cannot marry the daughter of his father's brother, she is his *para kha* (lit. birth sister). Similarly he cannot marry the daughter of his father's paternal uncle. He can, however, marry the daughter of his mother's brother, provided that the brother is dead. This somewhat paradoxical state of affairs is explained by the fact that the children of the mother's brother belong to a different clan to that of the mother, i.e. to the mother's brother's wife's clan. The Khasi, Synteng, Wár, and Lynngam divisions are not strictly endogamous groups, and there is nothing to prevent intermarriage between them. For instance, it has been the custom in the Nongkhlaw Siem family to obtain husbands for the princesses of the state from the Wár country. There is no custom amongst the Khasis of two men exchanging daughters, i.e. each marrying his son to
[423] the other's daughter. Notwithstanding the existence of the matriarchate, and the fact that all ancestral property is vested in the mother, it would be a mistake to suppose that the father
593 is a nobody in the Khasi house. It is true that the *kni*, or
604 mother's elder brother, is the head of the house, but the father is the executive head of the new home, where, after children

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

have been born to him, his wife and children live with him. It 573
is he who faces the dangers of the jungles, and risks his life for 604
wife and children. In his wife's clan he occupies a very high place, he is second to none but *u kni*, the maternal uncle, while in his own family circle a father and husband is nearer to his children and his wife than *u kni*. The Khasi saying is, "*u kpa uba lah ban iai, u kni uba tang ha ka iap ka im*," which may be translated freely as, "the father bears the heat and burden of the day, the maternal uncle only comes when it is a question of life or death." The Khasi father is revered not only when living, but also after death as *U Thawlang*, and special ceremonies are performed to propitiate his shade. Further remarks on the subject of marriage will be found in the Section which deals with religion.

DIVORCE.

Divorce amongst the Khasis is common, and may occur for 586
a variety of reasons, such as adultery, barrenness, incompatibility of temperament, &c. The rule amongst the Khasis is that both parties must agree, but amongst the Wars, especially the people of Shella, the party who divorces the other without his or her consent must pay compensation, which is called *ka myurain*, or *ka thnem*. Amongst the Khasis it is not the custom to enforce restitution of conjugal rights; as a rule, when husband and wife cannot live together amicably, they agree to divorce one another; but occasionally it happens that either the husband or the wife will not agree to a divorce. Usually the husband would be willing to live with his wife; but when the latter consents neither to live with her husband nor to accept a divorce, a difficult situation arises, and it is in the event of such a contingency happening that the necessity of assessing *ka myurain*, or *ka thnem* (compensation), occurs. [587]
The latter is computed by the village elders. Parties who have been divorced cannot afterwards remarry one another, but they are at liberty to marry into other families. A woman cannot [843]
be divorced during pregnancy. The following description of the divorce ceremony is taken from U Jeebon Roy's note on the

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

ancestral property, except in the Wár country. In the event of a divorce the mother is always allowed the custody of the children. Divorces amongst both Khasis and Syntengs are of common occurrence, the result being that the children in many cases are ignorant of even the names of their fathers. For the mother, on the other hand, the children cherish a very strong affection, all their sympathies and affections binding them closely to the mother's kin. Divorce amongst the Syntengs, though resting on the same principle as that of the Khasis, differs in detail, and must be described separately. It is as follows:—In the first place it is not necessary for both husband and wife to be consenting parties, as is the case with the Khasis. In the Nongkhlih doloiship divorce takes place before the relatives of the parties. The man has to give eight annas as a sign of the divorce, and clothes worth Rs. 3/- or Rs. 5/- to the wife. There is a similar custom in the Suhtnga and Amwi doloiships. In the Jowai doloiship the divorce takes place in the presence of a village official called *U basan*. The husband or the wife gives the *basan* an eight anna piece, the latter gives this either to the wife or to the husband, as the case may be. The *basan's* share of the eight annas is two pice, the remainder being spent on liquor. The *basan* is entitled to a further fee of one anna from the man. If a wife does not agree to accept divorce, she is entitled to receive two pieces of cloth from the husband to the value of Rs. 3/-. This compensation is called *thnem*. The divorce then takes place. If a wife wishes to divorce her husband, and the latter is unwilling, before she can obtain divorce, she must pay *thnem* to the value of the whole amount the husband has spent on her and her children during the marriage. Divorce customs in Nartiang and Nongjinghi doloiships are much the same, only the amounts tendered by the parties and that of compensation differing.

In conclusion it should be stated that the great drawback attaching to divorce in ordinary communities, i.e. the effect that it has on the lives of the children of the marriage, does not apply to the Khasis, for with them the children always live with their mother and their mother's family, which latter would be bound to maintain them in the event of a divorce.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

INHERITANCE.

428 The Khasi and Synteng laws of inheritance are practically the same, although in some of the doloiships in the Jaintia Hills there are some slight differences. The Wár law of inheritance differs greatly from that of the Khasis, and the customs of the Bhois or Mikirs, who inhabit the Bhoi doloiship of the Jaintia Hills, are totally different from those of the Khasis, thereby supplying another link in the chain of evidence in support of the conclusion that the Bhois, or, more correctly speaking, the Mikirs, are of Bodo origin, and not Khasi or Mon-Anam. The Lynngams follow the Khasi law of inheritance. It will be convenient to describe the Khasi law first, and then to pass on to the special customs in vogue in the different doloiships in the Jaintia Hills, and, finally, to describe the Wár, Bhoi and Lynngam customs.

611 The Khasi saying is, "*long jaid na ka kynthei*" (from the
562 woman sprang the clan). The Khasis, when reckoning descent, count from the mother only; they speak of a family of brothers and sisters, who are the great grandchildren of one great grandmother, as *shi kpoh*, which, being literally translated, is one womb, i.e. the issue of one womb. The man is nobody. If he is a brother, *u kur*, a brother being taken to mean an uterine brother, or a cousin-german, he will be lost to the family or clan directly he marries. If he be a husband, he is looked upon merely as *u shong kha*, a begetter. In some of the Wár villages a newly married man is spoken of by the
593 bride's family as, "*u khun ki briew*," some one else's son. It is,
764 perhaps, somewhat of a paradox under the circumstances that wives should address their husbands as "*kynrad*," or lord.
611 There is, however, no gainsaying the fact that the husband, at least in theory, is a stranger in his wife's home, and it is certain that he can take no part in the rites and ceremonies of his wife's family, and that his ashes after death can find no place within the wife's family tomb, except, in certain cases, amongst
796 the Syntengs. Further, the ceremonial religion amongst Khasis,
562 especially that of the home, is in the hands of the women. It is, therefore, perhaps not to be wondered at, considering the
428 important status assigned to women by the Khasis, that women

776 Therefore nobody dares to appropriate the ob-
772 jects that have been thrown away or even to touch
773 them. Only into the house of the S'iem and into the whole royal family can no entrance be found by the thlen, and therefore some valuable things may be given to the Khasi king. This may be connected with the fact that usually on the next morning after the above ceremony nothing more is to be found of the objects that were given away. Therefore, it rarely happened in former times that anyone kept a found object from fear that it might be thlen property and he might bring the thlen devil into his house with it. But if they did take an object they found, a piece of money or such, home with them, the oracle was first asked by egg throwing whether it contained any evil, and only when this was denied and the real owner could not be found did they keep a part of it; the rest had to be used for sacrificial purposes.

The immovable property is treated the same way as the movable property. Fields which the family formerly possessed lie fallow; nobody dares to take them over or to plant anything on them.
[476] But the whole village hastens to help the former thlen owners who have lost all their property. They are given clothes and rice and helped in building a hut so that they can begin an honest life again.

c) Story of a Former Thlen Worshipper.

776
●593 How is all this known about the thlen,[1] many ask, if the owners try to hide their secret? An indirect answer is already given by the whole previous presentation. Then it also happens, for example, that men marry into the house of a woman who is a thlen owner. Certainly this is not always known beforehand, although real thlen

[1] [devil snake; see Cat 116, pp 28 ff. --Analyst]

776 owners can only conceal this for any length of
593 time with difficulty. Now when the woman gathers the members of her household and the unsuspecting man together for the thlen sacrifice, this man dashes out from fright and tells the horrible things that he has seen. He never returns to his wife by whom he was deceived by the concealment of such an important condition and he seeks another wife.

776 [229] The accounts of previous thlen owners
682 finally give further information. I will only
783 introduce one case as it was told by one of these. I am indebted for this to the kindness of the missionary in Cherrapunji, P. Corbinian Bonheim S.V.S. who has been there many years and to whom a former thlen owner related his experiences. This he translated into our language as follows:

"Formerly we were very poor people. Then one day we found a wonderfully beautiful smooth stone on the mountain when we were chopping wood, and we brought it home and preserved it. From this time on we had good luck everywhere; every undertaking succeeded, we never had losses and our fortune increased from day to day and even at gambling we never lost. Gradually we became rich people. Thus matters continued for four or five years. Then I had a strange dream. A woman appeared to me who said to me: "Look, I have given you such great wealth, now I also demand a sacrifice of you. You should sacrifice a lang thoh khlih to me, i.e., a goat with a spotted head." The next morning I told my dream to the members of the household, and they thought that she was the goddess who was demanding the sacrifice owing to her. So we sacrificed a goat. But soon after I had a dream again and the same voice as before spoke to me again: "I have demanded ka lang thoh khlih of you and you only gave me a goat. The goat, however, that I demand,

613 bakla); and as long as the expiatory sacrifice, in the form of pigs and
698 goats, determined by the elders of the family and by the sacrificial
682 priest (lyngdoh) has not been offered, the sinning member is considered excluded from the family and the family sacrifices. But even after being accepted again a certain stain still clings to him.

613 But it is also the duty of the clan mother to care for the needs of the members of her family clan with regard to food, clothing, and the like. She divides the fruits of the harvests according to the needs of the individual. She goes or sends to market to trade, to buy, or to sell. She takes care of the common purse and even the masculine members of the clan have to ask her for money when they wish to drink rice liquor or buy clothing. There the clan mother is generous
[662] rather than niggardly. This dependent relationship of the men is not considered unworthy at all or shameful. It is the matriarchal form and ancient custom. Nevertheless, the position of the men in the family clan is an esteemed one. Even the name they are called by has an important sound: Rangbah, Basan (oldest ones, advisers). On them falls often the work in the field and wood or the protection of the family; bow and arrow are handed to them as cradle gifts. In the more important family matters the clan mother consults with them. At the giving of the name, during a wedding, a funeral, or cremation the clan mother steps almost completely into the background, also during quarrels and court hearings before the chief (Doloi) or king (S'lem). She is still always influential with her advice, but the actual appearance, activity and judgments is the business of the men. The smaller,
[782] everyday sacrifices she performs in the clan hut; but she can also let these /135/ be performed by her sons. At larger sacrificial ceremonies which are offered by several family clans at the same time, by whole
[792] villages or even by one of the Khasi states, only the men are active as sacrificial priests.

613 With regard to the husbands of the clan mother and of the feminine
596 members, they are not considered members of the family clan of the women at all. They are only considered the begetters. They work and live in their own clan, participate in their sacrifices and burial places. The father has no further influence in the raising of the children, who belong entirely to the clan of the mother. But usually they have no obligation, unless the wife and children are impoverished. Even then their care comes in second place after that of members of their own
[593] clan. Nevertheless the husband is honored and is addressed by "Mr." (kynrad) by his wife. She would consider it disgraceful to approach him impertinently. Where the property of a clan has been dissolved or Christian customs introduced, the husband lives and works together with his wife and children.

[p.25]

CHAPTER III

It is evident from the discussions in the previous chapter, that the children born in a house have to take note, as they grow up, of the seniority and juniority among the sisters of the mothers, and also of the brothers of the mother. They have however very little relation with the brothers of the father, and we have to explain why the latter are classed with the father. This point will be discussed later. Here we may note that the relative lack of importance of the father's sisters has resulted in her not receiving distinction by age in the table of Kinship terms ; it is however indicated in address. Similarly the wife of the mother's brother is also not distinguished by age.

It may however be questioned why such a distinction by age is extended to the husband of the mother's sister. As noted before, a Khasi does not set up a separate house until one or two children are born. The children who are born in the house of mother's mother, are looked after like mothers, not only by the progenitress but her sisters. While there would arise no question as to who is the actual mother, it would be normal for the children to call the mother and her sisters by the same term which would thus cover the women of that generation who live in that house. Each little child would find its mother's sister addressed as "mother" by its playmate and cousin. Hence he or she would also tend to extend the term to the mother's sister from the mother. Under such circumstances, the simplest mode of distinction would be to apply the term "mother" to the actual relation, and add qualifying adjectives for the sisters of the mother. The Khasis use for this purpose, quite appropriately, terms denoting seniority and juniority for reasons previously stated. Reciprocally, a woman uses the same terms for

her children and sister's children, using an additional term for the latter, to make the distinction clear. The mother's brother's wife, and the father's sister live elsewhere, and cannot therefore share the same kinship term with the mother. The husbands of the mother's sisters are comparable to the father, as these males are all outsiders who have married the women of the house. The actual father "U Kpa" is the husband of the actual mother "Ka Kmie" and is clearly distinguished. The others are the husbands of the "Kmie San" and "Kmie Nah." Hence they are given the labels of "Kpah San" and "Kpa Nah" or "Kpa Khynnah." They derive their kinship terms denoting "father" through their wives who are called mothers by the children—not through any sexual rights on the wife's sisters. Such sexual rights, as noted before, have no existence. Hodson is not justified in ascribing this identity of kinship terms to alleged marriage rules and sexual rights which were operative in a hypothetical earlier type of Khasi society.

The mother's brother is important to the Khasi child, and has a special name, Ma, with an adjective such as Rangbah to indicate his position among his brothers. His relation with his sister's children is different from that of the mother's sister's husbands. It is more or less formal and ceremonial. A similar relative, on the father's side of the family, is the father's sister, though her position is not so important. Nevertheless, the two relatives are comparable. The mother's brother is in charge of the management of the mother's ancestral property and helps in performing important social ceremonies for the group. The father's sister is the repository of the bones of the father's family; in her is vested the preservation of the family religious traditions. Both these relatives live in houses separate from those of the nephews and nieces concerned and are, in a sense, of other households. Each of them was born in the natal house of one of the parents. They are therefore clearly distinguished from the father, the mother, the sisters of the mother and their husbands. But a common term, allowing

13:Mukherjee E-5 (1954)1956 AR7 Khasi AR7

596 extended form more often when the children of the deceased sisters of *Ka-khadduh* reside there. This extension is on the mother's side and is affiliated through the extension of mother-child relationship.

Additional members like widower brothers or widowed sisters make the Khasi family a composite one.

In a Khasi family father, mother and her brother are very important. Father who is regard[1] as *Mynder* (stranger) or *Ushong kha* (begetter), has also the position of *Kynrad* (master) of the house (set-up by him). He is the executive head and the mother is the *dejure* owner of the household.

177 178 604 503 [428] Modern conditions and spread of Christianity have greatly affected the Khasi society and changed the Khasi ways of life but have failed to alter the traditional mode of inheritance even among the Christian Khasis. Another important fact which is apparent in the Khasi families, is the change of the status of the mother's brother (*Uknii*) in his sister's house. His influence has greatly been diminished due to clash with *Ka-Khadduh* (heiress). He has almost lost his control over his sister's [562] family. This has made the women exert their status to a danger point. Consequently, some amount of maladjustment in the relationship system, moral depravity and disintegration loom large in the family horizon.

596 613 Family is the core of Khasi social organization and the closeness of familial kin with the members of the sub-clan is due more to the fact that sub-clan owes its development to the family. A *Shi-K'poh* (member of sub-clan) is a secondary relative and can easily be approached for any help.

614 The functions of the above mentioned social groupings are as follows :

Clan (*Ka-Kur*)—It regulates marriage. It being a larger non-residential kin group contact between its members is infrequent. The amount of social participation needed on certain level to intensify the relationship among its members falls far short of. But nevertheless, there existed among the members

614 614 [1] [Should read:- regarded.—Analyst]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

absence of A, D, E, K and N, U succeeds to the office if he is grown up. 613
If U is too young, a chance arises for F's husband, if F is alive, if not, for M's husband.[1] In the event that none of these males be available, finally the office is taken by F and then by M. It should be noted that the office assumed by F's husband, M's husband, F or M would have to be returned to M's son, as soon as he comes of age. These cases are considered a temporary measure to meet an emergency.

The Khasi follow a strict descent line, and neither a classificatory 611
uncle (or brother) is allowed to take over the authority of the *iing*,[2] 613
though if there is no successor to the property, a daughter may be adopted from the nearest matrilineal descent group. Instead of the adoption of a daughter, the following steps may also be taken. The property is handed over to the nearest matrilineal descent group; or if there is a son, he may inherit his father's or mother's acquired property, but ancestral property should go to a matrilineal kin. In such cases, the particular *iing* actually becomes extinct: in the former case, though the property is handed over to another *iing*, this *iing* belongs to the same matrilineal line; in the latter, the property goes eventually to the son's wife and to his children, i.e. an *iing* of an entirely different *kur*. The latter arrangement suggests that though the Khasi follow the strict descent line, so far as the acquired property is concerned, the child has primary rights over the mother's other matrilineal kin, as expressed by the son's right of inheritance in the absence of a daughter. In this way, the *iing* may become extinct by the death of the female member who has no daughter.

The Khasi consider the *iing* institution as the basic and most 613
important functional unit; it represents also the religious unit which keeps ancestral property and shares a common religious ceremony. This is indeed the key to the whole Khasi social organization.

III. Residential Unit

In this section I shall deal with the relation between the *iing* and 592
the domestic dwelling unit and examine the type of relation maintain- 593
ed between the marital family (husband, wife and children) and the 613
iing. Among the Garo, the *nok* corresponds to the actual group of individuals residing within one household. Upon this point the Khasi system is more complicated since spouses of members of the *iing* are excluded from the *iing*.

1. This would only arise in cases where the husbands of F or M live in the same household as their wives.
2. In the case of succession to the chieftainship, a classificatory sister's son is taken in the absence of a direct nephew or brother

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

years after his marriage. During this period he works in his wife's 178
field, then, if the couple gets on well, they start to live together in
an independent house (non-heiress's case) or in the wife's house 184
(heiress's case). In spite of the fact that the inhabitants are all Christians, they have retained this custom.

It is difficult to determine at what date the Khasi people have 178
changed from duolocal marriage to uxorilocal marriage. However, 591
the present dwelling unit, with its fluid relationship between husband and wife (in fact, there are many cases of category 3), suggests a situation linked with the duolocal residence pattern. The fragmentary historical information available and the present Khasi residence pattern suggest that the duolocal arrangement may be an older pattern of marriage. When I was in Kongton there was no husband who stayed at his mother's house permanently, visiting his wife at night. The head man told me that, when he married, there were many who did not stay in the wife's house. He was the first person to settle in the wife's house. In his case, he said, he felt sympathy for his wife who had no brother who could work for her. After he had settled in his wife's house, many villagers began to follow his example.[1] When the [621]
pattern of a visiting marriage was in vogue, a village must have constituted a more compact endogamous unit. If the husband's house was in another village, a visiting marriage must have been a great inconvenience. The tendency to settle in the wife's house and work for the wife's house must have brought about a wider range of marriage contracts, such as with members of nearby villages, even though in the present form of marriage, village endogamy is much preferred as it is decidedly advantageous particularly for a husband, since he can continue his life in the same familiar environment in spite of uxorilocal marriage.

The variations in the pattern of co-residential grouping, which 592
I have classified into four categories, reflect two different themes in 593
the social structure of the Khasi. On the one hand they represent
different stages in the maturity of the individual families concerned. 613
For example, a householder who starts in category 3 or 4 may end as an old man in category 1. On the other hand these variations also reflect the polar opposition between the obligations of matrilineal kinship and the obligations of parenthood; a man, in particular, has conflicting obligations towards the *iing* of his sister and the *iing* of

1. However, all the information which I collected in the upland Khas [184]
Hills indicates that the uxorilocal residence pattern has been practised for a long time. According to stories often told by the Kongton people, they migrated from the Jaintia Hills. If these accounts are to be taken as a reflection of the real history of their migration, it would seem that the Kongton people may have kept up the Jaintia custom including the duolocal residence pattern up to recent times, while the majority of the Khasi practised uxorilocal marriage.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

his wife. Paternal rights are not well recognized among the Khasi. The religious elements in the *iing* institution lay stress only on matrilineal solidarity. These elements tend therefore to orient each individual of the domestic unit to his or her own matrilineal kin group, the *iing*. This results in unstable relations between members of each elementary family, in other words, the marriage relation is one of the weakest.

This is the crucial point in matrilineal societies, and has been much discussed by anthropologists. Richards says,

> "In this balance of privileges and duties between the patrikin and the matrikin the crucial point is obviously the husband's right to determine the residence of the bride. If she and her children live in the same homestead or village as his kinsmen, his domestic authority is likely to be greater than where they remain with the wife's relative" (Richards, 1950, p. 208).

This statement is quite acceptable for those matrilineal systems which provide possibility for a man to take his wife from her matrikin to his house or village where the husband's kin are found, as in cases of the matrilineal Central Bantus, the Ashanti, the Trobriands and the Nayar in North Malabar. However, among the Khasi, there is no such custom of removing a wife from her kin to that of her husband. Since most marriages take place inside a village, there are only two different residential arrangements: one is to take the husband to the wife's house, where he lives with his wife's parents and other matrikin; the second is for the newly married couple to establish an independent house. Among Khasi men and women the usual practice is to leave the parents' house at marriage, except in the case of the heiress (the youngest daughter). In this respect the Khasi differ again from the Nayar and the Minangkabau who form a sibling family on the basis of duolocal residence,[1] and from the Hopi, the Zuni and the Trukese who form a residential group of an extended family, based on matrilineal descent including in-marrying husbands of married females. Khasi sisters do not form a residential group after their marriage; sisters' houses are scattered over the whole village residential area, mixing with households of other descent groups (see Fig. 10 with List 8).

Then, what is the factor that makes the Khasi have two different types of residence i.e. uxorilocal and neolocal[2] within a matrilineal

1. Only the case of some traditional Jaintias (category 2) would appear to show groupings similar to those of the Nayar, however, I did not work among them, nor are there anthropological reports available for them, particularly in this respect.

2. I use 'neolocal' in terms of house-building, since they usually build a house for newly married couple in the same village where both wife's and husband's parents live—village endogamy.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

society? Among the matrilineal Central Bantus, Richards says that 591
the determining factor in residence at marriage is the marriage payment or the type of goods and services which the bridegroom gives (Richards, 1950, p. 249). However, the Khasi have no such custom in the marriage contract, it is therefore out of the question to explain the two types of residence in this way. In the case of the Khasi, the determining factor is the type of marriage with relation to the rule of inheritance and ownership of property, which is clearly related to the structure of the *iing*. Khasi marriages can be divided into two categories i.e., marriage with an heiress and with a non-heiress. Marriages with an heiress must be uxorilocal. This accounts for category 1 or 3 of the household pattern. On the other hand, marriages with a non-heiress become neolocal and correspond to category 4 of the household unit.

IV. Marriage with the Heiress

A man married to an heiress, usually lives with his wife's parents and her unmarried or divorced brothers and sisters. For a man, life after marriage under such circumstances require great adjustment and endurance. The husband's status is especially weak when a male member of the wife's kin lives in the same household. The management of property and all economic activities are entirely controlled by the authority (wife's brother or maternal uncle) of the *iing*. The husband works in the wife's field under constant supervision from this authority. Both economic activities and domestic affairs are always under the management of this authority. The children have more attachment to, and are more obedient to, the maternal uncle than to the father. The tie between the uncle and the nephew is so strong that the father is rather like an additional member of the household. He is the last person to be introduced to visitors. [574]

182
428
591
592
593
602
604
613

This family system is clearly reflected in the daily behaviour. When we visited the Khasi household of a youngest daughter, if a man (obviously the husband) came first to greet us, he always said "please wait, my wife (or mother-in-law) is coming." And it was the wife who entertained us, offering tea or pan and discussing matters with us, while her husband remained silent in the corner of the room, or in the next room. If her uncle or brother was there, *he* would be the person who talked to us, while his niece or sister served us. In such a case, we were seldom introduced to the husband. When I was working at Shella, I happened to stay in such a family. I had hardly any opportunity to talk to the husband during the two weeks of my stay. He left the house very early in the morning and came back late in the evening from the fields. While he was at home, he was

592 always somewhat outside the family conversation which was centred
593 on the maternal uncle and his sisters, nephews and nieces, by whom
604 I was well taken care of. This is somewhat similar to the situation amongst the Cewa and the Yao of the Central Bantus, which have what Richard calls 'the detachable husband' (Richards, 1950, pp. 233-35, 248), though the parallel is not by any means exact.

428 There is, therefore, inevitably an element of tension in the relations
581 between the wife's maternal uncle (including parents-in-law) and the
586 husband (son-in-law) and this tension makes the latter's life extremely uncomfortable. This awkward position is well shown in the divorce
[604] rate. At Kongton (see List 9), out of 61 couples (house-owners and
[606] their spouses), the number of persons who had experience of divorce
[592] was 33 (female 15, male 18) and those married more than twice
[593] numbered 19 (female 7, male 12). Out of 61 couples, there were only 31 in which neither husband nor wife had been divorced. In my census of Jatinga village, 70 per cent of all divorce cases were marriages to heiresses. In general, the period when divorce occurs more frequently is before a couple get children and after the wife has passed the child-bearing age. A marriage breaks up either through the action of the wife or of the husband, but generally through that of the wife. However, the state of separation which I presently describe is brought about by the husband, though later it results in a divorce from the wife. Divorce does not mean a great catastrophe for a Khasi wife, especially if she is an heiress and her husband's economic
[587] contribution is not significant. Moreover, in this society remarriage is as easy for a widow or divorcée, as it is to divorce. In the villages of Sohkynduh and Kongton, the couple who wants to divorce has only to throw a few Annas together in the presence of some witness, usually an elderly man.

581 In addition to divorce, there are many actual separations of husband
and wife, of short or long duration, when the husband runs away from
593 his wife's house to his sister's. Though it does not always end in divorce, considerable number of husbands have a strong tendency to spend most of their time at their sister's house. Khasi women often told me, "I don't know why he does not come back to my place." I have often found the husband staying at his sister's house only a few houses away from his wife's, without any particular reason. They are obliged to see each other every day whether divorced or separated. This kind of ambiguity in the marriage relation seems to have an important correlation with the Khasi social structure, combined with the village endogamy. The man and and wife have grown up together from their childhood in the same village and known each other very well. Hence their psychology cannot clearly distinguish the marriage form as a newly-established independent social relation-

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

ship. They still live in the same familiar atmosphere as before their 581
marriage. The implications of this ambiguity in the married state are 593
considerable. Particularly the husband's uncomfortable situation, when the wife is heiress, encourages him to take marriage less seriously.

A husband who undergoes hardship in his wife's house, finds 581
himself as the authority in his sister's house; if he is not the authority, 591
he can find at least a respected position as uncle or brother. In the 592
case of a man of authority in the *iing*, the tendency for him to regard 593
his *iing* as more important than his married life is proportionately 602
stronger, as I will discuss later. Hence the most unstable and unsuccessful marriages are those between the heiress and the man of 604
authority. This is one of the reasons we often find among the Khasi: 613
a brother or an uncle, who is already married, acting nevertheless as 428
the head to a family *(iing)* and as a member of its domestic group. This means that he is in a state of temporary separation or divorced. [171]
Among the Ashanti, a man and his wife's brother are never found as members of a common household (Fortes, 1950, p. 262), but among the Khasi, on the contrary, a man and his wife's brother are often found as members of a common household. In such cases, however, the brother has no wife, or never brings his wife to his *iing*. Therefore, a man and his wife and his sister never reside together. As far as the residence of women is concerned, the Khasi keep to the strict descent rule; two women who belong to different descent groups never live together. This point differentiates the Khasi residence pattern, in which social structure is involved, from that not only of the Ashanti but also of the Yao where the head of a descent group can bring his wife to his sister's household, though, among other members, uxorilocal marriage is the rule. These differential aspects of matrilineal systems will be discussed from a more theoretical point of view later.

In addition, should a Khasi man even succeed in spending his life 602
with his wife's kinsmen, as soon as the wife dies, he will usually 613
return to his *iing*, that is, to his sister's house, where he is received warmly and where he often acts as the *de facto* authorithy, as in the similar situation of divorce and separation. Thus the strong matrilineal structural principle tends to orient a man towards his own descent group, the *iing*.

The man's attachment to his *iing* is very great throughout his 171
life. In this regard the Khasi differs from the matrilineal Negri 592
Sembilan Malay. Among the latter, returning to the matrilineal kin 602
is regarded by the man as an imposition rather than as the enjoyment 613
of a legitimate privilege (see Swift, 1958, p. 157).[1] This difference 428

1. He presents this fact as one of the reasons of the durability of marriage among the Negri Sembilan. Indeed, on this precise point they differ from the Khasi where marriage is rather unstable. [581]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

whom he can marry, he has to endure this miserable lonely life, while often in the same village his former wife is living in a well-built house with her children and her matrilineal relatives as before. Households of 3, 13 and 30 of Sohkynduh in List 6, and 23, 29, 38 and 56 of Kongton in List 9 are instances of such cases. It is really a pitiful picture to see such a man, aged and poor, living all alone. 586 613 736 428

V. Marriage with the Non-heiress

Outsiders who come to the Khasi Hills are often impressed by the Khasi husband's miserable status and express surprise at the high divorce rate. This is mostly due to exaggeration based on the marriage with the heiress. However, where a man marries a non-heiress, there are many successful marriages with paternal authority. In most of these cases a man's status as a husband and as a father is stable. First of all, the domestic residential unit is an elementary family. From the onset of the marriage the husband's labour is of great importance to his family, since a non-heiress usually has no economic background, i.e., no dowry or inherited property (see p. 105). The economic circumstances allow a man to be the *de facto* head even though whatever he earns belongs, as a rule, to his wife. A man who succeeds at the beginning of his married life is respected and honoured as father in his family for the rest of his life. By this type of marriage, the man's status is firmly established. It is therefore a more secure form of marriage than a match with an heiress. 184 428 593

In such a marriage the children love and obey their father. The management of his acquired property will be taken over by his son and the property will be handed over to his daughter. Thus the paternal authority is as well established in this form of domestic family, as in a patrilineal family. However, the great difference from a patrilineal case is that the husband/father status is not permanent as the authority of the family. Theoretically he exercises it in the absence of a male adult member of his wife's *iing* (actually founded by his contribution), in other words, till his son is grown up (see p. 12). In the next generation this will form an established *iing* in which the husband of his youngest daughter will suffer again. [613]

The household of this kind of marriage with a non-heiress actually enjoys a considerable degree of independence from the descent groups of both wife and husband. If a man who has established a matrimonial life independent of his wife's natal *iing*, is not the authority of his natal *iing*, his relation with the latter usually becomes weaker. Economic and residential factors make it possible for the men to make the considerable shift from his *iing* to his wife's *iing*, and though 592 593 613

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 he clearly maintains the label of his descent group, he is at least
593 divorced from them economically. If a father's activities were such
613 as to permit the accumulation of wealth to be handed over to the next generation, he is always remembered with great respect and admiration by his successors and by the descendants of his wife's matrilineal line. In such a case he is looked upon as a member of his wife's descent group rather than of his mother's descent group. The best examples of this are the cases of men belonging to the first generation of Jatinga villagers, especially that of the founder of
[166] Jatinga. These immigrants to Jatinga mostly accompanied their wives, who were not heiresses (as I mentioned previously, the unit of Khasi immigrants is mostly found in this kind of a couple); and most of them established successful matrimonial life with paternal authority, having been freed from the gravity of both matri-kin of wife as well as of husband.

Not necessarily confined to such cases of immigrants, even in an ordinary situation, if husband is ready to devote himself for his wife and children, the matrimonial life mostly turns happier and well established one. For under the Khasi matrilineal system, a wife, if she is not the heiress, is normally oriented to develop surprisingly high degree of independence from her descent group, i.e. her natal *iing*, unlike women of other matrilineal societies. This fact is closely related with the unique structure of the *iing*, as already discussed.

As a woman (non-heiress) tends to keep a certain distance to her natal *iing*, her brother accordingly decreases his concern to her new household. The pressure of the authority (wife's maternal uncle or brother) of wife's natal *iing*, on such a household becomes less marked. The wife's brothers are members of her natal *iing*, not of her new established *iing*, and therefore none of them can act as an authority over her new *iing*, though they may exercise certain pressure on the sister's husband, since the sister who established the new *iing* still keeps her membership in her natal *iing*. In fact a husband actually feels pressure from his wife's brothers; the occasional visits of the authority of her natal *iing* exercise a psychological check on his whole control over her and his children. Should any serious mischance occur in the marriage, the wife will run to her brother for consultation. Furthermore, as member of her natal *iing*, he has the right to demand the property acquired by him if his wife has no successor, since it automatically belongs to his wife unless he acquired it without cohabitation with her, or through the capital of his *iing*. However, the process of segmentation in the *iing* leads the wife to greater attachment to her husband, particularly when his economic contribution is important, and as a consequence weakens her ties with her natal *iing*.

613 The limited rights of the brother over his sister's (non-heiress)

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

182 586 613 736 Even after divorce or husband's death, the Khasi woman stays on in her household. Indeed many divorced or widowed poor wives, whose children are still small, try their best to live and bring up their children by themselves without asking their brothers' help. Of course a mother and her small children may go back to live in her natal *iing*. Such cases are found particularly when the woman's *iing* is rich. However, during my field work, I found no sense of psychological inferiority in Khasi women, widows or divorcées, such as we usually find in other societies. The personality of the individual seems to reflect the social structure.

182 184 586 593 613 Given such strong residential independence on the part of the non-heiress, economically divorced from her descent group, and oriented towards sociological separation from it, the husband's economic and social contribution is handsomely rewarded by the establishment of a stable, happier, matrimonial life. In fact, as already mentioned, the divorce rate among such couples is very low contrasted with the high rate among marriages with heiresses. More accurately, I should say that divorce is more likely to occur among the latter owing to the conflict of loyalties towards spouse and *iing*. Therefore, when each partner has less loyalty towards his or her natal *iing*, the divorce cases become correspondingly fewer. Thus, among the Khasi, successful marriages are frequently found where there is branching off from an *iing*. And a new *iing* is always established by a husband's contribution.

182 184 581 Khasi men, who are well aware of this fact, prefer to marry a non-heiress, since they will then form an independent household and remain immune to pressure from their wife's kin. However, they say a poor or lazy man prefers marriage with an heiress. As Richards said of the matrilineal Central Bantus, the residence on marriage seems to be a most important index of the husband's status, though the determining factors of the residence of the Khasi differ from those of the Bantus (see p. 124).

182 184 587 593 613 736 In the case of marriage with an heiress, when the wife dies, the husband usually returns to his *iing* (the youngest sister's house). But in marriage with a non-heiress the husband often remains with his children, if his children are not too small and he is not planning to marry any woman other than his late wife's younger sister. If he marries his wife's younger sister, he has the right to stay on. This kind of sororal marriage cannot take place in the case of a man married to an heiress, since a Khasi man is not allowed to marry the late wife's elder sister. This form of sororate is found among the Khasi, but the levirate is unknown, such as can be seen among the Ashanti and the Ila, where a man takes his late brother's wife. Among the Khasi, even if a widow happened to marry her late husband's

182 587

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

brother (actually not likely to happen), the levirate has no sociological implication in the social structure, which is specifically related to the residence rule. The levirate seems to have a significant function only when a marriage is virilocal—when the husband has full rights over his residence and property. This is also another aspect where the Khasi structure shows a marked difference from that of the Ashanti and the Ila, etc. 182 587

VI. Marriage of the Man of Authority of an *Iing*

Among these successful marital families, there are also shadows of a matrilineal order. These affect especially those men who are in the position of authority in an *iing*. Such a man, though he has an independent household with his wife and children, often visits his youngest sister's (or niece's) house, *iing (ka iing sen)*, and sometimes stays there. Such a man's attachment to his *iing* is not only social or psychological, but also often economic. The man, as authority of his natal *iing*, usually has economic control over the management, particularly so, if his *iing* has considerable property or active trading business. As husband/father in his family he works for his wife and children, but often takes into consideration as well the interests of his *iing*. I found such cases especially among richer villagers in Shella and Jatinga, where the main economic activities were based on trading. 592 593 602 613 [182]

Among the Khasi, it is quite a traditional rule of the division of labour that women engage in trading activities at markets whether on a large or small scale. Husbands may carry goods from field to market, but male members are kept away from the actual scene of the selling and buying. However, these activities on the part of the women are controlled and accounted for by their uncle or brother, or even son (or, if no male member is available, by the husband), though in many cases they form separate domestic families. The man's control over the trade appears more marked when the scale of business is large. [443] [462]

A man of Jatinga, who worked in a shop in Haflong, spent his salary in keeping his wife and children, but at the same time he kept the accounts of his sister who was a professional merchant. Thus, the economy of the *iing* and that of the co-residential group are crossed by the dual role of the man. Hence, among the Khasi, residential autonomy is not always an indication of economic autonomy. However, it should be clearly understood that a man's acquired property goes to his co-residential group, not to his *iing*. [421]

A man of authority is attached to his *iing* by the stronger ties of religious, social and economic (management) duties as well as by

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 sentiment, in spite of his forming an independent domestic unit. Such a
• 593 man with two households, the family of orientation and of procreation,
says "one leg is in my sister's house and the other is in my wife's,"
602 and he feels more at home in his sister's. In villages, whenever a
613 Khasi man in such a position invited me, I was always taken to his
[123] sister's (or niece's) house, his *iing*, not to his wife's. There I was warmly welcomed with highest respect by the women of the household as the guest of their uncle (or of their brother), the head of the *iing*. Khasi men whom outsiders often regard as hopeless in their social position, thus enjoy the highest status in their *iing*.

One Khasi gentleman who occupies a fairly high post in the Government, at Haflong, leaving his wife (non-heiress) and children at Shillong, to my question "when you go to Shillong into which house do you first step," immediately replied, "As soon as I get back to Shillong, I take the way to my sister's home and there take the evening meal with them, enjoying their talk. Then I go to my wife's house where my loving children are waiting." This shows a typical Khasi man's psychology in relation to a family of orientation and of procreation. His first concern on coming back to his homeland is whether his sister and her children are well, since he is the man of authority in that *iing*. He feels much more relaxed in his sister's house where he is held in higher regard and more cared for.

I came across many similar cases. In Jatinga and Shella, such men on returning from their work, often have their evening meal with their sisters though their wives are waiting for them. Furthermore, if they choose to do so, they sleep at their sister's house without even going back to their wife's house. This results in an unstable married life, where a wife has to face a psychological handicap caused by the occasional absence of the husband, in spite of her advantageous position in a matrilineal and uxorilocal system. Many wives worry every day over whether or not their husbands will come to their house at night. And often this concern changes into sadness and loneliness when the husband does not return for several days on end. The wife knows her husband is at his sister's house in the same village. But she has no right to fetch her husband home. As in Western social dancing, the women have to wait till their partners come. During my field work I often came across these lonely women, just waiting for their husbands, each knowing he was only a few houses
[123] away. Though these Khasi women never show their feelings of loneliness in the presence of others, I, being a female anthropologist, was often told of the sadness of their married life. The situation of these women can be more easily understood if we remember the process of the segmentation of the *iing*, which separates each married woman from her descent group, her natal *iing*.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

Thus, the marriage of a non-heiress and a man of authority also produces an unstable position for the husband in spite of his having an independent household. Therefore, the possibility of a really stable marriage is even more limited; it will occur only in the match of a non-heiress and a non-authority of the *iing*. But even these marriages cannot be free from the influence of a matrilineal social structure: the man of authority of the wife's *iing* may visit these couples now and then, curb the husband's power and remind both partners of the orientation towards the matri-kin, the *iing*, though this pressure is insignificant in comparison with that experienced by the heiress's family. Likewise, a husband now and then visits his youngest sister's house, *ka iing sen*. These constant matrilineal contacts offer husbands chances of escaping from even the slightest matrimonial tension. Whenever a Khasi man feels uneasiness, he will return to his sister's house rather than face a difficult situation with his wife. This tendency is maximised especially on the occasion of religious ceremonies, when all individuals are grouped around each *iing*.

It is apparent that the rules of the *iing* as the underlying structural pattern, function throughout the various categories of domestic unit of the Khasi community as the most important intrinsic force.

VII. Polygyny

After this long attempt at the structural analysis of marriages, I think one can theoretically predict what is the situation of polygyny among the Khasi. The theoretical framework elaborated through preceding discussions can also be tested by the empirical data in terms of polygyny.

Nowadays, the Khasi feel so strongly against polygyny that they have no knowledge even that they ever practised it. Many Khasi, in more sophisticated areas, did not believe my findings on polygyny in Sohkynduh and Kongton. I think this is due to the rapid Christianization of the Hills during the last hundred years. My interpreter, though he was not Christian, said to me in the village, "it is most regrettable to bring you to a village where we find polygyny." However, one of the ministers of the Cherra State to which the two villages belong, told me that there was no particular opposition to polygyny, though recent Christian influence gave people the idea that it was a shameful custom, and he mentioned the case of a polygynist in his area, a man who had recently died, who had had ten wives. In Jatinga whose inhabitants are all Christian, and in Shella where there has been much contact with, and influence by, Hindus, there were

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

which I described previously, where a man brings his secondary wives to his first wife's house in which he is acting as the head. Furthermore, sororal polygyny is prohibited, while it was prefered among the Garo in terms of wives taken from the same *mahari*, though mostly not real sisters. The strong jealousy, which I observed, among the Khasi wives of a polygynist, would appear to make such polygynous marriages with closely related women practically impossible. As shown in List 6 & 9 every single one of the wives of each polygynist belongs to different *kur*, and the two secondary wives of the man of Kongton came from neighbouring villages. 591 595 [171]

These aspects of Khasi polygyny are related fundamentally to the underlying Khasi social structure. It should be remembered that every married woman has her independent household, *iing*, and that two women of different descent groups never reside together (see p. 127). The picture is one of every married woman holding a key-point in the whole network of the social system, and men fit into this network with much flexibility. The strong stability of women and the fluid nature of men in terms of residence naturally produces this form of polygyny. This analogy is also true of lovers' relations and illegal marriages. Though polygyny is a rapidly decreasing institution all over the Khasi Hills, cases of lovers' relations and illegal marriages are found to be very numerous among the Khasi, as compared with neighbouring tribes and peoples in Assam. 182 591 595 613 837 [171]

Throughout my discussions of various forms of Khasi marriage, I found men to be more or less in the position wittily described by one of them as "having one leg in my sister's house, the other in my wife's," except in cases of the husband/father who succeds in establishing paternal authority, as in marriages with a non-heiress. Even in the latter a man might have a period of uncertainty until his children were born and until the economic basis for his matrimonial life was firmly established. For the rest, Khasi men would be in the position of either becoming the authority of an *iing*, or swinging between their sister and their wife, which may produce more opportunities for lovers' relations. One of a man's legs is certainly always found in his sister's house, the other may rest in his wife's, but it may also rest in another woman's house. The wife being rather accustomed to his occasional absence due to his visits to his sister's house, another kind of absence does not mark any great change from the usual situation, at least not physically. Such situations occur particularly in the earlier stage of the marriage, as a sort of continuation of premarital affairs, which are quite freely practised: it is a usual custom before marriage for young men to sleep at a girl's house whom they like though they say sexual intercourse usually does not take place in such cases. This I observed in Sohkynduh and Kongton. 182 591 593 613 836 837

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

182 Because of the firm right of women over the residence, Khasi poly-
595 gyny can never be a clearly distinguishable institution, and has no operational advantage in the social and economic fields; the situation is very similar with lovers' relations and illegal marriages. By polygyny the man achieves no additional economic advantage, nor does he increase his social status or prestige; rather the reverse, for I observed that the polygynyst was regarded as a somewhat ludicrous or tragic figure. As for the woman, she is placed slightly at a disadvantage since the husband's economic activities are not concentrated on her household. However, even many legally-married wives are separated or divorced, so that such disadvantages are not only experienced by the wives of polygynists. The social disadvantage of being secondary wife is not serious, firstly, because wives, whether first or secondary, have social and economic independence—they do not belong to the husband as in the case of patrilineal systems. Secondly, the significance attached to the legal marriage institution is not so great, so that the handicap of being the secondary wife is not severe. What is most important, furthermore, is that her slightly inferior status does in no ways affect the next generation. Indeed such children, including
[848] those of premarital or illegal relations, suffer no serious social dis-
[851] advantage, though they are nominally distinguishable from legitimate children. From this it is clear that the effectiveness of legitimate marriage, and paternal recognition are rather limited among the Khasi.

Thus, Khasi polygyny differs greatly from the polygyny of other societies in terms of its operation and of its form. It also differs in the incentive to its practice. Among the Garo and many other societies, the practice of polygyny usually depends on a man's economic capability, but among the Khasi, it appears rather to depend on his
182 whim. Khasi husbands are notorious for their heavy drinking and
593 neglect of wife and children. Some of them told me that their earnings, their children and everything they acquired go to their wife or sister,
733 leaving them with nothing; therefore they should at least have freedom to enjoy their life. This freedom seemed to mean women and drink. I am not sure how far this explanation is true, but it seems to justify their behaviour to a certain extent. I do not mean that this is the general characteristic of the Khasi husbands, but some such tendency is to be observed. Actually I often heard wives complain of their husbands' drinking and running after women, and was asked "Are your Japanese husbands also like that?", "What is the good of having a husband!" then comes divorce . . .

182 On the contrary, women placed at an advantage by residence
562 and matrilineal inheritance, are required always to be on their best behaviour. There are very strict rules governing the behaviour of
593 Khasi women. They are supposed not to drink, smoke, or play with

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

any man other than their husband. Women before marriage enjoy a considerable freedom in love affairs, but once married these are no longer tolerated. Women should be faithful wives. They should be so in order to keep their husbands who have a strong tendency to leave their wives. The husband of a woman who has an affair with another man, will never come back to her. There is no attraction to draw the husband, who has home at his sister's, to his wife's house unless she is good and charming. Such Gurdon's remarks as "There is no evidence to show that polyandry ever existed among the Khasis. Unlike the Tibetans, the Khasi women seem to have contented themselves always with one husband, at any rate with one at a time" (Gurdon, 1914, p. 77), is utterly nonsense: a Khasi woman is placed in a situation which is not easy to monopolize even one husband. Moreover, the Khasi social organization in general does not accord to the practice of polyandry.

Garo AR5

Within such a structural framework it is quite understandable that the predominance of virilocal arrangements, coupled with male authority as husband/father, are found. All observers of these societies have noted this feature. Among the plateau Tonga and the Bemba particularly, male authority is outstanding. 000

"Men are free to move and to form their own homesteads because they acquire rights over their wives which permit them to remove these women from the protection of their kin . . . As head of the household, the husband occupies a position comparable in many respects to that which falls to men in patrilineal societies" (Colson, 1958, p. 61).

"With the marriage the husband obtains—but only for the probationary period—rights over his wife's labour, the right to control her movements, and rights to her sexually. He is the father of any children born to her, whether or not he begets them . . ." (*ibid.*, p. 101).

"So long as the household contains a married couple, it is theoretically under the authority of the husband. The wife and her children form the house, the *inganda*, but the husband is known as the *singanda*, 'the owner of the house' . . ." (*ibid.*, p. 105).

"Once the young man is admitted to the family he is free to move his wife and children to his own village should he desire to do so" (Richards, *ibid.*, p. 225).

"This is a male dominant society and, even though descent is reckoned through the mother, the wife is very much under the control of her husband even while he is an outsider in his wife's village" (*ibid.*, p. 225).

The husband/father's authority was also observed among other matrilineal systems under certain conditions, as already fully discussed in the chapters on the Garo and the Khasi, and more predominantly among societies of the Ashanti type where the residential pattern was viri-avunculocal. However, the ambilateral structure on the level of the household composition may give more opportunity to create a husband/father authority of a more stable kind, unhampered by matrilineal force. K 9 171 182 593 • 611

Furthermore, individuals are almost free from the descent principle in establishing their residence. Colson states in her account on the Tonga that a man has complete freedom to choose his residence, and residents in a single neighbourhood need not have kinship ties with one another. In the ordinary round of daily life, membership within a neighbourhood may be of more significance than membership within a matrilineal group (Colson, 1958, pp. 27-28). Oliver describes a similar situation: 000

"The out-marrying women and their children acquire provisional rights in tracts where they reside, and ultimately acquire full title to such lands" (Oliver, 1955, p. 116).

It is clear, in these societies, that there are two sets of groups on different levels: a matrilineal group membership of which is acquired

15: Makane 2-5 (1955-1956) 1967 AR7 Khasi AR7

621 descent grouping are often different. This is a very similar pattern to the
[184] mobility which I discussed in Sohkynduh and Kongton (see p. 112).

One of the outstanding features in this community is the strong paternal
178 authority, established especially in the first generation, because the father's (husband's) contribution was very important in such circumstances: their
• 593 domestic units were completely independent from the *iing* either of husband
61 or wife. Some of them came with their wives, and many younger ones and their sons brought their wives from their homeland afterwards, thus practising
621 virilocal marriage.

They have an interesting social usage which reflects the importance of the husband of the first generation. This is the addition of the name of the husband of the first generation to the matrilineal clan name in order to differentiate each particular descent group established at Jatinga within the same clan. For instance, Rupsi-Tah, Rupsi-Loh, Rupsi-Khla and Rupsi-Lati are found in the Rupsi clan. Rupsi-Tah is one of the lines of the first immigrants to Jatinga, which I have mentioned as Rupsi: Tah was taken from Pryntah, the husband of Sintu (Rupsi) (see p. 171). Thus the present inhabitants of Jatinga are very conscious of their father or grandfather, though they strictly follow the matrilineal descent rule. From such a usage of naming a clan, the Indian officer, who gave me some information about Jatinga before I went there, made the mistaken deduction that they had changed from matrilineal to patrilineal, assuming this to have come about as a result of the influence of patrilineal tribes around Jatinga. But this is simply due to the fact, firstly, that they hold in high regard the man of the first generation, because of his great contribution; secondly, that they distinguish themselves from members of the same clan according to the descent group established at each immigration; in other words, it indicates each *iing* grouping in the village.

178 The fundamental Khasi social organization based on the matrilineal system
184 did not change at all. I could observe in Jatinga exactly the same principle in action as I had found in Sohkynduh and Kongton. The village endogamy
582 has also been well established in the present generation: there are about 20 different clans which can intermarry, and taking a spouse from an outside com-
61 munity has become very rare nowadays. Marriage patterns in relation to the *iing* structure and all its related aspects are surprisingly similar to that of the
621 communities in the Khasi Hills. The solidarity of the *iing* is even greater in Jatinga, particularly among the rich, because of the greater accumulation of wealth and greater economic activity, which also increases the authority of the *iing* as manager of considerable property—this was also the case with the Shella people. Jatinga demonstrates that in spite of colonization and of a significant change in economic activities, Khasi social organization has maintained itself intact. This situation is in contrast with the considerable social changes observed among the Garo community in colonial areas like Rinsibara and Joshipara.

621 ***Intermarriage.***

178 From the earliest period of the establishment of Jatinga up to the present,
582 some changing aspects of marriage patterns relating to intermarriages are to be observed.

563 As I stated before, in the earlier period, the people used to bring their spouses from their homeland, but they also married neighbouring tribal peoples, namely,
563 the Zemi-Naga, the Kuki and the Cacharee of villages close to Jatinga, and also the Lushai, the Bengalee, the Moslem and the Anglo-Indian who lived
621 in Haflong, the biggest political and commercial centre in the Hills, situated

17: Banerjee E-5 (1955) 1962 AR7 Khasi AR7
Smith

Then followed the dance of the girls (*Ki shad Lyngkot*) who were also wearing dress as described above. They kept their eyes down, keeping their arms on their sides taking such a short steps with the music, that the movement of the feet were hardly perceptible. The boys were also in their dancing dress as worn by *nongshad* and danced with fly-brush round the girls making their steps with the beatings of the drums. The music started from the morning would be stopped only after completion of the dance which prolonged till evening. These functions served as a good source of amusement to the people, enabling them to have a good diversion from their monotonous life with an opportunity to meet their friends and relations who assembled there from different parts of the hill.

535
(534)

DISCUSSION

From the fore-going description, it is evident that the Khasi live in a democratic set up in which the secular duties are entrusted to the *Siem*. A different rule is followed in the case of religious festivals. Every Khasi family entrusts the sacredotal work of the house to the youngest daughter. The *Siem's* sister (Siem Sod) being the nearest member of his mother's clan, is made responsible for the observance of these ceremonies which concerns the welfare of the subjects. The people attend the festival to seek blessings of their supreme deity U Shillong and their presence in the *Siem's* residence indicates their loyalty to him. The rituals of the festival, instead of being performed by her (High Priestess), were conducted by the Chief Priest (Soh Sim) for which he was allotted a very important position in the celebration. The musicians were given similar status owing to the belief in the sanctities of their music. It ought to be played in proper tune otherwise the displeasure of the deity would fall on them on finding any slight departure in this respect. For this reason, the music is considered as important as the rituals and the role of musicians were consequently given due recognition at every stage of the festival. The traditions of departing one person of Nongrong clan to sacrifice the goat at the top of the hill was followed on account of their ancestors having carried out in olden times the profession of *sile-bamang* (body guard) to the *Siem*. Another person of Khartohmen clan was also asked to carry the head of the sacrificial animal from the hill to the residence of the *Siem* after the worship, as his predecessors were such in ancient times during the period of their servitude in the State. Such incidents were found expressed in a symbolic way through their ceremonies.

172

782

The most important concern of the people was to maintain their social of living together with their property and other means of subsistence. They worshipped him so that he might prevent the evil spirits from doing any harm and may in addition grant them bumper crops. To be recipient of such a favour, they supplied their god U Shillong with gifts and sacrifices. It is not sure whether he is considered as one of their gotland ancestors but his important position in the Khasi pantheon entitled him to have some priority in their worship. The offering of *ed-ewek* together with a yellow goat, moreover, revealed his amiable and benevolent nature as the malignant ones get representation invariably with black colours. U Shillong was invoked simultaneously with other dead ancestors, with the hope, that all the deities would pool their supernatural strength in fighting the evil spirits before the latter were able to cause any harm to their crops or to pollute in any way the fertility of their fields.

Smit

could not be in a position to divert their attention to the problems of large enterprises and other measures in their life. This is expressed through rituals which are maintained through tradition and transmitted from generation to generation. A proper performance of the ritual ensures prosperity.

The maternal uncle occupies a very important position in the social life of the Khasi community. He acts as a manager of the family and his opinion is always sought for in any matter of social implications. He is thus honoured and respected by all the members of the house. In spite of the matriarchal set up of their society, the men are given honourable positions in the affairs of the family. Their role has been given due recognition in their various customs and rites. The uncle (mother's brother) as also husbands in some exceptional cases, are always remembered by the living members of the house for their wisdom and sagacity. They are thus invited and are prayed by them to bestow all possible help to tide over their period of crisis. The Khasi pantheon to whom the people in general pay due reverence, are considered to have led similar life as prevalent in their present society. Thus the various rites and ceremonies that are observed, expressing clearly the duties, nature and obligations for these deities, are simply a reflection of the Khasi way of life. The general pattern of social structure has been found to be projected unconsciously through their religious worship and these celebrations are of course of great value to the local inhabitants as it re-affirms certain cultural features as characteristic of the tribe.

strip of fine silk for the loins, a part of which hangs gracefully as low as the calves in front. No notice is here taken of what has undoubtedly been added and borrowed from their more civilised neighbours in the plains. 291

MARRIAGE.—The marriageable age for females is from 15 to 18; for males, from 18 to 24. Matrimonial alliances are contracted either through the parents or the living representatives of the families to which the parties belong. The mode of procedure is still very primitive and unceremonious. The bridegroom, escorted by a number of friends and relatives, goes to the house of the bride, where all are feasted and lodged for the night; on the morrow he leads the bride, accompanied by a number of her relatives, to his own house, and entertains the company with dishes of boiled rice and fresh pork. After remaining three a day or two, the newly-married couple return together to the house of the wife, which becomes their future home. Marriage is dissoluble by regular divorce, for any sufficient cause, and often without any assignable reason except mutual dislike or want of issue, the latter being the most common case of all. Marriage with the Khásiás is simply a conventional arrangement, with nothing further for its object than the procreation of children; failing that, it is no longer looked upon as a contract permanently binding. Divorce is effected in the presence of eye-witnesses—the parents, or the heads of clans. Five cowries (*kawrie*) are produced by the parties and exchanged, then cast away by mutual consent, and the ceremony is over. Parties once divorced can never again contract marriage with each other, but they are at liberty to marry into other families. Polygamy, strictly so called, is not sanctioned by Khásiá custom. Adultery is looked upon as a serious crime. If the five cowries have not been cast away by mutual consent, both husband and wife are held to be subject to the "matrimonial demon;" and even when either dies in wedlock, the survivor is not at liberty to contract a fresh alliance until he or she pays the family a sum of money as the means of removing the surviving party from subjection to the "matrimonial demon." The husband is a stranger, so to speak, in the family he has entered, and perpetuates the race of others, not his own. The children in all questions of lineage and personal rights follow the mother. There are always two incomes in the same family—that of the husband, and that of the wife. Whatever the husband may have earned or acquired in

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

593 wedlock goes to the wife and becomes her property; but all other
428 property is inalienable, and reverts to his family, as also does his corpse after death.

771 'RELIGION.—The religion of the Khásiás is demon-worship, or a jumble of enchantments muttered by priests who are sorcerers. They invoke evil spirits as the deputies of God and the instruments
775 of His pleasure or displeasure. The Khásiás believe in metempsychosis, or the transmigration of souls. After death, human beings are transformed into monkeys, crabs, tortoises, frogs, etc. Though a future state is not denied, it is treated with absolute indifference, as beyond the sphere of responsibility; all rites, ceremonies, and observances bear reference to the welfare of mankind in this world. The spirits of their departed relatives and ancestors are invoked only in so far as they are considered to influence and have power
764 over the present life. The Khásiás burn their dead, and collect the ashes into urns, which are kept under a slab raised on four others enclosing a space. These monuments are of various kinds and sizes —one for individuals, another for a family, and another for a whole
614 clan. There is no caste system, but each clan is called after some object of nature, as the Oak clan, the Crab clan, etc., and these names entail certain restrictions beyond which intermarriage is
771 forbidden. The Khási religion may be briefly described as the practice of forms to cure diseases, and to avert misfortunes of all kinds, by means of ascertaining the name of the demon who is the author of the evil, and the kind of sacrifice necessary to appease it.

797 'CHRISTIANITY.—The Welsh Mission has been labouring amongst the Khásiás and Syntengs for thirty-two years. The Christians number about 1000 [according to the Census of 1872, the total number of native converts in the District is only 85]. There are four central stations—Cherrá, Shellá, Shillong, and Jowái —and twenty-three churches. Translations of the whole of the New Testament, and a portion of the Old, are now (1876) going to press, besides other religious books.

197 'LANGUAGE.—The definitions generally given of monosyllabic languages are far from adequate to enable us to assign to the
193 Khási tongue its position amongst the Indo-Chinese family of speech. Still, in the absence of a better terminology, it may be described as monosyllabic in the agglutinative stage. The monosyllabic element greatly predominates. By far the larger number of the compounds are mere agglutinations (in a modified

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

of father in Russian (for the *tzar*, etc.), (secondly) the youngest, not the oldest, daughter performs the family rites and inherits the family-property [24]. Even in cases when there is no woman to inherit, the youngest, not the oldest son inherits [25]. Among the conservatively matrilineal Pnár (Jaintia) this term of diminution *i*, however, carries at times a somewhat contemptuous meaning, though the minorate is strongly in force also among them. The ambivalent position of this honorific term of diminution is thus significant (comp. term 9/*e* among Pnár and infra.) 601 [428] [196]

Term 7 — mother: (*i mei*) — The prefix *i* used among Khasi and Wár Khasi signifies particular reverence (supra: term 6). The classificatory character of the term has been discussed by CHATTOPADHYAY [26]. [193]

Term 9/*f* — *hep* for all younger siblings, cousins and even other young folk does not indicate the consideration which the terms 9/*d* — *kong* for older sisters and female cousins, or 9/*e* — *bah* for their male equivalents indicate. The term *san* (9/*e* among Pnár) stands here, as generally, for elder and implies a honorific meaning (comp. term 6 supra and term 13/*a* infra).

Terms 10/*a* and *b* show that husband and wife address each other by equal terms and do in no way indicate anything like an inferior position of either wives or husbands of which I did also not find any indications otherwise. It may here be mentioned that property rights even in newly established estates, vest in women and are inherited by women, — not generally men. 601 562

Term 11*d* — *ka khun khaddnh* — the youngest daughter whose important position in Khasi religious ritual, social organization and inheritance law has already been referred to sub term 6 and described in detail elsewhere [27]. The affectionate character of this term finds vivid expression in the abbreviation *ka duh*, which I heard from sisters and the father of a youngest daughter. 601 [593]

Term 13/*a* — *mei san* (mother's older sister). The word *san* (older) here has a definitely honorific character, although the *mei khynnah* — the mother's younger sister (term 13/*b*) may be the heir of Ego's ancestral property. This constellation corresponds to the peculiar significance of terms 6, 9/*d* and especially 11/*d* (supra).

Terms 13, 14, 15/*a*, 18, 18/*a*, 18/*b*, and the terms for cousins 19, 20, 21/*a*, 21/*b*, 22 show, like term 7 — mother (supra), classificatory character. The restriction on cross-cousin marriage is of different nature, according as to whether they belong to different households, or not, as has been discussed by CHATTOPADHYAY [28]. [582]

Term 16/*a* — *ñia* (mother's brother's wife) is basically the same as term 15 — *ñia kha* (father's sister) [29] though the latter is qualified by the additional term *kha*: (begetting, birth) which signifies paternal relationship (see: term No. 1).

[29] In detail discussed by CHATTOPADHYAY (1941), p. 27.

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

namely that male members of a matrilineal clan enjoy, among Khasi as among other matrilineal groups in India, a position which, far from unenviable, is a very high one in itself and doubly fortified by the respect which to the same male family member is being shown (*a*) in his capacity as the father of his children in his wife's clan (comp. term 8 of the list), and (*b*) in that of the maternal uncle (comp. terms 14, 14/*a*, 14/*b* and 26 and 28). 601 602

The terms 33/*b*, *c*, *g*, *h*, have classificatory character. 601

The term 33/*e* — *u kong* for the husband's older sister's husband is one of the exceptions of the rule that *kong* generally signifies an honoured older female relative but, as in this case, also her husband (comp. term 26).

Term 36/*a* *u pa* (father) in its usage among Pnár (Jaintia), also for stepfather is significant. A Pnár child has no legal clan-relationsihp with his/her biological father, who belongs to another (matrilineal) clan than the child and mother. Yet the honorific term *pa* is, among Pnár, also applied to a stepfather, although neither legal, nor biological but merely ideological relationship via the mother, exists between stepfather and -child. This use of the word *pa* thus seems to emphasize both, firstly the integration of the matrilineal family structure, by making an unrelated stepfather to be looked upon as father, owing to his relationship with Ego's mother and, secondly the important sociological and psychological position of the father in this matrilineal family structure which appears to go back to an old tradition among the Pnár. 601 5930 [614]

Term 41 — *para 'riew lum* [33] (Assamese hill tribals) are characteristically termed *para* (Brethren), although they are different in many respects, from the Khasi, yet considered as definitely nearer related than all other neighbours, grouped under the 601

Term 43 — *dkhar* (plainspeople) [34], — a term which varies in emotional content from contempt pure and simple to an attitude, somewhat parallel to what ordinary English usage would generally associate with the expression "continental". Marriages of Khasi girls and boys with *dkhar* do occur, though infinitely rarer than marriages of (especially educated) Khasi girls with (educated) *para 'riew lum*, Nepalese, Gurkha or Chinese boys. One of the reasons which is usually being given for this preference for non-Indians is by no means colour-prejudice, but the taboo on either beef or pork which most *dkhar ïong* [35] (Indians, Hindus or Muslims, respectively) observe; a taboo which they generally extend to their Khasi wives, thus preventing them from enjoying two favourite Khasi national dishes. Another more psychological reason is the overbearing treatment of wives, which is generally ascribed to *dkhar ïong*, more even than to *dkhar li* [36]. It is in this connection 601 582

[33] Literally: Brethren Humans Hill.

[34] With Dkhar are here meant the plainspeople as such; — not the Khasi Dkhar (or Khar) clans which are mostly, if not always, descended from ancestresses who had been captured in the plains and brought to the Khasi Hills; comp. CHATTOPADHYAY (1941), pp. 30/31 and EHRENFELS (1950/*A*), pp. 33/34. [101]

[35] Literally: Plainspeople black.

[36] Literally: Plainspeople white.

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

for difference in sex, is applied to both. The corresponding uncle and aunt by marriage are referred to by terms which make this clear. The husband of the father's sister is a "Ma" like the mother's brother and is also referred to as "Kni." But as his position by age is unimportant, the adjective of position is lacking in his case. Similarly the mother's brother's wife and the father's sister have a common term "Nia"; but the latter has her relationship through the father clearly indicated by the additional term "Kha" which refers to kinship through a male. The mother's brother's wife is, on the contrary, an aunt by marriage. The husband of the father's sister derives his term through his wife; and the wife of the mother's brother, through her husband. The identities M.B. = F.S.H. and M.B.W. = F.S. are therefore derived indirectly and are not original. Hodson's hypothesis that they represent actual identity of kinship in an earlier dual society therefore turns out to be superfluous.

Reciprocally, a man refers to his sister's children by a term which is different from that for his own children. A woman also refers to her brother's children by this term which is different from that used for her own or her sister's children. As indicated, the M.B. as well as the F.S. are both on a parallel footing, and are practically labelled together, allowing for differences of sex.

We may say that there are, in Khasi society, two clearly recognised units. One of these is the house and household, where the men and women have been born. Inside this house group, the sisters have similar rights, actual as well as potential. As we have seen, on the death of one sister, where there is no female issue, another sister takes her place in continuing the traditional religious entity of the group. The brothers again, among themselves, take one another's place in succession, in the matter of authority, and of management of the family property. The other unit is that of the woman, her husband and the children. We may refer to it as the unit set up by marriage.

Referring to the first type, we may say that the second type results from the men of the house going out to marry women of other houses. As the men settle down in the wife's mother's house and later on set up a separate house on her land, the continuity of tradition in the house of birth is kept up by the women who remain behind.

It would however be a mistake to suppose that the bond between the members born in a house is severed on marriage. We have noted before that the bones of a dead man return eventually to his mother's house, for final deposition in the clan cinerary, or at least that of the extended household. The bond between the mother's brother and sister's children has also been noted as well as the authority exercised by the former over the extended family.

Further links between a man and his mother's Kur will appear from a study of the rules of inheritance and land tenure with regard to men. Any property that a man acquires before marriage belongs to his mother's house. Myntri U Subu Rai, for example, earned money before his marriage, and he purchased some land with this amount, in a village called Mawbeh. It will go to his sisters and their heiresses on his death. The earnings of a man after marriage, and after he has settled down in his wife's mother's house (or wife's house), among Khasis proper, generally go to the wife and daughters on death. But any gifts made by the parents at marriage have to be returned on death. Slmilarly, if a man has earned money after marriage, independently of his wife's capital, a part can be claimed on death by the man's mother's group.

Again, if a man returns to his mother's village after marriage, he can exercise his rights to cultivate the common land there. Every village community has its common land known as Ri Raid. As David Roy states (CN), "people can occupy a raid land where they build their houses and cultivate. For cultivation purposes land not more than can be cultivated is taken. The occupant can sell his house and the site and the garden of

[p.33]

CHAPTER IV

The Khasi marriage prohibitions may now be discussed in some detail. The rules regarding levirate and sororate have already been noted. The Khasi is also exogamous with regard to his Kur. This bar extends to clans derived from the same ancestry. A Khasi cannot also marry his father's brother's daughter, or his father's father's brother's daughter. He cannot marry his mother's brother's daughter so long as this uncle is alive but may do so after the death of this relative. He cannot also marry his father's sister's daughter so long as the father is alive but may marry her after the death of his father. Gurdon remarks that even then "such unions are looked upon with disfavour by Khasis. In the War country, such marriages are totally prohibited." 582

It has been noted in the previous chapter, that the basic unit of Khasi society is the house where the children are born and where the women stay all their lives and with which the men also are connected intimately even when they go elsewhere on marriage. It has also been observed that the authority is vested entirely in the men. The women have various rights not found in many patrilocal groups; but it would be a mistake to underestimate the position of the men in the house. The father is the head of his small family—the simple family consisting of himself, his wife and the children. He is also the person in authority over his sisters' households in matters affecting the extended family as opposed to the simple family. Although his own children, and the children born in his natal house are distinguished on account of their social and economic differentiation, nevertheless, they are, to a certain extent, both like children to 582 602 [594]

13:Mukherjee E-5 (1954)1958 AR7 Khasi AR7

613
[769]

cessation of transaction of money (*kheinsbai*) during the period, compulsory social participation in marriage, household worship, and funeral ritual, and the pride for the privilege in sucession to *siem-ship* (chieftain ship) hold together the inner structure of the society in fulfilling its function.

594
596
602

Family (*Ka-iing*)—The functions of family centre round the :

1. performance of basic religious rites,
2. management and inheritance of family property,
3. maintenance of social relations with the kin of *ka-k'ṭoh* and *ka-kur*,
4. protection of familial kin.

602
867

From the above discussions it may be inferred that the social groupings of the Khasis function in different dimensions and make the individuals aware of their duties, and obligations towards each other. In the process of socialization and enculturation of the individual they learn that the individuals, the different social groups and the community at large are inseparable.

Even from infancy a boy is infused with the idea that family comes first in regard, sub-clan second, and clan third. The kin of the family are primary relatives, and those of the sub-clan and the clan are secondary and tertiary respectively. [553] One bow and three arrows given by a father to his son in his naming ceremony (*jerkhun*) symbolise their relationships with the three social groups. With the first arrow man has to fight for *shi-iing* (members of the same family) and *shi-k'ṭoh* (members of the same sub-clan), with the second for his *shi-kur* and with the third for the state.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

589 dition that she does not remarry; the idea being that as long as
765 the bones remain in the widow's keeping, the spirit of her husband is still with her. On this account many wives who revere their husband's memories, and who do not contemplate
587 remarriage, purposely keep the bones for a long time. If a
765 widow marries, even after the customary taboo period of one year, whilst her deceased husband's bones are still in her keeping,
[346] she is generally looked down upon. Her children in such a case perform the ceremony of handing over the bones of their father to his clan in a building specially erected for the purpose. The widow cannot enter therein, or even go near it, whilst the ceremony is proceeding, no matter whether the *jing sang*, or the price for removing the taboo after a husband's death, has been
595 paid to the husband's clan or not. There is no evidence to show that polyandry ever existed amongst the Khasis. Unlike the Thibetans, the Khasi women seem to have contented themselves always with one husband, at any rate with one at a time. Certainly at the present day they are monandrists. Polygamy does not exist amongst the Khasis; such a practice would naturally not be in vogue amongst a people who observe the matriarchate. There are instances, however, of men having wives other than those they have regularly married, and in the Wár country children by such wives enjoy rights to their father's acquired property equally with the children by the legally
582 married wife. As the clans are strictly exogamous, a Khasi
688 cannot take a wife from his own clan; to do this would entail
764 the most disastrous religious, as well as social consequences. For to marry within the clan is the greatest sin a Khasi can commit, and would cause excommunication by his kinsfolk and the refusal of funeral ceremonies at death, and his bones would
[115] not be allowed a resting-place in the sepulchre of the clan. To
614 give a list of all the Khasi exogamous clans would perhaps serve no useful purpose, but I have prepared from information, kindly
582 furnished me by the Siems of Khyrim and Cherrapunji, a list of the clans in those States which will be found in Appendices A and B. These will suffice as examples. It will be seen from the Cherra list that the different divisions of the Diengdoh clan, viz. Lalu, Diengdoh-bah, Diengdoh-kylla, are prohibited from intermarriage; this is due to those branches of the clan being

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

586 Khasi religion. If the marriage has been celebrated according to the *pynhiar synjat* rite, a *ksiang* (go-between) is necessary on each side, also the *kni*, or maternal uncles of the parties, to witness the divorce. In other cases the presence of the *ksiang* is unnecessary, but some acquaintances and friends as well as the relatives on both sides should witness the ceremony. The husband and the wife each bring five cowries (*sbài*), or, more commonly nowadays, five pice. The wife gives her five cowries or pice to her husband, who places them with his, and then returns the five cowries or coins to his wife, together with his own five. The wife then returns the ten shells or coins to the husband who throws them on the ground. A crier (*u nõng* [203] *pyrta shnong*) then goes round the village to proclaim the divorce, using the following words :—

"Kaw—hear, oh villagers, that U—— and K—— have become separated in the presence of the elders. Hei! thou, oh, young man, canst go and make love to Ka—— for she is now unmarried (*khynraw*), and thou, oh, spinster, canst make love to U——. Hei! there is no let or hindrance from henceforth." Among the Khasis divorce must be by mutual consent, [587] and the ceremony must take place in the open air. Until the divorce ceremony has been performed as above described, neither husband nor wife can marry again, but after it has taken place, either can remarry, but not within the family of the divorced husband or wife. In the event of a husband or wife being absent for a long period, say ten years, without any communication having been received from either of them, a divorce ceremony is performed by the relatives on his or her behalf. It is stated by U Jeebon Roy * that the rule of 595 monogamy is not so strict for the husband as it is for the wife, 428 he can contract an informal alliance with another woman, the only prohibition being that she must not belong to the original wife's village. Such a wife is called *ka tynga tuh*, literally, stolen wife, in contradistinction to the legally married wife (*ka tynga trai*). The children by the unmarried wife are called *ki khun kliar* (children from the top). By children from the top, is understood to mean children from the branches not from the root (*traj*) of the tree. Such children cannot claim ancestral property, except in the war country.

113 * See page 18, "Ka Niam Khasi." (U Jeebon Roy.)

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

Thus, the marriage of a non-heiress and a man of authority also produces an unstable position for the husband in spite of his having an independent household. Therefore, the possibility of a really stable marriage is even more limited; it will occur only in the match of a non-heiress and a non-authority of the *iing*. But even these marriages cannot be free from the influence of a matrilineal social structure: the man of authority of the wife's *iing* may visit these couples now and then, curb the husband's power and remind both partners of the orientation towards the matri-kin, the *iing*, though this pressure is insignificant in comparison with that experienced by the heiress's family. Likewise, a husband now and then visits his youngest sister's house, *ka iing sen*. These constant matrilineal contacts offer husbands chances of escaping from even the slightest matrimonial tension. Whenever a Khasi man feels uneasiness, he will return to his sister's house rather than face a difficult situation with his wife. This tendency is maximised especially on the occasion of religious ceremonies, when all individuals are grouped around each *iing*.

It is apparent that the rules of the *iing* as the underlying structural pattern, function throughout the various categories of domestic unit of the Khasi community as the most important intrinsic force.

VII. Polygyny

After this long attempt at the structural analysis of marriages, I think one can theoretically predict what is the situation of polygyny among the Khasi. The theoretical framework elaborated through preceding discussions can also be tested by the empirical data in terms of polygyny.

Nowadays, the Khasi feel so strongly against polygyny that they have no knowledge even that they ever practised it. Many Khasi, in more sophisticated areas, did not believe my findings on polygyny in Sohkynduh and Kongton. I think this is due to the rapid Christianization of the Hills during the last hundred years. My interpreter, though he was not Christian, said to me in the village, "it is most regrettable to bring you to a village where we find polygyny." However, one of the ministers of the Cherra State to which the two villages belong, told me that there was no particular opposition to polygyny, though recent Christian influence gave people the idea that it was a shameful custom, and he mentioned the case of a polygynist in his area, a man who had recently died, who had had ten wives. In Jatinga whose inhabitants are all Christian, and in Shella where there has been much contact with, and influence by, Hindus, there were

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

582 marry any one belonging to your own *kur*, or clan. Unlike the
614 Khasis, however, a Lynngam can marry two sisters at a time.
595 The Lynngam marriages are arranged by *ksiangs*, or go-betweens,
584 much in the same way as Khasi marriages; but the ritual
582 observed is less elaborate, and shows a mixture of Khasi and Garo customs (see Section III.). The Lynngams intermarry with the Garos. It appears that sometimes the parents of girls
583 exact bride-money, and marriages by capture have been heard of. Both of these customs are more characteristic of the Bodo
847 tribes of the plains than of the Khasis. There are no special birth
782 customs, as with the Khasis, except that when the umbilical cord
553 falls a fowl is sacrificed, and the child is brought outside the house. Children are named without any special ceremony.
764 The death customs of the Lynngams have been described in Section III. A peculiar characteristic is the keeping of the dead body in the house for days, sometimes even for several months, before it is burnt. The putrefying corpse inside the house seems to cause these people no inconvenience, for whilst it remains there, they eat, carry on their ordinary avocations, and sleep there, regardless of what would be
771 considered by others an intolerable nuisance. The religion of these people consists of a mixture of ancestor-worship and the propitiation of the spirits of fell and fall, which are, most of them, believed to be of evil influence, as is the case with other savage
716 races. As with the people of Nongstoin, the primaeval ancestress, "*ka Iaw bei*," is worshipped for the welfare of the
782 clan, a sow being sacrificed to her, with a gourd of rice-beer, and leaves of the oak, or *dieng-sning* tree. The leaves of the oak are afterwards hung up inside the house, together with the jaw-bone of the pig. Sacrifices are offered to a forest demon, *U Bangjang* (a god who brings illness), by the roadside; also to *Ka Miang Bylli U Majymma*, the god of cultivation, at seed time, on the path to the forest clearing where the seed is sown. Models of paddy store-houses, baskets and agricultural implements are made, sand being used to indicate the grain. These are placed by the roadside, the skulls of the sacrificial animals and the feathers of fowls being hung up on bamboos about the place
793 where the sacrifice has been performed. There are no priests or
796 *lyngdohs*, the fathers of the hamlet performing the various ceremonies.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

178 no polygynists, though there were many personal temporary illicit
184 relations or love affairs.

It is true that even in interior villages polygyny is rapidly decreas-
• 595 ing. In the two villages I found only two cases of polygyny: a man with two wives in Sohkynduh (Josio in List 6, whose wives are 26 and 32), and a man with three wives in Kongton (Jubongrai in List 9, whose wives are 8, 20 and 52). These cases appeared clearly as cases of polygyny which the villagers recognized as such, speaking of them quite differently from the way they would have spoken of lovers, calling them wives and husbands. Of course, the first wife socially outranks the secondary wives, as *ka tynga trai*, and the term *ka tynga tuh* is used for the latter, as Gurdon states (1914, p. 80). The difference being that the first wife has a legal marriage ceremony while the
585 others have not—*ka tynga tuh* means literally 'stolen wife.' About the marriage ceremony, Gurdon gives a detailed discription (*ibid.*,
595 pp. 127-130) and says there are three forms of marriage ceremonies, *Pynhiarsynjat*, *Lamdoh* and *Iadih-hiad*. The first and second forms are considered the more respectable; the last one is resorted to by the very poor who cannot afford the greater expense entailed by the first two. Unfortunately, during my stay in these villages, no marriage ceremony took place, but villagers described to me what seems to be the *Iadih-hiad*, where only a fowl is sacrified, and the whole procedure is much simpler than that described by Gurdon. However, whatever the complexity and richness may be, there is a distinct line between having a ceremony and not having it, and this draws the distinction between the status of the first wife and that of the secondary wives.

428 Nevertheless, this distinction has more of a social bearing than the legal bearing it has in a patrilineal system. Since they follow the
595 matrilineal system, the legal distinction between the first wife and
851 the secondary wife does not affect their children's status and their property rights, at least not in the villages where I worked. The children's social locus is determined by their mother. The children (particularly the youngest daughter) have the right to inherit their father's acquired property which is automatically under their mother's ownership. If the polygynist father has acquired property by working their mother's field, or in trading on behalf of their mother, whether she be the first wife or the second, this property undoubtedly belongs to the children of that wife, not to the first wife alone. The father's physical locus at the time of his economic realisations is the decisive factor.

591 The Khasi polygynist, without bringing his wives into one house-
595 hold, alternates his residence among them, in turn or according to his temper. This practice is similar to that of the Trukese described by Goodenough (1951, p. 123), and quite different from that of the Garo

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

which I described previously, where a man brings his secondary wives to his first wife's house in which he is acting as the head. Furthermore, sororal polygyny is prohibited, while it was prefered among the Garo in terms of wives taken from the same *mahari*, though mostly not real sisters. The strong jealousy, which I observed, among the Khasi wives of a polygynist, would appear to make such polygynous marriages with closely related women practically impossible. As shown in List 6 & 9 every single one of the wives of each polygynist belongs to different *kur*, and the two secondary wives of the man of Kongton came from neighbouring villages. 591 595 • [171]

These aspects of Khasi polygyny are related fundamentally to the underlying Khasi social structure. It should be remembered that every married woman has her independent household, *iing*, and that two women of different descent groups never reside together (see p. 127). The picture is one of every married woman holding a key-point in the whole network of the social system, and men fit into this network with much flexibility. The strong stability of women and the fluid nature of men in terms of residence naturally produces this form of polygyny. This analogy is also true of lovers' relations and illegal marriages. Though polygyny is a rapidly decreasing institution all over the Khasi Hills, cases of lovers' relations and illegal marriages are found to be very numerous among the Khasi, as compared with neighbouring tribes and peoples in Assam. 182 591 595 613 837 [171]

Throughout my discussions of various forms of Khasi marriage, I found men to be more or less in the position wittily described by one of them as "having one leg in my sister's house, the other in my wife's," except in cases of the husband/father who succeds in establishing paternal authority, as in marriages with a non-heiress. Even in the latter a man might have a period of uncertainty until his children were born and until the economic basis for his matrimonial life was firmly established. For the rest, Khasi men would be in the position of either becoming the authority of an *iing*, or swinging between their sister and their wife, which may produce more opportunities for lovers' relations. One of a man's legs is certainly always found in his sister's house, the other may rest in his wife's, but it may also rest in another woman's house. The wife being rather accustomed to his occasional absence due to his visits to his sister's house, another kind of absence does not mark any great change from the usual situation, at least not physically. Such situations occur particularly in the earlier stage of the marriage, as a sort of continuation of premarital affairs, which are quite freely practised: it is a usual custom before marriage for young men to sleep at a girl's house whom they like though they say sexual intercourse usually does not take place in such cases. This I observed in Sohkynduh and Kongton. 182 591 593 613 836 837

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

182 Because of the firm right of women over the residence, Khasi polygyny can never be a clearly distinguishable institution, and has no
• 595 operational advantage in the social and economic fields; the situation is very similar with lovers' relations and illegal marriages. By polygyny the man achieves no additional economic advantage, nor does he increase his social status or prestige; rather the reverse, for I observed that the polygynyst was regarded as a somewhat ludicrous or tragic figure. As for the woman, she is placed slightly at a disadvantage since the husband's economic activities are not concentrated on her household. However, even many legally-married wives are separated or divorced, so that such disadvantages are not only experienced by the wives of polygynists. The social disadvantage of being secondary wife is not serious, firstly, because wives, whether first or secondary, have social and economic independence—they do not belong to the husband as in the case of patrilineal systems. Secondly, the significance attached to the legal marriage institution is not so great, so that the handicap of being the secondary wife is not severe. What is most important, furthermore, is that her slightly inferior status does in no ways affect the next generation. Indeed such children, including
[848] those of premarital or illegal relations, suffer no serious social dis-
[851] advantage, though they are nominally distinguishable from legitimate children. From this it is clear that the effectiveness of legitimate marriage, and paternal recognition are rather limited among the Khasi.

Thus, Khasi polygyny differs greatly from the polygyny of other societies in terms of its operation and of its form. It also differs in the incentive to its practice. Among the Garo and many other societies, the practice of polygyny usually depends on a man's economic capability, but among the Khasi, it appears rather to depend on his
182 whim. Khasi husbands are notorious for their heavy drinking and
593 neglect of wife and children. Some of them told me that their earnings,
793 their children and everything they acquired go to their wife or sister, leaving them with nothing; therefore they should at least have freedom to enjoy their life. This freedom seemed to mean women and drink. I am not sure how far this explanation is true, but it seems to justify their behaviour to a certain extent. I do not mean that this is the general characteristic of the Khasi husbands, but some such tendency is to be observed. Actually I often heard wives complain of their husbands' drinking and running after women, and was asked "Are your Japanese husbands also like that?", "What is the good of having a husband!" then comes divorce . . .

182 On the contrary, women placed at an advantage by residence
562 and matrilineal inheritance, are required always to be on their best
593 behaviour. There are very strict rules governing the behaviour of Khasi women. They are supposed not to drink, smoke, or play with

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

any man other than their husband. Women before marriage enjoy a considerable freedom in love affairs, but once married these are no longer tolerated. Women should be faithful wives. They should be so in order to keep their husbands who have a strong tendency to leave their wives. The husband of a woman who has an affair with another man, will never come back to her. There is no attraction to draw the husband, who has home at his sister's, to his wife's house unless she is good and charming. Such Gurdon's remarks as "There is no evidence to show that polyandry ever existed among the Khasis. Unlike the Tibetans, the Khasi women seem to have contented themselves always with one husband, at any rate with one at a time" (Gurdon, 1914, p. 77), is utterly nonsense: a Khasi woman is placed in a situation which is not easy to monopolize even one husband. Moreover, the Khasi social organisation in general does not accord to the practice of polyandry.

strip of fine silk for the loins, a part of which hangs gracefully as low as the calves in front. No notice is here taken of what has undoubtedly been added and borrowed from their more civilised neighbours in the plains. 291

'MARRIAGE.—The marriageable age for females is from 15 to 18; for males, from 18 to 24. Matrimonial alliances are contracted either through the parents or the living representatives of the families to which the parties belong. The mode of procedure is still very primitive and unceremonious. The bridegroom, escorted by a number of friends and relatives, goes to the house of the bride, where all are feasted and lodged for the night; on the morrow he leads the bride, accompanied by a number of her relatives, to his own house, and entertains the company with dishes of boiled rice and fresh pork. After remaining there a day or two, the newly-married couple return together to the house of the wife, which becomes their future home. Marriage is dissoluble by regular divorce, for any sufficient cause, and often without any assignable reason except mutual dislike or want of issue, the latter being the most common case of all. Marriage with the Khásiás is simply a conventional arrangement, with nothing further for its object than the procreation of children; failing that, it is no longer looked upon as a contract permanently binding. Divorce is effected in the presence of eye-witnesses—the parents, or the heads of clans. Five cowries (*kauris*) are produced by the parties and exchanged, then cast away by mutual consent, and the ceremony is over. Parties once divorced can never again contract marriage with each other, but they are at liberty to marry into other families. Polygamy, strictly so called, is not sanctioned by Khási custom. Adultery is looked upon as a serious crime. If the five cowries have not been cast away by mutual consent, both husband and wife are held to be subject to the "matrimonial demon;" and even when either dies in wedlock, the survivor is not at liberty to contract a fresh alliance until he or she pays the family a sum of money as the means of removing the surviving party from subjection to the "matrimonial demon." The husband is a stranger, so to speak, in the family he has entered, and perpetuates the race of others, not his own. The children in all questions of lineage and personal rights follow the mother. There are always two interests in the same family—that of the husband, and that of the wife. Whatever the husband may have earned or acquired in

58 591 586 [581] 587 595 837 587 593 611 593 428

772 preside over a whole district and are known as
773 lyngdoh rangbah (head sacrificer), are not sacrificers by profession. Thus, for example, the chief sacrificer of Lamin in the district of War is a coolie by trade and carries loads from one market to the other (Fig.1).[1] None of these sacrificers has a revered position among the people. It is rather the "fear" of them which makes them respected. For the Khasi firmly believe that the lyngdoh or even merely the ordinary sacrificers are masters over the (evil) spirits. Therefore they are very careful not to quarrel with the sacrificers, so that they will not conjure up spirits in their anger and set them on the guilty one and thus bring him to destruction.

774 The sacrificers are not actually officers
775 of sacrifices in the strict sense of the word,
776 but only representative people at the sacrifice. For the Khasi live under a matriarchy. With a sharpness of logic and with thoroughness they have probably developed and put into effect as a social organisation the most beautiful pattern of a matriarchy of anyone up to today. The mother is the head of the family, the only tie that gives the family unity; she is the sole possessor and sole owner of all property, and inheritance is only possible through her. The father has no right to the relationship of the children. These belong only to the maternal line. Even his ashes will not rest finally beside those of his wife or children, but in the grave of his mother. Whatever the father may earn or save does not belong to his children, but returns to the maternal line. It is not surprising that with such views it is also the mother who has all the spiritual power. And in reality she is in complete possession of the highest spiritual power. It is her duty to

[illegible]

772 preserve the customs of the family or sib; she
• 774 must see to it that the ancient domestic customs
773 of the household sacrifices are truly preserved; it is her duty, to keep the inherited ceremonies of the sacrifices pure and to hand them down conscientiously to the descendants. Therefore she has to arrange for the necessary sacrificial materials; she must prepare everything; she is the only one who must fast before the offering of many a sacrifice; she gives the order for the sacrifice, and she should also have to perform it herself.

But this does not happen. In reality no woman offers the sacrifice herself. (4) She is

4. With the exception of the secret sacrifices, about which, see later.

[404] represented by a male person. But he must be related to her on the maternal side. Usually a maternal uncle (kni) represents her. Such representation by a relative is always necessary, whether it be for a public or a private sacrifice. But not merely the degree of relationship must lie in the feminine line; there is still something else that must be observed for each sacrifice. Even though the duties of the sacrificers and their methods of sacrificing are very different and are arranged according to the customs and inherited usages in the family or in the sib or in the state or community, yet in one point they are all similar: namely, all the sacrificers must be assisted by a woman during the performance of the services referred to. She is simply called ka lyngdoh (the priestess). [711] Because the man must function in her name and he is only her representative at the sacrifice,

782 Gurdon (5) believes that his ka lyngdoh is with-
576
793

5. Gurdon, The Khasi, loc. cit.

out doubt a holdover from that time of the matriarchy in which a priestess also performed the sacrifices herself.

b) The Public and Ceremonial Introduction as a Lyngdoh.

793 How does a person become a lyngdoh?[1] This
784 question can also not be answered so easily.
555 This is very different in the different districts. In general it may be assumed that the lyngdoh arise from the practice of household (private) sacrifices. Since it is the duty of the woman to watch over the sacrificial ceremonies, she will introduce one of her sons to the rite of performing sacrifices that is peculiar to the family, so that he will be able to occasionally offer the sacrifice in the prescribed manner or in case of need (sickness, death, misfortune). But because the maternal uncle is usually called upon for the sacrifices, the son who has learned to offer sacrifices will have little chance to practise this art in his own family, but rather among his maternal relatives. And the other way around, people from there who know how to offer sacrifices will be called into this household. In this way the man who offers sacrifices becomes known in the neighborhood. If he has luck with his arrangements and if success crowns his efforts, the news will spread that he is an experienced sacrificer whom the spirits obey and that he knows how to seek them out, to drive them away, or to propitiate them, as the case requires. Thus it happens that such a man is called upon again and again to offer sacrifices,
[1 Lit. sacrificer.. Analyst]

more than a thousand of them who have been converted to the Hindu religion. 162 (797)

This group of people possesses the possibility of expansion, since they have at their disposal within the area of the Khasi and Jaintia Mountains a territory of 6,022 English square miles, with only 40 persons per square mile. Although wide areas are not built up and the system of shifting fields prevents the full utilization of the land, it is still true that with this small population figure by far the largest part of the whole population (200,781) is dependent on agriculture; trade and manufacturing only play a subordinate part. [311]

With regard to the division of the sexes, the two large religions of Assam, Hinduism and Mohammedanism, show the same proportion as in the rest of India, a lesser number of women than men. But among the Khasi the women are more numerous than the men. In the Brahmaputra valley with its greater Hindu population there are only 892 women for every 1,000 men; in the Surma valley, with a greater Moslem element, there are 937. But the situation is reversed among the Khasi, where there is a surplus of 74 women for every thousand men. The position of the women is basically different among this people. It is based on the customs and usages of maternal rights that prevail among them, which are prédominantly based on possession and which find honorable expression in possession. 562 162

1. Property Rights in the Family Property.

The great principle which governs property among the Khasi, is that all family property rests in the hands /128: A/ /Fig. 1. Khasi Girls and Women with their Carrying Baskets. Fig. 2. An Old Clan Mother in the Village Laitumkhra. / /128: B/ /Fig. 3. At the Oracle of Egg Throwing/. Fig. 5. Khasi Girls and Men in Festive Dance Clothing. / /128: C/ /Fig. 4. A Group of Synteng/ /128: D/ Fig. 6. A Holy Grove and Part of the Village Raliang/ /129/ of the women and not of the man. The man can never be the owner of family property, and it can never be transferred to him. He may perhaps acquire some property through his own industry and work, but even that will pass into feminine hands by the path of inheritance. The concept of family is not as narrowly drawn here as in our country. This is a question of the clan-family, the clan. The head of it is always the youngest daughter, who, even when she has become old, bears the honorable name ka barit in the Jaintia Mountains, and in the Khasi Mountains ka khadduh, the last, the youngest. Around her gather her nearest blood relatives, brothers and sisters, and children. For example let 421 613 596 613 596

613 us take such a clan mother with the name Ka Sing Lau. She has two
59% sons and five daughters, and in addition two brothers and two sisters who are all married. Also each of the five daughters and two sisters has four children. These forty-six people live with the clan mother and form the family clan of the Lau. To these we also add the sons
[592] and brothers, the nephews and grandsons, but not their children. The latter have nothing to do with the family Lau but belong to the family clan of their wives, live with that clan and are counted in it. Likewise neither the husband of Ka Sing Lau, nor the husbands of the various daughters, sisters, nieces, and granddaughters belong here. They are all counted with their own clans, live and work with them according to Khasi custom, and only visit their wives occasionally perhaps after dark.

621 The entire clan-family of Lau is housed in 5 or 6 huts, which all
351 stand next to each other in a semicircle or are built one above the other on the slope of a hill, according to the character of the land. A
[241] garden frequently surrounds them in which maize, sweet potatoes, potato-like roots of Soh-ot and Schrut, bananas and, on the southern slopes of the Khasi Mountains, also coffee, pineapples, and other fruits are cultivated. A circle of bamboo cane that is so important for building purposes, household objects, and /130/ implements surrounds the garden and huts. This bamboo cane grows up as thick as an arm to a height of 10 or 15 meters and at the same time forms a good protection against bad weather. A wall (morscha) of thrown-up earth encloses everything, forming an enclosed farm, prevents unimpeded access, and protects cattle and crops from the attacks and devastations of wild animals.

423 What is considered the family property of such a clan? Primarily it is the land, the gardens, the rice fields, woods, fallow mountain and grazing lands. On the southern slopes of the Khasi Mountains there
[241] are fields for the cultivation of rape, orange groves, laurel groves, plantations of betel palms and of pepper leaves which far and wide are so highly treasured for betel chewing as a source of pleasure. (2)

2. Cf. Becker, Im Stromtal des Brahmaputra, /In the River Valley of the Brahmaputra/ (Munich, 1923). pp. 357 ff.

[31] Usually there is so much land available that the family-clan can nourish itself properly and also increase in number

473 According to its size and wealth a family clan also owns a
231 corresponding number of cows, oxen, hens, pigs, and goats. Neither the milk nor the flesh of the cows is used. They are kept for the

613 bakla); and as long as the expiatory sacrifice, in the form of pigs and
688 goats, determined by the elders of the family and by the sacrificial
682 priest (lyngdoh) has not been offered, the sinning member is considered excluded from the family and the family sacrifices. But even after being accepted again a certain stain still clings to him.

But it is also the duty of the clan mother to care for the needs of
613 the members of her family clan with regard to food, clothing, and the like. She divides the fruits of the harvests according to the needs of the individual. She goes or sends to market to trade, to buy, or to sell. She takes care of the common purse and even the masculine members of the clan have to ask her for money when they wish to drink rice liquor or buy clothing. There the clan mother is generous
[562] rather than niggardly. This dependent relationship of the men is not considered unworthy at all or shameful. It is the matriarchal form and ancient custom. Nevertheless, the position of the men in the family clan is an esteemed one. Even the name they are called by has an important sound: Rangbah, Basan (oldest ones, advisers). On them falls often the work in the field and wood or the protection of the family; bow and arrow are handed to them as cradle gifts. In the more important family matters the clan mother consults with them. At the giving of the name, during a wedding, a funeral, or cremation the clan mother steps almost completely into the background, also during quarrels and court hearings before the chief (Doloi) or king (S'iem). She is still always influential with her advice, but the actual appearance, activity and judgments is the business of the men. The smaller,
[782] everyday sacrifices she performs in the clan hut; but she can also let these /135/ be performed by her sons. At larger sacrificial ceremonies which are offered by several family clans at the same time, by whole
[793] villages or even by one of the Khasi states, only the men are active as sacrificial priests.

With regard to the husbands of the clan mother and of the feminine
613 members, they are not considered members of the family clan of the
596 women at all. They are only considered the begetters. They work and live in their own clan, participate in their sacrifices and burial places. The father has no further influence in the raising of the children, who belong entirely to the clan of the mother. But usually they have no obligation, unless the wife and children are impoverished. Even then their care comes in second place after that of members of their own
[593] clan. Nevertheless the husband is honored and is addressed by "Mr." (kynrad) by his wife. She would consider it disgraceful to approach him impertinently. Where the property of a clan has been dissolved or Christian customs introduced, the husband lives and works together with his wife and children.

Ib Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

it, they have to arrange with the U Kni, who is in this case U Babu of Mawphlang, elder brother of the Myntri, U Mama who represents this clan on the State organisation. Payment is made in money which is distributed to the different houses of the Kur. There is, however, Ri Kynti land of another kind, individual property which can be sold absolutely. It may be noted here that no rent is paid to the State or the British Government for the Ri Raid, Ri Kynti or other lands in Mawphlang, or in general in other Khasi States. The revenue of the State is derived from tolls levied on commodities sold in market places and also from fines and other minor sources.

596 The fundamental social and economic unit among Khasis is therefore the family house and the extended family associated with it; the Kur represents a later stage in its expansion. Marriage sets up new relations but does not disturb this basic structure of Khasi Society.

13:Mukherjee E-5 (1954)1958 AR7 Khasi AR7

The primal father and the mother of the members of every clan are respectively known as *U-Parad* (*U-Thawlang*) and *Ka-Meyrad* (*Ka-Iawbei*). 614 192 773

There is a large number of clans among the Khasis and some of the clan names are those of animals and trees. *Shrieh* is monkey, *tham*, a crab, and *dingdoh*, a tree ; yet they do not constitute totemic clan organization. The clan names are not even the names of the ancestress. The clans are not ancestral but rather were territorial in nature when the clansmen (*shi-Kur*) used to live in a place having a common land (*ri-kur*) and a clan ossuary (*mawbah*) where the bones of the dead clansmen were deposited. 614 551

Unlike the clans, the sub-clans (*ka-k'poh*) are ancestral. As for example, in case of the *Siem* clan of the Chera state, it is found that Ka-Khiem was the primal ancestress. Her daughter Ka-Pet had three daughters, namely, Ka-Sngi, Ka-Lngen, and Ka-Kreh each of whom is regarded as the *Ka-K' poh* (*meaning* womb) of their respective descendants who are *shi-K'poh* (the members of the same womb). And their names are the names of the three sub-clans of the *siem* clan. 613

The names of the sub-clans of some of the clans as collected from the elderly Khasi women are given below. 613 614 551

CLAN	SUB-CLAN
1. Siem	— sngi ; lngen , kreh
2. Khongsit	— yin , phai ; har ; jiram
3. Kharshling	— iew ; mah ; sayngiar , iynean
4. Lyngdoh	— kaban ; summhir ; kamai
5. Nongrum	— tungan ; tungwi ; syngna , buhai
6. Khongrymai	— thania ; thani , barhai , lisi
7. Jaidkhar	— hazi ; haza , tuli ; tuia
8. Simpilian	— eli ; mayar ; josi , emi

Family (*ka-iing*) among the Khasis is the socio-economic and religious unit. Due to matrilocal residence, the structure of the Khasi families assumes a different form. The constituent members are the grandmother, her daughters and their children. But the parmanent[1] residents are the youngest daughter (*ka-khadduh*), her husband and daughters. It takes an 596

[1] [Should read: permanent.— Analyst]

13: Mukherjee E-5 (1954)1958 AR7 Khasi AR7

596 extended form more often when the children of the deceased sisters of *Ka-khadduh* reside there. This extension is on the mother's side and is affiliated through the extension of mother-child relationship.

Additional members like widower brothers or widowed sisters make the Khasi family a composite one.

In a Khasi family father, mother and her brother are very important. Father who is regard[1] as *Mynder* (stranger) or *Ushong kha* (begetter), has also the position of *Kynrad* (master) of the house (set-up by him). He is the executive head and the mother is the *dejure* owner of the household.

177 178 604 593 [428] Modern conditions and spread of Christianity have greatly affected the Khasi society and changed the Khasi ways of life but have failed to alter the traditional mode of inheritance even among the Christian Khasis. Another important fact which is apparent in the Khasi families, is the change of the status of the mother's brother (*Uknii*) in his sister's house. His influence has greatly been diminished due to clash with *Ka-Khadduh* (heiress). He has almost lost his control over his sister's [562] family. This has made the women exert their status to a danger point. Consequently, some amount of maladjustment in the relationship system, moral depravity and disintegration loom large in the family horizon.

596 613 Family is the core of Khasi social organization and the closeness of familial kin with the members of the sub-clan is due more to the fact that sub-clan owes its development to the family. A *Shi-K'poh* (member of sub-clan) is a secondary relative and can easily be approached for any help.

614 The functions of the above mentioned social groupings are as follows:

Clan (*Ka-Kur*)—It regulates marriage. It being a larger non-residential kin group contact between its members is infrequent. The amount of social participation needed on certain level to intensify the relationship among its members falls far short of. But nevertheless, there existed among the members

614 764

[1] [Should read: regarded.—Analyst]

13:Mukherjee E-5 (1954)1958 AR7 Khasi AR7

613
[765]

cessation of transaction of money (*kheinsbai*) during the period, compulsory social participation in marriage, household worship, and funeral ritual, and the pride for the privilege in sucession to *siem-ship* (chieftain ship) hold together the inner structure of the society in fulfilling its function.

594
596
602

Family (*Ka-iing*)—The functions of family centre round the :

1. performance of basic religious rites,
2. management and inheritance of family property,
3. maintenance of social relations with the kin of *ka-k'poh* and *ka-kur*,
4. protection of familial kin.

602
867

From the above discussions it may be inferred that the social groupings of the Khasis function in different dimensions and make the individuals aware of their duties, and obligations towards each other. In the process of socialization and enculturation of the individual they learn that the individuals, the different social groups and the community at large are inseparable.

Even from infancy a boy is infused with the idea that family comes first in regard, sub-clan second, and clan third. The kin of the family are primary relatives, and those of the sub-clan and the clan are secondary and tertiary respectively. [553] One bow and three arrows given by a father to his son in his naming ceremony (*jerkhun*) symbolise their relationships with the three social groups. With the first arrow man has to fight for *shi-iing* (members of the same family) and *shi-k'poh* (members of the same sub-clan), with the second for his *shi-kur* and with the third for the state.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

custom. In the Amwi doloiship a widow who consents to pay the costs of her husband's funeral, provided she agrees not to re-marry, inherits half of her husband's acquired property. 428 [589]

In the Wár country the children inherit both ancestral and acquired property in equal shares, both males and females, with the exception that the youngest daughter is given something in addition to her share, although not such a large share of the property as amongst the Khasis. Amongst the Mikir-Bhois, i.e. the Mikirs who inhabit the Bhoi doloiship of the Jaintia Hills, the law of inheritance is totally different from that of the Khasis, for males succeed to all property, whether ancestral or acquired. Thus, if a man dies, leaving son, mother, wife, and daughters, the son takes all. If there are several sons, they divide. If there are no sons, the property goes to the nearest male heir. If a woman dies, leaving husband and children, the husband takes all. If the husband is dead, and there are sons and daughters, the former inherit. The great difference in the custom of inheritance between Khasis and Bhois is, as I have already pointed out, part of the evidence that these people are of different origin.

The Lynngam law of inheritance is the same as that of the Khasis. The youngest daughter obtains the largest share of the ancestral property, the remainder being divided between the remaining daughters. The sons do not get any share. The rule is also said to apply with regard to acquired property.

ADOPTION.

Both Khasis and Syntengs observe a custom known as *'rap iing* (an abbreviation for *ia rap iing*, literally, to help the house). This is practically adoption. If in a family the female members have died out, the male members of the family are allowed by custom to call (*khot*) a girl from some other family, to act as *ka'rap iing*, and to perform the family religious ceremonies, and therefore to inherit the family ancestral property. The female so introduced into the family then takes her place as *ka khun khadduh*, or youngest daughter, and becomes the head of the house (*ka trai iing*). The 597 428

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

The
597 adoption of a female obviates the family dying out (*iap duh*),
428 which to the Khasi is a very serious matter, inasmuch as there
764 will then be no one qualified to place the bones of its members within the family tomb (*ka ba thep shieng mawbah*), and to
597 perform the requisite funeral ceremonies. Amongst the Khasis no particular ceremonies are performed at the time of
262 adoption; but some of the Syntengs observe a religious cere-
782 mony which consists largely of a feast to the clans-folk, at which liquor, rice, dried fish, and ginger are partaken of. Before the feast commences, each clansman is provided with a small gourd (*u klong*) filled with liquor, a little of the latter is then thrown on the ground from the gourd, and the following words are uttered:—

"Oh, God! oh, Lord! oh, ruling king Biskurom, now the *pynrap iing* ceremony is about to be performed, let the ceremony be propitious, and let males and females (of the clan) increase in numbers, so that the clan may become great, and respected, and that intelligent male members may spring up." No such ceremony is, however, observed, it is understood, in the Nartiang and Raliang doloiships.

597 In the case of a family being *iap duh* (extinct), the family
428 property, according to Khasi custom, passes to the Siem. Therefore it is to the interest of the members of families to
421 adopt a female, when such necessity arises. As there is no religious ceremony which is compulsory to the Khasis on the occasion of an adoption, perhaps we are almost justified in concluding that in former times the adoption custom did not exist, more especially as the Khasis possess a special word, *iap duh*, for describing a family the females of which have all died out; and it is admittedly the custom for the Siem to succeed to the
177 property of such a family. The Synteng custom of *'rap iing*
797 may have been borrowed from the Hindus, when the Rajas of Jaintia became converts to that religion.

TENURE OF LAND AND LAWS REGARDING LAND.

423 Land in the Khasi Hills proper, i.e. land in the high plateau, is held somewhat differently from land in the Jaintia Hills and

Il: Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

While the traditions regarding the origin of Khar Dumpep and Khar Sohnoh collected by me do not support the view that the ancestress came necessarily from the plains, it is clear that they support Gurdon's hypothesis that those clans are derived from ancestresses who came from or settled in certain villages. It is evident that Gurdon's hypothesis implies that the husbands of these women, who brought them home from elsewhere, could clear land and transmit such property to their daughters, although the mother of the daughters did not own any land locally. This right to clear the Ri Raid is therefore not a recent innovation.

I have noted these details here as this aspect of inheritance from males has not been clarified elsewhere. It is not meant of course that this right to clear land extended to the special clan lands or family property matrilenial of the man. As noted before the Kni manages such land and makes over the income or produce to the women who are the owners. Even in such land, however, a man has some rights. Both Gurdon and Cantlie state that a male can adopt a blood relative of the same Kur if all the female members of the particular stock are dead. He himself holds the property for life only, when the women of the line are dead. On adopting a girl of the Kur, she becomes the keeper of the property and also his successor. But "the profits of his labours in the landed property can be used for his wife and children." The inherent right of the male is brought out to a certain extent in this rule also. Such private lands are known as Ri Kynti. It may be of the family or the clan. As an example of family land may be noted the case of the forest of U Nong Sohra, the husband of Ka Jem [Genealogy I(*a*)]. He cleared some Ri Raid land and planted pine trees there. Only the descendants of Ka Jem can cut trees in this forest which is now practically private property of this group. But the land is essentially Ri Raid in this sense that it cannot be alienated and when all trees have been cut away, any villager will be entitled to occupy it. The Khar Shiing Kur as a whole has true private lands near the village. If people of other clans want to cultivate

clothing, operate the large Khasi business establishments in Shillong, and provide all civic and religious leadership. Women care for children and for the home, do the marketing, and sell dried fish, betel nut, lime, fruits, and rice breads at markets. Other tasks can be performed by either sex. **Land tenure.** Land was formerly divided into sib land and public domain. Sib land was corporately held in perpetuity, and was inalienable except by the unanimous consent of all members of the sib. The public domain was subject to usufructuary right by anyone who kept the land regularly under habitation or cultivation, with a lapse of no more than three years. Most villages grew up on public domain, and then reckoned all land inhabited or under cultivation by a village member as village land. Forests were public, except for sacred groves possessed by villages or lineage groups, and everyone was free to gather branches for fuel. Wastelands and streams were also public. By now, most public domain and village land, together with its forest cover, has been pre-empted as private property and is being rented and sold as such. Sib lands *remain intact, unless* the sibs agree to rent, lease, or sell. [Cf. Cantlie 1934.]

462 294 443 622 423 [178].

KIN GROUPS. **Descent.** Descent is matrilineal, and the Khasi is a member exclusively of his own matrilineage from birth to death. Adoption, which is very rare, is only within the matrilineage. **Kin groups.** The maximal matrilineage is the sib; this is a named, widely dispersed, strictly exogamous, lineage group, which claims but cannot trace its origin from a single ancestress. Sibs used to meet as corporate groups from time to time. Some sibs are linked with others in large amorphous groups that are unnamed and are defined solely by exogamy. Such a group is composed of two or more sibs, the ancestresses of which are claimed to have been either real sisters or dear friends who out of affection declared that thenceforth their descendants would be as consanguineals. The origin and function of sib-linkage is now unknown, and today the members of a sib will often disagree on whether or not their sib is linked with another. • The minimal matrilineage is the local descent group, or *iing*. This is the largest kin group that normally rallies at life crises. It is said that the *iing* formerly spanned six generations; today, it encompasses only four. If an *iing* grows to more than four generations in a single village, it segments. New houses are located at some distance from the old and the *iing* soon forgets exactly how to trace genealogical connection, except for which segment descended from a youngest sister. The term *iing* may also be applied to an extended family, an elementary family, and a house. The elementary family is the basic domestic unit in Khasi society. In any village there are likely to be one or two households which stand as sole local representatives of the lineage of the female household head. Such a household is known as an

611 [597] 614 602 [59]

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

782 spirit of the dead, so that it may come in the capacity of a 'Ksuid', or demon, to cause pain and calamity to the family. This sacrifice is frequently repeated after a person's death, if his bones were deposited in a small repository; but if they are placed in a large one, the fear of his injuring the family is not so great, and the sacrifice is not so frequent, because 'la buh ka niam ka rukum', the religion and customs were observed regarding him."

Extract from the Rev. J. Pryse's Paper, p. 130.—"The reader is desired to observe that this form is always pronounced, when the person on pronouncing it is in the act of offering his thankofferings; hence it was thought necessary to give a few explanations of the movements of the speaker."

"*Thank Offering to Secure the Protection of the Goddess.*"

(The Khasia words are, "Ka jing-nguh pynskem ia ka blei"; the offering is made in order to secure the kind offices of the goddess in the future, rather than to acknowledge past kindness.)

"Attend, O Goddess, that thou mayest protect us all as a family,* that we may increase and prosper. O Goddess, we are now about to sacrifice a large cock, and a large horned goat, also a plaintain leaf, flour, baked rice, a heart, and a twig. Do thou, O Goddess, attend to us. I put up and cause to stand the offering for the purpose of appeasing thee, O Goddess.† O thou family-builder, I remove and drive away thirty demons, nine demons,‡ and Ka Tyrút Ka Smer,§ that I may prepare and set aright the intestines, that I may cut the throat of the cock, and sprinkle the blood upon the twig.‖ Away, thou Ka Tyrút ka Smer! I sweep away and remove thee, that I may open a clear road for the purpose of inquiring concerning the good and the evil. Thus it is proper that I should sacrifice a large horned goat. Attend thou, O Goddess, whilst I offer to thee a member and the backbone after I shall have laid it bare and made it ready.¶ Attend thou, whilst I observe and keep the rules and customs, and whilst I offer to thee a sacrifice in order that thou mayest give us

[601] * "All as a family", "barah shi kur", "ka kur", is generally used among the Khasis to signify all those who are related by blood.

† Whilst saying these words, the officer prepares the place, and causes the goat, etc., to stand by the place. (See Lev. xvi, 7.)

‡ The offerer, whilst saying this, throws some rice on the ground to pacify the evil spirits, and drive them away, lest they should desecrate the sacrifice and ceremonies. "Laipen ksuid kyndai ksuid"—here neither thirty nor nine should be regarded as the exact number, but both signify any number indefinitely great; much in like manner as the number one thousand was regarded by the Jews, and as that number is occasionally used in Scripture. The phrase, "kyndai ksuid", nine demons, seems to be an old phraseology, the exact meaning of which is not known at present; but "laipen ksuid", thirty demons, is the common phrase in use to signify an indefinitely great number—it means *all*.

§ The name of one of the most powerful and malignant demons.

‖ While speaking thus, the offerer kills the cock, and sprinkles the blood as described above.

¶ The offerer's hands are busily employed in preparing his sacrifice whilst he utters the above speech.

B. Chattopadhyay E-4, 5 (no date) 1941 A87 Khasi A87

[p. 3]

CHAPTER I

According to traditions preserved by the local people, the Iangblah clan were the first settlers in Mawphlang. The Lyngdohs were invited to come and settle as the Iangblahs wanted priests to perform proper worship for their village. Other clans came later and settled in the State. These old clans are known as Khadar Kur. Myntris are elected from the following four clans—Iangblah, Khar Shiing, Khar Hunai and Khar Sohlia. The above traditions of the origin of the settlement were furnished by the myntri U Subu Rai, his sister's husband U Alisson and others. The list of Khadar Kur furnished by the myntri is noted below :— 101 [124]

(1) Iangblah.	(2) Lyngdoh.	(3) Khar Shiing.
(4) Khar Hunai	(5) Khar Sohlia.	(6) Khar Phannap.
(7) Khar Kynnie.	(8) Khar Sahkhar.	(9) Marbaniang.
(10) Khar Narbi.	(11) Khar Mawphlang.	(12) Khar Syntiew.

The genealogy of myntri U Subu Rai, of myntri U Orong Singh and others are shown at the end of this chapter. In collecting kinship terms, three questions were asked of the informant : 125 601

(i). What is the relationship of B to the informant A (and of A to B). This is shown in the tables as the kinship term.

(ii). What the informant A called B (and conversely). This is shown in the tables as the term of address.

(iii). How the informant A referred to the relationship of B to C, another relative. This is shown as the term of reference.

Generally the terms for (i) and (iii) are the same. In a few instances a distinction was said to be made. Many people however do not observe such distinctions. In the list of kinship terms published by Rai Bahadur S. C. Roy, this distinction has not been made. While his list agrees with mine in many respects, there are important differences. He has noted certain identities in kinship terms, which I did not find, and which have not been noted also in the Census Report.

The kinship system of the Khasis has certain special features:

(a) There is a clear distinction drawn in the kinship terms, with regard to seniority and juniority in age between siblings. This distinction is also made in the generation above that of the speaker, with regard to the mother's sisters, and father's brothers and their spouses. It is also observed, with regard to the mother's brothers but not with regard to the father's sisters or the spouses, or their children. The distinction is however observed throughout in terms of address.

(b) A woman refers to her sister's children by the same term as a man to his brother's children; but a woman refers to her brother's children by a different term, which is applied also by her brother to her children.

(c) Certain kin are grouped together. The same term, for example is applied to the mother, step mother, the mother's sisters, and the wives of the brothers of the father. Similarly, the father, the step father, the father's brothers and the husbands of the mother's sisters are grouped together. In both cases, the actual father and mother are referred to by a term, to which adjectives denoting seniority and juniority are added for the other relatives. The mother's brother and the father's sister's husband have a common term. But the mother's brother is always distinguished by adding the adjective of age noting his position as elder or younger uncle. The father's sister's husband is not so distinguished. The sister of the father is clearly distinguished

B. Chattopadhyay 2-4, 5 (no date) 1941 AR7 Khasi AR7

from the wife of mother's brother by a term denoting relationship through the father. The mother's brother's wife was stated by my informants in Mawphlang not to be denoted by the term "Kha" or "Knia Kha" which was applied only to the father's sister. She was merely Knia. 601

(d) A man and his wife applied to the brothers and sisters of the spouse, with one exception the same terms (with a term added to qualify) of relationship as for own brothers and sisters. This practice is extended also to the children of these relatives. The exception occurs with regard to the term used by a man towards his sister's husband, and by the latter to him. It is a single special term, the distinction extending to the term of address. In this case, the qualifying term 'even' is dropped in address and no distinction is then made between a sister and the wife's sister, or a brother and the husband's brother.

In order to appreciate the significance of features of Khasi Kinship, it is necessary to note in brief, the rules of descent, inheritance, and succession among the Khasis. An excellent summary of these have been given by Gurdon. The rules of inheritance and land tenure have been further elucidated by Cantlie and others in the work already mentioned. I shall illustrate essential points in the next chapter with reference to the genealogies included in this paper, and also note certain additional details which were observed by me. 601 611

Abbreviations used in the kinship table are those employed in an earlier paper. They are noted below :—

F—father.	M—mother.	B—brother.
S—sister.	Z—son.	D—daughter.
H—husband.	W—wife.	C—child.
e—elder.	y—younger.	e—elder.
m.s.—man speaking.	w.s.—woman speaking.	

The prefixes U and Ka have not been noted in the case of most of the kinship terms as superfluous.

60/ In the genealogies Ka before a name denotes a woman, and U, a man. Hence no special symbols have been used to distinguish sex. Abbreviations used are :—

[128]

d.—dead.	u.c.—not [illegible].	u.k.—not known.
d.y.—died young.	unm.—unmarried.	u.l.—not [illegible].

Unless the village of birth is stated to be otherwise, it is Mawphlang.

removal of the bar on remarriage was also of the same kind elsewhere in the neighbouring States. Clearly, the idea of levirate or sororate is incompatible with this idea of the marriage bond continuing even after death and necessitating a ceremony to break it. It may also be noted that while the Khasis permit divorce somewhat easily, remarriage is not permitted of either party "within the family of the divorced husband or wife" (G). A Khasi cannot also marry two sisters, although he can marry irregularly, more than one woman and also the wife's sister after the decease of the wife. We can now discuss why a woman or a man refers to the brothers and sisters of the husband or wife by the kinship terms and by the spouse, qualified by a special term. When a man marries and goes to live in the house of his wife's mother, he comes in contact with unmarried sisters of the wife. But he knows that they are sexually to be avoided. He lives in the wife's mother's house only during the life time of his wife. A wife's sister is comparable to a Kur sister sexually, during this period.

But his economic relations and religious ties require that a distinction should be made between these "sisters" and the "Kur sisters." The qualifying term supplies this requirement. The woman, on the other hand, has no direct relations with her husband's brothers. She has however to keep in touch with the husband's female relatives. The bones of the husband go over to the mother's house and eventually to the clan ossuary. The husband is also a potential manager of the property of his female relatives. She has therefore to take note of the order in age of her husband's sisters. As her husband uses the terms for sisters for the sisters-in-law, it is quite natural for her to extend such usage to her husband's sisters. The brothers of the husband do not count at all so far as the woman is concerned, and she will not therefore have any special term for them. As the sisters are referred to as Para Kynsi and Hynnam Kynsi, so will the brothers of the husband be referred to by similar terms. The absence of any sexual privileges between the woman and her

[illegible] husband's brothers forms with such a terminology of kinship. [illegible] It has not however determined the terminology.

We have referred to an exception in the case of kinship terms used by a wife. The relation with his wife's brothers is quite different from that of a woman with the husband's sisters. The wife's brother is the manager of the wife's ancestral property; also the uncle has to be associated with important rites at birth and death of the children of the sister. Nevertheless, the husband has also his own position. The house that he sets up after marriage belongs to his wife as doubt; but he is the master there. As Gordon states "It is he who faces the dangers of the jungle and risks his life for wife and children. In his wife's clan he occupies a very high place, he is second to none but U Kni, the maternal uncle, while in his own family stands a father and a husband is nearer to his children and wife than U Kni. The Khasi saying is "U Kpa ulu lah ken ia, U Kni Uba tang ia ka lup ka ia" which may be translated freely as "The father bears the heat and burden of the day, the maternal uncle only comes when it is a question of life or death."

A man and his wife's brother represent the two aspects of the relationship which binds every man in Khasi society to his mother's house and to his wife's house.

Clearly, the two men, the sister's husband and the wife's brother, each have rights which are similar. Also they have close contact in many matters. Their relationship to each other is however distinct from that of brothers. Among the latter, authority depends on seniority. Between the S.H and the W.B, such a question does not arise. Each is in a position of authority, but in a different sphere. A special term is obviously

[p.28]

CHAPTER III

It is evident from the discussion in the previous chapter, that the children born in a house have to take note, as they grow up, of the seniority and juniority among the sisters of the mothers, and also of the brothers of the mother. They have however very little relation with the brothers of the father, and so have to explain why the latter are classed with the fathers. This point will be discussed here. Here we may note that the relative lack of importance of the father's sisters has resulted in her not receiving distinction by age in the table of Kinship terms; it is however followed in address. Similarly the wife of the mother's brother is also not distinguished by age.

It may however be questioned why such a distinction by age is extended to the husband of the mother's sister. As noted before, a Khasi does not set up a separate home until one or two children are born. The children who are born in the house of mother's mother, are looked after like mothers, not only by the progenitress but her sisters. While there would arise no question as to who is the actual mother, it would be normal for the children to call the mother and her sisters by the same term which would thus cover the women of that generation who live in that house. Each little child would look on mother's sister addressed as "mother" for its elements and comes. Hence, be as the young who tend to extend the term to the mother's sister from the mother. Under such circumstances, the simplest mode of distinction would be to apply the term "mother" to the actual relation, and add qualifying adjectives for the sisters of the mother. The Khasis use for this purpose, quite appropriately, terms meaning seniority and juniority for women previously stated. Reciprocally, a woman uses the same terms for

her children and sister's children, using an additional term for the latter, to make the distinction clear. The mother's brother's wife, and the father's sister live elsewhere, and cannot therefore share the same kinship term with the mother. The husbands of the mother's sisters are comparable to the father, as these unions are all outsiders who have married the women of the house. The actual father "U Kpa" is the husband of the actual mother "Ka Kmie" and is clearly distinguished. The others are the husbands of the "Kmie Sun" and "Kmie Nah." Hence they are given the labels of "Kpah Sun" and "Kpa Nah" or "Kpa Khynnah." They derive their kinship terms denoting "father" through their wives who are called mothers by the children—not through any sexual rights on the wife's sisters. Such sexual rights, as noted before, have no existence. Hodson is not justified in ascribing this identity of kinship terms to alleged marriage rules and sexual rights which were operative in a hypothetical earlier type of Khasi society.

The mother's brother is important to the Khasi child, and has a special name, Wa, with an adjective such as Rongbah to indicate his position among his brothers. His relation with his sister's children is different from that of the mother's sister's husbands. It is more or less formal and ceremonial. A similar relative, on the father's side of the family, is the father's sister, though her position is not so important. Nevertheless, the two relatives are comparable. The mother's brother is in charge of the management of the mother's ancestral property and helps in performing important social ceremonies for the group. The father's sister is the repository of the lores of the father's family; in her is vested the preservation of the family religious traditions. Both these relatives live in [illegible] and are, in a sense, of other households. Each of them was born in the natal house of one of the parents. They are therefore clearly distinguished from the father, the mother, the sisters of the mother and their husbands. But a common term, allowing

for difference in sex, is applied to both. The corresponding uncle and aunt by marriage are referred to by terms which make this clear. The husband of the father's sister is a "Ma" like the mother's brother and is also referred to as "Kni." But as his position by age is unimportant, the adjective of position is lacking in his case. Similarly the mother's brother's wife and the father's sister have a common term "Nia"; but the latter has her relationship through the father clearly indicated by the additional term "Kha" which refers to kinship through a male. The mother's brother's wife is, on the contrary, an aunt by marriage. The husband of the father's sister derives his term through his wife; and the wife of the mother's brother, through her husband. The identities M.B. = F.S.H. and M.B.W. = F.S. are therefore derived indirectly and are not original. Hodson's hypothesis that they represent actual identity of kin-ship in an earlier dual society therefore turns out to be unsound.

Reciprocally, a man refers to his sister's children by a term which is different from that for his own children. A woman also refers to her brother's children by this term which is different from that used for her own or her sister's children. As indicated, the M.B. as well as the F.S. are both on a parallel footing, and are practically labelled together, allowing for differences of sex.

We may say that there are, in Khasi society, two clearly recognized units. One of these is the house and household, where the men and women have been born. Inside this house group, the sisters have similar rights, actual as well as potential. As we have seen, on the death of one sister, another sister takes her place in continuing the female line, another sister takes her place in continuing the traditional religious entity of the group. The brothers again, among themselves, take one another's place in succession, in the matter of authority, and of management of the family property. The other unit is that of the woman, her husband and the children. We may refer to it as the unit set up by marriage.

among Khasis. Even the Garos whom he cites apparently as representing a type of social organization which the Khasis had earlier, do not encourage marriage with the father's sister's daughter. There is also no evidence that a Khasi ever married his mother's brother's widow. As I have shown earlier, the marriage prohibitions regarding cross-cousins can be explained on the basis of existing social and economic forces in Khasi society. The rule regarding exclusion of the F.B.Z.Z merely states that a woman cannot marry the son of her pure Kha. It is not a new prohibition.

We may now state the reasons why a Khasi calls his father's brothers by the same term as father, and the wives of these uncles, as mother, using of course a qualifying term for seniority and juniority. As noted before, a Khasi boy or girl calls his mother's sister's children brothers and sisters. He avoids them strictly in marriage. They are not like cross-cousins, marriageable under certain circumstances. Any sexual approach towards them would have led in the old days to exile and also excommunication. The children of the father's brother are similarly excluded from the category of marriageable persons. They are like brothers and sisters, and as such are addressed as Bah, Bay and Kong. They are referred to as Pure Kha. As Rivers observes, the term Pure conveys, when used as a prefix, the idea of having common rights or status. It also means, when used by itself, a younger brother or sister. The term Kha refers to relation (by birth) through a male. It is used for example in the combination Bah Kha, which denotes both relations of cross-cousins, the children of the mother's brother, as well as the father's sister. A Khasi man (and) woman has literally another set of parallel cousins who are sexually tabooed. Their parents are given terms denoting the father and mother, with certain modifications. As the children of the father's sisters are also sexually tabooed, it would be natural to extend to them the terms used for the parents of the other group of non-marriageable cousins.

The close connection between the social structure of the Khasis and their kinship terms, is evidenced also in the case of the other relations, by marriage. For a woman, the husband of the daughter is a son of another household, and is referred to by the term Pyrsa, used for persons of the generation below the speaker when they are of another house-unit. Her husband also follows the same rule. The son-in-law is not the son of one who is the potential successor of the speaker, in the natal house. But a distinction is necessary between the Pyrsa who is a nephew, and the son-in-law. This is furnished by the qualifying term Kurim. For the same reason, the son's wife also gets the kinship term Pyrsa Kurim. We may expect that the reciprocal kinship terms, for the mother-in-law at least, looking at the matter from the house-unit view, will be denoted by a general term of this type. This general term ought to be applicable, with qualifications, to the reciprocal woman relative of the children who are termed Pyrsa, *i.e.*, to the father's sister, and mother's brother's wife. But the terms ordinarily used across the relationship between the houses of these nephews and nieces and their aunts noted above. The terms Kaia or Nia, and Kia have come from the relationship between the houses. This aspect of these terms has been discussed in an earlier chapter. Obviously an expression like Kaia Kurim would not emphasise the fact that the mother-in-law was a woman of another household. The term Syngkon is however used to denote the mother's brother's wife alternatively, and we find that the term Syngkon Kurim is also used for a mother-in-law. Although the father's sister and the mother's brother's wife have certain common aspects, we note that only a woman related by marriage with a male relative of the *previous generation* is referred to by the term Syngkon. Thus the wife of the father's brother is occasionally referred to as Syngkon, apparently when she is not being thought of as the mother of a pure Kia. The father's sister is naturally not termed Syngkon. The usage is therefore comparable to the employment of the terms Pyrsa and

Pyrsa Kurim, for the reciprocal relations. Normally, however, the mother-in-law is referred to by a separate special term which does not stress this aspect of the relation between the two persons.

113

IV. THE PLACE OF THE KHASI IN THE WORLD.

By

David Roy

(51) The Khasi country lies in the hills of the province of Assam in North East India. Khasi clans are exogamous and matrilineal, and the Khasis speak a MonKhmer language.

(52) In speaking of the place of the Khasi in the world I intend to explain the Khasi's own view of his relation to other peoples of the world.*

(53) The Khasi is very conscious of his importance. He says a Khasi claims to be the centre of the world. The Khasi has acquired such a feeling of self-importance from his great confidence in himself; and this confidence he has derived from the position in which his relationship-terminology represents him as standing with respect to himself and the world around him. Or, rather, his relationship terms and language are an expression of his attitude and notions.

(60) The Khasi says—*Ka Kmain* (mother)

U Khun (son) — *Ka Kmain* (mother)

Which too—Ka mother

Himself (male) — His sister (female)

He calls this the family. Then he says—

Ka Kmain Kha (Father's mother)

U Epa Kha (Father, Father's brother) (male) — *Ka Pia Kha* Father Father's sister (female)

[114] The writer of this is certainly in himself a Khasi (Christian).

14:Roy 1-5 (no date) 1938 AR7 Khasi AR7

He calls this the world. So a Khasi places his family on one side :— 601

Ka Kmie	*U Khaw*	*Ka Kmie*
(Mother)	(Son)	(Mother)

which consists of his mother, himself, his sister, and, the world on the other side :—

Ka Kmie Kha	*U Kpa,*	*Ka Pia Kha*
(His father's mother)	*U Kpa Kha* (Father, brother)	(His father's sister)

But he places himself again between that family and that world, and claims again :—

Ka Pia Kha	*U Khaw Kha*	*Ka Bokha*
(Father's sister.)	(Father's son) (Himself)	(Father's sister's daughter)

Then he brings in nearer to himself and claims again :—

Ka Kmie Kha Ka	*u*	*Ka Pawa Kha*
(Father's mother)	(u Khaw Kha) (Himself, Father's son.)	(Father's brother's daughter.)

Thus in the family—he stands between the mother and his sister ;—and outside in the world—His father—stands between his (the father's) mother and his (the father's) sister.

Thus in the world the Khasi stands between his mother and his sister, and between his father's mother and father's sister. 602

This happens when on the death of his uncle he stands between, and on behalf of, his sister and mother; and, on the death of his father, he stands between, and on behalf of, his father's sister and his father's sister's daughter.

On the death of his father's younger or elder brother he stands between, and, on behalf of, his father's mother and his father's brother's daughter.

14:Ray 1-5 (no date) 1938 ART Khasi ART

human beings all over the four quarters of the globe (*shi eniah ka pyrshat*) with whom, in the world, he can give in marriage and take in marriage, shows the nature which is believed to be innate in the Khasi, and his supposed power of moulding the world. His nature is to grow and to resist, to extend and spread out. It is against his idea of life to remain narrow or limited and concentrated. He is not to be made small or made an orphan, it will not do for him and his idea of the world to 'ash ikhim khaw ka ka ki,' stay without kind and species, without child, without home. A couple would even seek to separate if there are no children of the union. His idea is, so to say, 'imperialistic,' to new and spread-out. As I wrote elsewhere, "A Khasi marries men and women of all races; to his Khasi parent the issue are all one and the same without any distinction of caste or creed or colour or possessions. The children are the 'khun kha' (khun = child, kha = born, i.e. children who are born through the union of a descendant of the parent with a descendant of another parent), and these children are unified into families and are assimilated, in the Khasi idea of life, while these groups of families are bound to their mother and are made to revolve on this matriarch as the pivot of their existence."

156
602
609
[illegible]
[596]
601

Thus the Khasi shows :—

One one side = mother

| Son = mother

which is, = mother

| the son of such a son = his kinswomen

On the other side she he shows = mother

| Son = mother

which is = Father's mother

| the son of whom his kinswomen

[illegible]

In their midst the Khasi places himself always as the son of the world, thus—

14: Roy 1-5 (no date) 1938 AR7 Khasi AR7

For the species to increase and continue he says, Here—

The mother to bear and give birth—	—	The son of others	The sent *ka nin kha* (father's sister)	Ia Ib

156
601
611

For the house to continue and the world to remain he says, Here—

The sent *ka nin kha* (father's sister)	—	The son *u khun kha* (son of brother of *ka nin kha*)	The cousin *ka hokha* (daughter of *ka nin kha*) father's sister)	Ib IIa

For the person (species) to crystalise, and the stairs (rysing) to remain he says, Here—

Father's mother (*ka kmie kha*) —	The son *u khun kha* (son of brother of *ka nin kha*, who is grandson of *ka kmie kha* (father's mother)	The cousin *ka pawa kha* (daughter of father's brother)	Ib IIIa

The Khasi knows the 'sang' (sacra, sacred, that which is forbidden as sacred). He has experimented and therefore he says *ka sang iap* (lit., that which is 'sacred' or forbidden or taboo unto death) in the case of those who committed incest in the same *jaid*, kind, species, that is, those of the *a* group. It is sacrilege. There is no greater punishment than for this sin,—a punishment so severe that the Khasi will not permit the bones of these transgressors to enter the family *saiw*. Similarly they regard as an act of sacrilege for children of brothers (*shi pawa kha*) to inter-marry. Thus the Khasi regards as 'sacred', that is, forbidden or tabooed, for those who are sprung of or connected through the same womb, and for those who are generated of and are suspended from or strung to one umbilical cord in origin, to marry. That is they regard as *sang* for the *a+b* man—woman group to marry the *b* son. [see Tables (1) & (2)].

654
662

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

the husband. Whichever side is *jem ka ruiang* 592
(*lit.* whose person is less strong, less able to resist the evil) will suffer death. The word *ruiang* means more than literally 'fortune.' The word *ruiang* goes with *rngiew* and the two are coupled together as *ka Rngiew ka Ruiang*. *Rngiew* is the person, the man's 'ama'. '*Ruiang*' is the encircling power produced by that person, hence *jem ka ruiang* means the power encircling the man's person becoming easy of being conquered or subdued. (*Jem* = easy, pliable.)

In a word, the Khasi's idea of himself is that he 156
stands in the middle of the world. We do not 601
find terms in the languages of peoples with the family system to express varieties of relationship to the extent that we have in the Khasi vocabulary. Some of the other languages content themselves with terms for father, mother, uncle, aunt, cousin. They have no words to differentiate the classificatory-descriptive system of terms showing relationship with mother, mother's elder and younger sisters (*mai*, *mai sem*, *mai nah*); father and his elder and younger brothers (*kpa*, *kpa sem*, *kap nah*) and father's brother's children (*para kha*), father's mother (*mei kha*), mother's mother (*mei rad*,) wife's brother (*kynam*), husband's brother (*kung*), and so on. We find in the Khasi sociology, departments of 156
social organization indicating the attitude towards 829
life which is peculiar to the Khasi. The terms are 601
not mere names but serve to show well-defined groups based on an idea of their special functions. As Dr. R. R. Marett says, "Exogamy, and everything 121

15: Nakane E-5 (1955-1956 1967 AR7 Khasi AR7

CHAPTER II

KINSHIP STRUCTURE AND ITS IMPLICATIONS IN VARIOUS FORMS OF MARRIAGE

I. KINSHIP TERMINOLOGY AS SELECTION OF SPOUSE

The Khasi social structure differs [illegible]ently from that of the Garo, and one of the important differentia[illegible] elements is revealed in their kinship terminology. The Khasi kinship terminology does not show the structural significance of the marriage rules except for the basic distinction between own matrilineal ki, *kur*, and non-matrilineal kin, *kha*; this distinction serves to enforce [illegible] exogamous rule. 601 [191]

All members of Ego's generation, including both maternal and paternal cousins, are classed as *pa-* (sibling), and those of Ego's child's generation as *khun*. In these two important generations, the generation principle is the basic pattern in terms of marriage. Cutting across this principle, distinctions of [illegible] (*ka* for female, *u* for male) and order of birth (old or first, young, youngest, sometimes middle is added) are to be found. For instance, *ka-para-kur* is mother's sister's daughter, *u-para-kha* is father's brother's (or sister's) son. Wife is *ka-lok*, and husband, *u-lok*. The youngest daughter is *ka-khun-khadduh*.[1]

Though the terminology of Ego's and child's generations follows the generation principle, the matrilineal structure is reflected in the following points apart from the distinction between *kur* and *kha*. 1) In the child's generation (*khun*), the matrilineal nephew and niece are termed *pyrsa* as well as *khun*, signifying the sociologically closest members of the child's generation. 2) *Kni* is the most important kinship term among the Khasi; it designates the head (and potential head) of the descent group, i.e. the mother's brother. The mother's mother's brother is also termed *kni*, just like among the Naga the [191]

1. For further instances, see U. R. Ehrenfels, [illegible]

15: Nakane E-5 (1955-1956) 1967 AR? Khasi AR?

601 [171] term *mama* for mother's brother designates as well mother's mother's brother. 3) Terms for mother's sister *(kmie)* and father's sister *(kia)* are different; and, needless to say, father's brother is called *kpa*, not *kki*. 4) Mother's mother *(mawad)* is differentiated from father's mother *(mukha)*, though the grandfathers on both sides are termed *pawad*.

582 601 [171] As regards cross-cousin marriage, which, as we have seen, was an essential part of Garo social structure, the Khasi have no institutional arrangements. The cross-cousin distinction is indeed found in the Khasi kinship terminology. Among those who are called *pawa* (sibling), an additional term is applied to cross-cousins (both matrilateral and patrilateral). They are called *bakha*. However, this additional cross-cousin term should not be considered as indicating a preference for cross-cousin marriage. This is structurally different from that of the Iroquois type discussed in terms of Garo kinship terminology, in which a preferred cross-cousin marriage is involved. The term *pawa* (sibling) is more often used for them than *bakha*.[1] Actually, among the Khasi there is no preference for cross-cousin marriage; indeed there are even indications to the contrary, in that marriage with the mother's brother's daughter is not allowed during the life-time of the maternal uncle. In the same way, marriage with the father's sister's daughter is not allowed during the life-time of the father.

[171]

582 In fact, the Khasi have numerous prohibitions of marriages between near kin on both paternal as well as maternal sides. The first and second parallel cousins are avoided. Those related to father within three generations are avoided. Within such a framework of marriage prohibitions, the use of a special additional term for cross-cousins is an indication of marriageable relations within the framework of prohibition. This should not be considered to indicate a marriageable member in an active sense or a preference for cross-cousin marriage.

However, such marriages do sometimes appear in my census, for example, a man may have married a woman who is the sister of his brother's wife, or of his sister's husband. Thus sometimes between two descent groups there are more than two exchanges of men. But such relations are temporary and would terminate after one or two generations. There is no structural continuity. My censuses of four Khasi villages do show some tendency to marriages between two specific *kur*, but I consider this to be largely accidental. When the choice of an individual is random, but one or two *kur* are larger than the others, it will naturally follow that there will be a high frequency

582 614

[171]

1. Such use of the dual terminology is also found among the Ruri and the Trobriand, (see the discussion, in pp. 154-155).

ring from the time it consists of an elementary family until it grows to a local descent group four generations deep. (Cf. Chattopadhyay 1961.) Kin terminology. The terms of address given below are also terms of reference except where otherwise indicated, and are uniform for male and female speakers. They were collected in an upland Khasi village near Shillong (cf. Chowdhri 1961 for some regional variants).

MARRIAGE AND FAMILY. Made, according to the traditional courting pattern, a group of young male relatives and female male aghly visits to the house of some young girl in another village, appearing her through hagiro while she and her parents appraised them, and staying the night to avoid the dark walk home. Marriage was according to the wishes of the parents after negotiation by a go-between from the boy's side. Girls might be 15 and boys 17 years of age. Girls have now acquired freedom of movement through attending school, however. Premarital sexual play is common, and young people choose their own spouses when the girl is about 18 and the boy 21. The most common mode of marriage is elopement for Christians and non-Christians alike but some Christians marry in church and some Khasis still marry according to the traditional ceremony or some variation on it. There are no preferred or prescribed marriage types, nor is there a bride price or dowry. Form. Monogamy is the ideal for all. Extension of incest taboos. Sibs are exogamous. Other prohibited marriage partners are real and classificatory FaSi and FaSi FaBrCh, FaSiSo, and FaSiSoSo. The MoBrSi is also prohibited. Any

Bibliography

I. Introductory Remarks

Professor [illegible] (Calcutta University) published in [illegible] an analysis of Khasi kinship terms[1] based on eight genealogies which he collected in the Nongstoin area, about seven miles south-west of Shillong.[2] He discussed in this paper a previous publication by Professor Hutton[3] where special features of certain Khasi kinship terms are held to prove the pre-existence of a dual system in a one-time Khasi social order and he quotes also the late Rai Bahadur S. C. Roy's work on Khasi kinship[4] and lists of Eastern relationship terms, contained in "Census of India Reports"[5] and Khasi terms in U Nonna Sawait's "Khasi-English Dictionary"[6], P. R. T. Gurdon's monograph on the Khasi[7] and in Sir Roper Lethbridge's "Notes on Khasi Law"[8]. Discussing these previously published papers, Chattopadhyay arrives at the conclusion that Hutton's hypothesis of a dual organisation in a hypothetical former Khasi society was not justified[9].

The present paper, however, does not enter into discussion of this

Ai: Khwadala E-4,5 (1950) 1951 AR? Khasi AR?

question and mind has been compiled without knowledge of Professor Carrithers's work, and believe he very kindly sent a private copy of this work, which had not been available to me previously.

The present paper offers data on the following subjects:

1. Khasi kinship terms from the Khwdai Khasi plateau-area in the Khynriam State, about 20 to 30 miles south-east of Shillong, which are in some minor details different from the Mawphlang data, collected by Carrithers, south-west of Shillong;
2. Comparative data from the War-Khasi;
3. from the plateau-area of Jowai in the Jaintia* Hills, and
4. from the War-Jaintia;
5. Aspects of the Khasi kinship terms, with special reference to the matrilineal order of society, and to the respective position of women and men there, especially the particular consideration which the biological relationship through the father receives in kinship terminology, in spite of the emphasis on the matrilineal structure in Khasi society (comp. term No. 1 of the list and its discussion in para. 16 of the present paper, on p. 406).

The data were collected in field researches to which I was enabled by two Research Grants for comparative studies in matrilineal civilizations of India, given by the Viking Fund Inc. (now: Wenner-Gren Foundation for Anthropological Research) in New York, during the periods 1949-50 and 1951-52. My gratitude to the foundation for enabling me to carry out these field researches, as well as to the University of Madras, for granting me leave for the same purpose, is here once more recorded.

My research programme was based on the first tentative working hypotheses, laid down in my book "Mother-right in India"[1], but includes also various other aspects of study which have not been pre-planned, or even considered there[2], as for instance also the present comparative study of kinship terms in areas of four Khasi dialects and their special significance to the Khasi matrilineal social system. The material was collected during a five weeks house-to-house study in the recently founded Plateau Khasi village Raw Syn Jri, during April and May 1950. This village consisted mostly of houses, owned by Khasi elder sisters and inhabited by them, with their families, after they had left the ancestral home in the main village Khawang, about one mile across the valley on the western side of the new settlement. The ancestral family houses there were in the possession of either the mother, or, if she was no more alive, the youngest daughter of the family, the *ka khon khadduh*[3].

* Jaintia, (Pnar or "Syntong") are the Khasi speaking eastern neighbours of the Khasi proper. As among the Khasi, so also among Jaintia the people in the cool plateau highlands are in many ways different from those who settled in the lowland tropical rainforests of the southern slopes, now situated just north of the East Pakistan frontier — the so-called War-country, where economy is mainly based on jum-leaf gardening.

21: Khrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

my informants at Pada), in the year 1931, is said to have begun the cultivation of yam (*shrie*) and millets (*kwe*) in the then uncultivated slopes. He and his people used to be, on this account, ridiculed as monkeys (*shrieh*). The Nonglamin clan took later to pan-leaf-, and arecanut-cultivation and became one of the richest landowners of the Wár-country. Others followed and imitated them. This clan (*kur*) is now residing at Nongtalang, about ten miles east of Pada in the Wár-Jaintia slopes.

This possibility of a comparatively recent origin of the now economically independent Wár-groups among the Khasi speaking peoples is of importance to the question of some different terms in kinship terminology which the following lists will show.

Comments on other features in the relationship terminology, bearing on sociological or historical problems of either among the four Khasi speaking groups under discussion, are being hinted at in the text of the lists itself and further discussed in Part Three of the present paper, following the lists of kinship terms.

B. The Use of the Kinship Terms

(a is the definite article masc. gen.; ka — the definite article fem. gen. Both are prefixed to proper nouns and then assume the meaning and function of the English Mr. and Mrs. (or Miss) respectively.)

No.	English	Palawan Kinsmen	Wife Kinsmen	Husband Kinsmen	Wife Relatives
1.	To give birth or beget:	Sha (masc.) (pag-Sha)	Sha	Sha	Sha
1.a.	To give birth to a girl:	Sha kyaiber	Sha kyaiber	Sha kyaiber	Sha kyaiber (kyaiber)
1.b.	To give birth to a boy:	Sha shyawey	Sha shyawey	Sha shyawey	Sha kyaw (yawey)
1.c.	To give birth twice:	Sha syawji	Sha kyawji	Sha syawji (or: swaji)	Sha kaji
2.	Child:	Shyawit (with a and ka respectively)	Shaw (or: Shawkaw) (a and ka)	Shya ka (with a and ka)	Kwaka (with a and ka)
2.a.	Childhood:	Ka yaphaw Shawkaw	Ka yaphaw Shawkaw	Ka yaphyawit	Ka kwakaw
3.	Puberty of a girl or boy:	ahing sawin (or: Shyawit)	pra sawin	ahing khyiket	Shyawey dawa
3.a.	Marriageable girl:	Ka sawin (or: Shyawit)	Ka sawin (or: Shyawit)	Ka khyiket	Ka dawa
3.b.	Marriageable man:	a sawin (or: Shyawit)	a sawin (or: Shyawit)	a Shyaw	a dawa
4.	Women:	Ka (or: Ka kyaiber)	Ka (or: Ka kyaiber)	Ka kyaiber	Kaka (kyaiber-wayiber)
5.	Man:	a (or: a shyawit)	a (or: a shyawit)	a (or: a shyawey)	a (or: a kyaw-wayiber)
6.	Article of respect: a (masc.) or ka (fem.)	Ka both mean in a term of distinction: used as honorific prefix. Not has a contemptuous meaning in the plurals shown.			
	Parents:

III. Explanations

1. General

Most of my informants were illiterate. The spelling of the terms was checked and corrected by my English-speaking and writing Khasi- and Pnar- friends, mentioned in para one, to whom thanks are being here once more expressed. All responsibility for spelling mistakes, however, which may have slipped into this list but of course to be borne by me.

Blanks (—) or question marks (?) in one of the columns do not necessarily mean that there is no word used, by the respective group, for the particular term. They more often indicate that my informants did not use, or know, the particular term, or that I failed to enquire about it in a manner sufficiently clear to my informants. This is particularly true of general terms, partly or fully corresponding to English general terms, such as parents or grand-parents, or the terms No. 9(a) and 8, 11, 15(a), 19-20, and 26, which were partly explained to me, by Khasi friends in Shillong, where I stayed some time after completion of field-work during the rainy season. Hence I could no more return for verification to the little accessible War-villages on the steep southern slopes. Although I am planning to utilize a future opportunity for such checking up, I am yet publishing the present results in the hope that they may thus become accessible to field-workers among other S. E.-Asiatic, and especially Austro-Asiatic speaking peoples.

All terms which are equal for both sexes (cf. Nos. 10, 11, 18, 19, etc.) are used with he and a respectively. Those sex-determining prepaid articles, as also the honorific i are specially mentioned in the list, only if this is essential for the understanding of the respective terms as in Nos. 3-5, 7, 8, or 19.

2. Special

Term No. 1 — to give birth or beget (kim) signifies also relatives on the paternal side as in *kaw kim* (paternal cousin No. 5(c)), in contradistinction to *kaw kur*, 5A, (b) — cousin of the clan), i. e. maternal cousin, since the clan is a matrilineal unit. This usage of the word *kim* appears also significantly in the terms 15(a), 17, 19(A, B), 20, 25, 28 and, as an integral part of the Khasi kinship terminology, renders it highly improbable that the Khasi matrilineal system could have originated in ignorance of the biological function of the father. It is a significant feature in the matrilineal social system.

The term 1(e) 2(b) refer to unmarried but biologically marriageable youths. It will be noted that there are (and were in 1950) no indications of puberty-rites for either girls or boys. There is also no child-marriage among Khasi. The use of special terms for mature, unmarried youths is therefore significant.

Term 6 — i as honorific article, is at the same time indicative of diminution [*], which is remarkable for two reasons: (firstly) the diminution is used for the oldest and most respected family members, like the diminution

[*] Gustav Geiger (1889), p. 40.

of father in Rimmon (for the *iaw*, etc.), (usually) the youngest, not the oldest, daughter performs the family rites and inherits the family property*. Even in cases where there is no woman to inherit, the youngest, not the oldest son inherits*. Among the conservatively matriliineal Pnar (Jaintia) the term of diminution *i*, however, carries at times a somewhat contemptuous meaning, though the minority is strongly in favor also among them. The underlined position of this honorific term of diminution is thus significant (comp. term 9/e among Pnar and infra.)

Term 7 — *mother* (*i mai*) — The prefix *i* used among Khasi and War Khasi signifies particular reverence (supra: term 4). The classificatory character of the term has been discussed by Gurdonmawrat*.

Term 8/*i* — *kyi* for all younger siblings, cousins and even other young kin does not indicate the consideration which the terms 9/*i* — *kong* for elder sisters and female cousins, or 9/e — *kai* for their male equivalents indicate. The term *nai* (9/e among Pnar) stands here, as generally, for elder and implies a honorific meaning (comp. term 4 supra and term 11/e infra).

Terms 10/e and 8 show that husband and wife address each other by equal terms and do in no way indicate anything like an inferior position of either wives or husbands of which I did also not find any indications otherwise. It may here be mentioned that property rights even in newly established estates, vest in women and are inherited by women, — not generally men.

Term 11/*d* — *ka Khon Khadduh* — the youngest daughter whose important position in Khasi religious ritual, social organization and inheritance has already been referred to sub term 4 and depicted in detail elsewhere*. The affectionate character of this term finds vivid expression in the abbreviation *ka dah*, which I heard from sisters and the father of a youngest daughter.

Term 11/e — *mai nai* (mother's elder sister). The word *nai* (elder) here has a definitely honorific character, although the *mai khynnah* — the mother's younger sister (term 11/f) may be the heir of Epi's ancestral property. This constitution corresponds to the peculiar significance of terms 4, 9/d and especially 11/d (supra).

Terms 13, 14, 15/a, 16, 16/a, 19/b, and the terms for cousins 19, 20, 21/a, 21/b, 22 show, like term 7 — *mother* (supra), classificatory character. The restriction on cross-cousin marriage is of different nature, according as to whether they belong to different households, or not, as has been discussed by Gurdonmawrat*.

Term 16/a — *ka* (mother's brother's wife) is basically the same as term 15 — *ka kha* (father's sister)* though the latter is qualified by the additional term *kha* (begetting, birth) which signifies parental relationship (see: infra No. 1).

* Carrow (1936), p. 55.
* Gurdonmawrat (1933), pp. 55, seq.
* Gordon (1934), pp. 60, seq. and Carrow (1936), pp. 51, seq.
* Gurdonmawrat (1933), pp. 55, seq.
* In small measure by Gurdonmawrat (1933), p. 57.

Terms [illegible] and [illegible] — [illegible] for and [illegible] the former for all cousins and half-siblings on the mother's and the latter for those on the father's side, show the consciousness of the matrilineal clan-affinity and the patrilineal biological relationship through their classificatory substitutes, which is also true of

Terms [illegible], [illegible] and [illegible] — the father are cross-cousins.

Term [illegible] shows special consideration for the elder paternal male cousin of the first degree, who is addressed as fak while the elder maternal male cousin of the first degree is addressed as fang, like the elder female cousins on both sides.

Terms [illegible], [illegible], [illegible] — [illegible] for grandchildren would appear to mean [illegible]'s children. It has, however, been pointed out to me, by Khasi friends, that the Khasi word for dog is [illegible] not [illegible]. The Pnar (Jaintia) pronunciation is [illegible] for grandchildren, and the occasionally occurring designation of great-grandchildren as "rara children" (term [illegible]) and of great-great-grandchildren as "rara children" (term [illegible]), however, would appear rather to suggest the derivation of [illegible] — fag, than from a meaningless separate root.

Term [illegible] — [illegible] (= rara children) for great-grandchildren is used among Pnar-speaking Khasi families. [illegible] considers with [illegible], [illegible] and [illegible] the possibility that the name of the [illegible] has been derived from rara[illegible]. This is a hill tribe, speaking a language with some similarity to the Mon-Khmer group[illegible] (to which also the Khasi language belongs). The [illegible] are living not very far from the possible homeland of the Khasi around the region of S. China, S. South and Indo-China. If a parallel should have to be assumed, the two complementary Khasi terms No. [illegible] (dogs children) and [illegible] (rara children) may appear to be formed on the basis of analogy with the term "rara children" as tribal self-designation. Another explanation, however, of this unusual kinship-term which was given to me by a Khasi friend, contended that each generation, seen from the ancestral parent's point of view, is as numerous as the young of the respective species of animals.

Term [illegible] — [illegible] (rara children) [illegible] — see — term [illegible], [illegible]

Term [illegible] — [illegible] — [illegible] fag as a humorific term for the maternal uncle and the husbands of the elder sisters and elder female cousins on the maternal side, illustrates the great respect shown to male relatives on the mother's side by adding the reverence prepositions [illegible] to the word fag, which generally signifies elder female maternal relatives, but in this case, their husbands (today, term [illegible]). This usage of the term is consistent of the Khasiens recognition preferment for male maternal ancestors, instead of the mothers, grandmothers, etc. It also tallies with my observations, otherwise obtained[illegible]

[illegible] [illegible], pp. [illegible]

[illegible] [illegible], p. [illegible], enough to denote the surname of the [illegible] [illegible] [illegible] [illegible]

[illegible] [illegible], p. [illegible] [illegible] [illegible], pp. [illegible], [illegible] [illegible], pp. [illegible], [illegible], [illegible]

namely that such members of a matrilineal clan origin, among Khasi as among other matrilineal groups in India, a position which, far from unusable, is a very high one in itself and doubly hurtful by the respect which to the same male family member is being shown (a) in his capacity as the father of his children in his wife's clan (comp. term 8 of the list), and (b) in that of the maternal uncle (comp. terms 10, 10a, 10b and 9b and 9b).

The terms 10b, e.g.6, have classificatory character.

The term 10c — *u dong* for the husband's elder sister's husband is one of the exceptions of the rule that *dong* generally signifies an honoured male female relative too, so in this case, also her husband (comp. term 9).

Term 10d *u jie* (father) in its usage among Pnar (Jaintia), also for stepfather is significant. A Pnar child has no legal clan-relationship with his/her biological father, who belongs to another (matrilineal) clan than the child and mother. Yet the honorific term *jie* is, among Pnar, also applied to a stepfather, although neither legal, nor biological but merely sociological relationship via the mother, exists between stepfather and child. The use of the word *jie* thus seems to emphasize both, firstly the integration of the matrilineal family structure, by making an unrelated stepfather to be looked upon as father, owing to his relationship with Ego's mother and, secondly the important sociological and psychological position of the father in this matrilineal family structure which appears to go back to an old tradition among the Pnar.

Term 11 — *pam* 'von Ium'* (Jaintia: 11b) which are characteristically termed *pam* (Brothers), although they are different in many respects, from the Khasi, yet considered as definitely more related than all other neighbours, grouped under the.

Term 12 — *dilter* (photograph)*, — a term which varies in emotional content from contempt, pun and simple to an attitude, somewhat parallel to what ordinary English usage would generally associate with the expression 'mentaccid'. Marriages of Khasi girls and boys with *dilter* do occur, though infinitely more than marriages of (especially educated) Khasi girls with (educated) *pam* 'von Ium, Tryaiden, Garhia or Chinese boys. One of the reasons which is usually being given for this preference for non-Indians is by no means colour-prejudice, but the taboo on other half or gods which must *dilter* may* (Jaintia, Khasia or Syiemlieh, respectively) observe; a taboo which they generally extend to their Khasi wives, thus preventing them from enjoying her favourite Khasi national dishes. Another more psychological reason is the overbearing treatment of wives, which is generally ascribed to *dilter* boy, more over than to *dilter* G*. It is in this connection

significant that the reason, given for the comparatively frequent marriages of Khasi girls with Chinese boys is not the greater physical resemblance which no doubt exists between the average Khasi and the average Chinese (Mongol) as compared to the average non-Chinese Other (Indians, Europeans, Africans, Americans and others) but the belief that Chinese husbands are less domineering in their attitudes towards their wives, than are other Others.

her children and sister's children, using an additional term for the latter, to make the distinction clear. The mother's brother's wife, and the father's sister live elsewhere, and cannot therefore share the same kinship term with the mother. The husbands of the mother's sisters are comparable to the father, as these males are all outsiders who have married the women of the house. The actual father "U Kpa" is the husband of the actual mother "Ka Kmie" and is clearly distinguished. The others are the husbands of the "Kmie San" and "Kmie Nah." Hence they are given the labels of "Kpah San" and "Kpa Nah" or "Kpa Khynnah." They derive their kinship terms denoting "father" through their wives who are called mothers by the children—not through any sexual rights on the wife's sisters. Such sexual rights, as noted before, have no existence. Hodson is not justified in ascribing this identity of kinship terms to alleged marriage rules and sexual rights which were operative in a hypothetical earlier type of Khasi society.

The mother's brother is important to the Khasi child, and has a special name, Ma, with an adjective such as Rangbah to indicate his position among his brothers. His relation with his sister's children is different from that of the mother's sister's husbands. It is more or less formal and ceremonial. A similar relative, on the father's side of the family, is the father's sister, though her position is not so important. Nevertheless, the two relatives are comparable. The mother's brother is in charge of the management of the mother's ancestral property and helps in performing important social ceremonies for the group. The father's sister is the repository of the bones of the father's family; in her is vested the preservation of the family religious traditions. Both these relatives live in houses separate from those of the nephews and nieces concerned and are, in a sense, of other households. Each of them was born in the natal house of one of the parents. They are therefore clearly distinguished from the father, the mother, the sisters of the mother and their husbands. But a common term, allowing

Referring to the first type, we may say that the second type results from the men of the house going out to marry women of other houses. As the men settle down in the wife's mother's house and later on set up a separate house on her land, the continuity of tradition in the house of birth is kept up by the women who remain behind.

It would however be a mistake to suppose that the bond between the members born in a house is severed on marriage. We have noted before that the bones of a dead man return eventually to his mother's house, for final deposition in the clan cemetery, or at least that of the extended household. The bond between the mother's brother and sister's children has also been noted as well as the authority exercised by the former over the extended family.

Further links between a man and his mother's Kur will appear from a study of the rules of inheritance and land tenure with regard to men. Any property that a man acquires before marriage belongs to his mother's house. Myatri U Sohn Rai, for example, earned money before his marriage, and he purchased some land with this amount, in a village called Mawbah. It will go to his sisters and their heirs on his death. The earnings of a man after marriage, and after he has settled down in his wife's mother's house (or wife's house), among Khasis proper, generally go to the wife and daughters on death. But any gifts made by the parents at marriage have to be returned on death. Similarly, if a man has earned money after marriage, independently of his wife's capital, a part can be claimed on death by the man's mother's group.

Again, if a man returns to his mother's village after marriage, he can exercise his rights to cultivate the common land there. Every village community has its common land known as Ri Raid. As David Roy states (CN), "people can occupy a raid land where they build their houses and cultivate. For cultivation purposes land not more than can be cultivated is taken. The occupant can sell his house and the site and the garden of

his house or paddy field or grove; but the sale does not extend to anything more than his right of occupancy.....Any site, garden or plain of cultivation if abandoned, can be taken by another."

A son of a house of the village, of which the Kur is of the ancient settlers or has been given similar privileges, has the right of building a house, and of cultivating land in the Ri Raid. Reference has been made to the case practice whereby a man brings his wife from her mother's house to his own village. In such a case he may set up a separate house on the community land, and cultivate some of it, to maintain his wife and children. The property will pass, on his death, to his daughters as usual. It will not go to his mother or sister.

(a) The man U Hortiluk married twice, but did not settle down with his wife on either occasion. He built a house in Mawphlang which is his mother's ancestral village and brought each wife there. Both of them were divorced in turn and have left. If any of his wives had lived with him the house would have gone to his daughters. Now, however, the heiress is Ka Jrem, the daughter of a sister. [Genealogy [illegible]].

(b) The woman Ka Lakimon is of the old Lyngdoh clan of Mawphlang. When U Lyman married her, he set up a house in Mawphlang and cultivated land. But on his death, the woman went away to Shillong with her children, about 10-15 years ago, selling the house and abandoning the jhum land. The son U Bellester has recently come to Mawphlang and is working in U Subu Rai's house. If he settles down, *i.e.*, marries and wants to set up a house, he can do so on the Ri Raid. (Genealogy IV).

(c) The foundress of the Khar Dumpep clan was a woman of the village Dumpep, and of clan Khar Dobling. She had two other sisters. One of the three sisters went to Mylliem, and another came to Mawphlang while the third remained at Dumpep as Ka Khadduh. The girl who went to Mylliem founded the Khar Sohnob Kur and the girl who came to Mawphlang founded

Khar Dumpep. These three clans—Khar Dohling, Khar Dumpep and Khar Sohnah colour interesting on account of their common ancestry. U Kleson, the sister's husband of U Sohn Rai is of Khar Dumpep clan and furnished me with the above details. He stated that his ancestress married a man of the old settler clans of Mawphlang and came to her husband's village. This man, being of the Khadar Kur, could build a house and cultivate land from the community holding. The property thus acquired passed to the daughters; and gradually the clan Khar Dumpep grew more numerous, and acquired rights in the Ri Raid like an old clan. [Genealogy [illegible]].

(d) The family of the first wife of U Gongsing furnishes another illustration. The woman Ka Li came with her widowed mother from Cherra. The father had been a Syiemlieh from Jowai. The girl has been married by U Bahon, who is a member of one of the old settler clans. He has built a house for his family and made an excellent potato garden out of the common land for the maintenance of his wife and children. They will inherit it from him according to the usual Khasi mode. [Genealogy [illegible]].

[illegible] (e) U Roberts who is a Syiemlieh of Jowai, and a Christian by religion (Genealogy V) came to Mawphlang in 1920-21 and after a couple of years married a non-Christian Khasi girl by Khasi rites thereby losing his membership of the church. He cultivated Ri Raid land when he stayed with his wife's mother Ka Shami [Genealogy V]. This woman is of Khar Sohno clan. One of her ancestresses, came to Mawphlang only a few generations ago, and married a man of the old clans. Her descendants have thereby obtained the privilege of cultivating Ri Raid. U Roberts has divorced his wife and no longer possesses this right. He now works as a tailor in the village, and lives with a friend near the bazaar.

6.14 (f) Gurdon has suggested that the large number of clans having Khar as the first part of the name of the Kur have originated from ancestresses who were carried off from the plains.

[p. 33]

CHAPTER IV

The Khasi marriage prohibitions may now be discussed in some detail. The rules regarding levirate and sororate have already been noted. The Khasi is also exogamous with regard to his Kur. This bar extends to clans derived from the same century. A Khasi cannot also marry his father's brother's daughter, or his father's father's brother's daughter. He cannot marry his mother's brother's daughter as long as this uncle is alive but may do so after the death of this relative. He cannot also marry his father's sister's daughter as long as the father is alive but may marry her after the death of his father. Gordon remarks that even then "such unions are looked upon with disfavour by Khasis." In the War country, such marriages are totally prohibited."

It has been noted in the previous chapter, that the basic unit of Khasi society is the house where the children are born and where the women stay all their lives and with which the men also are connected intimately even when they go elsewhere on marriage. It has also been observed that the authority is vested entirely in the men. The women have various rights not found in many patriloral groups; but it would be a mistake to underestimate the position of the men in the house. The father is the head of his small family—the simple family consisting of himself, his wife and the children. He is also the person in authority over his sisters' households in matters affecting the extended family as opposed to the simple family. Although his own children, and the children born in his natal house are distinguished on account of their social and economic differentiation, nevertheless, they are, to a certain extent, both like children to

him. His own brothers again, are to him his ancestors in the permanent rights, which are linked with the house of birth. Their bones all return to the common memory of ancestral home. Apparently, this close association of the brothers with the house of birth is responsible for the rule that children of brothers cannot marry. If we formulate the prohibitions from the standpoint of the women, we can get a clear idea of their significance.

A Khasi woman cannot marry her father's brother's son; nor even the son of this cousin. Again, a Khasi woman cannot marry her father's sister's son during the lifetime of her father; but may do so after his death. As we know, the father's death and return of the bones severs the link of the children and their mother with the father's house of birth. The women who safeguard and maintain the Khasi religious traditions, will thereafter raise no objection to the marriage of a woman of their house with the father's sister's son, who is now no longer closely related and is a man of another house merely. But the case is different with the other cross-cousin. A woman cannot marry her mother's brother's son, even after the death of that uncle, without incurring odium. In the War country, such a marriage is not permissible even after the uncle's death. We know that the relation with the mother's brother is not severed either at marriage or at death. The links are maintained even after death. His bones come back and rest in the memory of the house and the clan of his women relatives. The decease of this uncle does not therefore place his son in the category of a person with whom the formerly existing bond has been broken. We may sum up the distinction as follows :—

In the case of the father's sister's son, the death of the father breaks the link between a woman and her cousin in the other house, as neither of the parents of that male cousin were born in the house or extended family of the woman. In the case of the mother's brother's son, the father of that cousin is of the woman's own house and one with whom the bond endures even

among Khasis. Even the Garos whom he cites apparently as representing a type of social organization which the Khasis had earlier, do not encourage marriage with the father's sister's daughter. There is also no evidence that a Khasi ever married his mother's brother's widow. As I have shown earlier, the marriage prohibitions regarding cross-cousins can be explained on the basis of existing social and economic forces in Khasi society. The rule regarding exclusion of the F.B.S.S. merely states that a woman cannot marry the son of her pure Kha. It is not a new prohibition.

We may now state the reason why a Khasi calls his father's brothers by the same term as father, and the wives of these males, as mother, being of course a qualifying term for seniority and juniority. As noted before, a Khasi boy or girl calls his mother's sister's children brothers and sisters. He avoids them strictly in marriage. They are not like cross-cousins, marriageable under certain circumstances. Any sexual approach towards them would have led in the old days to exile and also excommunication. The children of the father's brother are similarly excluded from a category of marriageable persons. They are like brothers and sisters, and as such are addressed as Doh, Bay and Kong. They are referred to as Pure Kha. As Hutton observes, the term Pure conveys, when used as a prefix, the idea of having common rights or status. It also means, when used by itself, a younger brother or sister. The term Kha refers to relation (by birth) through a male. It is used for example in the combination Doh Kha, which denotes both varieties of cross-cousins, the children of the mother's brother, as well as the father's sister. A Khasi man (and) woman has clearly neither set of parallel cousins who are sexually tabooed. Their parents are given terms denoting the father and mother, with certain modifications. As the children of the father's brothers are also sexually tabooed, it would be natural to extend to them the terms used for the parents of the other group of non-marriageable cousins.

The close connection between the social structure of the Khasis and their kinship terms, is evidenced also in the case of the other relatives, by marriage. For a woman, the husband of the daughter is a son of another household, and is referred to by the term Pyrsa, used for persons of the generation below the speaker when they are of another house-unit. Her husband also follows the same rule. The son-in-law is not the son of one who is the potential successor of the speaker, in the social house. But a distinction is necessary between the Pyrsa who is a nephew, and the son-in-law. This is furnished by the qualifying term Kwrim. For the same reason, the son's wife also gets the kinship term Pyrsa Kwrim. We may expect that the reciprocal kinship term, for the mother-in-law at least, looking at the matter from the house-unit view, will be denoted by a general term of this type. This general term ought to be applicable, with qualifications, to the reciprocal woman relative of the children who are termed Pyrsa, *i.e.*, to the father's sister and mother's brother's wife. But the terms ordinarily used ignore the relationship between the houses of these nephews and nieces and their aunts noted above. The terms Kwin or Nin, and Kha have come from the relationship between the houses. This aspect of these terms has been discussed in an earlier chapter. Obviously an expression like Kwin Kwrim would not emphasise the fact that the mother-in-law was a woman of another household. The term Syngkon is however used to denote the mother's brother's wife alternatively, and we find that the term Syngkon Kwrim is also used for a mother-in-law. Although the father's sister and the mother's brother's wife have certain common aspects, we note that only a woman related by marriage with a male relative of the previous generation is referred to by the term Syngkon. Thus the wife of the father's brother is occasionally referred to as Syngkon, apparently when she is not being thought of as the mother of a pure Kha. The father's sister is naturally not termed Syngkon. The usage is therefore comparable to the employment of the terms Pyrsa and

Tyna Kawa, for the reciprocal relations. Normally, however, the mother-in-law is referred to by a separate special term which does not stress this aspect of the relation between the two persons.

[illegible]

[illegible]

creation of transmission of money (*khinshai*) during the period, compulsory social participation in marriage, household worship, and funeral ritual, and the pride for the privilege in succession to *sim-ukip* (chieftain ship) hold together the inner structure of the society in fulfilling its function.

[illegible]

Family (*Ka-ing*)—The functions of family centre round the :

1. performance of basic religious rites,
2. management and inheritance of family property,
3. maintenance of social relations with the kin of *ka-k'juk* and *ka-ban*,
4. protection of familial kin.

[illegible]

From the above discussions it may be inferred that the social groupings of the Khasis function in different dimensions and make the individuals aware of their duties, and obligations towards each other. In the process of socialisation and enculturation of the individual they learn that the individuals, the different social groups and the community at large are inseparable.

Even from infancy a boy is infused with the idea that family comes first in regard, sub-clan second, and clan third. The kin of the family are primary relatives, and those of the sub-clan and the clan are secondary and tertiary respectively. One bow and three arrows given by a father to his son in his naming ceremony (*jarkhan*) symbolise their relationships with the three social groups. With the first arrow man has to fight for *shi-ing* (members of the same family) and *shi-k'juk* (members of the same sub-clan), with the second for his *shi-ban* and with the third for the state.

He sails into the world. He a Khasi places his family on one side :— 601

Ka Ewin	*U Khasi*	*Ka Ewin*
(Mother)	(Son)	(Mother)

which consists of his mother, himself, his sister, and, the world on the other side :—

Ka Ewin Kha	*U Kpa,*	*Ka Pla Kha*
(His father's mother)	*U Kpa Kha* (Father, brother)	(His father's sister)

But he places himself again between that family and that world, and claims again :—

Ka Pla Kha	*U Khasi Kha*	*Ka Dabha*
(Father's sister.)	(Father's son) (Himself)	(Father's mother's daughter)

Thus he brings in counter to himself and claims again :—

Ka Ewin Kha Ma	*u*	*Ka Pura Kha*
(Father's mother)	(*u Khasi Kha*) (Himself, Father's son.)	(Father's brother's daughter.)

Thus in the family—(he stands between the mother and his sister ;—and outside in the world—(his father—stands between his (the father's) mother and his (the father's) sister.

Thus in the world the Khasi stands between his mother and his sister, and between his father's mother and father's sister. 602

This happens when on the death of his uncle he stands between, and on behalf of, his sister and mother; and, on the death of his father, he stands between, and on behalf of, his father's sister and his father's sister's daughter.

On the death of his father's younger or elder brother he stands between, and, on behalf of, his father's mother and his father's brother's daughter.

527 The Khasi's interpretation of his life is this,—"long jaid ca ka kynthei," i.e., from women sprang the kind, or species; "U kha cha ci ka rynring," i.e., it is the father who gives the stature or person. Thus, the mother produces the kind or species, and this kind 'ka jaid' springs and remains in the man's own house ('ka iaing') by his mother, and is nourished by his sister and his own, sister's child.

526 The stature or person, is produced, crystallised and is endowed with power and fortune, that is, with power to resist forces which affect a man's capacity to grow in power and in fortune, by his father, father's younger brother and father's elder brother, and by the father's nephews.

602 Thus the Khasi says all those who spring
• 526 from the same womb are his kind, '*jaid-o song*'; that is, they are forbidden as 'sacred' humans, he says, they are suckled of one and the same breast. They are 'song jaid.'

Again, he says, all who receive or derive respectively their stature from the common source
527 which gives birth to man's body—*o song*, that is,
602 they are tatooed or are marked as they come out or spring or are generated from one navel-string (umbilical cord), *u sulpet kha*. They are '*song sulpet kha*.'

(a) = *Song jaid*

Table Women

(1)

(b) = *Song sulpet kha.*

Thus the Khasi says, "I do not marry (and I cannot even think in this wise of) my own mother, my own sister. They are of the (a) group. I cannot think like that of my father's mother (kmie kha), father's sister (nie kha), father's brother (kpa kha), father's brother's children (pura kha). They are of the (b) group." On his mother's side a *sang jaid*, that is, he is *sang* or forbidden as being of the same clan, kind, species. On his father's side a *sang ralpet kha*, that is, he is *sang*, forbidden as being of the same umbilical cord. [926]

Then he finds only himself and his bakha (cousins, the children of his father's sister),—he being the son of a man born of one woman, and they the children of the sister of that person, born or whose 'sisters' were generated from one man.

Table

Thus the a woman and the a daughter and all those between these two and those after those two, join to the a woman in life through the two primary stages of life in its essence when it was sustained through the umbilical cord and later by the woman's breasts. [927]

So the a woman and the b son and all those between the two and those after those two,

16:Roy 1-9 (no date) 1939 AR? Khasi AR?

[60] *jaid* to the *a* woman in life through only one of the primary stages in the life essence when it was sustained through the umbilical cord.

Thus the connection of the *a* group is sustained to a much longer period and greater intensity in its life-formation to the *a* woman, than the *b* man.

Hence we have the double source of sustenance of life producing, through the umbilical cord and the breast, the single group *a*, while the single connection of life-formation through the umbilical cord produces a double *a* + *b* man-woman connection with the *b* man.

Thus he stands alone in the centre and he places his *jaid* on *ka kpah* (the kind which springs from the same womb), that is, those of (*a*) group (see tables) on one side, and he places his *ka* or those connected, or sprung of, the one umbilical cord, that is, those of (*b*) group on the other side. On the other side is *ka ryniang ka rngiew*, the 'stature', the person from which he also derives his. Thus the Khasi calls the source (*kynmaw*) from which he springs, *ka kur ka rngiew* (stature, person) *ki ka* as *wari u sohpat* (those connected or sprung of one umbilical cord).

[60] [60] [15] Thus the Khasi has his house of *ki kur ki jaid* the relatives of his kind and species, and his world of *ki ka ki man*, relatives of other people's kind and species with whom they are able to propagate human life.

This interesting Khasi fabric of human relationship between man and his mother and father, [66] of the connection between a man and his fellow-

human beings all over the four quarters of the globe (*phi mash ka pyrthei*) with whom, in the world, he can give in marriage and take in marriage, shows the nature which is believed to be innate in the Khasi, and his supposed power of moulding the world. His nature is to grow and to resist, to extend and spread out. It is against his idea of life to remain narrow or limited and concentrated. He is not to be made small or made an orphan, it will not do for him and his idea of the world to 'ask *khlem, khem lalem kin*,' stay without kind and species, without child, without issue. A couple would even seek to separate if there are no children of the union. His idea is, so to say, 'imperialistic,' to sow and spread out. As I wrote elsewhere, "A Khasi marries man and woman of all races; to his Khasi parent the issues are all one and the sons without any distinction of caste or creed or colour or possessions. The children are the 'khun khe' (*khun* = child, *khe* = born, i.e. children who are born through the union of a descendant of the parent with a descendant of another parent), and these children are unified into families and are assimilated, in the Khasi idea of life, while these groups of families are traced to their mother and are made to revolve on this ancestress as the pivot of their existence."

Thus the Khasi shows :—

One one side – mother
|
Son – mother
which is, – mother
|
the son of such two – his kinswomen

On the other side also he shows – mother
|
Son – mother
which is – Father's mother
|
the son of others his kinswomen

19: Nakase G-5 (1955-1956) 1967 AB7 Khasi AB7

the matrilineal descent group has a distinguished function only when there is common residence and common property.

In Kongton, among 5 different *kur* (List 10), Pohmong and Khonut accounted for the majority of the population, while the rest, seven *kur*, were more or less of equal size. On the whole the population seemed more stable than that of Sohkynduh. However, as in Sohkynduh, actual descent groups amounted to 45, many of which have the same *kur* name but could not always establish genealogical relationship with one another, nor was there any functional cohesion. I failed to reconstruct the history of the formation of these descent groups: the villagers had no memory of their past except very fragmentary information which was quite insufficient to account for their present composition. They only insisted this was a very old village in comparison with Sohkynduh and other neighbouring villages.

While I was struggling with the villagers' scant accounts of their past and fragmented kinship relations among the present households, I was struck by the poorness of the villagers' genealogical memory in comparison with that of the Garo. Suppose A, B and C, who belonged to the same property-holding descent group three generations back: A and B being sisters and C being B's daughter. If B, including her descendants, moved away from the village two generations back, the present generation of A's and C's descendants would easily lose contact and knowledge of their genealogical relationship. This fact, on the other hand, illustrates some important aspects of the Khasi social structure: the kinship relation—matrilineal descent link—is not a significant factor beyond the scale of the household (property-holding descent group), and locality is more important than matrilineal descent for the formation of the Khasi community. Through the predominant practice of endogamy on the level of the village, the small segments (found on a level of a household or a group of a few households) of various different *kur* clustered in a village are linked by affinal relations each other, by which altogether form a well knit social organization of a village community. The cohesion and solidarity of the Khasi village community is strengthened by the local endogamy not by the localized lineage organization.

In fact, in contrast with the rather loose kinship relations which link different households, the affinal relations link almost every households in the village, as shown in Fig. 10. The lines, ———, indicate marriage relations between living members of households, and the lines, - - - - -, indicate affinal relations established through dead members of present households or through spouses' kinship relations at Sohkynduh, as in November 1955. In this way, except for one household (24), members of a single household are all linked together through affinal or cognatic ties. In some cases, the affinal relations between

FIG. 10. — *Kinship and Household Location in Sohkhynduh.*

——— Affinal relations (Direct) among household members.
- - - - - Affinal relations (Indirect) among household members.

particular two families are not connected to one, but may be accommodated two or three, though I omitted to indicate these in Fig. 10.

There are some extensions of marriage relations with members outside the village. In Sohkhynduh, out of 88 (48 homeowners and 40 their husbands) 13 men and 2 women came from neighbouring villages. Owing to the predominant uxorilocal arrangement, those who came in from outside the village were mostly men. By these members, five different *kur*, new to Sohkhynduh, were found, as shown in List 7 (17-21). Most of these outsiders came from villages inside the Kudashinong, or villages no further than a day's journey there and back. This area might be called a secondary endogamous area, and includes more than half a dozen villages. In Kongtun, 20 husbands and 3 women came from neighbouring villages by their marriages. The secondary endogamous areas of Kongtun and of Sohkhynduh are not the same but they overlap in certain places, the surrounding areas being centred on each village. There were, by December 1955, no instances of direct marriage between these two villages.

There are a few exceptions to local endogamy, such as those individuals who have become Christians and are educated in towns like Shillong or Cherrapunjee. They usually move to a town, seeking

society? Among the matrilineal Central Bantus, Richards says that the determining factor in residence at marriage is the marriage payment or the type of goods and services which the bridegroom gives (Richards, 1950, p. 44). However, the Khasi have no such custom in the marriage contract, it is therefore out of the question to explain the two types of residence in this way. In the case of the Khasi, the determining factor is the type of marriage with relation to the rule of inheritance and ownership of property, which is closely related to the structure of the ring. Khasi marriages can be divided into two categories i.e., marriage with an heiress and with a non-heiress. Marriages with an heiress must be uxorilocal. This accounts for category 1 or 2 of the household pattern. On the other hand, marriages with a non-heiress become neolocal and correspond to category 4 of the household unit.

IV. Husband and his Heiress

A man married to an heiress, usually lives with his wife's parents and her unmarried or divorced brothers and sisters. For a man, life after marriage under such circumstances require great adjustment and endurance. The husband's status is especially weak when a male member of the wife's kin lives in the same household. The management of property and all economic activities are entirely controlled by the authority (wife's brother or maternal uncle) of the ring. The husband works in the wife's field under constant supervision from the authority. Both economic activities and domestic affairs are always under the management of this authority. The children have more attachment to, and are more obedient to, the maternal uncle than to the father. The tie between the uncle and the nephew is so strong that the father is rather like an additional member of the household. He is the last person to be introduced to visitors.

This family system is clearly reflected in the daily behaviour. When we visited the Khasi household of a youngest daughter, if a man (obviously the husband) came first to greet us, he always said "please wait, my wife (or mother-in-law) is coming." And it was the wife who entertained us, offering tea or pan and discussing matters with us, while her husband remained silent in the corner of the room, or in the next room. If her uncle or brother was there, he would be the person who talked to us, while his niece or sister served us. In such a case, we were seldom introduced to the husband. When I was working at Shella, I happened to stay in such a family. I had hardly any opportunity to talk to the husband during the two weeks of my stay. He left the house very early in the morning and came back late in the evening from the fields. While he was at home, he was

ship. They still live in the same familiar atmosphere as before their marriage. The implications of this ambiguity in the married state are considerable. Particularly the husband's uncomfortable situation, when the wife is known, encourages him to take marriage less seriously. 581 593

A husband who undergoes hardship in his wife's house, finds himself as the authority in his sister's house, if he is not the authority, he can find at least a respected position as uncle or brother. In the case of a man of authority in the *ring*, the tendency for him to regard his *ring* as more important than his married life is proportionately stronger, as I will discuss later. Hence the most unstable and unsuccessful marriages are those between the homos and the men of authority. This is one of the reasons we often find among the Khasi a brother or an uncle, who is already married, acting nevertheless as the head to a family (*ring*) and as a member of its domestic group. This means that he is in a state of temporary separation or divorced. Among the Ashanti, a man and his wife's brother are never found as members of a common household (Fortes, 1950, p. 261), but among the Khasi, on the contrary, a man and his wife's brother are often found as members of a common household. In such cases, however, the brother has no wife, or never brings his wife to his *ring*. Therefore, a man and his wife and his sister never reside together. As far as the residence of women is concerned, the Khasi keep to the strict descent rule; two women who belong to different descent groups never live together. This point differentiates the Khasi residence pattern, in which social structure is involved, from that not only of the Ashanti but also of the Yao where the head of a descent group can bring his wife to his sister's household, though, among other members, uxorilocal marriage is the rule. These differential aspects of matrilineal systems will be discussed from a more theoretical point of view later. 581 581 592 593 602 604 619 423 [171]

In addition, should a Khasi man even succeed in spending his life with his wife's kinsmen, as soon as the wife dies, he will usually return to his *ring*, that is, to his sister's house, where he is received warmly and where he often acts as the *de facto* authority, as in the similar situation of divorce and separation. Thus the strong matrilineal structural principle tends to orient a man towards his own descent group, the *ring*. 602 619

The man's attachment to his *ring* is very great throughout his life. In this regard the Khasi differs from the matrilineal Negri Sembilan Malay. Among the latter, returning to the matrilineal kin is regarded by the man as an imposition rather than as the enjoyment of a legitimate privilege (see Swift, 1958, p. 157).[1] This difference 171 592 602 619 428

1. He presents this fact as one of the reasons of the durability of marriage among the Negri Sembilan. Indeed, on this precise point they differ from the Khasi where marriage is rather unstable. [581]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

171 seems to come *firstly* from the different residential arrangement on
592 marriage: among the Negri Sembilan a man marries into his wife's
• 602 group, i.e. his wife's village; being thus separated from his kin, and
619 as a result of the physical absence of his wife's brother or maternal
428 uncle in his domestic family, he enjoys considerable rights in his wife's household—as Swift states, he is 'master in his own house.' On the other hand, since among the Khasi the man stays in the village where his mother's (or mother's successor's) house is, even after his marriage, his relation to his natal house is preserved; *secondly*, from the structural difference of organization of the descent group. Among the Khasi, the *siang* is always the centre of the descent group, based on unigeniture succession and inheritance. Hence, the core of the descent group is always found physically in a particular household, whereas among the Negri Sembilan, the descent group is *not* organized on a *household* level, but is a much wider organization, including apparently many households. Membership of an actual household and of a descent group are at different levels. To marry out and become a member of his wife's household means for the man the transfer of his household membership. Likewise, his sister's husband becomes a member of his sister's household. Thereby he becomes a secondary member of his sister's household after marriage though he keeps his membership in the descent group to which his sister belongs. Among the Khasi, membership of a descent group always corresponds to membership of a particular household. The Khasi man can always demand his rights at his natal house primarily, as he is a member of that descent group. But it should be noted that he has this right only in his mother's (or mother's successor's) household, not his other sisters' (non-heiress') and mother's sisters' households (unless one of them is successor of his mother), though they may belong to the same descent group. These matri kin's households are considered as separate *siang* (strict functional descent group) from his.

586 Indeed, sometimes a man cannot find his *siang*, because his mother
619 died leaving no daughter to succeed her, or his sister died leaving
796 no successor, and his *siang* became extinct. Such a case occasionally
428 happens when a man becomes a divorcé or a widower as he is getting old. Then he has to face a serious social and economic condition. In divorcing, he has to leave everything he owned, his earnings including the house which he built, and even children . . . really he has nothing left him except his body.[1] Such a wretched man collects some timber and makes a small hut for himself, though sometimes lads who sympathize with him help him to build it. Unless he finds some woman

1. A widower has an alternative solution—to remain in his late wife's household till he marries again, though his position is not comfortable there.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

brother (actually not likely to happen), the levirate has no sociological implication in the social structure, which is specifically related to the residence rule. The levirate seems to have a significant function only when a marriage is virilocal—when the husband has full rights over his residence and property. This is also another aspect where the Khasi structure shows a marked difference from that of the Ashanti and the Ila, etc. 182 587

VI. Marriage of the Man of Authority of an *Iing*

Among these successful marital families, there are also shadows of a matrilineal order. These affect especially those men who are in the position of authority in an *iing*. Such a man, though he has an independent household with his wife and children, often visits his youngest sister's (or niece's) house, *iing (ka iing sew)*, and sometimes stays there. Such a man's attachment to his *iing* is not only social or psychological, but also often economic. The man, as authority of his natal *iing*, usually has economic control over the management, particularly so, if his *iing* has considerable property or active trading business. As husband/father in his family he works for his wife and children, but often takes into consideration as well the interests of his *iing*. I found such cases especially among richer villagers in Sheila and Jatinga, where the main economic activities were based on trading. 592 593 602 613 [182]

Among the Khasi, it is quite a traditional rule of the division of labour that women engage in trading activities at markets whether on a large or small scale. Husbands may carry goods from field to market, but male members are kept away from the actual scene of the selling and buying. However, these activities on the part of the women are controlled and accounted for by their uncle or brother, or even son (or, if no male member is available, by the husband), though in many cases they form separate domestic families. The man's control over the trade appears more marked when the scale of business is large. [443] [462]

A man of Jatinga, who worked in a shop in Haflong, spent his salary in keeping his wife and children, but at the same time he kept the accounts of his sister who was a professional merchant. Thus, the economy of the *iing* and that of the co-residential group are crossed by the dual role of the man. Hence, among the Khasi, residential autonomy is not always an indication of economic autonomy. However, it should be clearly understood that a man's acquired property goes to his co-residential group, not to his *iing*. [421]

A man of authority is attached to his *iing* by the stronger ties of religious, social and economic (management) duties as well as by

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 sentiment, in spite of his forming an independent domestic unit. Such a
593 man with two households, the family of orientation and of procreation,
• 602 says "one leg is in my sister's house and the other is in my wife's,"
613 and he feels more at home in his sister's. In villages, whenever a
[123] Khasi man in such a position invited me, I was always taken to his sister's (or niece's) house, his *iing*, not to his wife's. There I was warmly welcomed with highest respect by the women of the household as the guest of their uncle (or of their brother), the head of the *iing*. Khasi men whom outsiders often regard as hopeless in their social position, thus enjoy the highest status in their *iing*.

One Khasi gentleman who occupies a fairly high post in the Government, at Haflong, leaving his wife (non-heiress) and children at Shillong, to my question "when you go to Shillong into which house do you first step," immediately replied, "As soon as I get back to Shillong, I take the way to my sister's home and there take the evening meal with them, enjoying their talk. Then I go to my wife's house where my loving children are waiting." This shows a typical Khasi man's psychology in relation to a family of orientation and of procreation. His first concern on coming back to his homeland is whether his sister and her children are well, since he is the man of authority in that *iing*. He feels much more relaxed in his sister's house where he is held in higher regard and more cared for.

I came across many similar cases. In Jatinga and Sheila, such men on returning from their work, often have their evening meal with their sisters though their wives are waiting for them. Furthermore, if they choose to do so, they sleep at their sister's house without even going back to their wife's house. This results in an unstable married life, where a wife has to face a psychological handicap caused by the occasional absence of the husband, in spite of her advantageous position in a matrilineal and uxorilocal system. Many wives worry every day over whether or not their husbands will come to their house at night. And often this concern changes into sadness and loneliness when the husband does not return for several days on end. The wife knows her husband is at his sister's house in the same village. But she has no right to fetch her husband home. As in Western social dancing, the women have to wait till their partners come. During my field work I often came across these lonely women, just waiting for their husbands, each knowing he was only a few houses
[123] away. Though these Khasi women never show their feelings of loneliness in the presence of others, I, being a female anthropologist, was often told of the sadness of their married life. The situation of these women can be more easily understood if we remember the process of the segmentation of the *iing*, which separates each married woman from her descent group, her natal *iing*.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

Thus, the marriage of a non-heiress and a man of authority also produces an unstable position for the husband in spite of his having an independent household. Therefore, the possibility of a really stable marriage is even more limited; it will occur only in the match of a non-heiress and a non-authority of the *iing*. But even these marriages cannot be free from the influence of a matrilineal social structure: the man of authority of the wife's *iing* may visit these couples now and then, curb the husband's power and remind both partners of the orientation towards the matri-kin, the *iing*, though this pressure is insignificant in comparison with that experienced by the heiress's family. Likewise, a husband now and then visits his youngest sister's house, *ha iing sen*. These constant matrilineal contacts offer husbands chances of escaping from even the slightest matrimonial tension. Whenever a Khasi man feels uneasiness, he will return to his sister's house rather than face a difficult situation with his wife. This tendency is maximised especially on the occasion of religious ceremonies, when all individuals are grouped around each *iing*.

It is apparent that the rules of the *iing* as the underlying structural pattern, function throughout the various categories of domestic unit of the Khasi community as the most important intrinsic force.

VII. Polygyny

After this long attempt at the structural analysis of marriages, I think one can theoretically predict what is the situation of polygyny among the Khasi. The theoretical framework elaborated through preceding discussions can also be tested by the empirical data in terms of polygyny.

Nowadays, the Khasi feel so strongly against polygyny that they have no knowledge even that they ever practised it. Many Khasi, in more sophisticated areas, did not believe my findings on polygyny in Sohkynduh and Kongton. I think this is due to the rapid Christianization of the Hills during the last hundred years. My interpreter, though he was not Christian, said to me in the village, "it is most regrettable to bring you to a village where we find polygyny." However, one of the ministers of the Cherra State to which the two villages belong, told me that there was no particular opposition to polygyny, though recent Christian influence gave people the idea that it was a shameful custom, and he mentioned the case of a polygynist in his area, a man who had recently died, who had had ten wives. In Jatinga whose inhabitants are all Christian, and in Shella where there has been much contact with, and influence by, Hindus, there were

children, but Christian influence has eradicated or driven underground the consumption by women and children. **Industrial arts.** The only industrial arts traditionally practiced in all households were a rudimentary carpentry and a simple utilitarian basketry. Other arts were few, and were practiced as village specialties: the washing and smelting of iron ore and the forging of hoes, dacs, knives, swords, and cooking pots (upland Khasis); the spinning of cotton thread (Mynso village, Jaintia); the dyeing of cotton thread and the weaving of cloth (Jaintias, Bhoys, Lyngngams, Wars); the spinning and weaving of Eri silk (Khyrwang and Nongtung villages, Bhoi and Jaintia); and the hand manufacture, without wheel, of painted earthenware pots (Larnai village, Jaintia). Ironworking and the production of cotton goods have nearly died out through the competition of machine-made goods. Carpentry has greatly improved. An innovation of major importance is the sewing and tailoring, on sewing machines, of ready-made garments for both sexes. [Cf. Darrah 1906; C., W. 1832.] **Trade.** Khasi villages normally contain a number of household shops operated by women. Every Khasi also lives within walking distance of several village markets that are held on successive days of the eight-day week. The limits of market intercourse for the members of any particular village can be roughly distinguished by their naming the days of their week, which are called after the active markets. The exception is the huge market at Shillong, much of which is active daily, and which serves as a magnet for Khasis from all over the hills. The traditional barter has given way to currency in all markets. The small ones contain at least some local farm produce, plus other essentials like betel nut, and the food and tea stalls which serve as centers of social intercourse. The big markets contain not only regional produce and manufactures but also products from distant parts of the hills, brought for sale by traveling middlemen. There is also substantial trade, from the hills to the valleys, in potatoes, pears, hides, lac, cotton, caoutchouc, the wood of the sal tree, Eri silk thread, limestone, coal, ivory, bay leaf, betel nut, pan leaves, bananas, sugar cane, oranges, til, turmeric, and chilies. From the plains to the hills, there is trade in dried fish, paddy rice, salt, cooking oil, kerosene, matches, tea, sugar, wheat flour, machine-made cloth, shoes, metal pots, crockery, porcelain objects, coral beads, silver, and gold. Markets are important not only as economic institutions but also as centers for recreation (including archery competitions), courtship, reaffirmation of kinship ties with distant relatives, and the dissemination of information of all kinds. [Cf. Stegmiller 1924a.] **Division of labor.** Men do the heavy work, such as clearing and burning the swidden fields, caring for cattle and goats and driving them to market, butchering and selling large cuts of beef and pork, carpentry and mining, and driving and laboring on motor vehicles. They also tailor men's

clothing, operate the large Khasi business establishments in Shillong, and provide all civic and religious leadership. Women care for children and for the home, do the marketing, and sell dried fish, betel nut, lime, fruits, and rice breads at markets. Other tasks can be performed by either sex. **Land tenure.** Land was formerly divided into sib land and public domain. Sib land was corporately held in perpetuity, and was inalienable except by the unanimous consent of all members of the sib. The public domain was subject to usufructuary right by anyone who kept the land regularly under habitation or cultivation, with a lapse of no more than three years. Most villages grew up on public domain, and then reckoned all land inhabited or under cultivation by a village member as village land. Forests were public, except for sacred groves possessed by villages or lineage groups, and everyone was free to gather branches for fuel. Wastelands and streams were also public. By now, most public domain and village land, together with its forest cover, has been pre-empted as private property and is being rented and sold as such. Sib lands remain intact, unless the sibs agree to rent, lease, or sell. [Cf. Cantlie 1934.]

462 294 543 522 423 [78]

KIN GROUPS. **Descent.** Descent is matrilineal, and the Khasi is a member exclusively of his own matrilineage from birth to death. Adoption, which is very rare, is only within the matrilineage. **Kin groups.** The maximal matrilineage is the sib; this is a named, widely dispersed, strictly exogamous, lineage group, which claims but cannot trace its origin from a single ancestress. Sibs used to meet as corporate groups from time to time. Some sibs are linked with others in large amorphous groups that are unnamed and are defined solely by exogamy. Such a group is composed of two or more sibs, the ancestresses of which are claimed to have been either real sisters or dear friends who out of affection declared that thenceforth their descendants would be as consanguineals. The origin and function of sib-linkage is now unknown, and today the members of a sib will often disagree on whether or not their sib is linked with another. • The minimal matrilineage is the local descent group, or *iing*. This is the largest kin group that normally rallies at life crises. It is said that the *iing* formerly spanned six generations; today, it encompasses only four. If an *iing* grows to more than four generations in a single village, it segments. New houses are located at some distance from the old and the *iing* soon forgets exactly how to trace genealogical connection, except for which segment descended from a youngest sister. The term *iing* may also be applied to an extended family, an elementary family, and a house. The elementary family is the basic domestic unit in Khasi society. In any village there are likely to be one or two households which stand as sole local representatives of the lineage of the female household head. Such a household is known as an

611 [597] 614 602 [59]

ing from the time it consists of an elementary family until it grows to a local descent group four generations deep. [Cf. Chattopadhyay 1941.] **Kin terminology.** The terms of address given below are also terms of reference except where otherwise indicated, and are uniform for male and female speakers. They were collected in an upland Khasi village near Shillong (cf. Ehrenfels 1953 for some regional variants). 602 601 [114]

MARRIAGE AND FAMILY. **Mode.** According to the traditional courtship pattern, a group of young male relatives and friends made nightly visits to the house of some virgin girl in another village, appraising her through banter while she and her parents appraised them, and staying the night to avoid the dark walk home. Marriage was according to the wishes of the parents after negotiation by a go-between from the boy's side. Girls might be 15, and boys 17, years of age. Girls have now acquired freedom of movement through attending school, however. Premarital sexual play is common, and young people choose their own spouses when the girl is about 19 and the boy 21. The most common mode of marriage is elopement, for Christians and non-Christians alike, but some Christians marry in church, and some Khasis still marry according to the traditional ceremony or some variation on it. There are no preferred or prescribed marriage types, nor is there a bride price or dowry. **Form.** Monogamy is the ideal for all. **Extension of incest taboos.** Sibs are exogamous. Other prohibited marriage partners are real and classificatory FaSi and FaBr, FaBrCh, FaMo, and FaMoMo. The MoBrWi is also prohibited. Roy 584 582 562 178 836 584 583 585 184 583 581 835 [114]

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

601 Term 19 and 20 — *para kur* and *para kha*; the former for all cousins and half-siblings on the mother's and the latter for those on the father's side, show the consciousness of the matrilineal clan-affinity and the patrilineal biological relationship through their classificatory subdivision, which is also true of

Term 21, 21/*a* and 21/*b*; — the *bakha* are cross-cousins.

Term 21/*b* shows special consideration for the older paternal male cousin of the first degree, who is addressed as *bah* whilst the older maternal male cousin of the first degree is addressed as *kong*, like the older female cousins on both sides.

Term 23, 23/*a*, 23/*b*, — *ksiew* for grandchildren would appear to mean: [192] dog's children. It has, however, been pointed out to me, by Khasi friends, that the Khasi word for dog is *ksew*; not *ksiew*. The Pnár (Jaintia) pronunciation *ki ksu* for grandchildren, and the occasionally occuring designation of great-grandchildren as "cats children" (term 24) and of great-great-grandchildren as "rats children" (term 25), however, would appear rather to suggest the derivation of *khun ksiew* from *ksew* — dog, than from a meaningless separate root.

Term 24 — *khun miaw* (i. e. cats children) for great-grandchildren is used among Plateau Khasi families. BERNATZIK considers with CREDNER, E. LUNET DE LAJONQUIÈRE, MARABAILS and EICKSTEDT the possibility that [197] the name of the Meau has been derived from cats [30]. This is a hill tribe, speaking a language with some similarity to the Mon-Khmer group [31] (to which also the Khasi language belongs). The Meau are living not very far from the possible homeland of the Khasi around the region of S. China, N. Siam and Indo-China. If a parallel should here be assumed, the two complementary Khasi terms No. 23 (dogs children) and 25 (rats children) may appear to be formed on the basis of analogy with the term "cats children" as tribal self-designation. Another explanation, however, of this unusual kinship-term which was given to me by a Khasi friend, contented that each generation, seen from the ancestral parent's point of view, is as numerous as the young of the respective varieties of animals.

Term 25 — *khun knai* (rats children) comments: — see: term 24, (supra).

601 602 Term 26 — *u ñi* — *u kong* as a honorific term for the maternal uncles and the husbands of the elder sisters and elder female cousins on the maternal side, illustrates the great respect shown to male relatives on the mother's side by adding the masculine preposition *u* to the word *kong*, which generally signifies older female maternal relatives, but in this case, their husbands (comp. term 33/*e*). This usage of the term is reminiscent of the Brahmin ceremonies performed for male maternal ancestors, instead of for mothers, grandmothers, etc. It also tallies with my observations, otherwise obtained [32]

[30] BERNATZIK (1947), pp. 6, 7.

[31] BERNATZIK (1947), p. 445, though he denies the inclusion of the Meau into the Mon-Khmer group.

[32] EHRENFELS (1950), p. 34, (1951/*A*), pp. 3, 4, 5; (1951/*B*), pp. 73, 80, seq.

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

namely that male members of a matrilineal clan enjoy, among Khasi as among other matrilineal groups in India, a position which, far from unenviable, is a very high one in itself and doubly fortified by the respect which to the same male family member is being shown (*a*) in his capacity as the father of his children in his wife's clan (comp. term 8 of the list), and (*b*) in that of the maternal uncle (comp. terms 14, 14/*a*, 14/*b* and 26 and 28). 601 602

The terms 33/*b*, *c*, *g*, *h*, have classificatory character. 601

The term 33/*e* — *u kong* for the husband's older sister's husband is one of the exceptions of the rule that *kong* generally signifies an honoured older female relative but, as in this case, also her husband (comp. term 26).

Term 36/*a* *u pa* (father) in its usage among Pnár (Jaintia), also for stepfather is significant. A Pnár child has no legal clan-relationsihp with his/her biological father, who belongs to another (matrilineal) clan than the child and mother. Yet the honorific term *pa* is, among Pnár, also applied to a stepfather, although neither legal, nor biological but merely ideological relationship via the mother, exists between stepfather and -child. This use of the word *pa* thus seems to emphasize both, firstly the integration of the matrilineal family structure, by making an unrelated stepfather to be looked upon as father, owing to his relationship with Ego's mother and, secondly the important sociological and psychological position of the father in this matrilineal family structure which appears to go back to an old tradition among the Pnár. 601 593 [614]

Term 41 — *para 'riew lum* [33] (Assamese hill tribals) are characteristically termed *para* (Brethren), although they are different in many respects, from the Khasi, yet considered as definitely nearer related than all other neighbours, grouped under the 601

Term 43 — *dkhar* (plainspeople) [34], — a term which varies in emotional content from contempt pure and simple to an attitude, somewhat parallel to what ordinary English usage would generally associate with the expression "continental". Marriages of Khasi girls and boys with *dkhar* do occur, though infinitely rarer than marriages of (especially educated) Khasi girls with (educated) *para 'riew lum*, Nepalese, Gurkha or Chinese boys. One of the reasons which is usually being given for this preference for non-Indians is by no means colour-prejudice, but the taboo on either beef or pork which most *dkhar ïong* [35] (Indians, Hindus or Muslims, respectively) observe; a taboo which they generally extend to their Khasi wives, thus preventing them from enjoying two favourite Khasi national dishes. Another more psychological reason is the overbearing treatment of wives, which is generally ascribed to *dkhar ïong*, more even than to *dkhar li* [36]. It is in this connection 601 582

[33] Literally: Brethren Humans Hill.

[34] With Dkhar are here meant the plainspeople as such; — not the Khasi Dkhar (or Khar) clans which are mostly, if not always, descended from ancestresses who had been captured in the plains and brought to the Khasi Hills; comp. CHATTOPADHYAY (1941), pp. 30/31 and EHRENFELS (1950/*A*), pp. 33/34. [101]

[35] Literally: Plainspeople black.

[36] Literally: Plainspeople white.

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

581 [773] *Hynniew Trep Hynniew Sknm* (the seven nests, seven roots), These seven nests or roots were seven pairs of virgin women and men created by God to marry and they formed seven houses (families) and from them the country was filled and the rites and ceremonies were obtained. Thus the Khasi takes pride in the fact that God Himself delivered their religion and the rites and ceremonies unto them. ... The Khasi matrilineal system has come down through ages and with a definite idea of the union of one man with one woman. This is significant for those who consider that marriage is and has always been common to the whole human race, and it raises the question as to whether the Khasi idea is the survival of a period when the nature of paternity was not understood".

[851] [603] [553] In the sacred rites of baptism of this simple folk we find that a Khasi grandmother will not officiate in the name-giving ceremony unless in the marriage of her son with the woman to whom the child is born there has been the regular ceremony of marriage.

1:Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

614 descended from a common ancestress. There are other instances
582 of clans being connected with one another, such connection being called by the Khasis *iateh kur*. Whenever such connection exists, intermarriage is strictly prohibited, and is considered to be *sang*. There is no custom of hypergamy. A Khasi cannot marry his maternal uncle's daughter during the lifetime
[604] of the maternal uncle. This is probably due to the fact that the maternal uncle, or *kni*, in a Khasi household is regarded more in the light of a father than of an uncle. His children, however, would belong to the clan of his wife and there would, therefore, in ordinary cases be no bar to the nephew marrying one of them. Marriage with the daughters of a father's sister is not allowed during the lifetime of the father, but after the latter's death there is no religious ban, although such unions are looked upon with disfavour by the Khasis. In the Wár country, how-
587 ever, such marriages are totally prohibited. A Khasi cannot
582 marry two sisters, but he can marry his deceased wife's sister after the expiry of one year from the wife's death, on payment of *jing sang* (price of *sang*, or taboo) to the wife's clan. A
582 Khasi cannot marry the daughter of his father's brother; she is his *para kha* (lit. birth sister). Similarly he cannot marry the daughter of his father's paternal uncle. He can, however, marry the daughter of his mother's brother, provided that the brother is dead. This somewhat paradoxical state of affairs is explained by the fact that the children of the mother's brother belong to a different clan to that of the mother, i.e. to the mother's brother's wife's clan. The Khasi, Synteng, Wár, and Lynngam divisions are not strictly endogamous groups, and there is nothing to prevent intermarriage between them. For instance, it has been the custom in the Nongkhlaw Siem family to obtain husbands for the princesses of the state from the Wár country. There is no custom amongst the Khasis of two men exchanging daughters, i.e. each marrying his son to
[423] the other's daughter. Notwithstanding the existence of the matriarchate, and the fact that all ancestral property is vested in the mother, it would be a mistake to suppose that the father
593 is a nobody in the Khasi house. It is true that the *kni*, or
604 mother's elder brother, is the head of the house, but the father is the executive head of the new home, where, after children

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

have been born to him, his wife and children live with him. It 593
is he who faces the dangers of the jungles, and risks his life for 604
wife and children. In his wife's clan he occupies a very high place, he is second to none but *u kni*, the maternal uncle, while in his own family circle a father and husband is nearer to his children and his wife than *u kni*. The Khasi saying is, "*u kpa uba lah ban iai, u kni uba tang ha ka iap ka im*," which may be translated freely as, "the father bears the heat and burden of the day, the maternal uncle only comes when it is a question of life or death." The Khasi father is revered not only when living, but also after death as *U Thawlang*, and special ceremonies are performed to propitiate his shade. Further remarks on the subject of marriage will be found in the Section which deals with religion.

DIVORCE.

Divorce amongst the Khasis is common, and may occur for 586
a variety of reasons, such as adultery, barrenness, incompatibility of temperament, &c. The rule amongst the Khasis is that both parties must agree, but amongst the Wárs, especially the people of Shella, the party who divorces the other without his or her consent must pay compensation, which is called *ka mynrain*, or *ka thnem*. Amongst the Khasis it is not the custom to enforce restitution of conjugal rights; as a rule, when husband and wife cannot live together amicably, they agree to divorce one another; but occasionally it happens that either the husband or the wife will not agree to a divorce. Usually the husband would be willing to live with his wife; but when the latter consents neither to live with her husband nor to accept a divorce, a difficult situation arises, and it is in the event of such a contingency happening that the necessity of assessing *ka mynrain*, or *ka thnem* (compensation), occurs. [587]
The latter is computed by the village elders. Parties who have been divorced cannot afterwards remarry one another, but they are at liberty to marry into other families. A woman cannot [843]
be divorced during pregnancy. The following description of the divorce ceremony is taken from U Jeebon Roy's note on the

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

being in a position to help his descendant in times of trouble. 761
The same thought underlies the extreme reverence with which 171
Ka Iawbei is regarded. Thus we see a striking point of resemblance between the Khasi ancestor-worship and the ancient Shinto cult of Japan, as described by Mr. Lafcadio Hearn. *U Suid-Nia*, or *u Kni Kanbah*, the first maternal uncle, i.e. the elder brother of *Ka Iawbei*, is also much revered. It will also be noticed under the healing of memorial stones that the great central upright monolith of the *máwbynna*, or memorial stones, is erected in his honour. The influence of 604
the *kni*, or mother's elder brother, in the Khasi family is very 764
great, for it is he who is the manager on behalf of the mother, 211
his position in the Khasi family being very similar to that of the *karta* in the Hindu joint family It is on this account that he is so much revered, and is honoured with a stone which is larger than the other up-right memorial stones after death. It will be seen in the article dealing with "the disposal of the dead," that at Cherra, on the occasion of the bestowal of the ashes in the cinerarium of the clan, a part of the attendant ceremonies consists of the preparation of two effigies called *Ka Puron* and *U Tyngshop*, intended to represent *Ka Iawbei* (the first mother) and *U Suid-Nia* (the first maternal uncle). The Wárs of Nongjri have a custon peculiar to themselves. 344
They erect small thatched houses in their compounds, which 769
they call *iing ksuid*. When they worship their ancestors they 211
deposit offerings of food in these houses, the idea being that 171
the ancestors will feed on the offerings. These Wárs do not erect memorial stones, nor do they collect the ashes of the clan in a common sepulchre; they deposit the ashes in circular cineraria, each family, or *iing*, possessing one. It should further be noted with reference to the Khasi custom of *ai bam*, or giving food to the spirits of deceased ancestors, that Dr. Frazer, in his "Golden Bough," has mentioned numerous instances of firstfruits being offered to the spirits of deceased ancestors by the tribes inhabiting the Malay Archipelago. (See pages 462-463 of the "Golden Bough.") Some other points of similarity in customs have already been noticed between the Khasis and certain Malay tribes.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

787 [791] case. The Khasi word for consulting the omens is *khan*, and a diviner is called a *nongkhan*. Another method of obtaining omens is by dropping two leaves into a pool of water or on a stone, the position of the leaves as they fall, either right side uppermost or upside down, signifying good or evil as the case may be; this is called *khan-sla*.

PRIESTHOOD.

793 104 The Khasi priest is usually called *Lyngdoh*, or *langdoh*; he is always appointed from the lyngdoh clan. The etymology of the word *lyngdoh* is said by certain lyngdohs of the Khyrim State to be *lang*=together and *doh*=flesh. A *lyngdoh*, or *langdoh*, is one who collects sacrificial victims, i.e. flesh for the purpose of sacrificing. It must be confessed, however, that this definition is doubtful, owing to the absence in the word *lyngdoh* of the prefix *nong* which is the sign of the agent in Khasi. Besides *lyngdohs* there are persons called *soh-blei* or *soh-sla*, who may 793 also be said to be priests. The Khasis, unlike the Hindus, have [604] no *purohit* or priest to perform the family ceremonies. Such duties fall to the lot of the head of the family or clan, who 782 carries them out generally through the agency of the *kni*, or maternal uncle. Old Khasis are frequently well versed in the details of sacrifices, and in the art of obtaining auguries by examining the viscera of sacrificial victims. Apart from family and clan sacrifices, there are the sacrifices for the good of the State or community at large; it is these sacrifices that it is the duty of the *lyngdoh* to perform. He may be said to be the priest of the communal religion, although he has certain duties in connection with offences committed against the social law of marriage, and with regard to the casting out of evil spirits from houses which may be thought to be infested with them. The lyngdohs of the Khasis may be likened to the Roman *pontifices*. 793 In the different Khasi States there is, as a rule, more 631 than one *lyngdoh*; sometimes there is quite a number of such priests, as in Nongkrem where there is a *lyngdoh* for each *raj* 793 or division of the state. There are a few Khasi States where 643 the priest altogether takes the place of the Siem, and rules the community with the help of his elders in addition to perform-

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

ing of which the last drop of liquor remains adhering to the spout of the gourd is the name selected for the child. Then the puja performer invokes the god to grant good luck to the child. The father takes the pot containing the placenta, after having previously placed rice flour and fermented rice therein, and waves it three times over the child, and then walks out with it through the main entrance of the house and hangs up the pot to a tree outside the village. When he returns from this duty, before he re-enters the house, another throws water over the father's feet. The father, being thus cleansed, enters, and holds the rice flour to his mouth three times. Two people then, holding the dried fish by their two ends, break them in two. The powdered turmeric mixed with rice flour and water is applied to the right foot of the father, the mother and the child receiving the same treatment. The friends and relations are then anointed, the turmeric being applied, however, to their left feet. The bow, arrows, *da*, and *u star* are carefully placed inside the inner surface of the thatch on the roof, and the ceremony is over. Rice flour is then distributed to all who are present, and the male adults are given liquor to drink. After two or three months the ears of the child are bored and ear-rings are inserted. These ear-rings are called *ki shashkor iawbei* (i.e. the ear-rings of the great-grandmother). Mr. Jenkins mentions that the naming ceremony amongst the Syntengs is performed by the "eldest aunt," presumably on the mother's side. A basket of eggs is placed in the centre of the room, and before the ceremony begins one egg has to be broken. Then the aunt of the child takes two sticks, and, raising them to her shoulder, lets them fall to the ground. Before they fall she shouts, "What name do you give the child?" The name is mentioned, and if, on falling upon the ground, one stick crosses the other, it is a proof that the name has won the approval of the spirit. If the sticks do not fall in this position, another egg is broken and another name is chosen, and the sticks are dropped as before until they fall in the required position, when it is understood by the performers that the name is a good one. Mr. Jenkins was informed by a young man "who had renounced heathenism" that some of the more cunning women cross the sticks before lifting them, and that

553 782 [386] [302] 553 304 553 [604]

782 preserve the customs of the family or sib; she
596 must see to it that the ancient domestic customs
793 of the household sacrifices are truly preserved; it is her duty, to keep the inherited ceremonies of the sacrifices pure and to hand them down conscientiously to the descendants. Therefore she has to arrange for the necessary sacrificial materials; she must prepare everything; she is the only one who must fast before the offering of many a sacrifice; she gives the order for the sacrifice, and she should also have to perform it herself.

But this does not happen. In reality no woman offers the sacrifice herself. (4) She is

4. With the exception of the secret sacrifices, about which, see later.

• [604] represented by a male person. But he must be related to her on the maternal side. Usually a maternal uncle (kni) represents her. Such representation by a relative is always necessary, whether it be for a public or a private sacrifice. But not merely the degree of relationship must lie in the feminine line; there is still something else that must be observed for each sacrifice. Even though the duties of the sacrificers and their methods of sacrificing are very different and are arranged according to the customs and inherited usages in the family or in the sib or in the state or community, yet in one point they are all similar: namely, all the sacrificers must be assisted by a woman during the performance of the services referred to. She is simply called ka lyngdoh (the priestess). [213] Because the man must function in her name and he is only her representative at the sacrifice,

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

[p.25]

CHAPTER III

It is evident from the discussions in the previous chapter, 601
that the children born in a house have to take note, as they grow 604
up, of the seniority and juniority among the sisters of the mothers, and also of the brothers of the mother. They have however very little relation with the brothers of the father, and we have to explain why the latter are classed with the father. This point will be discussed later. Here we may note that the relative lack of importance of the father's sisters has resulted in her not receiving distinction by age in the table of Kinship terms ; it is however indicated in address. Similarly the wife of the mother's brother is also not distinguished by age.

It may however be questioned why such a distinction by age is extended to the husband of the mother's sister. As noted before, a Khasi does not set up a separate house until one or two children are born. The children who are born in the house of [593]
mother's mother, are looked after like mothers, not only by the progenitress but her sisters. While there would arise no question as to who is the actual mother, it would be normal for the children to call the mother and her sisters by the same term which would thus cover the women of that generation who live in that house. Each little child would find its mother's sister addressed as "mother" by its playmate and cousin. Hence he or she would also tend to extend the term to the mother's sister from the mother. Under such circumstances, the simplest mode of distinction would be to apply the term "mother" to the actual relation, and add qualifying adjectives for the sisters of the mother. The Khasis use for this purpose, quite appropriately, terms denoting seniority and juniority for reasons previously stated. Reciprocally, a woman uses the same terms for

K. Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

601 her children and sister's children, using an additional term
604 for the latter, to make the distinction clear. The mother's brother's wife, and the father's sister live elsewhere, and cannot therefore share the same kinship term with the mother. The husbands of the mother's sisters are comparable to the father, as these males are all outsiders who have married the women
602 of the house. The actual father "U Kpa" is the husband of the actual mother "Ka Kmie" and is clearly distinguished. The others are the husbands of the "Kmie San" and "Kmie Nah." Hence they are given the labels of "Kpah San" and
[593] "Kpa Nah" or "Kpa Khynnah." They derive their kinship terms denoting "father" through their wives who are called mothers by the children—not through any sexual rights on the wife's sisters. Such sexual rights, as noted before, have no existence. Hodson is not justified in ascribing this identity of kinship terms to alleged marriage rules and sexual rights which were operative in a hypothetical earlier type of Khasi society.

601 The mother's brother is important to the Khasi child, and
604 has a special name, Ma, with an adjective such as Rangbah to indicate his position among his brothers. His relation with his sister's children is different from that of the mother's sister's husbands. It is more or less formal and ceremonial. A similar relative, on the father's side of the family, is the father's sister, though her position is not so important. Nevertheless, the two relatives are comparable. The mother's brother is in charge of the management of the mother's ancestral property and helps in performing important social ceremonies for the group. The father's sister is the repository of the bones of the father's family; in her is vested the preservation of the family religious traditions. Both these relatives live in houses separate from those of the nephews and nieces concerned and are, in a sense, of other households. Each of them was born in the natal house of one of the parents. They are therefore clearly distinguished from the father, the mother, the sisters of the mother and their husbands. But a common term, allowing

for difference in sex, is applied to both. The corresponding uncle and aunt by marriage are referred to by terms which make this clear. The husband of the father's sister is a "Ma" like the mother's brother and is also referred to as "Kni." But as his position by age is unimportant, the adjective of position is lacking in his case. Similarly the mother's brother's wife and the father's sister have a common term "Nia"; but the latter has her relationship through the father clearly indicated by the additional term "Kha" which refers to kinship through a male. The mother's brother's wife is, on the contrary, an aunt by marriage. The husband of the father's sister derives his term through his wife; and the wife of the mother's brother, through her husband. The identities M.B. = F.S.H. and M.B.W. = F.S. are therefore derived indirectly and are not original. Hodson's hypothesis that they represent actual identity of kinship in an earlier dual society therefore turns out to be superfluous.

Reciprocally, a man refers to his sister's children by a term which is different from that for his own children. A woman also refers to her brother's children by this term which is different from that used for her own or her sister's children. As indicated, the M.B. as well as the F.S. are both on a parallel footing, and are practically labelled together, allowing for differences of sex.

We may say that there are, in Khasi society, two clearly recognised units. One of these is the house and household, where the men and women have been born. Inside this house group, the sisters have similar rights, actual as well as potential. As we have seen, on the death of one sister, where there is no female issue, another sister takes her place in continuing the traditional religious entity of the group. The brothers again, among themselves, take one another's place in succession, in the matter of authority, and of management of the family property. The other unit is that of the woman, her husband and the children. We may refer to it as the unit set up by marriage.

among Khasis. Even the Garos whom he cites apparently as representing a type of social organisation which the Khasis had earlier, do not encourage marriage with the father's sister's daughter. There is also no evidence that a Khasi ever married his mother's brother's widow. As I have shown earlier, the marriage prohibitions regarding cross-cousins can be explained on the basis of existing social and economic forces in Khasi society. The rule regarding exclusion of the F.B.Z.Z merely states that a woman cannot marry the son of her para Kha. It is not a new prohibition. 582

We may now state the reasons why a Khasi calls his father's brothers by the same term as father, and the wives of these uncles, as mother, using of course a qualifying term for seniority and juniority. As noted before, a Khasi boy or girl calls his mother's sister's children brothers and sisters. He avoids them strictly in marriage. They are not like cross-cousins, marriageable under certain circumstances. Any sexual approach towards them would have led in the old days to exile and also excommunication. The children of the father's brother are similarly excluded from the category of marriageable persons. They are like brothers and sisters, and as such are addressed as Bah, Bep and Kong. They are referred to as Para Kha. As Hodson observes, the term Para conveys, when used as a prefix, the idea of having common rights or status. It also means, when used by itself, a younger brother or sister. The term Kha refers to relation (by birth) through a male. It is used for example in the combination Bah Kha, which denotes both varieties of cross-cousins, the children of the mother's brother, as well as the father's sister. A Khasi man (and) woman has already another set of parallel cousins who are sexually tabooed. Their parents are given terms denoting the father and mother, with certain modifications. As the children of the father's brothers are also sexually tabooed, it would be natural to extend to them the terms used for the parents of the other group of non-marriageable cousins. 601 602 604

extended form more often when the children of the deceased sisters of *Ka-khadduh* reside there. This extension is on the mother's side and is affiliated through the extension of mother-child relationship.

Additional members like widower brothers or widowed sisters make the Khasi family a composite one.

In a Khasi family father, mother and her brother are very important. Father who is regard[!]as *Myndar* (stranger) or *Ushong kha* (begetter), has also the position of *Kynrad* (master) of the house (set-up by him). He is the executive head and the mother is the *dejure* owner of the household.

Modern conditions and spread of Christianity have greatly affected the Khasi society and changed the Khasi ways of life but have failed to alter the traditional mode of inheritance even among the Christian Khasis. Another important fact which is apparent in the Khasi families, is the change of the status of the mother's brother (*Ukni*) in his sister's house. His influence has greatly been diminished due to clash with *Ka-Khadduh* (heiress). He has almost lost his control over his sister's family. This has made the women exert their status to a danger point. Consequently, some amount of maladjustment in the relationship system, moral depravity and disintegration loom large in the family horizon.

Family is the core of Khasi social organization and the closeness of familial kin with the members of the sub-clan is due more to the fact that sub-clan owes its development to the family. A *Shi-K'pah* (member of sub-clan) is a secondary relative and can easily be approached for any help.

The functions of the above mentioned social groupings are as follows :

Clan (*Ka-Kur*)—It regulates marriage. It being a larger non-residential kin group contact between its members is infrequent. The amount of social participation needed on certain level to intensify the relationship among its members falls far short of. But nevertheless, there existed among the members

society? Among the matrilineal Central Bantus, Richards says that 591
the determining factor in residence at marriage is the marriage payment
or the type of goods and services which the bridegroom gives (Richards,
1950, p. 249). However, the Khasi have no such custom in the mar-
riage contract, it is therefore out of the question to explain the two
types of residence in this way. In the case of the Khasi, the determin- 182
ing factor is the type of marriage with relation to the rule of inheritance 428
and ownership of property, which is clearly related to the structure 581
of the *iing*. Khasi marriages can be divided into two categories i.e., 591
marriage with an heiress and with a non-heiress. Marriages with an 602
heiress must be uxorilocal. This accounts for category 1 or 3 of the 613
household pattern. On the other hand, marriages with a non-heiress
become neolocal and correspond to category 4 of the household unit.

IV. Marriage with the Heiress

A man married to an heiress, usually lives with his wife's parents 182
and her unmarried or divorced brothers and sisters. For a man, life 428
after marriage under such circumstances require great adjustment 591
and endurance. The husband's status is especially weak when a male 592
member of the wife's kin lives in the same household. The manage- 593
ment of property and all economic activities are entirely controlled 602
by the authority (wife's brother or maternal uncle) of the *iing*. The 604
husband works in the wife's field under constant supervision from 613
this authority. Both economic activities and domestic affairs are
always under the management of this authority. The children have
more attachment to, and are more obedient to, the maternal uncle
than to the father. The tie between the uncle and the nephew is so
strong that the father is rather like an additional member of the
household. He is the last person to be introduced to visitors. [574]

This family system is clearly reflected in the daily behaviour. 123
When we visited the Khasi household of a youngest daughter, if a 574
man (obviously the husband) came first to greet us, he always said 592
"please wait, my wife (or mother-in-law) is coming." And it was 593
the wife who entertained us, offering tea or pan and discussing matters 602
with us, while her husband remained silent in the corner of the room, 604
or in the next room. If her uncle or brother was there, *he* would be
the person who talked to us, while his niece or sister served us. In
such a case, we were seldom introduced to the husband. When I was
working at Shella, I happened to stay in such a family. I had hardly
any opportunity to talk to the husband during the two weeks of my
stay. He left the house very early in the morning and came back 592
late in the evening from the fields. While he was at home, he was 593
604

592 always somewhat outside the family conversation which was centred
593 on the maternal uncle and his sisters, nephews and nieces, by whom
• 604 I was well taken care of. This is somewhat similar to the situation amongst the Cewa and the Yao of the Central Bantus, which have what Richard calls 'the detachable husband' (Richards, 1950, pp. 233-35, 248), though the parallel is not by any means exact.

428 There is, therefore, inevitably an element of tension in the relations
581 between the wife's maternal uncle (including parents-in-law) and the
586 husband (son-in-law) and this tension makes the latter's life extremely uncomfortable. This awkward position is well shown in the divorce
[604] rate. At Kongton (see List 9), out of 61 couples (house-owners and
[606] their spouses), the number of persons who had experience of divorce was 33 (female 15, male 18) and those married more than twice
[592] numbered 19 (female 7, male 12). Out of 61 couples, there were only
[593] 31 in which neither husband nor wife had been divorced. In my census of Jatinga village, 70 per cent of all divorce cases were marriages to heiresses. In general, the period when divorce occurs more frequently is before a couple get children and after the wife has passed the child-bearing age. A marriage breaks up either through the action of the wife or of the husband, but generally through that of the wife. However, the state of separation which I presently describe is brought about by the husband, though later it results in a divorce from the wife. Divorce does not mean a great catastrophe for a Khasi wife, especially if she is an heiress and her husband's economic
[587] contribution is not significant. Moreover, in this society remarriage is as easy for a widow or divorcée, as it is to divorce. In the villages of Sohkynduh and Kongton, the couple who wants to divorce has only to throw a few Annas together in the presence of some witness, usually an elderly man.

581 In addition to divorce, there are many actual separations of husband
and wife, of short or long duration, when the husband runs away from
593 his wife's house to his sister's. Though it does not always end in divorce, considerable number of husbands have a strong tendency to spend most of their time at their sister's house. Khasi women often told me, "I don't know why he does not come back to my place." I have often found the husband staying at his sister's house only a few houses away from his wife's, without any particular reason. They are obliged to see each other every day whether divorced or separated. This kind of ambiguity in the marriage relation seems to have an important correlation with the Khasi social structure, combined with the village endogamy. The man and and wife have grown up together from their childhood in the same village and known each other very well. Hence their psychology cannot clearly distinguish the marriage form as a newly-established independent social relation-

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

ship. They still live in the same familiar atmosphere as before their marriage. The implications of this ambiguity in the married state are considerable. Particularly the husband's uncomfortable situation, when the wife is heiress, encourages him to take marriage less seriously. 581 593

A husband who undergoes hardship in his wife's house, finds himself as the authority in his sister's house; if he is not the authority, he can find at least a respected position as uncle or brother. In the case of a man of authority in the *iing*, the tendency for him to regard his *iing* as more important than his married life is proportionately stronger, as I will discuss later. Hence the most unstable and unsuccessful marriages are those between the heiress and the man of authority. This is one of the reasons we often find among the Khasi: a brother or an uncle, who is already married, acting nevertheless as the head to a family *(iing)* and as a member of its domestic group. This means that he is in a state of temporary separation or divorced. Among the Ashanti, a man and his wife's brother are never found as members of a common household (Fortes, 1950, p. 262), but among the Khasi, on the contrary, a man and his wife's brother are often found as members of a common household. In such cases, however, the brother has no wife, or never brings his wife to his *iing*. Therefore, a man and his wife and his sister never reside together. As far as the residence of women is concerned, the Khasi keep to the strict descent rule; two women who belong to different descent groups never live together. This point differentiates the Khasi residence pattern, in which social structure is involved, from that not only of the Ashanti but also of the Yao where the head of a descent group can bring his wife to his sister's household, though, among other members, uxorilocal marriage is the rule. These differential aspects of matrilineal systems will be discussed from a more theoretical point of view later. 581 591 592 593 602 604 613 428 [171]

In addition, should a Khasi man even succeed in spending his life with his wife's kinsmen, as soon as the wife dies, he will usually return to his *iing*, that is, to his sister's house, where he is received warmly and where he often acts as the *de facto* authorithy, as in the similar situation of divorce and separation. Thus the strong matrilineal structural principle tends to orient a man towards his own descent group, the *iing*. 602 613

The man's attachment to his *iing* is very great throughout his life. In this regard the Khasi differs from the matrilineal Negri Sembilan Malay. Among the latter, returning to the matrilineal kin is regarded by the man as an imposition rather than as the enjoyment of a legitimate privilege (see Swift, 1958, p. 157).[1] This difference 171 592 602 613 428

1. He presents this fact as one of the reasons of the durability of marriage among the Negri Sembilan. Indeed, on this precise point they differ from the Khasi where marriage is rather unstable. [581]

would not be in a position to divert their attention to the problems of basic amenities and other necessaries in their life. This is expressed through rituals which are maintained through tradition and transmitted from generation to generation. A proper performance of the ritual ensures prosperity. 796 182

The maternal uncle occupies a very important position in the social life of the Khasi community. He acts as a manager of the family and his opinion is always sought for in any matter of social implications. He is thus honoured and respected by all the members of the house. In spite of the matrilineal set up of their society, the men are given honourable position in the affairs of the family. Their role has been given due recognition in their various customs and rites. The uncle (mother's brother) as also husbands in some exceptional cases, are always remembered by the living members of the house for their wisdom and sagacity. They are thus deified and are prayed by them to bestow all possible help to tide over their period of crisis. The Khasi pantheons to whom the people in general pay due reverence, are considered to have led similar life as prevelent in their present society. Thus the various rites and ceremonies that are observed, expressing clearly the duties, nature and obligations for these deities, are simply a reflection of the Khasi way of life. The general pattern of social structure has been found to be projected unconsciously through their religious worship and these celebrations are of course of great value to the local inhabitants as it re-inforces certain cultural features so characteristic of this tribe. 593 604 182 769 796 182

592 always somewhat outside the family conversation which was centred
593 on the maternal uncle and his sisters, nephews and nieces, by whom
604 I was well taken care of. This is somewhat similar to the situation amongst the Cewa and the Yao of the Central Bantus, which have what Richard calls 'the detachable husband' (Richards, 1950, pp. 233-35, 248), though the parallel is not by any means exact.

428 There is, therefore, inevitably an element of tension in the relations between the wife's maternal uncle (including parents-in-law) and the
581 husband (son-in-law) and this tension makes the latter's life extremely
586 uncomfortable. This awkward position is well shown in the divorce rate. At Kongton (see List 9), out of 61 couples (house-owners and
[604] their spouses), the number of persons who had experience of divorce
• [606] was 33 (female 15, male 18) and those married more than twice
[592] numbered 19 (female 7, male 12). Out of 61 couples, there were only
[593] 31 in which neither husband nor wife had been divorced. In my census of Jatinga village, 70 per cent of all divorce cases were marriages to heiresses. In general, the period when divorce occurs more frequently is before a couple get children and after the wife has passed the child-bearing age. A marriage breaks up either through the action of the wife or of the husband, but generally through that of the wife. However, the state of separation which I presently describe is brought about by the husband, though later it results in a divorce from the wife. Divorce does not mean a great catastrophe for a Khasi wife, especially if she is an heiress and her husband's economic
[587] contribution is not significant. Moreover, in this society remarriage is as easy for a widow or divorcée, as it is to divorce. In the villages of Sohkynduh and Kongton, the couple who wants to divorce has only to throw a few Annas together in the presence of some witness, usually an elderly man.

581 In addition to divorce, there are many actual separations of husband and wife, of short or long duration, when the husband runs away from
593 his wife's house to his sister's. Though it does not always end in divorce, considerable number of husbands have a strong tendency to spend most of their time at their sister's house. Khasi women often told me, "I don't know why he does not come back to my place." I have often found the husband staying at his sister's house only a few houses away from his wife's, without any particular reason. They are obliged to see each other every day whether divorced or separated. This kind of ambiguity in the marriage relation seems to have an important correlation with the Khasi social structure, combined with the village endogamy. The man and and wife have grown up together from their childhood in the same village and known each other very well. Hence their psychology cannot clearly distinguish the marriage form as a newly-established independent social relation-

Il: Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

removal of the bar on remarriage was also of the same kind elsewhere in the neighbouring States. Clearly, the idea of leviration or sororation is incompatible with this idea of the marriage bond continuing even after death and necessitating a ceremony to break it. It may also be noted that while the Khasis permit divorce somewhat easily, remarriage is not permitted of either party "within the family of the divorced husband or wife" (G). A Khasi cannot also marry two sisters, although he can marry irregularly, more than one woman and also the wife's sister after the decease of the wife. We can now discuss why a woman or a man refers to the brothers and sisters of the husband or wife by the kinship terms used by the spouse, qualified by a special term. When a man marries and goes to live in the house of his wife's mother, he comes in contact with unmarried sisters of the wife. But he knows that they are sexually to be avoided. He lives in the wife's mother's house only during the life time of his wife. A wife's sister is comparable to a Kur sister sexually, during this period.

But his economic relations and religious ties require that a distinction should be made between these "sisters" and the "Kur sisters." The qualifying term supplies this requirement. The woman, on the other hand, has no direct relations with her husband's brothers. She has however to keep in touch with the husband's female relatives. The bones of the husband go over to the mother's house and eventually to the clan ossuary. The husband is also a potential manager of the property of his female relatives. She has therefore to take note of the order in age of her husband's sisters. As her husband uses the terms for sisters for the sisters-in-law, it is quite natural for her to extend such usage to her husband's sisters. The brothers of the husband do not count at all so far as the woman is concerned, and she will not therefore have any special term for them. As the sisters are referred to as Para Kynsi and Hymmen Kynsi, so will the brothers of the husband be referred to by similar terms. The absence of any sexual privileges between the woman and her

husband's brothers fits in with such a terminology of kinship. It has not however determined the terminology.

We have referred to an exception in the case of kinship terms used by a man. His relation with his wife's brothers is quite different from that of a woman with the husband's sisters. The wife's brother is the manager of the wife's ancestral property; also this uncle has to be associated with important rites at birth and death of the children of the sister. Nevertheless, the husband has also his own position. The house that he sets up after marriage belongs to his wife no doubt; but he is the master there. As Gurdon states "It is he who faces the dangers of the jungles and risks his life for wife and children. In his wife's clan he occupies a very high place, he is second to none but U Kni, the maternal uncle, while in his own family circle a father and a husband is nearer to his children and wife than U Kni. The Khasi saying is "U Kpa uba lah ban iai, U Kni Uba tang ba ka Iap ka im" which may be translated freely as "The father bears the heat and burden of the day, the maternal uncle only comes when it is a question of life or death."

A man and his wife's brother represent the two aspects of the relationship which binds every man in Khasi society to his mother's house and to his wife's house.
